

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PREFACE

The leading topics in the present volume—the twentieth since the work began in 1898 and the fifteenth in the new series beginning in 1907—include among others the following: The Washington Conference for the Limitation of Armament discussed under WAR OF THE NATIONS and NAVAL PROGRESS with text of agreements reached before the end of the year and summary of debates on the several issues; the conflicting policies of France and her Allies; the war between Greece and Turkey; the Upper Silesian Settlement; the reversal of Russian Soviet policy; the fall of exchange and the financial chaos in the countries of Europe; the question of German solvency; the menace of revolt in Egypt and India; the movement for Irish independence and the settlement reached at the end of the year; the second year of the League of Nations; Unemployment; the first ten months of the Harding administration, etc. Outside the political field the articles on industrial subjects, social economics, and applied science are of especial importance, including RAILWAYS, SHIPBUILDING, SHIPPING, WATER POWER, RADIO-TELEGRAPHY AND TELEPHONY, AËRONAUTICS, AGRICULTURE, CITY PLANNING, and the groups of articles on Sanitary Engineering, and on the respective industries and their products.

FRANK MOORE COLBY.

EDITOR
FRANK MOORE COLBY, M. A.
LIST OF CONTRIBUTORS

**AGRICULTURE, BOTANY, FOOD, FORESTRY,
HORTICULTURE, RECLAMATION, ETC.**

EDWIN WEST ALLEN, PH.D.,
UNITED STATES DEPARTMENT OF AGRICULTURE,
AND
ALFRED CHARLES TRUE, PH.D.,
UNITED STATES DEPARTMENT OF AGRICULTURE;
E. H. SHINN (AGRICULTURAL EDUCATION);
WALTER H. EVANS, PH.D. (BOTANY AND
PLANT DISEASES); JOHN I. SCHULTE (CROP
PRODUCTION); CARL W. LARSON (DAIRY-
ING); WALTER H. BEAL (FERTILIZERS AND
SOILS); HOWARD L. KNIGHT (FOOD AND
NUTRITION; AGRICULTURAL LEGISLATION); J. E.
WELLINGTON (HORTICULTURE AND FOR-
ESTRY); RAY P. TEELE (RECLAMATION);
E. W. SHEETS (STOCK RAISING); AND WIL-
LIAM A. HOOKER (VETERINARY MEDICINE).

ANTHROPOLOGY (WITH ETHNOLOGY)

ROBERT H. LOWIE, PH.D.,
AMERICAN MUSEUM OF NATURAL HISTORY,
AND
CLARK WISSLER, PH.D.,
AMERICAN MUSEUM OF NATURAL HISTORY.

ARCHAEOLOGY

OLIVER SAMUEL TONKS, PH.D.,
PROFESSOR OF ART, VASSAR COLLEGE.

ARCHITECTURE

C. MATLACK PRICE,
FORMERLY EDITOR OF THE *Architectural Record*.

ASTRONOMY, METEOROLOGY

EDGAR W. WOOLARD,
UNITED STATES WEATHER BUREAU.

**CHEMISTRY; EXPOSITIONS; CELEBRA-
TIONS**

MARCUS BENJAMIN, PH. D., Sc.D., LL.D.,
EDITOR FOR THE UNITED STATES NATIONAL
MUSEUM.

**CIVIL ENGINEERING AND MANUFACTUR-
ING SUBJECTS; AERONAUTICS; ETC.**

HERBERT TREADWELL WADE,
LATE CAPTAIN, ORDNANCE DEPARTMENT, U. S.
ARMY.

DRAMA (AMERICAN AND ENGLISH)

OLIVER MARTIN SAYLER, M.A.,
DRAMATIC CRITIC, AUTHOR OF *The Russian
Theatre under the Revolution*.

**ECONOMIC, SOCIAL AND POLITICAL
SCIENCE SUBJECTS
EDITORIAL STAFF.**

EDUCATION IN THE UNITED STATES

MILO B. HILLEGAS, PH.D.,
FORMERLY COMMISSIONER OF EDUCATION OF
VERMONT.

ELECTRICAL ENGINEERING SUBJECTS

REGINALD GORDON,
ASSOCIATE EDITOR OF *Industrial Management*.

EXPLORATION; POLAR RESEARCH; ALASKA

A. W. GREELY, PH.D.,
MAJOR GENERAL, UNITED STATES ARMY; COM-
MANDER GREELY POLAR EXPEDITION.

FINANCIAL REVIEW

O. C. LOCKHART, PH.D.,
NATIONAL BANK OF COMMERCE, NEW YORK CITY.

FRENCH LITERATURE

ALBERT SCHINZ, PH.D.,
PROFESSOR OF FRENCH LITERATURE, SMITH
COLLEGE.

GEOLOGY; MINERALOGY

H. S. KANE,
DEPARTMENT OF GEOLOGY, COLUMBIA UNIVERSITY

GERMAN LITERATURE

AMELIA VON ENDE.

**INTERNATIONAL PEACE AND ARBITRA-
TION**

CLINTON ROGERS WOODRUFF, LL.B.,
SECRETARY OF THE MUNICIPAL NATIONAL LEAGUE
AND MEMBER OF THE MOHONK CONFERENCE;
FORMERLY PRESIDENT OF THE BOARD OF PER-
SONAL REGISTRATION, PHILADELPHIA.

LITERATURE, ENGLISH AND AMERICAN

W. B. PRESSEY
AND
DAVID LAMBUTH,
DEPARTMENT OF ENGLISH, DARTMOUTH COLLEGE.

**LITERATURE (CONTINENTAL): SEE FRENCH
LITERATURE; GERMAN LITERATURE;
ETC.**

MEDICAL SUBJECTS

EDWARD PREBLE, M.D.,
NEW YORK CITY.

MILITARY PROGRESS

C. DEWITT WILLCOX.
COLONEL, U. S. A.; PROFESSOR OF MODERN
LANGUAGES, U. S. MILITARY ACADEMY.

MUSIC

ALFRED REMY, M.A.,
EXTENSION LECTURER, COLUMBIA UNIVERSITY,
AND FORMERLY PROFESSOR OF HARMONY AND
COUNTERPOINT, INTERNATIONAL CONSERVATORY,
NEW YORK; EDITOR OF BAKER'S *Biographical
Dictionary of Musicians*.

**NAVAL PROGRESS AND RELATED SUB-
JECTS**

LEWIS SAYRE VAN DUZER,
CAPTAIN, U. S. N., RETIRED; WRITER ON NAVAL
AND NAUTICAL SUBJECTS.

PAINTING AND SCULPTURE

GEORGE KRIEHN, PH.D.,
EXTENSION LECTURER IN THE HISTORY OF ART,
COLUMBIA UNIVERSITY; LECTURER, WOMAN'S
ART SCHOOL, COOPER UNION.

PHILOLOGY (CLASSICAL)

CHARLES KNAPP, PH.D.,
PROFESSOR OF CLASSICAL PHILOLOGY, BARNARD
COLLEGE, COLUMBIA UNIVERSITY.

PHILOLOGY (MODERN)

JOHN LAWRENCE GERIG, PH.D.,
ASSOCIATE PROFESSOR OF CELTIC, EXECUTIVE
OFFICER, DEPARTMENT OF ROMANCE LANGUAGES,
COLUMBIA UNIVERSITY.

PHYSICS

* HENRY D. HUBBARD,
SECRETARY, UNITED STATES BUREAU OF STAND-
ARDS.

PSYCHOLOGY; PSYCHICAL RESEARCH

EDWARD BRADFORD TITCHENER, D.Sc.,
PH.D., LL.D., Litt. D.,
SAGE PROFESSOR OF PSYCHOLOGY, GRADUATE
SCHOOL OF CORNELL UNIVERSITY.

RAILWAYS

WILLIAM E. HOOPER,
FINANCIAL EDITOR, *Railway Age*.

ROMAN CATHOLIC CHURCH

THOMAS F. MEEHAN,
EDITORIAL STAFF, *America*.

**SANITARY ENGINEERING AND MUNIC-
IPAL SUBJECTS**

MOSES NELSON BAKER, PH.D., C. E.,
ASSOCIATE EDITOR OF THE *Engineering News-
Record*.

SCANDINAVIAN LITERATURE

HARRY V. E. PALMBLAD, A.M.,
PROFESSOR OF MODERN LANGUAGES, PHILLIPS
UNIVERSITY.

SPANISH LITERATURE

JOHN DRISCOLL FITZ-GERALD, PH.D.,
MEMBER OF THE HISPANIC SOCIETY OF AMERICA;
CORRESPONDING MEMBER OF THE SPANISH ROYAL
ACADEMY, AND OF THE ROYAL ACADEMY OF HIS-
TORY OF MADRID; PROFESSOR OF SPANISH, UNI-
VERSITY OF ILLINOIS.

SPORTS

CHARLES A. TAYLOR,
MEMBER OF THE STAFF OF THE New York
Tribune.

UNIVERSITIES AND COLLEGES

MILO B. HILLEGAS, PH.D.,

WAR OF THE NATIONS

FRANK MOORE COLBY, M.A.,
AND EDITORIAL STAFF.

ZOOLOGY

AARON L. TREADWELL, PH.D.,
PROFESSOR OF BIOLOGY, VASSAR COLLEGE.

THE NEW INTERNATIONAL YEAR BOOK

A

ABBOTT, IRA ANSON. Judge, formerly justice of the supreme court in New Mexico territory, died, October 19. He was born at Barnard, Vt., July 20, 1845, and served as a private in the Vermont Volunteers in the last year of the Civil War; graduated at Dartmouth in 1870. He began the practice of law at Haverhill, Mass., in 1872. In 1898 he was made judge of the Massachusetts central district court of northern Essex and in 1904 was appointed by President Roosevelt associate justice of the supreme court of New Mexico and was reappointed by President Taft. He returned to Haverhill, Mass., when New Mexico became a State in 1912, and passed the rest of his life in travel and in writing for the periodicals.

ABYSSINIA. A monarchy of northern Africa bounded on the north and east by Eritrea, the French Somali coast, British Somaliland, and Italian Somaliland; on the south by Italian Somaliland, and British East Africa or Kenya; and on the west by the Sudan; with an area of about 350,000 square miles and a population estimated at over 8,000,000. The capital is Addis Abeba, with a population of from 40,000 to 50,000; other towns are: Harar, with a population of about 50,000; Adua, 5000; Axum, about 5000, Mahdera-Mariam, 4000. It contains the following nine provinces: (1) Harar and dependencies; (2) Wollo; (3) Kassa and Magi; (4) Gore; (5) Tigré; (6) Damot and Gojon; (7) the Equatorial Province; (8) Gondar; (9) Gima or Jimma. Its independence was recognized by the convention of Addis Abeba between Italy and King Menelik, and its frontiers were fixed by treaties with Great Britain and Italy. These two Powers along with France signed an agreement, Dec. 13, 1906, for the preservation of its integrity and for a mutual policy in the matter of concessions, each of the three Powers engaging to take no advantage to the injury of either of the others. It was agreed that they would abstain from interference in the internal affairs of the country, but would act conjointly for the protection of the interests of their possessions on the border.

The inhabitants who are of the Semitic origin consist of four race groups: The Gallas and Somalis in the south and southwest; the Tigris in the north; the Danakils in the east; the Shoans

in the centre. Of these the Shoans are the ruling people and number about 1,500,000. Most of them are trained to arms. The Tigris formerly the ruling class of Ethiopia are of lighter complexion and plainly of Semitic type. The Danakils who are Mohammedans inhabit regions not easily accessible and maintain partial independence. In the southwest negroes are found and in the northeast there is a Jewish tribe known as the Fálashas together with a number of aliens in the towns. Since the fourth century the bulk of the inhabitants have been Christians and they have remained members of the Alexandrian Church under the head bishop or Abuna who is always a Copt appointed by the Coptic Patriarch of Alexandria, subject to a native church authority known as the Echegheh. The priests and other church dignitaries are said to number about 100,000. Illiteracy prevails, education being chiefly confined to the clergy in spite of the edict of October, 1907, which required education of all males over the age of twelve. Justice is in the hands of the provincial governors and chiefs, subject to appeal to the emperor.

The main pursuits are agriculture and grazing. A form of feudalism exists, the land belonging theoretically to the Negus or Emperor; and there is hardly any idea of private property in land. Although the soil is capable of producing several crops, culture is backward. Cotton, sugar, dates, coffee and the vine are cultivated to some extent, and coffee has lately increased somewhat in production. Exports amounted to 6364 metric tons in 1916. Other native products are hides and skins, wheat, barley, millet, tobacco and gesho. Manufacturing is backward, but in some districts hatchets, knives, spears and other instruments are made. Placer gold-mining is carried on in some parts of the country, and other minerals are found, including iron, sulphur, copper, and silver. The chief trade route is the French Ethiopian railway, but there is a large caravan trade in the interior. The chief exports are hides and skins, coffee, wax, civet and butter, and to a less extent spices, gums, gold, and rubber. The imports come chiefly from England, France, India, Italy and the United States, and comprise for the most part manufactures including cotton goods, arms and munitions, liquors, railway materials, sugar, and

petroleum. No general figures of foreign trade were available, but the total trade between Abyssinia and Great Britain in 1920 was: Imports from Great Britain £81,628; exports to Great Britain £8986.

The means of transportation have not been developed, and in the absence of railways and good roads merchandise is still largely carried on pack animals, including sometimes camels, and proceeds along mere trails, although in the neighborhood of the capital, there are a few miles of metalled road. There is a French railway line of narrow gauge from the port of Jibuti in French Somaliland to Diré Dawa in the southeastern part of Abyssinia, a distance of 187 miles; and after January, 1909, there was a line projected to Addis Abeba. There is telegraphic communication from Addis Abeba to Harar and to Jibuti in French Somaliland and Massaua in Eritrea, the length being 1066 miles. There is also telephone communication between Addis Abeba and several other points. The coin of the country is the Maria Theresa dollar to which of late years has been added the Menelik dollar whose value is about fifty cents.

The nominal head of the state is the emperor or Negus, but the executive consists of a state council, comprising the chief notables, who are the governors of districts and provinces and the chiefs of villages. In 1918 the country was under the personal rule of the regent, but the authority of the state council was restored in August. The army consists of a standing force, and of a sort of militia comprising the retainers of the various chiefs, which is available in time of war. The standing force has been placed at somewhat less than 1,000,000 men, and the militia at about 2,000,000 men. The latter is ill-equipped and loosely organized. In 1921 the empress was Waiseru Zauditu, daughter of Menelik, born in 1876, who was crowned Feb. 11, 1917. The chief or ras Tafari was declared regent and heir to the throne. The government was recognized by Great Britain.

ACADEMY, FRENCH (ACADÉMIE FRANÇAISE). The oldest of the five academies which make up the Institute of France and officially considered the highest; founded in 1635; reorganized in 1816. The list of its members is known as the Forty Immortals. For the complete list aside from the change mentioned below, see the article in the preceding YEAR BOOK. The death of M. Jean Aicard, (q. v.) one of the members, occurred, May 13. The candidates for this vacant chair in the elections of December 15 were MM. Abel Hermant, Louis Madelin, de Porto-Riche, Camille Le Senne and du Plessys Flandres Noblesse. The seventh ballot resulted in thirteen votes for M. Hermant, seven for M. Madelin, and six for M. de Porto-Riche, and no decision having been reached, the session terminated. At the public annual meeting in December the permanent secretary, M. Frederic Masson, in his report on the competition of the year showed that there had been no lack of works of the first rank presented including historical works, poems, novels, and literary studies. The great success of the year was *Maria Chapdelaine* by Louis Hémon who recently died in the United States. The French clergy were well represented among the writers of the best works including the Abbé Lavaquér, who won the second Gobert prize for his *Cardinal de Bois-*

gelin; the Abbé Dedieu, who wrote the *Political Role of the French Protestants*. Others especially mentioned were *Louis XIV in Flanders* by M. Albert Croquez; *The Memoirs of Cardinal de Richelieu* by Maxime Deloche; *Madame de Maintenon* by Madame Saint-René Taillandier; and General Buat's work on Ludendorff. The list of the others is too long to be included. The work on the dictionary was continuing throughout the year.

ACADEMY OF ARTS AND LETTERS, AMERICAN. Founded in 1904 by seven members of the National Institute of Arts and Letters, and similar to the French Academy. It is limited in membership to fifty. Vacancies caused by death are filled by election by the Academy members from the National Institute on the basis of lifetime achievement in literature, painting, sculpture, architecture, and music. During the year three deaths occurred: Barrett Wendell (died February 8); John Burroughs (died March 29); and Abbott Henderson Thayer (died May 29). Three members were elected to occupy these chairs: Henry Bacon, Charles Dana Gibson, and Joseph Pennell.

The Academy received in 1921 the gift of a four-story building at 15 West 81st Street, New York. The facilities are such that it is intended to make the building a treasure house for valuable manuscripts and other memorabilia. Two gifts of \$200,000 in December, 1920, are being used for the purpose of erecting a building for the Academy on 155th Street between Riverside Drive and Broadway. The laying of the cornerstone of the building took place on November 19 at the annual meeting of the Academy. Marshal Foch performed the ceremony. Other gifts totaling \$21,000 were made during 1921.

On March 1 the Academy and the National Institute of Arts and Letters conducted a meeting in memory of William Dean Howells, who was President of the Academy since its inception until his death in 1920. Addresses were delivered on Howells as novelist, dramatist, humorist, and writer by Robert Grant, Augustus Thomas, Jesse Lynch Williams, and Brander Matthews. A memorial meeting was also held in honor of John Burroughs on November 18. The speakers were Henry Fairfield Osborn, Bliss Perry, John H. Finley, and Hamlin Garland. The Academy has enlarged its activities, its work being divided into three main departments: the Secretariate, the Library, and the Archives.

Membership in 1921 comprised the following: John Singer Sargent, Daniel Chester French, James Ford Rhodes, William Milligan Sloane, Robert Underwood Johnson, George Washington Cable, Henry van Dyke, William Crary Brownell, Basil Lanneau Gildersleeve, Woodrow Wilson, Arthur Twining Hadley, Henry Cabot Lodge, Edwin Howland Blashfield, Thomas Hastings, Brander Matthews, Thomas Nelson Page, Elihu Vedder, George Edward Woodberry, George Whitefield Chadwick, George de Forest Brush, William Rutherford Mead, Bliss Perry, Abbott Lawrence Lowell, Nicholas Murray Butler, Paul Wayland Bartlett, Owen Wister, Herbert Adams, Augustus Thomas, Timothy Cole, Cass Gilbert, William Roscoe Thayer, Robert Grant, Frederick MacMonnies, William Gillette, Paul Elmer More, Gari Melchers, Elihu Root, Brand Whitlock, Hamlin Garland. Those elected since 1918 are Paul Shorey, Charles Adams Platt, Maurice Francis Egan, Archer M. Huntington, Childe

Hassam, David Jayne Hill, Lorado Taft, Booth Tarkington, Henry Bacon, Charles Dana Gibson, and Joseph Pennell. The permanent secretary of the Academy is Robert Underwood Johnson, 15 West 81st Street, New York City.

ACADEMY OF SCIENCES, NATIONAL. See SCIENCES, NATIONAL ACADEMY OF.

ACCIDENTS. See AUTOMOBILES; BOILERS; RAILWAY ACCIDENTS; SAFETY AT SEA.

ADAMS, FREDERICK UPHAM. Author and inventor, died August 28. His inventions and writings in the field of mechanical engineering are well known. He was born in Boston, Mass., Dec. 10, 1859, and educated in the city schools. From 1882 to 1890 he practiced the profession of mechanical engineering, inventing during that period an electric lamp post which was generally adopted throughout the country (1886) and electric light towers (1887). From 1894 to 1897 he was chief smoke inspector in Chicago. In 1900 he constructed an experimental passenger train for the Baltimore and Ohio railway which broke all previous records for speed. Becoming interested in social questions he founded the magazine called the *New Time* which he edited from 1896 to 1898. He wrote among other books: *Atmosphere Resistance and Its Relation to the Speed of Railway Trains* (1893); *President John Smith* (1896); *The Kidnapped Millionaires* (1901); *John Burt* (1903); *How Cities are Governed in Great Britain* (1904); *The Oil War in Mexico* (1909); *The Conquest of the Tropics* (1913); *The Romance of Big Business* (1915); *Woodrow Wilson vs. Woodrow Wilson* (1919); *The Open Shop* (1919).

ADAMS, HENRY CARTER. Political economist and educator, died August 11. He was professor of political economy and finance in the University of Michigan, and the author of important works on taxation, finance, and railways. He was born at Davenport, Iowa, Dec. 31, 1851; graduated at Iowa College in 1874, and studied at Johns Hopkins and German universities. He was appointed to the faculty of the University of Michigan in 1880, and became professor of political economy and finance in 1887. Among positions held by him on government commissions, etc., were: Director of the division of transportation of the Eleventh Census; statistician and chief of the statistical division of the Interstate Commerce Commission; adviser to a Chinese commission in respect to standardizing railway accounts. He was assistant editor of the *International Journal of Ethics*, and wrote among other works: *Public Debts* (1887); *Relation of the State to Industrial Action* (1887); *The Science of Finance* (1898); *Statistics of Railways* (1888-1910); *Economics and Jurisprudence* (1897); *Description of Industry* (1918); *American Railway Accounting* (1918).

ADELPHI COLLEGE. A non-sectarian institution of the higher education, at Brooklyn, N. Y.; founded in 1896. In the summer school of 1921 the enrollment was 93 and for the year 1921-22 in the regular college it was 300. There were 22 members in the faculty. The library contained 17,500 volumes. President, Frank D. Blodgett, LL.D.

ADEN. A volcanic peninsula belonging to Great Britain on the Arabian coast about 100 miles east of Bab-el-Mandeb, forming part of the Presidency of Bombay; area, about 75 square miles; with the Protectorate, about 9000 square miles. The settlement includes the small penin-

sula of Aden known as Little Aden, some settlements on the mainland and also the island of Perim at the entrance to the Red Sea. The population of Aden and Perim in 1911 was 46,165 and the population of the Protectorate was about 100,000. The chief industries are the manufacture of salt and cigarettes. The trade is mainly transit. In 1919-20 the imports by sea were valued at £6,580,474; by land £295,498; total including treasure £7,124,078. The chief imports were cotton piece goods, grain, hides and skins, tobacco, coal, and provisions. The exports by sea in 1919-20 were £6,292,691; by land £125,451; total including treasure £6,517,004. The chief exports were coffee, gums, hides and skins, cotton goods, tobacco, and provisions. The shipping in 1919-20 included 1066 merchant vessels of 2,736,839 tons entered of which 642 were British. The government is under a political resident with four assistants. Political resident, 1921, Major-General T. E. Scott.

ADVANCEMENT OF SCIENCE, AMERICAN ASSOCIATION FOR THE. An organization based on the principle that science can only be supported by the organization of scientific men in a democracy where no dependence can be had upon a leisure class; founded in 1848. Important work has been done in encouraging scientific research and promoting interest in its results. With the association are affiliated national societies which either meet regularly on their own account or during the annual convention week at the close of each year. Meetings have been held so far in Baltimore, Boston, Minneapolis, Washington, Cleveland, Atlanta, Philadelphia, Columbus, New York, Pittsburg, St. Louis, and Chicago. A Pacific Coast Division exists separately and holds its meetings independently in the summer. The official organ of the association is a journal, *Science*, published weekly. Membership is estimated at 15,000.

At the Toronto meeting of the association in 1921, held, December 27 to 31, by the invitation of the University of Toronto and the Royal Canadian Institute, the treasurer's report showed the total endowment funds of the association to amount to \$121,414.77 and the income for the fiscal year to be \$56,463.20. Among other measures, resolutions were adopted urging legislation requiring the use of the metric system in the United States, under government regulation. An address was delivered by Sir Adam Beck, chairman of the Hydro-Electric Commission of Ontario on "Hydro-Electric Developments in Ontario." He pointed out how these developments have been due to the electric and hydraulic engineers, and traced briefly the history of the hydro-electric enterprises of Ontario, showing how the commission is able to deliver electric power from Niagara Falls in Windsor (254 miles away) at a price only about one-third as great as that of steam-generated electricity in Detroit across the river. A series of moving pictures illustrated the various projects in Ontario. Under the social and economic sciences section a symposium was arranged on "An International Auxiliary Language." In this connection a paper was read by Dr. Frederick L. Hoffman, of the Prudential Life Insurance Co. of America, on "The Organization of Knowledge." The need for better methods in the classification of knowledge was emphasized, so

that what science has accomplished may become much more easily available. He presented an improved scheme of classification which has valuable possibilities in the fundamental field of scientific endeavor.

ADVENT CHRISTIANS. See ADVENTISTS.

ADVENTISTS. The largest branch of this denomination is the Seventh-Day Adventists. Figures for 1920 (latest available) show the following statistics for the North American Union: 2217 churches with membership of 95,877; 708 ordained ministers; 396 licensed ministers; 719 licensed missionaries, and other laborers bringing the total number of workers to 2694. The tithe receipts for the year amounted to \$3,918,515.14, or \$40.87 per capita. The total offerings to foreign missions was \$1,072,143.32; contributions for Home Mission Work, \$252,057.79. Sabbath schools numbered 2903, of total membership, 97,861. The 1308 church buildings were estimated to be valued at \$3,747,639.85. The church schools were 716 in number with total enrollment of 17,510; young people's societies numbered 1278 and had a total membership of 25,988. Contributions for young people's work totaled \$154,070.92. Six publishing houses were maintained and denominational literature was published in 99 different languages. There were 3155 publications issued during the year. Evangelistic work was conducted in 108 countries. Educational institutions in North America and elsewhere number 97, 16 of those in the former carrying full college courses. Loma Linda College, Pacific Union College, and Walla Walla College are the most famous.

Other branches of the Adventists are the Adventists Christian Church, which in 1916 (later figures not available) had 30,316 members, 640 churches, and 626 ministers; the Adventists Church of God, which in 1920 had 10,000 members, 100 churches, and 80 ministers. Exact statistics for 1921 are not available, but it is reported the denomination had the most prosperous year of its existence in the way of spiritual growth. Receipts in endowments, offerings, and gifts as well as membership more than doubled those of the previous year. During the year a new paper was launched, known as *The Field Messenger* and published monthly at Stanberry, Mo. Other branches of the Adventists are Life and Advent Union, which in 1920 had 700 members, 20 churches, and 15 ministers; and the Church of God and Jesus Christ, with about 4000 members, 90 churches, and 50 ministers.

AERONAUTICS. Notwithstanding the uncertain political and economic conditions prevailing in 1921, it may be said that during the year there was a distinct advance in many fields of aeronautics, though hardly to the extent that the more enthusiastic desired, and thought would come with greater government support and encouragement. The application of the airplane and the dirigible had lagged behind the development of these machines, except for military purposes, and with the curtailment of military needs and expenditures and the tendency toward reduced armaments, there was naturally less activity in army and navy air offices, though much important work was done. The development of the aerial post continued and air mail routes were extended and developed, though in some cases, as in the United States, there was involved a read-

justment of services. Here again both in America and Europe the demands of an enforced economy restricted developments, but there were distinct advances made, and many routes reported efficient and economical as well as regular and reliable air service. Certain government activities previously inaugurated, such as the Forest Fire Patrol by army aviators in the western part of United States, and various reconnaissance and other survey and mapping projects in the United States and Canada, were continued and extended. This mapping and survey work was being adjusted on a permanent and systematic basis for hydrographic, reclamation, development, planning, location, and other surveys, and already was quite beyond the experimental stage.

In commercial aviation, that is regular passenger and express service, progress was comparatively slow, though somewhat more marked in Europe than in America as regards the number of regular lines operated and projected but not in the actual number or mileage of flights. Safety and regularity of operation were generally secured and operating costs were being reduced. Probably with less stringent financial conditions more capital for development and organization would have been available, and it was the universal opinion that for some years civil and commercial aviation must be encouraged by government sympathy, interest and coöperation. However, there was an increase of air traffic on important routes such as across the Channel and between several continental cities.

On the technical and scientific side the advances though not spectacular were important. In all fields careful computation, design, and research were in progress, for airplane engineering long since had progressed beyond rule of thumb methods. In no field of mechanical engineering was there better and sounder design and precision of construction than in the development of planes and engines and the extraordinary long distance and duration, not to mention high speed records, flights, were eloquent testimony in this direction.

Obviously the military and naval side of aeronautics cannot be dismissed as summarily as above, and the reader is referred to the articles on MILITARY and NAVAL PROGRESS for this side of the discussion, but it is pertinent to call attention to such work as the destruction of obsolete or surrendered vessels of war and the dropping of heavy weights of high explosive bombs, weighing in one case as much as 4300 lbs. from airplanes and dirigibles, not to mention ease of penetrating the interior of a country, which matters figured to an important degree in the discussion of the Disarmament Conference (q. v.) at Washington in November and December, 1921. In this connection, an event fraught with great possibility as extending the range and usefulness of the swift airplane carrier or the battleship was when the U. S. Navy launched a seaplane from its first catapult at League Island Navy Yard, Philadelphia, preparatory to equipping surface craft with fighting and scout planes.

Returning to commercial and civilian flying in the United States, a review compiled by the Aeronautical Chamber of Commerce for the U. S. Department of Commerce stated that this had increased in 1921 20 per cent over the previous year. In 1921 twelve hundred aircraft were being operated by civilians with a flying record amount-

ing to more than 6,500,000 miles and carrying approximately 275,000 passengers. These figures were based on authenticated reports to the Aeronautical Chamber of Commerce from all sections of the country, and demonstrated that America was maintaining a place in the air as far as individual effort and accomplishment were concerned.

Late in the year the so-called Wadsworth-Hicks Bill providing for a Bureau of Civil Aviation in the Department of Commerce to regulate and develop navigation of the air, came before the Congress of the United States. This proposed bureau, among other duties, was to have supervision over the licensing and registration of all commercial aircraft and pilots and the enforcement of the laws. This measure sought to embody the recommendations of President Harding contained in his special message on the subject of aviation, sent to Congress soon after the opening of the session in December, 1921, when he transmitted the annual report of the National Advisory Committee for Aeronautics.

The bill as introduced was perfected and agreed upon by all agencies directly concerned with aeronautics. There was provided the appointment by the President of a Commissioner of Civil Aviation, to prepare rules and regulations for air navigation, including the issuance of licenses for aircraft, aviators, and air stations, who was authorized to designate and lay out air routes and to study the possibilities for the development of civil aviation in all parts of the United States.

The bill in the form as introduced was the result of conferences between the representatives of the Aero Club of America, the aircraft industry, and heads of the Army and Navy Air Services, the Weather Bureau, and the National Advisory Committee for Aeronautics. It dealt in considerable detail with the various phases of the air problem and sought to supply much needed legislation and harmony in this field.

As typical of the increased attention paid to practical aviation, mention may be made of the first American National Airway which was opened by the Army Air Service between Bolling Field, Washington, D. C., and Dayton, Ohio. In an attempt to popularize flying as well as to dispose of surplus stock during the year the U. S. Navy Department released four million dollars worth of flying boat equipment for the civilian market at greatly reduced figures.

NEW AIRPLANES. In 1921 there was successfully put in service the Larsen all-metal armored monoplane carrying machine guns, an American type, which later in the year, as related below, was able to secure the World's Endurance record. Two other important developments were the torpedo-carrying plane and the Navy Scout. Another important American development of great mechanical advantage was the geared propeller and multiple drive system tested successfully by the Gallaudet Aircraft Corporation at East Greenwich, R. I. It permitted the harnessing of three motors to one propeller and gave greater power, flexibility, and safety. A number of different types of small sport machines were produced in the United States in 1921. The Sperry "Messenger" with Lawrence motor, the sport Farman, the Thomas-Morse racing monoplane, the Laird Swallow, the Longren folded wing sport plane, and others were introduced during the year in the United States.

In Europe, as shown at the various aviation shows and in flight, there were also a number of developments during the year, but mostly in the direction of refinement and increased efficiency. New planes were developed and older ones improved as in the case of the Nieuport monoplane, whose record of speed has figured many times in this annual review. In 1921 the latest model (Nieuport-Delage) made a notable record, being flown at 206 miles per hour with a 300 h. p. Hispano-Suiza motor. By some engineers this new model was considered a biplane, although the lower plane, only one metre square and placed between the two landing wheels was so small as to be quite insignificant. In the upper plane there was a span of 8 metres and a breadth of 1 metre and 50 centimetres, while the fuselage measured 6 metres, 50 centimetres. The whole machine ready for flight weighed 950 kilogrammes (2094 lbs.).

In England a new type of monoplane brought out during the year was originally called the "Handalula," and represented a radical departure from current practice, the wing being shaped like that of a bird. This machine, when flown by Commander Kenworthy at Northolt Airdrome attained a speed of 187 miles an hour and reached a height of 3000 feet on almost its first flight. This performance was early made with only a 300 horsepower Hispano-Suiza engine, but a larger machine of modified design was built to be engine by a 1000 horsepower Napier "Cub," motor, and a much greater rate of speed was expected. The wing of this monoplane was designed specially for high lift by a Mr. Holle, who had been studying bird flight and the subject of high lift wings. The new plane became known as the "Alula," and inasmuch as it was typical of the later monoplanes with a large and powerful engine mounted in the fuselage below the wings it was of interest to determine just how much advantage would be secured with improved wing design.

AIRPLANE ENGINES. In the 18 years elapsing from the flight of the first airplane at Kittyhawk, N. C., in December, 1903, no feature stood out more strongly than the development of the airplane engine. Just as artificial flight largely was made possible by the small internal combustion engine, so its development had depended in no less measure on the improvement of the engine as suggested in the table below. The original engine of the Wright Brothers gave only 12 horsepower with a weight of 12.7 pounds per horsepower. This efficiency was so increased that the Liberty motor, used in 1918 and in a measure typical of modern engines up to 1921, stands out conspicuously in the table below.

The figures, except for the first and last columns (Wright and Liberty motors) are average values of principal engines for each year:

Year.....	1903	1910	1914	1915	1916	1917	1918
Horsepower.....	21	54	112	133	185	243	450
Weight, lbs.....	152	309	437	512	570	693	825
Lbs. per h. p.....	12.7	5.7	3.9	3.8	3.1	2.8	1.8

But no less striking were the reliability and endurance records of these high speed machines as shown in the extraordinary mileage the airplanes they drove were able to make. For example of the airplanes in daily flight between London and Paris, among the most successful machines the DH-18's which, equipped with a single 450

h.p. Napier aëro engine, had a passenger carrying capacity of eight and a total loading capacity of 18,000 lbs. It was the practice to run these Napier engines the remarkable distance of 10,000 miles before they were taken down for careful inspection, which was done solely by way of precaution. After examination these engines were reassembled for immediate service. Some of the Napier engines on the London to Paris aëro mail had actually covered a distance of 25,000 miles up to the end of 1921 and were in regular and daily service on the cross channel journey.

During the year in the United States many improvements were made and tested not only in airplane design and construction but in the internal combustion engine. Motors were made more reliable, more economical as far as fuel consumption was concerned, and more efficient. New types of motors were developed and were constructed, including the Wright, Lawrence, Packard, etc., radial, air-cooled, and steam. One of the important developments of the year was an internal combustion engine of 700 horsepower which was under test at McCook Field, Dayton, Ohio, and promised to be one of the most powerful in the world.

NOTABLE AMERICAN PERFORMANCES. The year 1921 was replete with notable and spectacular performances by American aviators and airplanes. These were noteworthy as marking distinct practical advances in the art of aviation which would soon become or indicate standard practice rather than as mere sensational or isolated feats of men or machines. Such for example was the transcontinental flight of Lt. W. D. Coney from San Diego, Cal., to Jacksonville, Fla., 2180 miles in 22 hours and 27 minutes. The flight of the aëromarine "President Zayas" from New York to Havana in 19 hours flying time, the 4842 mile flight of the two U. S. Marine Corps planes in charge of Lt. Col. T. C. Turner, from Quantico, Va., to Santo Domingo and return, the 3200 mile flight of the twelve Navy seaplanes from San Diego, Calif., to Panama were also notable achievements. On the purely military side, though showing excellent functioning and operation on the part of machines and pilot were the repeated performances in connection with manoeuvres of the Army, Navy, and Marine Corps planes which flew 100 miles out at sea and dropped tons of explosives on the surrendered German craft in the course of the aërial warfare demonstrations off the Virginia Capes in June and July, which proved conclusively the effectiveness of airplanes in coast defense against surface vessels. See **MILITARY PROGRESS AND NAVAL PROGRESS.**

LONG DISTANCE FLIGHT OF "SANTA MARIA." An important and interesting long distance passenger flight was made during the year by the American eleven-passenger flying cruiser "Santa Maria" of the Aëromarine Airways Co., which landed at New Orleans after a complete tour of the eastern section of the United States. The "Santa Maria" in 1921 was the largest passenger flying boat in the world, and had covered 18,000 miles in the air, and transported more than 2000 passengers in absolute safety. During this trip she was in the air a total of 270 hours, which was conceded to be an unprecedented feat for an airplane.

This notable flight was started at Key West when the Aëromarine Airways, with the co-

operation of the United States Navy Department, planned to fly the "Santa Maria" up the Atlantic coast to Washington and New York, and thence across New York State over rivers, lakes, and canals to Montreal, and along the Great Lakes via Toronto and Detroit to Chicago. From the latter city the "Santa Maria" went to New Orleans along the valleys of the Illinois and Mississippi rivers, stopping at St. Louis and Memphis.

This trip was not so remarkable for its total distance, as probably not more than 5500 miles was accomplished in a bee line, but the "Santa Maria" made a large number of passenger flights at each of the cities she visited. She carried among her through passengers a representative of the U. S. Navy throughout, Admiral C. J. Peoples, and then Commander P. N. L. Bellinger of the famous NC-1. Both were specially assigned by the Navy Department. During 1921 the fleet of fifteen flying boats of the Aëromarine Airways alone flew 100,000 miles and carried 6814 passengers, 29,002 pounds of freight and mail between Key West and Havana and at various posts along the Atlantic coast.

PHOTOGRAPHIC SURVEYING AND MAPPING. Photographic surveys from airplane and dirigible by 1921 had become as commonplace as they were useful and many of the military advantages developed during the war were found applicable to civil and other engineering and exploration. On the coasts of the U. S., Army, Navy, and Marine Corps aviators made many important aërial surveys, such as those of the Olympic Peninsula in Washington, the Mississippi River Delta and the coastline of several islands in the West Indies. Navy aviators prepared a photographic map of the mouth of the Mississippi for the U. S. Coast and Geodetic Survey, while a map of Guantánamo Bay was also made for the U. S. Hydrographic office.

In Canada the Reclamation Service made an airplane survey of a proposed drainage project in the region of the Carrot River, on the boundary between Northern Manitoba and Saskatchewan. The reclamation of 800,000 to 900,000 acres of land was involved in this large project, and a reconnaissance or rough topographical survey would have been difficult as much of the area was inaccessible on account of floods. Much valuable data was thus secured in short time so that if a ground survey later with instruments was required it could be done readily.

An interesting and useful discussion of aërial photographic mapping was published in *Engineering News-Record* (New York) for Oct. 13, 1921, p. 596, in which aërial photographic mapping for municipal and other engineering services was treated.

GOVERNMENT USES OF AIRPLANES. The previous successful use of airplanes to detect and prevent forest fires in the western United States was continued during 1921 and the forty-one army airplanes operated on the Aërial Forest Patrol in the National Forests on the Pacific Slope made 396 patrols during the season. They discovered 832 fires and provided protection to 7,230,459 square miles of valuable timber lands. In Canada the new Dayton Wright forest patrol seaplanes were placed in service during the summer. U. S. Marine Corps planes were used in revenue service and located many illicit stills on the eastern coast. On one occasion, on September 2, an entire moonshine village was thus detected.

The Bureau of Aeronautics was organized by the Navy Department thereby coordinating the various divisions of Naval aviation. The airplane rendered invaluable aid in flood, fire, and pestilence, one of the most notable occasions being the Pueblo, Colo., flood in June, and at the time of the threatened railway strikes, manufacturers and owners of aircraft proposed the organization of a supply and mail service for the different cities.

DIRIGIBLES

Notwithstanding the sad tragedy connected with the destruction of the huge airship intended for the U. S. Navy during a trial flight, there was considerable activity to be recorded in the development and use of dirigibles, particularly by the U. S. Navy and also in the proposed airships to be used in Europe for long distance transportation.

ZR-2 DISASTER. The most tragic disaster in the year's record in aeronautics was the collapse of the British designed and built dirigible R-38, constructed for the United States Navy and known on its records as ZR-2. This catastrophe occurred above Hull, England, on August 24, 1921, while the huge dirigible was on a trial trip under the command of a British officer, Lieut. A. A. Wann, and with a British crew of 49 officers and men. There were in addition six officers and eleven non-commissioned officers of the U. S. Navy aboard the craft, though it had not been turned over to the American government. The ZR-2, which had had a number of trial trips beginning as early as June 23, 1921, on this particular occasion had departed from her moorings at Howden on August 23, and had been cruising for some 30 hours in the North Sea and off shore. During this time she was in communication with her base by wireless and no mishaps or lack of control were reported. The trip was about concluded and the airship flying over the city of Hull at a height of about 1200 feet and ready to descend to her shed, when about 7.30 p. m. the huge gas envelope was seen to collapse and break in two while there was a severe explosion of the oil tanks which wrecked the steel frame and scattered fragments broadcast. The wrecked airship, which by design had been steered toward the Humber, fell into the river carrying with it those of the crew who had been unable to escape by leaping through the traps of the main car equipped with safety parachutes. The airship fell in the shallows of the river where it could not be reached on account of the smoke and flames so that all who did not escape perished. The tide rising rapidly soon submerged the wreck and but little remained of the world's greatest airship. The bodies of the victims were rescued later and the wreck of the dirigible was carefully studied. Those lost in the disaster totalled sixty-two of whom two subsequently died of injuries in the hospital.

In the YEAR BOOK for 1920, page 8, were given the dimensions and other data of this great dreadnaught of the skies, which was not only the largest but the most formidable aircraft in existence. She was designed for a flight of 5000 miles at full speed of 70 miles per hour, or for 6500 miles at a speed of 60 miles. The 690 feet of length practically rivalled the height of the Woolworth Tower in New York City and the

2,700,000 cubic feet of hydrogen gas would have lifted 83 tons of dead weight. The six Sunbeam-Cossack engines of 2000 horsepower were fully capable of producing the desired speed. The armament was also of interest in that it comprised fourteen Lewis machine guns and a one-pounder automatic in addition to four bombs weighing 520 pounds each and eight bombs weighing 230 pounds each. Every effort was made to eliminate such weaknesses of the German Zeppelins as had been revealed in the war and a complete system of operating and fire control was developed. Sleeping quarters were provided for thirty officers and men, while the heating of food was accomplished by using the exhaust gases in a special arrangement. Comparison of the ZR-2 with the R-34 which made the trip from England to America and back in 1919 was inevitable. The R-34 crossed in 108 hours and 12 minutes in July, 1919, but it was necessary to watch carefully the fuel supply. The ZR-2 could carry 2900 more gallons of gasoline and was capable of from ten to twenty-five miles an hour greater speed as she had six engines of 350 horsepower each as compared with five of 250 horsepower for the older airship. The American crew which had been trained on the dirigible was ready to take over the craft and an early departure was planned, a course having been plotted from Howden westward over Ireland and direct by a great circle to Newfoundland whence it was proposed to cross New England and proceed to Lakehurst, N. J., where a huge hangar costing some \$2,000,000 was in readiness to receive and house the ship. The ZR-2 had been put through a rigid series of trial trips and on one of the first of these, a "hump" was developed due to the bending under strain of the supporting girders and lattice work, which served as the foundation for the envelope and held the understructure to it. This led to a strengthening of the girders and rods, so that it was believed that the tendency to buckle had disappeared. The British constructors were not, however, entirely convinced and urged further and severe trial trips before the airship was turned over to the Americans. It was also suggested that the arranged day of departure should be postponed until further trials had been made.

Lieut. Wann, the commander, was the only one of those in the forepart of the balloon where the explosions occurred who escaped with his life, though he was severely injured. The other survivors were all in the stern. Lieut. Wann attributed the disaster to a weak structural part of the ship which broke in two pieces.

As was quite natural this tragedy was the subject of official investigation in England. A coroner's jury on October 4, turned in a verdict of accidental death, stating that nobody was to blame and finding no evidence regarding the actual cause of the dirigible's destruction. On the other hand, the Air Ministry's Board of Inquiry in a report published on October 7, blamed the disaster on a lack of proper coöperation and supervision when the designs of the dirigible were first prepared and the later failure to submit the changes in design to closer scrutiny. According to the report the airship in the course of the tests was made to turn sharply at a speed of from 45 to 50 knots and such a manoeuvre caused the breakdown between the ninth and tenth frames. The fire was produced by broken elec-

trical conductors in contact with broken gasoline feed pipes which spread throughout the keel. There was no fire in the after part of the ship from which four of the fire survivors escaped.

"That the requirements as to the maximum height and speed, together with the limits of length imposed by the only available construction sheds, necessitated the utmost economy at Hull in the matter of weights and materials. Many new features were introduced in the design, and it appears evident that in some cases there was a lack of vital aerodynamical information as to the effects of these modifications on the strength of the structure.

"That having regard for the great differences in requirements between His Majesty's airship R-38 (the British name for the ZR-2) and previous British airships, the design should have been examined and discussed by an official and competent committee before actual construction was commenced

"That, although there can be no doubt that efforts were made toward the end to complete the ship in the shortest possible time, there is no evidence that the work on the hull or structure suffered."

CONSTRUCTION OF ZR-1. In addition to the European airships ordered or under test by the United States Navy there was under construction during the year the ZR-1, which was the American Navy's first attempt to develop a huge airship of the rigid type along the lines of the German Zeppelin L-49, which was captured intact during the war in France. This German craft, built after some 140 airships had been employed in actual service, was considered to represent the best construction of the Zeppelin engineers and works and was regarded as a safe and reliable craft. On this design as a basis the American engineers were proceeding with the idea of making improvements suggested by experience rather than radical innovations. The construction was hampered by reduced appropriation, but the duralumin for the girders of the ship's framework had been delivered to the Philadelphia aircraft plant of the Navy where it was being fabricated into the lattice work frame members. The contract was let for the eighteen gas bags, while arrangements were being made to lay the keel in the new hangar which had been built at Lakehurst, N. J., and completed during the year to house both the ZR-1 and ZR-2. Here the frame members which had been cut and assembled for fitting at Philadelphia were to be transported and then reassembled and placed in the ship. The ZR-1 had a length of 645 feet and a diameter of 78 feet, both the German standard dimensions, and was to be equipped with six Liberty engines, each of 400 horsepower and in a separate car as against the original plan of five engines. These engines in service were to be reduced to 320 horsepower each with a promised increased economy and reliability of operation. The ZR-1, whose gas bags were designed for either hydrogen or helium, was to have a gas capacity of 2,000,000 cubic feet or some 700,000 cubic feet less than the ZR-2, while her lift was planned to be about twenty-seven tons less than that airship and be about equivalent to the fifty-six ton pull of the British R-34 which made the transatlantic trip. The speed was also planned to exceed the 60 mile maximum of German airships.

U. S. AIRSHIP "ROMA." In the autumn of 1921 the large semi-rigid dirigible "Roma," purchased by the United States government from Italy, arrived in good condition and was assembled at Langley Field. It was found that the envelope which contains the gas was in exceptionally fine shape, and no difficulties were encountered in its inflation, or in assembling the keel and the six power units, so that by November the airship was ready for trial.

The "Roma" was said to possess a range of action of approximately 3500 miles at 80 miles per hour, while at cruising speed, a distance of 8000 miles was estimated. Its capacity was 1,200,000 cubic feet, length 410 feet, width 82 feet, height 88.6 feet, and useful load in the neighborhood of 19 tons. It was equipped with six 12-cylinder, 400 h. p. Ansaldo motors but later it was proposed to substitute Liberty motors of corresponding horsepower for them when they would require replacement.

It was proposed by the Army Air Service to use this ship, which under favorable conditions was capable of making a non-stop flight from the Atlantic to the Pacific coast, for such work as long-distance reconnaissance flights, photographic surveys, coast patrol work, and the carrying of supplies for heavier-than-air units.

U. S. AIRSHIP No. A S 1504. The first test flight of the Army Airship No. A S 1504, a Goodyear pony blimp of the A type, was made at the Goodyear Akron Air Station September 12, by Flight Officer Lieut. G. W. McEntire. This airship had a capacity of 35,000 cubic feet of gas and was 95.5 feet long, with a maximum diameter of 28 feet. The car accommodated two or three passengers and was equipped with a Lawrence three-cylinder 50 horsepower motor, giving a cruising radius of 450 miles.

This ship was flown to Dayton, Ohio, on September 19, to be used by the Engineering Section of the Balloon and Airship Division of the U. S. Air Service for experimental purposes.

A GERMAN ZEPPELIN FOR THE UNITED STATES. Towards the close of 1921 it was reported that the Allied Council of Ambassadors in Europe had agreed to permit a modification of the protocol signed in June whereby Germany was limited as to the size of airships it might build. In place of the 30,000 cubic metres maximum capacity thus permitted Germany was to be allowed to build for the United States an airship of the L-90 type at the Friedrichshafen hangar after the completion of which the hangar, the largest in Germany, was to be taken down and the machinery and personnel dispersed. This was considered both in the way of a diplomatic triumph for the United States and as an evidence that the American authorities were convinced of the usefulness of these huge aircraft. It was also stated that this new airship would be built without cost to the United States as the expense would be figured in the war settlement.

Assuming that this proposed Zeppelin would reproduce the German L-70 class there would be involved an airship measuring 743 feet in length, or 48 feet longer than the ill-fated British ZR-2, described above, but having the standard German diameter of 78.4 feet. These Zeppelins were capable of sustaining a total useful load of more than 88,000 pounds, equivalent to 59 per cent of the total weight of the ships. Each carried a crew of thirty men. Seven Maybach engines of 290

BRITISH Z R-2, DESTROYED BY ACCIDENT
TWO GIANT DIRIGIBLES

horsepower each were installed in six power cars suspended below the gas bag of the ship, two being placed in the after car, thus giving a total horsepower of 2030, and developing a speed of over 80 miles an hour. It was decided that the construction of the new Zeppelin should be under the direction of technical officers of the U. S. Navy, and when finished it would be taken over and navigated to America by an American Naval crew. In this connection towards the end of the year it was reported that engineers of the Zeppelin Airship Building Co. were in the United States discussing plans for a possible transatlantic fleet of passenger and mail airships to operate between Germany and America.

HELIUM USED IN AN AIRSHIP. The first successful use of helium as a substitute for hydrogen gas occurred on Dec. 1, 1921, when the U. S. Navy non-rigid airship C-7 was successfully inflated and made two successful trips from the naval air station at Hampton Roads, Va., which were repeated on the following day and subsequently. This large blimp, which had a capacity of 181,000 cubic feet, was filled with gas made at the U. S. Government plant at Fort Worth, Texas. This installation was developed during the war when it was found that by a special process helium could be obtained in commercial quantities from the oil from certain wells in the Texas and Oklahoma fields. In this large plant built during the war for the joint use of the Army and Navy at heavy cost, by means of a complicated refrigerating equipment the helium could be separated from the other gases and made available for lighter than air flying machines. It has the distinct advantage of being non-inflammable and will not explode, but it has 92 per cent of the lifting power of hydrogen. Furthermore it is but 62 per cent as diffusive as hydrogen, which notwithstanding the airtight material of the envelopes often seeps through and goes to waste. Helium also does not deteriorate as rapidly as hydrogen which becomes impure when long kept in a dirigible, as it does not absorb the impurities as readily. In addition to the installation at Fort Worth there was under construction at Langley Field a plant for the production of the gas in usable form for the airships, while another helium producing plant was proposed for location on the Pacific coast. Later in the year the C-7 made a trip to Washington and other flights.

A NEW ITALIAN DIRIGIBLE. The success of the giant semi-rigid airship "Roma" sold by Italy to the United States Government, led the Italian air authorities to build another on much the same design, only larger and better, profiting by experience. It was to be known as the "Napoli" and probably was to be the second of a large fleet of huge aircraft.

The "Napoli" was to be of the semi-rigid type, much the same in shape as the sister airship though more elongated and of 54,000 cubic metres capacity instead of 34,000.

The power plant was to include twelve Spa motors of 300 horsepower each, Italian designed and constructed, and set tandem in the steel ribs so that they could be repaired and even changed, if needful, during flight.

The "Napoli" was designed to carry a hundred passengers. With only four engines working its speed was expected to be forty-three miles an hour.

SPAIN-ARGENTINA AIRSHIP SERVICE. The most notable airship project discussed during the year was an air company affiliated with the Compania Transatlantica Shipping organization to operate passenger and mail Zeppelins between Cadiz and Buenos Aires, making the trip between the two cities in ninety hours. Application for a subsidy was to be made to the Spanish parliament.

The enterprise was Spanish in its inception and development with Major Herrera representing the government, but the organization and management was to be German with Dr. Hugo Eckner formerly with Count Zeppelin as chief of the technical staff.

Dr. Eckner stated that war experiences with the German Zeppelins were sufficient to enable his company to guarantee the smooth operation of airships of 45,000 cubic metres in size at a rate of speed of seventy-two miles an hour while carrying between thirty and forty passengers and 300,000 letters.

The idea of the Cadiz-Buenos Aires service to establish a quick and direct connection with the trans-Atlantic nations originated in Spain and negotiations with the Zeppelin management led to the organization of a commission, which subscribed 50,000,000 pesetas (about \$10,000,000) of the necessary 80,000,000 pesetas (about \$16,000,000), the Spanish Government guaranteeing the interest on this sum.

Major Herrera together with two other Spanish air experts, and two Germans, including Dr. Eckner made a trip to Argentina in order to choose sites for hangars, study the conditions, and obtain financial interest and support from the Argentine Government. They reported that it would be necessary to use larger airships than any previously built (with the exception of R-38), and that the weather on the European side was favorable for anchoring but that on the American side it would be necessary to have a revolving shed. Excellent wind and weather conditions greatly favored the route proposed, which was 6000 miles long, and the airships would be able to escape tempests.

The return journey from Buenos Aires to Cadiz would require a hundred hours instead of ninety, owing to the northeast winds that would be met.

It was proposed that the airship service should be started with three airships, which would cost 36,000,000 pesetas (about \$7,200,000), and hangars, gas factories and wireless installations, costing 40,000,000 pesetas (about \$8,000,000), while unforeseen expenses were estimated at 4,000,000 pesetas (about \$800,000).

The cost of each trip was estimated at about 42,000 pesetas (about \$8400), and it was anticipated that the receipts would be about 900,000 pesetas (about \$180,000) based on carrying sixty passengers at 5000 pesetas (about \$1000) each, and 300,000 letters at a special mail rate of 2 pesetas (about 40 cents) each.

FRENCH DIRIGIBLES

The aeronautical station at Orly in the suburbs of Paris was selected to be the principal French airship base; and, during the year 1921, the buildings and plant required for construction were in an advanced stage. They included big gas-holders, airship sheds, and workshops, and a Customs house. Mooring masts for airships were embraced also in the French programme. Under

the war settlement, seven German airship sheds were allocated to France, and the French Council of National Defense was seeking to persuade the Government to agree to the Air Department's airship programme, and reerect these sheds at Marseilles, Paris, Tunis, Casablanca, Algiers, and Dakar (Senegal).

It was realized that France could not neglect the prospect of German airship construction and operation being maintained.

AIR COMPETITIONS

AMERICAN FLYING MEETS. During 1921 a number of well attended flying meets and competitions were held in the United States. Among the more important were the races, and demonstrations on Long Island, in Florida, Hartford, Conn., Baltimore, Chicago, Kokomo, Ind., Dallas, Denver, Oakland, and Long Beach, Calif., several in Iowa and Nebraska, and one of the most important, the American Legion Flying Meet at the National Convention in Kansas City, Mo., October 31-November 2.

PULITZER TROPHY RACE. The Pulitzer Trophy Contest for 1921 was held on November 3, at Omaha, Neb., over a triangular course of 30.7191 miles with five laps, or a total distance of 153.595 miles. It was won by Bertrand Acosta in a Curtiss Navy biplane with Curtiss CD-12 400 horsepower motor in 52 minutes and 8.4 seconds, or an average speed of 176.75 miles per hour, thus breaking the previous record of 173.1 miles per hour over a 186 mile course made by Lieutenant Georges Kirsch in a Nieuport-De Lage plane at the Deutsch de la Meurthe competition at Etampes, France, on September 30. The result of the Pulitzer Contest for 1921 was noteworthy in that the successful contestant was an American who flew an American plane equipped with American engines. Second place was also taken by an American plane, as Clarence Coombs in the Curtiss-Cox Triplane accomplished the course in 54 minutes 6.2 seconds, or an average speed of 170.34 miles. Third place was taken by J. A. MacReady in a Thomas Morse MB-6 biplane with a Wright H-2 motor in 57 minutes and 20.4 seconds; and fourth place by Lloyd Bertaud in an Italian Balilla scout biplane with a Curtiss C-12 motor in 61 minutes 31.4 seconds. James Curran in a S. V. A. biplane went two laps and was forced down by engine trouble, while Colonel H. E. Hartney, whose feed pump failed to work, was injured in a forced landing on the first lap. The 1922 competition was arranged for Detroit, where the 1921 contest was to have taken place, but was abandoned in favor of Omaha as greater support seemed possible in the latter city.

LARSEN TROPHY COMPETITION. This interesting airplane race on November 5 was held also at Omaha, over a triangular course of 8 laps each of 30.7191 miles or a total of 245.753 miles. This was won by E. F. White in a S. V. A. plane which negotiated the distance 154 minutes and 56 seconds, or an average speed of 95.17 miles per hour, though the decision of the Contest Committee was appealed. In this competition the efficiency of the various machines was determined on the basis of the following formula:

$$E = \frac{(W - T)S}{G}$$

Where

E = Factor of Efficiency.
W = Total Load Leaving Ground — Lbs.
T = Light Weight of Plane + Water — Lbs.
W — T = Total Useful Load — Lbs.
S = Average Speed, M P H Actually Made.
G = Gallons of Fuel Actually Used.

WORLD'S ENDURANCE AIRPLANE RECORD. For the first time since the record for time of flight by an airplane was made by Wilbur Wright in the early days of aviation (18 seconds in December, 1903, was the first duration of flight for a heavier than air machine) the World's Endurance record was made by an American machine with an American pilot and passenger. On Dec. 30, 1921, Edward Stinson and Lloyd Bertaud were in continuous flight for 26 hours 19 minutes and 35 seconds above Roosevelt Field near Mineola, Long Island, N. Y. This supplanted the previous record of 24 hours 19 minutes and 7 seconds made June 4, 1920, by Lieuts. Lucien Boussoutrol and Jean Bernard at Ville Sauvage la Dordogne flying a Farman Goliath airplane. The American record was made in a JL-6 airplane designed and built in the United States by John M. Larsen; an old metal plane developed from German designs, but with important and extensive modifications and improvements.

The average speed during this flight was estimated at about 85 miles an hour so that the actual distance flown was in the neighborhood of some 2500 miles which is also a record distance for a non-stop flight though of course the course followed was circular with the landmarks and especially lights below to guide the pilot. This distance may be compared with the Transatlantic flight of Alcock and Brown from St. Johns, Newfoundland, to Clifden, Ireland, of 1936 miles made June 14-15, 1919. The 185 horsepower B. M. E. engine, which was of German design though of American construction, functioned perfectly during the flight and was capable of further effort but defects developed in the lubrication system including a faulty connection so that certain parts had to be lubricated by pouring the oil by hand. The plane was built of duralumin throughout and had a wing span of 50 feet and a length over all of 81 feet by 11 feet in height. Ordinarily its cabin accommodated six passengers, but on this occasion the space was filled with extra fuel and lubricant. The Larsen airplane was one of several that had been constructed and used during the year in long distance flying and the achievement of a world's record came as the well merited result of careful design, construction, and experiment with this type of plane.

AMERICAN SPEED RECORD BROKEN. The American speed record for airplanes made under international standard and official conditions and supervision was broken by Bert Acosta, piloting a Curtiss navy racer, at Mineola, November 22. In this flight an officially timed average speed of 184.8 miles an hour was made and the maximum attained, as checked by electric timing apparatus, was 197.8 miles an hour.

This flight was also noteworthy as the first to be made in the United States since the war under the rules of the Federation Internationale Aéronautique. These rules, which were duly carried out, provided for eight flights over a measured course of one kilometre, four with the wind, and four against.

This American record took the place of that established in the autumn of 1920 by Captain C. C. Moseley in the U. S. Army Air Service Verville-Packard biplane. For this flight, however, the F. A. I. rules were not applied but there was returned an official record of 186 miles an hour. Under the same system Acosta's time on November 22 would have been 197.8 miles an hour.

ALTITUDE RECORD. A record height of 40,800 feet officially corrected to more than 37,800 feet was attained on September 28, at McCook Field, Dayton, Ohio, by Lieut. John A. McCready, test pilot, in a La Pere biplane. This supplanted the record previously made on Feb. 28, 1920, by Rudolph C. Schroeder, who drove the same biplane to a height of 36,020 feet, later corrected to the true altitude of 33,114.

At 40,800 feet McCready's engine ceased to function and he glided back to the field without any difficulty.

The plane used by Lieut. McCready was equipped with an engine supercharger invented by Dr. S. A. Moss which during altitude flights automatically changes the mixture in the carburetor and keeps the water in the radiator warm at all times, regardless of the temperature.

Another important altitude record was achieved by Lieutenant Leigh Wade, a test pilot at McCook Aviation Field, who on December 8, succeeded in attaining a height of 26,500 feet in a United States Army Martin twin motored bombing plane, also equipped with a supercharger at the engine. This achievement was regarded in its military aspect as demonstrating the practicability of daylight bombing, for previously it was considered that the limited speed of the heavy planes and their inability to reach high altitudes prevented their use on bombing expeditions except at night. In this flight an observer was carried and it was believed that a world's record for a multi-motored plane with two occupants was established.

At the maximum altitude of 26,500 feet, Lieutenant Wade reported that his gasoline feed lines froze and he was forced to descend. A minimum temperature of 34.6 degrees below zero was registered. Lieutenant Wade was in the air four hours on this flight.

The Loening Monoplane Flying Yacht carried four passengers to an altitude of 19,500 feet over Port Washington, L. I., in August.

PARACHUTE RECORD. A record for height in parachute jumping was made at Kansas City on Nov. 1, 1921, in connection with the American Legion Flying Meet, when Sergt. Encil Chambers, U. S. A., of Post Field, Fort Sill, Lawton, Okla., jumped approximately 26,000 feet—slightly less than five miles—from an army plane. The descent took eighteen minutes. While these records do not possess special significance it may be said that Sergeant Chambers had previously descended 22,002 feet, while Lieutenant Hamilton at Rantoul, Ill., made a jump at an altitude 23,007 feet, the official altitude verified. Chambers made his ascent with a pilot, Wendell Brookley, both equipped with oxygen tanks and special fur-lined clothing. When the flyers had reached the maximum altitude Chambers climbed out on the fuselage and jumped head first into space, dropping fully 500 feet before the large silken parachute opened.

ITALIAN GRAND PRIX. The aviation grand

prix at Brescia, Italy, was won by Sadi Lecoq, the French aviator, on September 5, flying 300 kilometres (186.41 miles) in one hour, 13 minutes and 19 seconds. Lieutenant Brakpaha, of Italy, finished second in one hour, 28 minutes and 58 seconds.

JAMES GORDON BENNETT CUP CONTEST. This annual competition was held in Sept., 1921, and was won by Sadi Lecoq, who negotiated the course of 300 kilometres (186.41 miles) with five turns at Etampes, France in 1 hour, 6 minutes, 17 1/2 seconds, or at an average speed of over 170 miles an hour.

DEUTSCH DE LA MEURTHE TROPHY RACE. This annual competition at Etampes, France, was won on Oct. 1, 1921, by Lieut. Georges Kirsch of France who covered 300 kilometres (186.3 miles) with five turns in 1 hour, 4 minutes, 39 1/2 seconds, or at the rate of nearly three miles a minute.

Sadi Lecoq, the French aviator who had won the James Gordon Bennett cup earlier in the season, was first to take the air, and had made great speed for the first fifty kilometres, flying this distance in 9 minutes 33 1/2 seconds. Unfortunately he was compelled to make a forced landing, suffering severe injury and smashing his airplane in the first lap of the race.

Lannes, the other French pilot, who used the machine piloted by Lecoq in 1920, was the only other entrant to finish the race making the course in 1 hour, 9 minutes, 55 1/2 seconds.

The British and Italian competitors gave up the race after going 100 and 150 kilometres respectively.

NATIONAL BALLOON RACE. To select the representative of the United States for the James Gordon Bennett International Cup competition, a balloon race was held at Birmingham, Ala., starting on May 21, 1921, and was won from a field of nine entrants by the balloon *Birmingham Semi-Centennial*, piloted by Ralph Upson with C. G. Andrus as aide. The distance accomplished was 425 miles to the landing point near Stuart, Va., and the balloon was in the air 34 hours and 40 minutes.

GORDON BENNETT BALLOON RACE. This annual contest in 1921 was started at Brussels, Belgium, on September 18, and attracted fourteen competitors from Europe and America. First place was secured by the Swiss balloon piloted by Captain Paul Armbruster, which descended on September 20 at Lamby Island, off the east coast of County Dublin, Ireland, after a trip of 476 miles. Ralph Upson of the United States flying in a Belgian balloon *Belgica I*, winner of the 1920 competition and loaned to him by Captain De Muyster, and Henry Spencer of England landed very close to one another near Carnarvon, Wales, the latter winning second place with 414 miles as compared with 413 miles for the American. The French balloons, *Marne* and *Picardy*, also landed in Wales near Dolgelly. The Italian entrant Uselli was unable to start on account of damage to his balloon, while the French balloon of M. Biernaim, though damaged, was able to start. The American entries also included Bernard von Hoffman in the *City of St. Louis*, and Wade T. Van Ormand in the *City of Akron*. The Belgian entrant *Belgica* with Lieutenant De Muyster as pilot was handicapped by carrying an extra passenger in the form of one of the

soldiers who entangled in the anchoring ropes, was carried aloft and hauled into the basket.

UNITED STATES AIR MAIL SERVICE. The creditable record of the U. S. Air Mail Service was continued and improved so that the efficiency on the transcontinental route became recognized as a model for civilian aerial transport the world over. Letters even were delivered in New York two days after casual mailing on the Pacific coast. The service developed by the end of 1921 had an average of 88.82 per cent efficiency, that is, completed trips on scheduled time since it was started in May, 1918. The Air Mail had during the year completed its wireless communications system, with fourteen stations having radio plants, three operated by the Navy Department and the others by the Air Mail Service. In February, a continuous flight, with night flying, was made between San Francisco and New York. Mail leaving the coast at 4:50 p. m. February 22, was delivered in New York at 4:50 p. m. February 23. U. S. Mail and Curtiss planes delivered to the Pacific coast photographs of the Carpentier-Dempsey fight within 48 hours after leaving.

During 1921 the U. S. Air Mail Service was maintained over the following routes with those discontinued as noted. Regular service between Omaha, Neb., and San Francisco, Calif. (part of the Transcontinental Route)—started Sept. 10, 1920.

Service between Chicago, Ill., and St. Louis, Mo. (part of the Twin Cities (St. Paul and Minneapolis)-St. Louis Division)—started August 16, 1920.

Regular service between Chicago, Ill., and Twin Cities (St. Paul and Minneapolis) (part of the St. Louis-Twin Cities Division)—started Nov. 29, 1920.

New York-Washington Division was discontinued May 31, 1921.

St. Louis-Twin Cities Division was discontinued June 30, 1921.

Repair Depot, Bustleton, Pa., was consolidated with Chicago Repair Depot, June 30, 1921—Bustleton Field abandoned same date.

An excellent showing was made by the Air Mail Service from July 1 to Sept. 30, 1921, which may be summarized as follows:

Percentage of performance, 98; number of miles flown with mail, 391,018; number of letters advanced, 10,014,280. The performance by Divisions: New York-Chicago, 98.5 per cent; Chicago-Rock Springs, 97.6 per cent; Rock Springs-San Francisco, 98 per cent.

In addition to the 391,018 miles flown with mail on regular schedule, the records show 49,662 miles of test flights and ferry trips, making a grand total of 440,680 miles flown in the three months. During this quarter there were eleven (11) crashes. In two accidents the ships were completely destroyed. In eleven cases of damage eight occurred on aviation fields and three at points of forced landings.

There were no fatalities or injury to employees on regular mail trips during this period. There was one fatality on a ferry trip. On July 16, 1921, Pilot Howard Smith lost his life in ship No. 222 on the San Francisco field. He was assigned to ferry this ship to Reno and fell from an altitude of 300 feet on the home field.

The cost per mile of operation during this period was: July, 73c; August, 71c; September, 70c.

Or an average of 71 1/3 cents per mile during this period as compared with 87 cents per mile cost during the same quarter of the year 1920.

On that portion of the Transcontinental Route between Cleveland, Ohio, and Chicago, Ill., an air distance of 335 miles, 24 weeks of 100 per cent performance on this leg of the route were completed without a break. During the 24 weeks, the mails were flown 96,480 miles without default. It was also reported that a record flight was made by mail planes between Salt Lake City and San Francisco on October 14. The time consumed from take-off at Salt Lake City (5:32) and arrival at San Francisco (11:33) was six hours and one minute. A stop for service of eleven minutes was made at Elko and a twenty-minute service stop was made at Reno; making the actual flying time five hours and thirty minutes as compared with 24 hours and 15 minutes for train No. 9, the fast exclusive mail and express train operated over the Southern Pacific Railroad between Salt Lake City and San Francisco.

COMMERCIAL AVIATION IN EUROPE. In 1921 Commercial Aviation in Europe underwent rapid development and the number of passengers and the quantity of exports and imports transported by airplane, especially between England and the Continent, experienced a decided increase. There were in Europe twenty air lines, covering a total distance of 6000 miles, France held first place with routes covering 2900 miles. Germany was second with 2000 miles and England was third. There were many local lines also, Italy leading with 1260 miles.

In Great Britain the principal interest in commercial flight centered in the service maintained across the English Channel. This seemed to grow in popular favor as illustrated in an interesting comparison of crew and passenger statistics for the Channel services for the week ending Sept. 4, 1921, as follows: Machines, 103; passengers, 427; crews, 129; total personnel, 556. For the corresponding week of 1920 the figures were: Machines, 104; passengers, 219; crews, 129; total personnel, 348.

The average monthly value of British imports by aircraft from Oct., 1920, to April, 1921, amounted to about £50,000 (normally about \$250,000). Exports averaged an equivalent of \$140,000. Reexport values were about \$135,000 a month. As showing the growth of the trans-channel service it was stated that rates on parcel post shipments by airplane from London to Paris were reduced in August to six cents a pound, and parcels were delivered to the house addressee upon payment of a small extra charge. Thus parcels were delivered in Paris on the day they were mailed in London. Nearly 200,000 letters were carried in nineteen months.

The London-Paris freight charge was one shilling a pound for packages up to 100 pounds and 10 pence a pound for packages weighing over 100 pounds.

As illustrating the support that European governments were giving to commercial aeronautics it may be stated that in 1921 bonuses and subsidies amounting to 27,885,008 francs were awarded by France to aerial navigation companies for working the following lines:

Paris-London; Paris-Brussels-Amsterdam; Paris-Strasbourg-Prague-Warsaw; Toulouse-Rabat-Casablanca; Bayonne-Nilbao-Santander; Bordeaux-

Toulouse-Montpellier; Saint Laurent-Cayenne, and Saint Laurent-Inini.

It was planned to continue these lines in 1922 and arrangements were made for opening new routes as follows:

Antibes-Tunis; Bucharest-Constantinople; Oran-Casablanca; Algiers-Biskra; Dakar-Kayes; Montpellier-Marseilles-Genoa.

Disbursement for the commercial routes mentioned represented an increase of 9,137,000 francs in subsidies, and it was proposed to use the remainder of the subsidies in aiding Civil Centres of Training for reserve pilots. Already excellent results had been achieved at these training centres.

In France since the war the growth of commercial aviation was marked, and in 1921 was reaching large dimensions. Whereas in 1919 there were but 960 persons who traveled by air, in 1920 the number of passengers amounted to 6750. In 1921 during the month of March 665 people traveled by air mail. There was a corresponding increase in the carrying of merchandise; 13,900 kilograms were carried by airplanes in 1919, while the total commercial transport amounted in 1920 to 103,330 kilograms (227,739 lbs.). In this last item were included many parcels sent from Paris to London by French dressmakers and milliners. The value of their consignments on the Paris-London service during the year 1920 exceeded 16 million francs, and in 1920 this amount of business was largely exceeded.

One of the notable air line routes in Europe was that from Paris to Prague in Czecho-Slovakia, which city by 1921 has become a veritable centre of air routes, as there were maintained daily services connecting Prague with Paris, Strasbourg, and Warsaw, with a number of new lines seriously contemplated.

In February of 1920 when the Paris service was started three passengers only arrived by air at Prague. In June there were 76. In February, 16 lbs. of parcels and 3 lbs. of newspapers arrived by air. In June 7000 lbs. of parcels and a ton and a half of newspapers were brought by air.

The duty paid on goods arriving by air despatch during the months shows the increase of traffic and was as follows: Feb. 130 crowns, March 3550 crowns, April 30,787 crowns, May 86,752 crowns, and June 207,104 crowns.

The Franco-Roumanian Air Navigation Company operating the Paris-Prague Service, had over 40 machines in service in 1921.

A notable achievement in commercial aviation was accomplished by this same Franco-Roumanian Aviation Co., which operated the Paris-Strasbourg-Prague-Warsaw air line, in extending their line to Bucharest. On October 22 the first direct flight was made, and occupied fourteen hours, including the stops at Strasbourg, Prague, and Budapest. Inasmuch as the journey by railway required about 63 hours, the saving effected was very considerable. This line also was contemplating a direct service between Paris and Constantinople for the spring of 1922, believing that the trip could be made in less than twenty-four hours. For this route a large multiple engine machine of 1200 horsepower was under construction at the Blériot plant designed to accommodate sixteen passengers and their baggage.

Further testimony as to the spread of air transport in Europe in 1921 was the announcement

that a passenger aeroplane service had been put in operation between Riga and Reval in Esthonia. Here large Fokker monoplanes with accommodation for four passengers were used on a semi-weekly service from Reval and connecting with the regular airplane service from Riga to Danzig and from Danzig to Berlin. The trip from Reval to Riga required two hours and the fare was 6000 marks.

GERMAN COMMERCIAL AERONAUTICS. The war did not altogether destroy the air transport and airplane industry in Germany and statistics covering the period from February 5, 1919, to November 26, 1920, indicated that German aeroplanes covered approximately 1,000,000 kilometres and conveyed 5545 passengers, 453,000 kilograms of freight, and 35,000 kilograms of air mail. Similar statistics for the first eight months of the year 1921, showed 3714 scheduled flights as compared with 1878 flights in twelve months in 1920. In eight months of 1921, 5581 persons have been transported by the regular air service. During all of 1920 only 2030 persons were carried. These figures indicate not only an increased amount of flying, amounting it was claimed to some 6000 miles a day, but also the establishment of new air routes and the addition of new planes for such service. The German Air Navigation Service, an association of allied aerial enterprises operating from Berlin as a centre in 1920 had 150 airplanes of various types in service or ready for operation.

The published air service schedule showed that from Berlin there were daily trips to and from Brunswick, Dortmund, Dresden, Hamburg, and Bremen, extended by the Baltic Air Service of the Sablatnig aeroplane firm to Travemuende, Warnemuende and Sassnitz, making connections with the steamers leaving those towns for Sweden, Norway, and Denmark.

The Danzig Air Service, in connection with the Sablatnig service maintained the flying routes between Berlin and the East Prussian route—Danzig, Koenigsberg, Memel—with connections at Riga and Reval, the Lloyd Air Service Sablatnig had an additional route from Berlin to Westphalia, Muenster, Bremen, Wangeroo.

The Rumpler Air Service provided planes for the Berlin, Leipzig, Nurnberg, Munich, Augsburg route, and at Munich the Bavarian Air Lloyd provides transportation facilities by air to Constance.

Direct service between Stuttgart and Constance was given by the Staehle Air Line.

The Deutsche Luftloyd, had a daily service of several planes from Berlin over Magdeburg to Hamburg and Bremen, and from Bremen over Magdeburg to Leipzig and Dresden. These routes made connection at Hamburg and Bremen with Dutch and Danish air lines for Amsterdam, Rotterdam, and Copenhagen, while at Amsterdam and Rotterdam, French and English planes were available to take passengers to London or via Brussels to Paris, where air connections can be made for Spain.

Local air service was maintained at Berlin so that travelers could make flights of about two hours' duration all around the surrounding districts for 200 marks—including the automobile trip from the city offices of the Hamburg-American Line of the North German Lloyd, to the flying field, some ten miles out of town.

It is interesting to note that while the costs of airplane fuel were greater in Germany than in most other European countries the rates of fare were said to be the lowest. Thus for ten commercial air lines in operation in 1921 the fares were as follows:

	Fare in Marks
(a) Berlin to Danzig and Königsberg.....	975
(b) Berlin to Bremen and Münster.....	650
(c) Berlin to Bremen and Wangeroo.....	650
(d) Berlin to Brunswick and Dortmund.....	800
(e) Berlin to Dresden.....	500
(f) Berlin to Leipzig, Nürnberg, Munich, and Augsburg.....	1725
(g) Hamburg to Magdeburg, Leipzig, and Dresden.....	700
(h) Munich to Constance.....	400
(i) Stuttgart to Constance.....	450
(j) Travemünde to Warnemünde, Sassnitz, and Swinemünde.....	550

In Germany in 1920 commercial aviation was largely in the hands of two main organizations which virtually control all air traffic—the Deutsche Luftreederei and the Nord Deutsche Lloyd. The latter included some eight or ten companies—the most important of which were the Rumpier Albatross, Sablatnig, and Junker concerns. In this connection it is of interest to study the following summary of the record of the *Fokker European Airlines* published late in the summer which indicated the extent of operation and the safety and reliability maintained.

Line	Route in miles	No. of Trips scheduled	No. of Trips carried out	Miles flown	Accidents involving injury to persons or loss of freight
London-Rotterdam-Amsterdam V. V. Period: Apr. 14-Aug. 23.....	265	243	230-95%	61,000	nil
Rotterdam-Amsterdam-Bremen-Hamburg V. V. Period: Apr. 14-Aug. 1.....	280	186	176-95%	50,000	nil

SAFETY IN FLIGHT. According to a report prepared for the Department of Commerce by the Information Department of the Manufacturers' Aircraft Association there were engaged in commercial flying in the United States in 1921 about 1200 aircraft. A conservative estimate stated the mileage flown by these commercial machines in the first six months of 1921 at 3,250,000 miles, and in that period there were but forty serious accidents in civil flying, resulting in the death of fourteen persons and more or less serious injury to fifty-two others. This summary excludes accidents to government-owned machines. In eighteen of the accidents there were no casualties, the fourteen deaths being charged to ten accidents and the fifty-two injuries to forty accidents.

Six requisites for safe flying were stated in this report. They were:

1. A machine sound aerodynamically and structurally.
2. An engine of sufficient power.
3. A competent, conservative pilot and navigator.
4. Air ports and emergency landing fields sufficiently close together to insure gliding to safety.
5. Nation-wide weather forecasts specialized and adapted to the needs of fliers.

6. National air-route charts.

Inasmuch as seventeen accidents on the list were attributed to the pilot, through carelessness, incompetence, or bad judgment, combined with other factors, there was demanded as the first of the government needs the examination and licensing of pilots.

Another condition responsible for ten accidents of those given was the inadequate landing fields or the total lack of landing facilities as the United States was woefully lacking in air ports for even the 1200 craft in operation.

In fact in the United States and its possessions there were only 271 land and water air terminals, many of them concentrated in certain localities. Of the 271 listed air ports, 145 were controlled by municipalities, 69 were privately owned and the others were a part of the Army and Navy Air Service and the air mail.

In eight accidents which occurred during stunt flying seven persons were killed and twenty-six injured—so that stunt flying in unrestricted areas was responsible for as many casualties as all other elements combined. While stunt flying was necessary to testing and essential to warfare, it was believed that there should be a governmental system of control limiting stunting to certain areas.

Two accidents were reported through carelessness on the field on the part of the spectators.

Finally five accidents were attributed to "unknown" causes which experience and scientific investigation only would solve and relieve.

Equal security was testified to in the experience of the French commercial or non-military aviators. During the year 1919-1920, 1,900,000 kilometres (1,180,603 miles) were covered by the flight of French aéroplanes. Of this total there were only 7 killed and 7 wounded, or an average of one killed and one wounded per 170,000 kilometres (105,633 miles) flown.

ANNUAL REPORT OF NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS. In December President Harding in a special message, submitted to the Congress of the United States the seventh Annual Report of the National Advisory Committee for aeronautics for the fiscal year ended June 30, 1921.

The President stated that he thought there could be no doubt that the development of aviation would become of great importance for the purposes of commerce, as well as for national defense. While the material progress in aircraft had been remarkable, the use had not as yet been extensively developed in America. This has been due, in the main, said the President, to lack of wise and necessary legislation. Aviation was destined to make great strides, and he believed

that America, its birthplace, could and should be foremost in its development.

He therefore urged upon the Congress the advisability of giving heed to the recommendations of the Committee, the first and most important of which was that a bureau be established in the Department of Commerce for the regulation and development of air navigation.

SUMMARY OF GENERAL RECOMMENDATIONS. The National Advisory Committee for Aeronautics in its Seventh Annual Report to the Congress stated that the most urgent need for the successful development of aviation at the present time, either for military or civil purposes, was the enactment of legislation providing for the Federal regulation of air navigation, and the establishment of airways and airdromes under Federal regulation. The Federal regulation should include the licensing of aviators, aircraft, and airdromes; the airways should consist of chains of landing fields providing supply and repair facilities and including the necessary meteorological stations, observations, and reports. If the Federal Government would establish and regulate transcontinental airways as recommended the committee was confident that air lines for the transportation of passengers or goods would be rapidly established by private enterprise in all parts of the country. The first national airways, however, should be carefully planned to serve military as well as civil needs. The committee reiterated its former recommendations as to the manner of accomplishing the desired results, and urgently recommended the establishment by law of a Bureau of Air Navigation in the Department of Commerce. The report also dealt with the extension of the aërological service of the U. S. Weather Bureau, the policy to be followed in developing the industry, the importance of military and naval aviation, scientific research, the air mail service, and the use of helium with airships.

AERONAUTICAL CHAMBER OF COMMERCE. An important event was the announcement made towards the end of the year of the organization of the aircraft industry in the United States into a national body or trade association known as the Aeronautical Chamber of Commerce of America, with approximately one hundred charter or founder members embracing the designing, constructing, operating, and kindred elements, and representing virtually every section of the United States, with the Executive Offices at 501 Fifth Avenue, New York City. This new organization among other objects had as its aim to develop the market and increase the use of flying machines among civilians, corporations, and transportation companies. It included within its membership the principal constructors of airplanes and motors, as well as the manufacturers of accessories, instruments, materials, and supplies, owners and operators of aircraft, various aeronautical trade papers and the principal engineers and designers.

Among its aims and purposes, as set forth in the Charter, were:

To procure uniformity and certainty in the customs and usages of trade and commerce in all matters pertaining to aeronautics, and to aid and assist in mapping out air roads and lanes; the location of landing fields, airdromes, hangars, or such other structures necessary for the ad-

vancement of aeronautics, and generally to develop the industry and the interests of the various members.

CURTISS PATENT SUSTAINED. On Dec. 15, 1921, a decision was handed down by the United States Circuit Court of Appeals of the Second District, and which reversed the decision of the United States District Court of the Eastern District of New York in the case of the Curtiss Aëroplane and Motor Corporation and Glenn H. Curtiss against Albert S. Janin and the Janin Company, Inc.

This suit was of unusual interest as it involved the claim advanced by Glenn H. Curtiss that he was the first to build a flying machine that could rise from and alight on the water. The decision, signed by Judges Charles M. Hough, Martin T. Manton, and Julius M. Mayer, marked a further step in one of the longest legal controversies in the U. S. over the development of flying machines, and established his right to a broad patent on the hydroaëroplane. Curtiss who, on Jan. 28, 1911, had demonstrated his flying boat in the harbor of San Diego, Calif., and on August 23 filed an application for a patent. His successful flight with an air machine equipped with a boat hull structure and wings buoyed with small pontoons was made on the same day that Janin, the defendant in the suit had filed his application for what he described as a land, water, and air machine.

One of the fatalities of the year was the death of the famous French aviator Gabriel Voisin who was killed along with a passenger as the result of flying so low that he was able to converse with a friend on the ground. Voisin had cut off the engine and the machine failed to clear a hedge and crashed, killing both pilot and passenger.

AEROPLANE. See **AERONAUTICS.**

AEROSTAT. See **AERONAUTICS.**

AFGHANISTAN. A monarchy of Asia situated between parallels 29° and 38° north latitude and 61° and 72° east longitude, with a long narrow strip extending to 75° east, bounded on the west by Persia, on the east by territory under the Indian government, on the north by Russian territory and Bokhara, and on the south by British Baluchistan. An agreement in respect to the southern boundaries was made in 1893 with the British government and the delimitation has been carried out at intervals since that time, and in 1921 was complete except for the Asmar section. The area is estimated at 245,000 square miles and the population at about 6,380,500. Capital, Kabul, with a population of about 150,000. Other large cities: Kandahar (31,500) and Herat (20,000). The Afghans are the dominant race, their leading tribes being the Durrani and the Ghilzais which together number from 2,200,000 to 3,200,000. Lesser groups are the Tajiks, Hezaras, Aimaks, and Uzbaks. The predominant religion is Islam, most of the people and the ruler being Sunnites. The languages spoken are Persian and Pushtoo. The country is largely mountainous but the valleys and plains are fertile, producing good crops. The chief occupations are agriculture and grazing. Among the cultivators there is a considerable class of holders under the metayer system. There are two harvests in most parts of the country, one sown in the autumn and reaped in the summer and the other sown at the end of spring and reaped in the autumn. The chief products are

wheat, barley, rice, millet, and other grains, a great variety of fruit and a plentiful supply of castor oil plant, madder, and asafetida. Sheep-raising is important and there is a large and singular variety of native fat-tailed sheep, the tail being of great size and weight, from which abundant grease is supplied, used as a substitute for butter. This sheep also affords the chief meat diet while the wool and skin are used for wearing apparel and also exported in considerable quantities. The mineral resources include copper, lead, iron, gold, and precious stones. Other industries are the production of silks, carpets, felts, and camels' and goats' hair goods. According to Indian statistics in 1919-20 the exports into India were £1,975,000 and the imports from India £1,607,000. The imports and exports from and to Bokhara were reported at about 4,000,000 rubles each. After 1915-16 the Indian trade showed a steady increase owing to the removal of restrictions such as the heavy duties and monopolies. There have been no railways, and trade has followed routes suited only for pack animals and light vehicles; and there are scant means of water communication.

The form of government is monarchical and at the head of it is the Amir, an hereditary prince who formerly received a subsidy from the Indian government under the treaty of 1893 but in accordance with the Treaty of Versailles, Aug. 8, 1919, its arrears were confiscated and it was discontinued. The total revenue has been placed at between 12,000,000 and 13,000,000 rubles which is probably an underestimate. There is a regular army, which is placed at 98,000 including 18,000 cavalry and 396 guns, but this is an old estimate and no figures were available for the strength in 1921. The Amir in 1921 was Amanullah Khan, who ascended the throne on the assassination of his father, Feb. 20, 1919. He was born June 1, 1892.

HISTORY. In accordance with the Anglo-Russian treaty of 1907 Afghanistan was a dependency of the British government and India. The treaty of 1907, however, was rescinded by the Bolshevik government with Great Britain's consent and Afghanistan became officially a free and independent state. On Feb. 28, 1921, the Afghan government signed a treaty with Moscow providing for Russian consulates in the country and for a Russian subsidy to the Amir. On March 16, the Anglo-Russian Trade Agreement was signed which is noted in the preceding YEAR BOOK, containing the stipulation that Russia should put an end to propaganda and other attempts to injure British interests in the East. On the signing of this agreement the British government demanded the immediate discontinuance of Russian propaganda in Afghanistan. In the spring of 1921 a British representative, Sir Henry Dobbs, was sent to Kabul for the purpose of negotiating a new arrangement with the Amir.

The religious element is an important one in the political situation. The population numbering about 5,000,000 are almost all Moslems and belong to the Sunni sect, that is to say to the same division as the rest of the Moslems in India, and as the Turks and Arabs. Persia to the west on the other hand belongs to the opposite sect, the Shi'ahs. The Sultan of Turkey is regarded by all the Sunni sect as the Caliph and it

is part of the sacred law that the Caliph shall be an independent ruler; but as a result of the war, the Turkish Sultan or Caliph was virtually a prisoner at Constantinople and the Holy Places had been taken away from him, Jerusalem being under the British and Mecca and Medina under the King of the Hedjaz, who was in the pay of the British Empire. This condition of things caused great anger throughout India and in Afghanistan. After signing the treaty with Moscow in February the Afghan mission went to Angora and signed there in April a treaty with the Turkish Nationalists providing for a close alliance against any alien imperialism, that is to say against the presumed purpose of the British Empire. Before that the Amir had welcomed at Kabul the former Turkish minister, Djemal Pasha, and appointed him Minister of War in the Afghan cabinet. Under this Turkish adviser a military college was founded at Kabul and Turkish officers were brought in from Angora to build up an efficient military system. When the Indian government announced its intention of running the military railway through the Khyber Pass to the Afghan frontier, it was regarded as a threat against Afghan independence and was followed by the building of forts commanding the Afghan end of the Pass. At the end of the summer it was reported that the advance of the Greeks into Asia Minor was adding to the disorder in Afghanistan and there were even rumors that the Afghans were about to invade India. Changes in the administration were reported in the summer indicating considerable improvement. On June 18 the first code of criminal law was proclaimed by the Amir.

A treaty with Great Britain resulted from the negotiations of Sir Henry Dobbs and was signed at Kabul on November 22 whereby it was agreed that no Russian consulate should be allowed on the frontier. It was hoped that this would bring to an end the difficulties on the border and those arising from Bolshevik activities. For some years the relations between the Indian government and Kabul had been strained, but after the beginning of the reign of Habibullah Khan, they greatly improved. According to the press accounts published at the time, the treaty was inconsistent with the terms of the Afghan treaty with Russia on February 28 which had provided that legations and consulates of the two countries were mutually to enjoy diplomatic privileges and which specify certain localities at which Russian and Afghan consulates were respectively to be maintained. A treaty with Turkey was proposed at the end of November, a representative of the Angora government arriving at Kabul with a draft.

AFRICA. The subject is discussed under the titles of the various divisions. See articles on the respective countries and territories including ABYSSINIA, ALGERIA, BRITISH EAST AFRICA or KENYA, EGYPT, MOROCCO, TUNIS, SOUTH AFRICA, UNION OF, etc. See also ANTHROPOLOGY and EXPLORATION.

AGRICULTURAL EDUCATION. During the year 1921 substantial growth has been noted among the agricultural colleges of the country. Some very liberal appropriations have been made not only for buildings and equipment but in many cases for increasing salaries of the professors on the college staff.

State appropriations for the ensuing biennium have been granted the Kansas College and Station, aggregating \$2,380,000, together with \$40,000 as a revolving fund for emergency use, \$43,000 for the Fort Hays Substation, and \$14,000, \$5000, and \$4000 for the substations at Garden City, Colby, and Tribune, respectively. Of the college appropriations \$275,000 will be available for the construction of the west wing of the agricultural building, \$125,000 for a cafeteria and printing plant, \$100,000 for the central portion of a veterinary clinic building, \$52,000 for the purchase of about 250 acres of additional pasture land, and \$10,000 for studies of contagious abortion. The remainder of the appropriations is largely for salaries, maintenance, and repairs.

The five State-supported educational institutions of Ohio are making a united campaign to secure appropriations aggregating over \$9,000,000, of which about \$6,000,000 is for buildings. The buildings desired by the State University include a new agricultural building costing \$369,000 and \$157,000 for other agricultural buildings.

The College of Agriculture of the University of California received appropriations for instruction, experimental, and extension work in agriculture aggregating \$2,500,000, an increase of 94 per cent over the previous biennium. In addition \$400,500 was granted for building at the University Farm, and \$127,587 was granted to complete the purchase of land and water rights.

At the Michigan College and Station the appropriations for the ensuing biennium aggregated \$990,000, the largest sum in the history of the institution.

The University of Louisiana, of which the College of Agriculture is a part, as a result of action taken by the state constitutional convention will receive \$7,500,000 for new buildings and equipment. The new constitution also provides a one-half mill tax which is estimated to yield \$1,000,000 per annum for maintenance of the university.

At Cornell University contracts have been let for the new dairy building, to be erected at a cost of about \$400,000. This will constitute the first unit of the \$3,000,000 building programme authorized by the State legislature.

The movement for the improvement of college teaching has made progress during the year. Some changes have been made in the agricultural curricula, entrance requirements have received some revision, and the elective system has been given greater elasticity. In certain agricultural colleges rather definite action has been directed toward improving the personnel of the teaching staff. The experiment of two or three institutions in developing special conferences or in the employment of special lecturers to aid college teachers in their effort for professional improvement,

demonstrates that much can be accomplished in this way.

The committee on the improvement of college teaching makes the following suggestions:

- (1) That college presidents, deans, and heads of departments study their own facilities for helping their teachers improve their work.
- (2) That a definite policy with reference to sabbatic leave and other leave for professional improvement be adopted by each college and that all of these facilities be made known to all of their teachers.
- (3) That teachers be encouraged in every way possible to study at other institutions where good opportunities for professional study are offered. It is the opinion of many that it would be a good plan, if colleges had the funds available, to pay the expenses of a few of their teachers each year to attend summer school at other colleges. The report states further that administrative officers believe that keeping up to date in vocational practice is beneficial to teachers when such practice is related to the subject-matter under consideration.

VOCATIONAL AGRICULTURAL EDUCATION. The States as a whole have made progress in the development of vocational agricultural education during the year. While many of them are still feeling the effects of the agricultural depression, the enrollment of students in vocational schools and in agricultural colleges has increased.

Some new lines of work have been developed during the year. State supervisors and administrators are placing emphasis upon the need of making thorough surveys of communities to determine whether or not it is advisable to establish an agricultural department in connection with the high school. Practically every State has some plan under way for part-time and evening class work in vocational agricultural courses. It is interesting to know that leaders in farmers' organizations are taking active interest in the programme for vocational agricultural education. Such leaders have begun to realize the need of intelligence among farmers in order to obtain the best coöperation in the intelligent production and distribution of farm products. Many of the farmers' organizations highly commend the work being done in vocational agriculture through part-time and evening classes.

It is gratifying to note that progress has been made during the year in the establishment of vocational work in a larger number of rural communities, especially where consolidation of rural schools has been accomplished. The agricultural teachers have given considerable time in certain sections to prevocational agriculture. While it is not possible, as a rule, for the agricultural teachers to teach these courses, they become potent factors in directing and supervising the teaching of the less experienced teachers in this field.

There have developed in the States four types of instruction in vocational agriculture, (1) the all-day school, (2) the short-unit course school, (3) the part-time school, and (4) the evening school.

TEACHER-TRAINING. The enrollment in teacher-training classes for 1920-21 was 2936, with a teacher-training staff of 278, showing a substantial increase in number of students in the teacher-training classes. Progress is noted in practically all the states in the programmes which

have been set up for both resident teacher-training and training in service.

ELEMENTARY AGRICULTURAL EDUCATION. The teaching of agriculture in elementary or rural schools has received impetus during the last two or three years from three sources, (1) club leaders and other extension agents, (2) the operation of the Smith-Hughes Law, and (3) better trained teachers for rural schools. Leaders in rural life are beginning to realize that elementary agriculture has a place in the programme of the rural school. Consolidation of rural schools has had a part in this movement. In a few States, State departments of education have made provision for the preparation of courses of study in elementary agriculture for teachers of rural schools. It is believed by many that courses of this character will serve a useful purpose in stimulating the teaching of agriculture, particularly in the consolidated school where sufficient teaching force and other equipment are available. More and more it is being realized that the rural school programme should be based on those things which rural people need to know.

AGRICULTURAL TRAINING FOR DISABLED EX-SERVICE MEN. Marked progress has been made during the year in opportunities offered for the training of disabled ex-service men. The number of men who had elected training in agriculture for their vocational training under the rehabilitation act up to the close of the year was 15,000. Many more, however, had availed themselves of the prevocational training as related to general farming, live-stock raising, dairying, poultry raising, horticulture, and beekeeping. Preliminary figures for forty men rehabilitated along agricultural lines showed that formerly men had earned an average wage of \$785.00, and since rehabilitation they were receiving an average salary of \$1477, an increase of \$692.00. These men, who were so disabled that they could not return to their former occupations, have been enabled as a result of training to command larger wages than they were earning before entering the war.

In the work of retraining ex-service men the agricultural colleges and many secondary agricultural schools entered into hearty coöperation with the Federal Board and, in so far as their capacity permitted, arranged for prevocational schooling for the men needing it.

The Sixty-seventh Congress enacted the Sweet Act, which was approved August 9, 1921. This Act transfers the rehabilitation work from the Federal Board for Vocational Education to the U. S. Veterans' Bureau. The Government is making plans to establish two or three special schools in different sections of the country which shall be properly equipped for offering courses of training for disabled ex-service men.

FOREIGN. In France there has been established recently, under the patronage of the agricultural society of France, a new practical school of agriculture, known as the La Félicité Higher School of Agriculture. The object of the school is to give instruction in the scientific methods of agriculture in order to train young men to become farm managers or to direct colonial farming enterprises. A tract of 247 acres of land has been secured for the school.

Important changes in the organization of higher agricultural education in Belgium have been made as a result of a royal decree of April 8,

1920. A license in agricultural science is created. The license is to be awarded on the completion of a two years' course in order to facilitate the access of farmers' sons to the agricultural education institutions. The course for the bachelor's degree will extend through four years.

Agricultural instruction has been organized in the Republic of Mexico based on the establishment of farm schools.

At the Ontario Agricultural College the building of the dormitory for men, which was suspended during the war, is nearing completion. A farm economics department has been established in the college, financed by the provincial funds.

The University of Alberta has established a continued course in arts and agriculture whereby the degrees of B. A. and B. S. A. are both conferred in six years.

The study of agriculture in Ecuador has recently taken a forward movement, due doubtless to the labors of the specialists of the Italian Commission. The late Congress passed a law which is of vital importance to the advancement of agriculture. This law provides for the establishment of courses of study in the various schools, the teachers to be increased as required, and college officials are authorized to give preference to agricultural instruction in the use of their funds.

AGRICULTURAL EXPERIMENT STATIONS. The experiment stations of the United States have been passing through a critical period. They have not been able to grow, and many of them have been unable to maintain themselves on a prewar basis. On the other hand, the calls upon them and the need for investigation have greatly increased. Agricultural extension and vocational teaching have been rapidly developed in the past seven years, with very little increased provision for the agencies which must supply the information.

Happily, there are some indications that the stations have turned the corner financially and are on the road to an era of larger prosperity. The situation of many of them was measurably improved during the year. In some cases the appropriations or allotments increased as much as 50 per cent; but in about half the States there was no increase whatever, and in only one-fourth did it amount to as much as \$10,000. In the majority of cases, therefore, very little opportunity for expansion was provided.

The action of many of the States was encouraging, even though the appropriation was not large. The New Hampshire Station received an appropriation for the first time in its history, and in Delaware the appropriation for the station and college farm was doubled, being increased to \$20,000. On the other hand, California nearly doubled its biennial appropriations for agricultural work including that of the experiment stations. Connecticut raised the biennial appropriation for the State Station from \$45,000 to \$82,000, and in addition gave \$10,000 for tobacco investigation. The latter work is in coöperation with a growers' organization which is lending liberal financial and other aid. In Florida the legislature provided for a branch station in the Everglades and appropriated \$40,000 for the biennium. It also authorized a substation for tobacco investigation, with an appropriation of \$30,000, the land being donated by the tobacco

growers. The State appropriation in Indiana was increased to about \$200,000 per annum under the provision of a mill tax. A department of home economics has been provided, to conduct investigations in that field. Kansas largely increased the appropriation for the station, and provided \$275,000 for the completion of the agricultural building, and \$10,000 for studies of contagious abortion. Montana gave liberal increases for its main and substations, the appropriation totaling for 1921-22, \$143,340, and for the following year, \$153,000. The appropriation for the Utah Station was increased by \$15,000, bringing that for the biennium up to \$115,000. In a number of other States more liberal appropriations for the colleges permitted a larger allotment of funds to the experiment stations.

The trustees of the University of Ohio authorized the establishment of a Plant Institute under the College of Agriculture, for promoting research in the field of agronomy and horticulture. The Thompson Institute for Plant Research was opened at Yonkers, N. Y., with Dr. William Crocker as director.

The stations suffered an unusually large number of changes in directors during the year. These affected the stations in Alabama, Arizona, Florida, Louisiana, Maine, Minnesota, New York, Ohio, Oklahoma, Utah, and West Virginia. In several cases some of the oldest directors in point of service were involved. Two of those who retired from the directorship, Dr. W. H. Jordan of New York and Prof. Charles E. Thorne of Ohio, had occupied such positions from the establishment of the stations under the Hatch Act, and others for from fifteen to twenty-five years.

Dr. H. P. Armsby, Director of the Institute of Animal Nutrition, associated with the Pennsylvania Experiment Station, and one of the most eminent world authorities on animal nutrition, died October 19. B. H. Hite, chief chemist of the West Virginia Station since 1895, and professor of agricultural chemistry of the State University, died in the same month. In the first week of January, 1922, Dr. William Frear, head of the Department of Experimental Agricultural Chemistry and vice-director of the experiment station in Pennsylvania, passed away after over thirty-six years of continuous service in that institution.

For the first time in the history of the American experiment stations a list of the various projects carried on at the different stations was compiled and issued by the Office of Experiment Stations. The list is classified by subjects and includes nearly 4000 projects. It was welcomed by workers as an important aid in showing the field covered, an evidence of what remains to be done, and a means of maintaining contacts between investigators having common interests.

There was considerable revival of activity among the stations in Europe, though many which were suspended during the war have not yet been revived and others are maintained on little more than a nominal basis. The stations in Austria and Hungary are considerably disorganized. Most of the work in Russia, formerly on such a high plane, has been interrupted and the equipment frequently dissipated, but of late there has been revival of interest and support for agricultural investigation.

In Great Britain, following the repeal of that

part of the agricultural act providing for guaranteed prices, an appropriation of £1,000,000 was made for agricultural education and research. To attract and retain talented workers the British Ministry of Agriculture has instituted a scheme of scholarships, graded positions, salaries, and tenure, which affords a definite career to persons connected with the agricultural research institutions in England and Wales. In addition, specialists are to be provided at "advisory centres" to aid farmers, with similar grades of salaries. Research scholarships have been established and several traveling fellowships are contemplated.

An Imperial Bureau of Mycology was established at Kew for work on fungus diseases of plants in the British over-seas dominions and colonies.

Plans have been matured for a new station at Bari (Puglia), Italy, to deal with plant breeding, dry farming, plant physiology, and other agronomic matters. The experiment and research bureaus of the directorate of Tunis, which were interrupted by the war, have been reorganized and their equipment enlarged.

In Egypt the Cotton Research Board, a war emergency organization, was definitely established under the Ministry of Agriculture, and will carry on investigations in all branches of cotton production. In China a central experiment station and sixteen substations for work on cotton were established under the auspices of the Chinese Cotton Mill Owners' Association. The establishment of a cotton station in Syria has been ordered by the French High Commissioner.

AGRICULTURAL EXTENSION WORK. During 1921 the Coöperative Extension Work in agriculture and home economics carried on in all the States by the United States Department of Agriculture and the state agricultural colleges under the Smith-Lever Act of May 8, 1914, and related Federal and State legislation proved its great usefulness as a means of aiding and encouraging the farming people in a time of great adversity. The sudden and rapid fall of the prices of farm products and the lessening of foreign demand owing to poverty abroad brought dismay and financial loss to multitudes of farmers. Every effort had to be made to ease their burdens as far as possible and to help them in cheapening the cost of production, storing surpluses or turning them into new channels of distribution, and arranging the best possible system of production for the ensuing year.

The extension agents were therefore compelled to give unusual attention to economic problems. That they had considerable success was shown by the fact that the number of counties having agricultural agents increased during the year in spite of financial difficulties affecting many counties. There was, however, a reduction in the number of home demonstration agents, particularly in the South, and no increase of special leaders for the boys' and girls' clubs. This does not show any loss of interest in the work for the farm women and children. There were many evidences that the farming people and others who understood the problems of agriculture and country life were convinced that the extension work was already a strong factor in improving the home and community life in the open country and that more than ever it was necessary to make strong efforts

to render country life more satisfactory and attractive to the women and children on the farms. Much attention was therefore given to strengthening this side of the extension work and laying foundations on which to build as soon as financial conditions improve.

The movement for the more complete organization of the farming people to protect their economic interests and improve their general condition continued during the year with accumulating force. There was especially a great increase in the number of small and large commodity organizations for the grading, standardizing, storage, and sale of farm products. The older farm organizations also took much more interest in these matters. The farm bureaus, representing in a large way the general interests of agriculture, somewhat as chambers of commerce do for commercial interests, spread rapidly into new regions and particularly fostered the formation of commodity organizations and the consideration of questions of coöperation, transportation, legislation, and finance affecting agricultural operations. Their state and national Federations were particularly active in the larger ways. The American Farm Bureau Federation held its third annual meeting at Atlanta, Ga., in November. At this meeting 38 State Federations were represented by 63 voting delegates. In 8 other States, county and state farm bureaus had been organized and were getting ready to join the national federation. About 1,000,000 members were enrolled in the 1500 county farm bureaus. A special committee of women was formed to plan the Federation's work relating to the farm home and to encourage the farm women to participate actively in the work of the county farm bureaus. The main office of the Federation was continued at Chicago, with a branch office at Washington. J. R. Howard of Iowa was reelected president of the Federation at the Atlanta meeting.

During 1921 agricultural agents were employed in about 2100 counties, home demonstration agents in about 800 counties and paid leaders of boys' and girls' club work in about 300 counties. There were also about 750 extension specialists in the various branches of agriculture and home economics who went out from the agricultural colleges to supplement the work of the county agents. Including the supervisory officers and their assistants about 5000 persons were engaged in extension work.

The county agents, assisted by marketing specialists, aided the farm organizations in the coöperative selling of all kinds of crops and live stock and in the buying of many farm necessities. The Bureau of Markets of the United States Department of Agriculture, State departments of agriculture and the extension divisions of the agricultural colleges coöperated closely in these activities. The value of all products coöperatively marketed and purchased with the aid of the extension forces during 1920 was nearly \$60,000,000 with a saving of over \$6,500,000 or about 11 per cent. The coöperative work relating to cotton grading and stapling saved the farmers millions of dollars in the marketing of their cotton crop alone.

After the sensational drop in the price of cotton in the fall of 1920 the extension forces in the cotton States, aided by farmers' organizations and business men made by a campaign which the

cotton acreage in 1921 was materially reduced. The same forces coöperated in instructing the farmers what crops to grow instead of cotton. The live stock industry which had made great progress in recent years in the cotton territory was also seriously affected by the falling prices for farm animals and the county agents had hard work to prevent farmers from selling good breeding stock to be slaughtered. In spite of such handicaps much useful work was done in keeping up interest in pure-bred live stock.

Over 230,000 adult farmers conducted demonstrations under the supervision of the county agents on 2,274,554 acres. The largest acreage was with corn, 539,794 acres, with an average yield of 41.6 bushels per acre or more than double the average yield of the whole territory. Like results were obtained from demonstrations with cotton, oats, wheat, legumes, potatoes, etc. The county agents were also very active in promoting terracing, drainage, liming, better seed, poultry culling, tick eradication, prevention of hog cholera, blackleg, and anthrax, etc.

In the Northern and Western States the county agricultural agents have for several years done a large amount of work connected with the organization of coöperative enterprises, the results of which have been cumulative. In 1920 reports by about half the agents showed that coöperative organizations effected through the influence of the agents did business amounting to \$375,714,660 with savings to the farmers of \$21,152,773. Increased attention was given to the development of local programmes of work through community groups. In 1920 there were 11,561 of these community committees, under whose auspices 31,914 meetings were held with an attendance of 1,214,551 persons interested in the extension programmes. About 60,000 demonstrations with crops and livestock were conducted on farms. The new area brought into profitable production through drainage or irrigation equaled six average Ohio counties. Over 50,000 farmers were assisted in securing 1,345,562 bushels of improved seed, and about 20,000 farmers grew 2,925,855 bushels of improved seed for sale. A large amount of rodent-control work was done in the West. Over 180,000 cows were under test for milk production in 555 cow-test associations. Farmers were assisted in purchasing 35,863 pure-bred sires and females, 232,700 animals were tested for tuberculosis, 287,694 cattle were treated for blackleg and 412,811 hogs vaccinated for cholera. During the year 441 county agents assisted 11,000 farmers in summarizing and analyzing their accounts, a large number of whom made profitable changes in their business; 860 farm-accounting schools were held with an attendance of 19,744.

The work of the county women agents, commonly called home demonstration agents, continued to include food production and conservation, diet, clothing, health, sanitation, household equipment and management, and the social interests of the rural community. The rapidly increasing number of farm women engaging in the work of community clubs, farm bureaus, and other organizations, and their closer participation in such work along with the men is materially strengthening the home demonstration work.

In the Southern States economic conditions greatly increased the importance of the work of

the women and girls in producing fruit, vegetables, poultry, eggs, milk and butter for home consumption.

In 1920 the members of the home demonstration clubs cured, according to standard methods, 9,477,988 pounds of meat and 2,173,626 pounds of sausage and rendered 2,648,686 pounds of lard. The canning of meat and fish under steam pressure was much increased as well as combination packs of meat or fish with vegetables.

The women grew 195,343 gardens and established 16,525 home orchards and vineyards. They canned over 11,000,000 quarts of fruits and vegetables and over 2,000,000 pints of jellies and marmalades. They stored over 1,000,000 pounds of dried fruits and vegetables and preserved in brine over 3,500,000 pounds. About 700,000 pounds of butter were made under demonstration methods, over 2,000,000 pounds of cream were sold, together with large amounts of poultry products. More work than ever before was done by the agents in connection with the planning or remodeling of farm houses, the rearrangement of kitchens, installing of water, heating, and lighting systems, introduction of home-made and purchased labor-saving devices and beautification of the home and adjacent grounds. Special emphasis was laid on diet, clothing, and home and farm sanitation as related to the health of the family. The benefits of the more liberal use of milk, butter, vegetables, and fruit were widely taught and demonstrated. The proper place of milk in the diet of children was stressed and much attention was given to school lunches. The home demonstration work is proving an important factor in the prevention of such diseases as pellagra, scurvy, and tuberculosis. Nearly 100 negro women agents supplemented the work of the white agents in improving the conditions in negro farm homes.

In the Northern and Western States over 17,000 local leaders of home demonstration work were secured through 3000 training groups supervised by the women extension agents. The local leaders established extension projects in their communities through which 71,000 home and community demonstrations were made from which 108,417 families adopted suggestions. In all, 1,336,787 persons were reached by the work of the home demonstration agents. About 84,000 women were enrolled in farm bureaus in 1920. In several States legislation was specially modified to include home demonstration work. Increased attention was given to projects relating to the health and comfort of the family, care of children, conveniences in the farm home and the welfare of the rural community. The extension agents worked closely with state and county health officers, school authorities, doctors, nurses, and Red Cross officials.

Community enterprises included recreation centres, rest rooms, libraries, reading circles, day nurseries, and coöperative associations. To train extension workers in home economics the agricultural colleges in New York, Minnesota, and Wisconsin offered special four-year courses, and eight colleges gave special courses at summer schools.

In the Northern and Western States 216,479 boys and girls were enrolled in clubs, 59 per cent of whom completed the work. Where county club agents were employed the average club membership in the counties was 441, as compared with 60 where the county agricultural or home demon-

stration agents gave part time to this work. The state and county club agents held 1271 training conferences for voluntary local club leaders, of whom 8391 assisted in carrying out the club programmes. In 686 counties boys and girls were eligible to membership in the farm bureaus. In increasing measure the club programmes have a definite relation to the extension programmes for the adult farm men and women. The club work covered a wide range of projects in the production of crops and live stock, canning, preserving, food selection and preparation, clothing, etc.

In the Southern States the girls grew about 180,000 gardens with products valued at over \$1,500,000, canned over 5,000,000 quarts of fruits and vegetables, besides large amounts dried, brined or sold fresh, and produced poultry products valued at over \$2,500,000. They were also active in dairying, bread-baking, meal preparation, making of clothing and beautification of their homes. Three hundred and sixty girls were attending normal or agricultural schools on scholarships awarded for excellency in club achievements, and 1880 girls were paying all or part of their school expenses from money earned from the sale of club products. The 113,861 white boys enrolled in clubs produced agricultural products valued at over \$4,250,000. Bankers and business men loaned or gave them \$659,000. This enabled them to introduce pure-bred live stock and seed into sections where they were practically unknown. Their average yield of corn was 57 bushels per acre as compared with 22.6 bushels in the Southern States generally. About 70,000 negro boys and girls had cotton, animal, and canning clubs.

The extension specialists from the agricultural colleges and the Department of Agriculture aided the county workers and supplemented their work in counties not yet supplied with extension agents. They took an active part in helping the county agents and farming people to shape and successfully conduct the local programmes of extension work. They prepared numerous publications, answered inquiries, and gave instruction and demonstrations at numerous movable schools, farmers' institutes, and other meetings.

Over 10,000 Farmers' Institutes with a total attendance of over 2,300,000 were held in 19 States by the agricultural colleges and in 15 States by the State Departments of Agriculture. These meetings, addressed by 1400 lecturers, which furnish a free forum for the discussion of many agricultural and country life subjects by the farmers themselves and also have recreational features, are increasingly popular among the farming people.

Extension work in Alaska, Hawaii, Porto Rico, Guam, and the Virgin Islands continued to be carried on through the Federal experiment stations. In Alaska the settlers coming into the Tanana and Matanuska Valleys, many of whom have had little agricultural experience, were helped in growing those crops which the station's investigations had shown to be best adapted to those regions. Distribution of suitable varieties of seed to various parts of Alaska was also continued. In Hawaii extension activities were vigorously conducted on the different islands. In Porto Rico the propagation and distribution of economic plants by the station has been very useful. A striking result is the greatly increased planting of trees on farms and in municipalities.

As the result of campaigns by the station 90 vats for dipping cattle to eradicate fever ticks have been established. A mimeographed extension publication was widely distributed in the island. In Guam 1291 boys and girls were enrolled in clubs for the growing of corn, beans, roots, vegetables, pigs, and poultry, and 88 per cent of the members completed the season's work and submitted written reports. In cooperation with the insular department of education school gardens were grown and aid given the teachers in garden instruction. In the Virgin Islands extension work was begun by sending out mimeographed extension notes. Special attention was given to the growing of fruits and vegetables now largely imported.

In England extension work was carried on through County Agricultural Councils. Connected with these were 40 County Agricultural Organizers, 80 per cent of whose salaries and expenses were paid by the Board of Agriculture. There were also traveling lecturers in dairying, horticulture, poultry, and other subjects. Many demonstrations were made and exhibits at numerous fairs and other places. Over 1500 women's institutes were held in England and Wales. The National Federation of Women's Institutes published a monthly magazine called *Home and City*. In Scotland the agricultural colleges at Glasgow, Edinburgh, and Aberdeen had a staff of extension workers. The counties had assignments of such workers who acted as agricultural agents. Special problems were referred to specialists at the colleges.

In the 33 counties of Ireland were county councils under which were itinerant extension workers, men and women, paid in part by the Department of Agriculture.

In Canada the provincial Department of Agriculture carried on extension work, through itinerant Agricultural Representatives. There were also Junior Farmers' Improvement Associations, boys' and girls' clubs and farmers' clubs. Women's institutes, which began in Ontario in 1898, had a National Federation with about 100,000 members.

In France traveling professors under the Ministry of Agriculture gave instruction and demonstrations throughout the country. Much use was made of moving pictures carried on trucks. Women were instructed in canning according to methods used in the United States.

Belgium had a well-organized extension system. Much attention was given to farm women through housekeeping advisers and a Farm Women's League.

In Denmark both the Government and agricultural societies supported extension work through agricultural advisers and school teachers.

In Norway and Sweden special attention was given to instruction in the use of tractors.

In Germany farmers were especially instructed in bookkeeping made necessary by income and other taxes. Bookkeeping bureaus were established in the provincial agricultural associations. Farm housewives' societies employed traveling teachers to give instruction in agriculture and home economics to women and girls.

In Italy about 275 itinerant teachers continued instruction in many branches of agriculture and helped to form many cooperative agricultural societies.

In India and Burma there were many demon-

strations on farms and at fairs. Special instruction was given on the use of better implements and seed and how to utilize fodder to the best advantage and store it against famine.

Agricultural extension work was also carried on in Argentina, British Guiana, Cyprus, Gold Coast of Africa, Jamaica, Spain, and Switzerland.

The general interests of the cooperative extension work throughout the United States continued to be promoted by two extension offices in the States Relations Service of the Department of Agriculture until Oct. 1, 1921, when a single combined office was established under the direction of Dr. C. B. Smith. The work in each State was administered by an Extension Director with headquarters at the Agricultural College, who was a joint representative of the Department and the College. Under the Director were State Leaders of county agricultural agents, home demonstration agents and boys' and girls' club work, together with a force of extension specialists.

For the fiscal year beginning July 1, 1921, the total fund available for extension work in the States was about \$18,500,000. Of this about \$1,050,000 was derived from direct appropriations to the States Relations Service, \$100,000 to other bureaus of the Department of Agriculture, \$4,080,000 from the Smith-Lever Act, and \$1,500,000 from the supplementary Federal fund, making the total Federal contribution \$6,730,000. This was met by approximately \$11,766,000 from sources within the States, including \$5,100,000 to offset the regular and supplementary Smith-Lever funds, \$1,390,000 additional state and college funds, \$4,388,000 from counties and \$887,000 from farm bureaus and miscellaneous sources. About \$9,670,000 was used for the demonstrations and other activities of the county agricultural agents. Much of their work bore on problems of the farm home, but \$2,980,000 was allotted to the work of the home demonstration agents. About \$1,244,000 was used for work among boys and girls, about \$3,282,000 for the tasks of the specialists in agriculture and home economics, \$1,000,000 for administration, and \$309,000 for publications.

AGRICULTURAL LEGISLATION. Despite the strongly manifested determination of farmers to play a more influential part in the framing of national policies and the numerous agricultural measures pending before Congress in apparently favorable strategic positions at the end of 1920, the completion of the final session of the Sixty-sixth Congress on March 4, 1921, showed surprisingly little of practical achievement. Efforts to harmonize the differences between the House and Senate on the bill designed to assure producers of the right to bargain collectively through regulated cooperative agricultural associations without liability of prosecution under the various antitrust laws met with failure, and the bill died in conference. A similar fate befell the bill to regulate cold storage practices and the various plans for the utilization of the Government air nitrate plants for fertilizer manufacture.

An emergency tariff bill imposing high duties on various farm products was agreed to by both houses, but vetoed by President Wilson. A joint resolution directing the immediate revival of the activities of the War Finance Corporation with a view to assisting in the financing of the exportation of agricultural and other products to foreign markets by providing special credit facilities was

likewise vetoed, but in this case the veto was overridden and the measure became law.

The only other legislation of agricultural significance to be completed at this session was embodied in the annual appropriation act for the support of the U. S. Department of Agriculture. This measure continued the joint congressional commission to investigate the feasibility of short-time rural credit legislation, and appropriated \$2,000,000 for the purchase by the Department of seed grain for sale to farmers in drought-stricken areas or for loans for the same purpose. Provision was also made for a World's Dairy Congress in this country in 1922, but subsequent legislation postponed this event until 1923.

The convening in April of the extra session of the Sixty-seventh Congress brought the reintroduction of most of the various agricultural bills which had failed of passage and an unusual number of new measures designed to alleviate the continued agricultural depression. Some weeks later occurred the most striking event of the year, the formation by a group of Senators and Representatives of the so-called "agricultural bloc." This group has been recently described as a "casual, voluntary, and purely informal gathering of men who sought to formulate and help enact a constructive, national agricultural program . . . as an emergency measure for handling some of the legislative features of the great and most unusual agricultural emergency." The senatorial group is reported as consisting of about twenty of the ninety-six members, mainly those of the middle West and South, and that in the House one member from each of the twenty-five more important agricultural States. In each case party lines were ignored.

The activities of the "bloc" attracted wide public notice. Strong criticism soon followed from numerous directions, chiefly on the ground that the objects sought were class legislation and that the "bloc" was destructive of the prevailing system of party action and responsibility. On the other hand, its formation was quite as warmly defended as an attempt to achieve openly for agriculture what had been sought under cover for many other interests for years, and furthermore that the prosperity of American agriculture was a matter of fundamental national concern. Irrespective of the merits of these contentions, the operations of the "bloc" undoubtedly tended to focus public attention more strongly than ever before upon the agricultural situation and its needs, and its efforts were followed by the enactment of an unusual amount of important agricultural legislation.

One of the earliest measures was the provision on June 7 of a Joint Congressional Commission of Agricultural Inquiry to investigate the prevailing economic status of agriculture, especially as regards prices, credits, and marketing and transportation problems. This commission held extended hearings and submitted a report on December 14 dealing with the agricultural crisis and its causes, which is noted elsewhere. (See AGRICULTURE.) On the same date the time for its final report was extended until April 15, 1922.

An act designed to regulate the marketing of live stock and its products, known as the Packers and Stockyards Act, was approved by President Harding, August 15. Under this measure, packers engaged in interstate commerce are prohibited

from unfair, unjustly discriminatory, or deceptive practices, manipulating or controlling prices, or otherwise creating a monopoly or restraining commerce. Commission merchants, stockyards services, and dealers at yards are likewise required to establish and maintain rates which are reasonable. The enforcement of this act is entrusted to the Secretary of Agriculture, subject to appeals to courts, with heavy penalties for its violation. Efforts of certain live stock dealers at the Chicago stockyards to obtain an injunction forbidding the enforcement of the act were denied December 20, and announcement was made that immediate compliance with its provisions would be insisted upon.

The long campaign for the supervision of grain exchanges found fruition August 24 in the approval of the Future-trading Act. This act imposes a prohibitive tax of twenty cents per bushel on speculative transactions known as "puts and calls," "bids," and the like, and a similar tax on grain sold for future delivery except by owners or certain authorized contract markets. These markets are to be under the supervision of the Secretary of Agriculture, who is given authority, in conjunction with the Secretary of Commerce and the Attorney-General and subject to appeals to the courts, to punish violations of the act by revocation of the privileges of these markets or of individuals trading thereon. A test suit to determine the constitutionality of this measure was pending at the close of the year.

An emergency tariff law was signed by President Harding May 27 covering a period of six months, and on November 16 extended until otherwise provided by law. This measure imposed high duties on imports of a large number of farm products, such as thirty-five cents per bushel on wheat, forty-five cents per pound on scoured wool, and twenty-five cents per bushel on potatoes.

The War Finance Corporation Act of 1918 was amended August 24 with a view to assisting producers of and dealers in agricultural products by providing special credit facilities in foreign markets. Under this legislation, the corporation, reorganized to include the Secretary of Agriculture as one of its six members, is empowered until July 1, 1922, to issue securities to an amount not exceeding \$1,000,000,000 at any one time, using the proceeds of the loans to aid in the transportation and exportation of agricultural products and to provide credit for agricultural purposes, including the production and marketing of live stock. Operations under this act proceeded actively up to the close of the year. (See also AGRICULTURE.)

Another credit measure authorized additional deposits by the Secretary of the Treasury in the Federal land banks to provide a larger working capital for loans in the interim pending an issue of land bank bonds. These advances may now aggregate \$50,000,000. Authority was also given to increase the interest rate on the land bank bonds from 5 to 5.5 per cent per annum until June 30, 1923, thereby materially increasing their marketability and in corresponding degree the usefulness of the land bank system.

Toward the close of the year announcement was made by leaders of the "agricultural bloc" that efforts would be made to secure the immediate passage of three additional measures. These were a provision whereby agriculture would be

specifically represented on the Federal Reserve Board, the bill to legalize cooperative agricultural marketing associations, and legislation creating a new system of rural credits upon longer and more satisfactory terms than at present to live stock producers, grain growers, and similar branches of farming with a long period of turn-over. Agreement had been reached in the Senate to vote on the question of an agricultural representative on the Federal Reserve Board on Jan. 17, 1922. A bill authorizing associations of producers of agricultural products was passed by the House May 4, and was pending on the Senate calendar at the end of the year.

The principal event of the year in Canada was the election on December 6 of a new Dominion Parliament in which the Progressives, a group definitely associated with agriculture, increased in strength from fourteen to sixty-five out of two hundred and thirty-three members, causing the overthrow of the ministry and becoming the second party in Canada. The Progressives had previously been in control of Ontario, which during the year enacted three important laws to promote agricultural development through provincial loans on long-time terms to farmers on their real estate and short-time credit to cooperative associations for current farm expenses. Very little agricultural legislation was enacted by the out-going Dominion Parliament, the principal measure providing a system of grading dairy products for export.

In Great Britain the Agriculture Act of 1920 came into operation Jan. 1, 1921. This measure was intended to make permanent many of the temporary war time provisions of the Corn Production Act of 1917, including the guarantee of minimum prices of wheat and oats, the regulation of farm wages, and the enforcement of proper cultivation of lands. On October 1, however, this measure was largely repealed, the Agricultural Wages Board and other machinery for fixing a minimum wage for farm labor being abolished, with the substitution of voluntary joint conciliation committees of employers and laborers in cases of disagreement, and the restriction of payments for wheat and oats to the crops of 1921. This action was attributed to the need of retrenchment in Government expenses, and to a change in policy under which Government aid would be rendered not to individuals but through the promotion of agricultural education and research. An appropriation of £1,000,000 was made for this purpose, of which £850,000 was available in England and Wales and the balance in Scotland.

A Danish law required farmers to deposit with the State, at a fixed price, their entire wheat and rye crops of 1920 and 1921 except their seed supply, the ministry of agriculture then provisioning the country and exporting any surplus. In Holland a new law became effective for the labeling and inspection of fertilizers, seeds, and feeding stuffs. Funds were provided from the treasury in Czecho-Slovakia for loans to superphosphate manufacturers to increase production at a fixed sale price to the Government.

More or less elaborate systems of agrarian land reform went into effect in Greece, Lettonia, Mexico, Poland, and Portugal. Provision was made in Italy for the organization of traveling chairs of agriculture to carry on extension work.

AGRICULTURAL ORGANIZATIONS AND CORPORATIONS. See AGRICULTURE.

AGRICULTURE. The year 1921 was an extremely difficult one for agriculture in the United States. The production of staple crops, while not as large as in some years, gave a large surplus and with satisfactory prices would have constituted a prosperous year. The acreage was large and the season generally favorable, but prices were unusually low, often below the cost of production. The industry suffered, therefore, along with other industries, but to an increasing extent.

The total production of bread grains was about up to the average, but this included one of the largest corn crops ever raised, only twice exceeded. Wheat dropped to about prewar production, while the oat crop was less than for several years, although still the second cereal in size. Barley was below the ten-year average, and rye showed a considerable decline, as did also rice. Potatoes were down to the prewar average; sweet potatoes, while less than the yield of 1920, were well above the average of previous years. The tobacco crop showed a considerable decline over recent years, and hay also.

The cotton crop was the smallest in twenty-five years. The foreign outlet for the large crop of 1920 so restricted prices that they dropped far below the cost of production, and bankers, merchants, and business men generally joined with the farmers to bring about a reduction of the acreage in 1921, resulting in a decrease of about 28 per cent. Added to this, the ravages of the boll weevil brought the probable reduction of the year's production nearly 50 per cent below that of 1920.

Exports of wheat continued heavy and also of rye and barley, but those of oats fell off greatly. The corn export was relatively large, although the amount affected but a small fraction of the total crop. The export of cotton fell off very materially.

In Europe the crops showed a steady return of agriculture in most countries, and indicated that Central Europe, especially, is emerging from its agricultural depression. The harvests of wheat and rye showed increase. In France, despite a long drouth, the wheat harvest was reported a remarkably good one, with low prices. In Germany the grain purchases were cut nearly in half. The world's cotton crop was estimated as the smallest since 1900, due to the small production of the United States and Egypt. Russia has practically ceased to grow cotton.

AGRICULTURAL DEPRESSION. The United States was passing through the most severe agricultural depression of its history. Farmers were hard hit by the slump in prices at the close of 1920. They borrowed more money, however, to keep up their operations and in the face of a continuing decline in the prices of most crops put out ample acreages in the spring of 1921. The condition as to prices continued during the year, and with the large production far in excess of domestic needs, the high freight rates, the inability of Europe to buy, and the general business conditions in the United States the situation was intensified. Wheat fell to one dollar a bushel, the lowest since 1919, while corn on the farms in the corn belt was lower than for 25 years. As the harvest season progressed, many farmers over wide sections were threatened with bank-

ruptcy, while others who had bought expensive land on contract were wiped out. Similarly, land rents, which had doubled, trebled, and even more in the prosperous years of the war, caused many renters to not only lose their labor but their savings as well.

The purchasing power of the principal farm crops was lower than ever before known, and that of the major grain crops was little more than half what it was on an average for the five prewar years, 1910-14. The farmers' wages were reduced to about the prewar level, while the wages of other people remained near the war level.

Not only were the prices abnormally low, but the cost of getting farm products from the farm to the consumer's table increased tremendously in the past three years, the freight charge nearly doubling. At the close of the year the cost of getting farm products to market was frequently greater than the amount the farmer himself received in return, and while a heavy burden on producers of grain and live stock at a distance from the primary markets, it resulted in the failure to harvest fruits and vegetables in some cases because the prices were not sufficient to pay the cost of packing and transportation.

The effect of this severe agricultural depression on business in general and on the future of the agricultural industry was viewed by students with much concern. Normally the farming classes represent nearly half the purchasing power of the country. The effect of the severe reduction in purchasing power was a no small element in the general business situation. It was pointed out that agricultural production in adequate measure cannot be continued any length of time on a basis which does not give the producer a fair price. If conditions continue under which workmen in other callings receive pay so much higher than the farmer can expect, there will be an increasing drift from the farm to industries in business, resulting eventually in prices for farm products so high that the burden will be transferred to the people in the cities. As pointed out by experts, the amount of food that will be produced upon American lands ten years hence will depend upon the number of men and women who find it profitable to remain upon the farms and the intensity with which they can afford to work the lands.

REMEDIAL MEASURES. Realization of the serious economic conditions affecting agriculture led to a great variety of suggestions for remedial measures and the taking of a number of definite steps by Congress. While it became evident that there were no short cuts by which an immediate return to prosperity could be insured, a number of laws were enacted which were expected to relieve the situation to some extent and to safeguard agriculture more largely in the future.

An emergency tariff imposing high duties, some of them well-nigh prohibitive, on the importation of about thirty farm products was passed after considerable delay. The measure was stimulated especially by the importation of wheat from Canada at prices which seriously competed with the American grown product, and by bringing in of wool, potatoes, and other staples from abroad.

In June a joint Congressional Commission of Agricultural Inquiry was authorized by Congress,

to investigate the conditions surrounding agriculture, especially with respect to prices, credits, marketing, etc., and to suggest remedies. (See below.)

Much attention was given to making credit more easily available to farmers who had borrowed heavily to keep going in the face of disastrous prices and were having difficulty in renewing their loans. The capital of the Federal Farm Loan system was increased by the deposit of \$25,000,000 of Government funds in the Farm Loan Banks, to be used as a revolving fund, and the Farm Loan Board was authorized to issue \$60,000,000 in new bonds. Earlier in the year the Board had marketed a \$40,000,000 issue of bonds, the first to be offered since the legality of the farm loan securities was favorably passed upon. The readiness with which these \$100,000,000 of bonds were taken up enabled the rapid extension of mortgage loans. The joint stock land banks were given authority to increase the interest rate on their bonds from five to five and one-half per cent.

Early in the year various measures were considered to assist in financing the exportation of agricultural and other products to foreign markets, but these finally gave way to the revival of the War Finance Corporation. Later, in August, the authority of the corporation with respect to agricultural products was enlarged and it was empowered to issue bonds to the extent of one and one-half billion dollars, using the proceeds up to one billion at any given time for advances in connection with transportation and export of agricultural products and to provide other credit for agricultural purposes. The production and marketing of live stock was included in its programme of aid. The activities of the corporation soon assumed large proportions, especially under the extension given in August. By the middle of November some \$95,000,000 had been loaned or approved, including \$44,000,000 on cotton, \$26,500,000 on grain, about \$6,000,000 on live stock, and nearly \$19,000,000 for other agricultural purposes; and additional advances were being made at the rate of from one to two million a day.

In November the corporation took up plans for warehousing corn on an extensive scale, to enable farmers to hold their grain for more active demand. This is in accordance with plans advocated by students of the subject for holding ample supplies of grain and hay in years of excessive production, to tide over lean years and thus equalize supplies. Such advocates have contended that more attention ought to be given to storage and the financing of crops in favorable years so that an unusually large production which is often a calamity to the farmers may be used to supplement short crops which are almost equally disadvantageous to the public generally.

The passage of these remedial measures and the blocking of other legislation considered disadvantageous to agriculture was vigorously pressed by a group in Congress which came to be known as the "agricultural bloc." (See also AGRICULTURAL LEGISLATION.) The activity of this group was one of the most significant agricultural events of the year. It was declared to be the most forceful group influence in Congress, making the strength of the farmer vote more apparent than it had ever been before. Representing about one-

third of the population, it overrode party lines and was credited with dictating terms to the party in power. The agricultural organizations were strongly arrayed back of the bloc and were determined that their influence should be felt. The bloc had a definite legislative programme, which it met with quite prompt success in putting through. At the close of the year its further programme included the placing of a farmer on the Federal Reserve Board, the provision of long-term personal credits for farmers, and legislation giving farmers' coöperative associations the right to buy and sell collectively without liability of prosecution under the anti-trust laws.

In his message to Congress in December, President Harding expressed concern for the condition of agriculture and the belief that "the main remedy lies in distribution and marketing." He accordingly advocated every proper encouragement to coöperative marketing. In October the Interstate Commerce Commission ordered freight rate reductions on grains, grain products, and hay in the territory between the Mississippi Valley and the Pacific coast, the new rates to be effective by November 20. Following this, many roads in other sections made similar reductions.

At the close of the year President Harding directed the Secretary of Agriculture to call a national agricultural conference to consider what corrective and constructive steps can be taken to relieve the depression in the farming industry. The conference was not to be limited to representatives of agriculture but to include all important allied industries such as packers, millers, railway and water carriers, exporters, commission merchants, etc. The conference was set for the last week in January, and a large number of invitations were sent out.

SUPERVISION AND REGULATION. There was more determined effort than ever before to find out the cause of the difference between the small price paid the farmer and vegetable grower for their products and what the ultimate consumer has to pay for them—to seek out intermediate agencies whose effect was to depress or control prices to consumers, to eliminate unnecessary links in the chain of distribution, and to remedy the handicap of the individual farmer through organization. The attempt to locate the cause of the large discrepancy in prices of products and the choking of competition in buying them was bitterly fought by large commercial interests through gross misrepresentation, personal attack, and otherwise. But the Department of Agriculture has responded to the demands of its constituents and is determined to get at the facts, as it is also to enforce such regulatory laws as have been provided.

In line with this movement, legislation was passed bringing the packers and stock yards under Government supervision, and extending Government supervision to the grain exchanges where prices so largely originate. (See **AGRICULTURAL LEGISLATION**.) Both acts are to be administered by the Federal Department of Agriculture. Their passage was vigorously contested by the interests concerned, but formed a part of the programme of the agricultural bloc in Congress.

Need for greater consideration of the economics of agriculture is strongly pressed by the Secretary of Agriculture. Agricultural efficiency consists in

intelligent production with due regard to the needs, and in placing the products advantageously before the consumer. The Secretary is pressing attention to research in marketing agricultural products, including assembling, storing, and distributing.

An investigation by the Federal Trade Commission of the grain trade, with especial reference to grain export prices paid producers, was ordered by the U. S. Senate near the close of the year.

ORGANIZATION. Efforts of the farming people to protect their economic interests, promote their welfare, and improve their general condition through organization were unusually active during the year. Organization has grown rapidly and found effective means of expressing itself. The American Farm Bureau Federation, with a membership of approximately a million, is the largest and most effective of these national organizations, and under able leadership has become a great force. It has set in motion various movements for the marketing of grain, live stock, dairy products, etc.

Among the organizations developed out of these movements is the United States Grain Growers, Inc., organized in April, 1921. It developed out of the Farmers' National Grain Marketing Committee of seventeen appointed by the Federation in 1920. It is designed to carry out the marketing plans of that committee to market grain for the farmers of the country, and so far as practicable to take this out of the hands of boards of trade, commission merchants, and grain speculators. The Grain Growers were vigorously opposed by the National Grain Dealers' Association, formed in June, which conducted an active propaganda against these coöperative efforts. But despite this, the membership of the Grain Growers grew rapidly until by the end of the year it had about 30,000 members and had signed up nearly 800 elevators. In the latter part of November, over 50,000,000 bushels of grain were reported to be under contract with members.

To finance its enterprise and furnish members with credit on stored or pooled grain, the Farmers' Financial Corporation was organized, with a capitalization of \$100,000,000. It encountered opposition from the securities commission of several States, however, and none of its preferred stock from which the capital was to be derived was offered for sale. A larger and more comprehensive organization to finance other agricultural products than grain was reported as under consideration, on a somewhat modified plan.

Within the States coöperative marketing and purchasing through the farm bureau organizations assumed rapidly increasing proportions. Some idea of the extent of these activities is shown in the article on Agricultural Extension.

Recently released Census reports show that in 1919 more than a half million farmers marketed coöperatively products valued at \$722,000,000, and over 300,000 farmers made purchases amounting to \$84,000,000 through coöperative buying associations. Grain, milk, cream, butter, fruit, and truck crops were marketed in the largest amounts by the coöperative associations. The organization of the fruit growers in California placed that State in the first rank in total value of products marketed, while the coöperative creameries and cheese factories of Minnesota were largely responsible for placing that State second, and the farmers' grain elevators helped to make Iowa rank third.

Since these figures were gathered there has been a continued increase in coöperative associations among dairy farmers, grain and live stock shippers, and the cotton growers of the South. A coöperative marketing organization of 50,000 growers of Burley tobacco, controlling 2,000,000 lbs. of the product, has been affected; and the American Farm Bureau Federation reports that 100,000 cotton planters have signed contracts for five years and plan to sell cotton through their agency.

COMMISSION OF AGRICULTURAL INQUIRY. The joint commission composed of members from the U. S. Senate and House of Representatives constituted early in June (as above mentioned), held hearings and solicited information from various sources during the summer and fall, and December 14 presented through its chairman, Representative Sydney Anderson of Minnesota, the first part of its report. This was entitled *The Agricultural Crisis and its Causes*, dealing with the actual condition of the farmer and agricultural production, the trend of agriculture, the economic conditions associated with it, etc. The report points out that normally agriculture produces about 17-18 per cent of the national income of the United States, although approximately 30 per cent of the persons gainfully employed are engaged in agriculture. The average labor income received by farmers is below that of employees in many other industries. Measured in terms of purchasing power, the farmer's reward in 1909 was \$326, in 1918 it was \$326, and in 1920, \$210. Measured by the standard of purchasing power of his products, by their absolute price compared with those of other commodities, by the test of quantity output or the test of income and rewards, the capital invested and the labor employed, the farmer in 1920 and 1921 was relatively worse off than employees in other industries. When the decline in prices came those of farm products dropped more rapidly and went to a lower level than those of other commodities, increasing the disadvantage of the farmer during the period of deflation.

As to the causes which brought about the débâcle of prices, the conclusion of the commission is that on the whole neither overproduction nor overmarketing of farm products in 1920 was in any considerable measure a moving factor in the decline of 1920-21; nor was the decline due to the falling off of exports. On the whole, exports of all grains in 1920-21 were greatly in excess of the prewar average, although cotton exports were markedly less than the average and were promptly reflected in a decline of prices. The consumption of cotton in 1920 was lower than in any year since 1915, and these two factors together largely account for the tremendous decline in cotton prices. Exports of beef and veal also declined, and the consumption of wheat, beef, mutton, and dairy products during the period of depression contributed undoubtedly to the decline in prices of these commodities. As the falling purchasing power of the world began to make itself felt in the lessening of export demand for farm products, the prices began to decline, and with them the purchasing power of the agricultural population, representing nearly 40 per cent of the total purchasing power of the country. This in turn affected the productive industries, and unemployment resulting in diminished consumption gave further impulse to the avalanche of prices.

Data are cited to show that on the whole

agricultural production in the United States has barely kept pace with consumption. Production of wheat and grains has about kept up with the increase in population, while cattle, other than beef cattle, and sheep have decreased in proportion to population. The prices received for farm products have not been such as to induce an increase in farm production on the whole. The cost of production in 1920 was far greater than the cost of any preceding crop year in the history of the country.

The number of mortgages on farm lands and buildings has more than doubled in the last ten years, greatly in excess of the increase in quantity production of farm crops, so that apparently the payment of the added interest and principal of the debt must look to increased prices. The decline in prices of agricultural products in the last twelve months has been equivalent to 53 per cent from the peak, having the effect of again doubling the farmers' debts, already doubled as compared with 1910.

The commission points out that freight rates reached their highest level during the period when agricultural products were at the lowest point in thirty years in terms of purchasing power; and it believes that an immediate reduction of freight rates on farm products is absolutely necessary to a renewal of normal agricultural operations and prosperity. (Such a reduction has been made since the report was issued.)

The commission urges the imperative necessity for the formulation of a definite programme looking to the permanent development of agriculture, with a view to relating it to the various agencies of distribution in such a way as to avoid duplication, waste, and loss in reaching the consumer. It urges the expansion of the gathering of agricultural statistics, the fixing of standards of agricultural products, the need of organization and coöperation in productive marketing and distribution, banking machinery adapted to the farmers' turnover and business requirements, and a national warehouse system which would provide uniform liability on the part of the warehouseman and fully insure the moral and financial hazards. "Only until the farmer can hold or sell his crops as his own judgment or the judgment of his coöperative association dictates can he hope to adequately control the marketing of his product and have influence in proportion to his number and importance."

Succeeding parts of the report will deal respectively with credit, transportation, and distribution and marketing.

CENSUS OF AGRICULTURE. During the year the U. S. Census Bureau made preliminary reports for the 1920 Census of farms and farm lands, tenure, etc. The number of farms on Jan. 1, 1920 (as revised August 15, 1921), was 6,448,366 an increase of 1.4 per cent in the decade. These had a total area of 955,676,545 acres, an increase of 8.7 per cent. Of this total area 506,982,301 acres were improved land. The average size of the farm was 148.2 acres, about 4 acres more than in 1910, of which 78.6 acres on an average was improved land, compared with 75.2 in 1910.

The estimated value of farm lands and buildings in 1920 was \$66,334,309,556, as compared with \$34,801,125,697 in 1910. The average value of land alone per farm in 1920 was \$8514, as com-

pared with \$4476 in 1910. The value of implements and machinery aggregated \$3,595,317,021, and of live stock \$7,996,362,496. The value of farm implements and machinery represented an increase of 184.2 per cent in ten years, and of live stock an increase of 62.4 per cent.

Of the total number of farms 60.9 per cent were operated by their owners, 1 per cent by managers, and 38.1 per cent by tenants. There has been a gradual decrease since 1900 in the proportion of farms operated by their owners and a corresponding increase in the proportion operated by tenants. Based on the total farm acreage 66.6 per cent was operated by owners, 5.6 per cent by managers, and 27.7 per cent by tenants. Of the total land operated by all farmers in 1920, 53 per cent was improved. Of the total land in farms in 1920, 910,608,420 acres were operated by white farmers, and 45,068,125 acres by colored. There was an increase of area in the case of white farmers of 9.4 per cent over 1910, and a decrease in the case of colored farmers of 3.4 per cent. The land operated by native white farmers constituted 83.7 per cent of all the farm land, and that operated by foreign born white farmers, 11.6 per cent, while colored farmers operated 4.7 per cent of the total farm acreage. The total number of foreign born white farmers was reported as 581,054, representing a decrease of 13.2 per cent in ten years. The foreign born farmers constituted 9 per cent of the total number of farmers in the country in 1920, as against 10.5 per cent in 1910. Of these 24.2 per cent were born in Germany, 10.4 per cent in Sweden, 8.9 per cent in Norway, and 8.4 per cent in Canada.

With reference to farm mortgages the Census shows that 41.3 per cent of the farms operated by their owners were mortgaged on Jan. 1, 1920, which compares with 33.6 per cent in 1910. Data were not secured for farms operated by tenants or managers. For those reporting the amount of the mortgage (less than one-third) the total debt amounted to over four billion dollars, an increase of 132.5 per cent over 1910. These mortgages represented 29.1 per cent of the value of the property, compared with 27.3 per cent in 1910.

AGRICULTURAL CONDITIONS ABROAD. Canadian farmers were reported to be producing their crops at a loss. The bumper wheat crop of 1920, as in the United States, was produced with the highest priced labor, machinery, and seed the country has ever known, resulting in heavy loss to many farmers. The prices of the bulk of farm products were nearly down to those of 1914. A grain pooling plan was under consideration but was abandoned. Through the agency of the Government, arrangements were made with the Canadian Bankers' Association to advance loans on cattle, to obviate the necessity of selling stock at sacrifice prices. The Ontario Government arranged to put into operation the credit scheme for the benefit of farmers authorized by the last session of the Provincial Legislature.

In Mexico the Department of Agriculture was planning the taking of an agricultural census in connection with the census of population.

Of special importance to British agriculture was the repeal in October of the essential features of the agricultural act passed in 1920. That act embodied the plans of the Government for a fixed agricultural policy (see AGRICULTURAL YEAR

Book, 1920), including the guaranty of minimum prices for wheat and oats, regulation of farm wages, and the control of land cultivation by the State. The repeal caused much disappointment and brought forth sharp criticism, as marking a return to the former uncertainties of farming and food supply. The price guaranty held for the 1920 crop. The farmers faced a falling market for their live stock and were reported as losing money quite generally. The cost of production was said to be more than the price obtained for crops and live stock. A marked reduction in the number of persons employed in agriculture was reported during the past ten years. Indications are that the number of agricultural laborers has decreased by about 150,000 since 1911. While the urban population increased by about 2,000,000, the population in the rural districts declined about 50,000. The Right Honorable Sir Arthur Griffith-Boscawen, M. P., was appointed Minister of Agriculture of Great Britain in the early spring in succession to Lord Lee of Fareham.

The work of restoration of agricultural lands in Belgium progressed favorably, and in France 90 per cent of the lands devastated by war were reported under cultivation. A severe drouth forced farmers to market pigs, sheep, and cattle in large numbers during the summer. Prohibition on the importation of wheat and cereals was abolished August 1. Russian agriculture was badly disorganized, with drouth in the Volga region. The indefinite land policy has created distrust and uncertainty and contributed to the decline. Crop production in lines in which the country was formerly a leader and large exporter decreased tremendously, so that in many sections famine conditions prevailed with millions facing starvation. The United States voted \$20,000,000 for relief, to be used for corn and preserved milk and for seed for planting in the spring. German farmers were granted an increase of from 50 to 65 per cent in prices of grain from the 1921 harvest contributed to the Government Grain Commission, up to the 92,000,000 bushels they were required to surrender to the commission.

The German potato crop was only 60 per cent of that of 1913. The decline in rural population which was under way in 1913 has continued, and in the interests of restoring agriculture systematic efforts were being made to increase land settlement. The Bulgarian Ministry of Agriculture was endeavoring to replace the primitive agricultural methods in use with more modern ones, using motor plows and machinery to increasing extent. The Portuguese Government adopted methods early in the year alleviating the economic crisis, one being the granting of bonuses to farmers and to aid in obtaining agricultural machines with greater facility. The reduction of the rice crop in Japan to less than the approximate annual consumption was a quite severe blow to the agriculture of the islands. A marked tendency to decline in value of farm lands in Japan has been noted as a result of the inflation of prices during the war, the depreciation of paddy fields being nearly 16 per cent and of uplands over 20 per cent.

Australia prepared for bulk storage and shipment of wheat, the elevator system being administered by the Government. A grading system similar to that in the United States and Canada was proposed. Arrangements were made

CEREAL PRODUCTION BY COUNTRIES IN 1920 AND 1921 OF WHEAT, RYE, OATS, BARLEY, AND MAIZE IN BUSHELS

to finance the wheat pool, the Government advancing farmers three shillings per bushel on delivery to railways. The Argentine live stock industry was reported in the most serious condition in its history, due to the slump in foreign demand, depreciation in value of grazing lands, and threatened loss of herds through insufficient pasturage.

STATE AGRICULTURAL DEPARTMENTS AND BOARDS. New State Departments of Agriculture were provided in Michigan, Montana and Missouri. In the latter State a large number of boards dealing with agricultural matters, including the board of agriculture, are consolidated under the new department. In Ohio a director of agriculture, appointed by the Governor, was placed in charge of the Department of Agriculture, heretofore under the control of the State Board of Agriculture. The latter was retained but with only advisory powers.

A board of agriculture was provided by a new law in Indiana, to include the dean of the College of Agriculture.

AGRICULTURE, UNITED STATES DEPARTMENT OF. On March 4, 1921, Henry Cantwell Wallace, of Des Moines, Iowa, editor and publisher of *Wallace's Farmer*, succeeded Edwin Thomas Meredith as Secretary of Agriculture. In October the Assistant Secretary, Dr. E. D. Ball, resigned to become Director of Scientific Work and was succeeded by C. W. Pugsley, editor of the *Nebraska Farmer*, who will have general charge of the publications and extension work of the Department. Carl Alsberg, Chief of the Bureau of Chemistry, and George Livingston, Chief of the Bureau of Markets, resigned. Henry C. Taylor, Chief of the Office of Farm Management, was made Chief of the combined Bureau of Markets and Crop Estimates.

In his annual report for 1921 Secretary Wallace dealt largely with the economic problems which were prominent because of the peculiar agricultural conditions of the year (See **AGRICULTURE**.)

An economic council consisting of the heads of five bureaus considered the economic work of the Department. Its report was submitted to several highly qualified men from different parts of the country. In this way plans were made for the consolidation of the Bureau of Crop Estimates and Bureau of Markets with the Office of Farm Management, the combination to be called the Bureau of Agricultural Economics if Congress approves that name.

The Department should make comprehensive studies relating to the business management of

the farm and the distribution of its products to the consumers. Such studies are vitally connected with those relating to agricultural production. The character of varieties, their liabilities to attack by diseases or insects, their qualities for storage, transportation and use, the standards for grading them are factors determining their market value. Therefore agronomic, biological, and physical research must go hand in hand with economic studies. Looking to the future there is great need of basic research in agricultural economics. The problems of land utilization will soon become very pressing as our population increases. A committee on land utilization has therefore been formed in the Department. The fundamental character and breadth of the research work of the Department was pointed out and illustrations of its important investigations were given. To coördinate this work and bring it into closer relations with similar work conducted by the state experiment stations and other agencies, Congress authorized the appointment of a Director of Scientific Work. To carry out this policy most efficiently increased federal appropriations for the experiment stations were advocated. The work of the Department in preparing subject-matter and illustrative material for teachers of agriculture and in making investigations in home economics was commended.

The Department's work in the administration of laws is large and has recently been materially broadened. Among these laws there are the pure food and drug act, meat inspection, quarantine acts dealing with live stock and plants, control of serums, toxins, and insecticides, protection of national forests, game animals, and migratory birds, enforcement of grain and cotton standards, the Federal Warehouse law, the act prescribing standard containers for fruits and vegetables, the Federal road act, the packers and stockyards act, and the future trading act. These acts require the coöperation of scientists in many fields of agricultural research and stimulate research on problems disclosed in their administration. A special unit has been formed in the Department for the administration of the packers and stockyards act. Arrangements are being made for studies of the operation and effects of future trading in grains and in this way it is hoped to get a good understanding of the actual status of such trading. The great breadth of the Department's extension work in coöperation with the agricultural colleges and other agencies was shown and the desirability of a more unified programme to reach the men, women, and children on the farms was suggested. More attention to a national programme of agricultural progress was also advocated. The service work done through crop reporting, weather forecasts, market news, certification of the wholesomeness of meats, fruits, and vegetables, etc., benefits the public generally.

The steady progress being made in the warfare against plant and animal diseases and pests is based on thorough scientific research and demonstrates the importance of adequate financial support for such research and for well-organized eradication campaigns.

During the fiscal year ended June 30, 1921, 7469 miles of roads were completed under the Federal Road Aid Act and at the end of the year 17,977 miles were under construction. The New Road Act passed by Congress in the fall

of 1921 was believed to be the most constructive road legislation enacted in the United States. It provides for interstate and intercounty roads, for road maintenance and for research on problems of road construction.

The policy of the Department in the management of the 156,000,000 acres of national forests contemplates (1) their greatest possible utilization and at the same time the greatest possible growth of timber; (2) their extension through purchase of lands to protect the watersheds of navigable streams; (3) scientific research regarding growth of timber crops, prevention of waste, utilization of products, and economic problems underlying a national forest policy; and (4) dissemination of information and cooperation with States and timberland owners and farmers in the protection and management of public and private forests and farm woodlots. The Secretary stoutly maintained that forestry is a distinctly agricultural business and that the work of various bureaus of the Department is needed to solve its problems. The work of the Department in Alaska was shown to be of exactly the same kind as that for the States and Territories, involving the activities of a number of bureaus. Plans for the utilization of the Tongass National Forest in Alaska for pulpwood for paper-making resulted in the beginning of this industry there with prospects of large development.

The need of more adequate salaries for administrative and scientific officers of the Department was emphasized. To give advanced training to subordinates in the scientific service graduate courses in several lines out of official hours were inaugurated in the Department.

The regular appropriations for the Department for the year ending June 30, 1922, amounted to \$36,404,259, an increase of \$4,491,475 as compared with those for 1921, including \$2,000,000 for loans to farmers in drought-stricken regions and \$1,000,000 for purchase of forests. Under permanent appropriation acts the Department controls the expenditure of additional amounts, including the road fund of over \$100,000,000; the extension fund of \$4,080,000; and the meat inspection fund of \$3,000,000. The allotment for hog cholera prevention was \$510,000 and for tuberculosis eradication \$1,978,800. For combating the European corn-borer \$275,000 was appropriated, for combating the pink bollworm of cotton \$554,840, and for the gipsy and browntail moth campaign \$400,000.

The appropriations for the Forest Service aggregated \$6,499,302, which was offset by \$4,793,482 of receipts from lumber sales and grazing leases in the National Forests in 1920. The appropriations for the Bureau of Plant Industry were increased from \$3,004,394 to \$3,147,770; Bureau of Animal Industry from \$5,477,156 to \$6,070,576; combined Bureau of Markets and Crop Estimates from \$2,857,365 to \$3,004,444; Weather Bureau from \$1,876,550 to \$1,886,570; Office of Farm Management from \$375,890 to \$414,830. Reductions were made for the Bureau of Chemistry from \$1,333,591 to \$1,300,251; and Bureau of Soils from \$542,215 to \$393,615. The Division of Publications was granted \$382,810, exclusive of \$725,000 for printing and binding carried in the Sundry Civil Appropriation Act.

AICARD, JEAN F. V. French poet and play-

wright, died May 13. He was born at Toulon in 1848 and published a drama in 1867. From 1870 on he published volumes of verse at intervals and two of them were crowned by the Academy in 1874 and 1876. He wrote after 1903 a series of plays of which the most popular is *Le Père Lebonnard* (1890). The list of his principal works with dates is as follows: *Au clair de la lune* (1870); *Les rébellions et les apaisements* (1871); *Poèmes de Provence* (1874), and *La chanson de l'enfant* (1876); *Miette et Noré* (1880); *Lamartine* (1883); *Jésus* (1896, 1912); *Tata* (1901, 1910); *L'ame d'un enfant* (1903); *Légende du cœur* (1903); *Benjamine* (1906); *L'illustre Maurin* (1908); *Maurin des Maures* (1908). In 1913 he published *Hollande and Algérie*.

ALABAMA, POPULATION. According to the report of the census of 1920, there were 2,348,174 residents in the State, Jan. 1, 1920, as compared with 2,138,093 in 1910.

AGRICULTURE. The following table is compiled from estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	4,042,000	62,661,000	\$38,844,000
	1920	3,593,000	56,410,000	55,282,000
Oats.....	1921	308,000	6,776,000	4,404,000
	1920	246,000	4,428,000	3,897,000
Wheat.....	1921	20,000	210,000	321,000
	1920	20,000	192,000	442,000
Tobacco.....	1921	2,000	1,500,000	390,000
	1920	2,000	1,400,000	770,000
Hay.....	1921	861,000	801,000	12,380,000
	1920	789,000	682,000	13,287,000
Cotton.....	1921	2,352,300	635,000	50,800,000
	1920	2,858,000	663,000	49,702,000
Peanuts.....	1921	330,000	181,500,000	5,082,000
	1920	324,000	183,700,000	6,430,000
Sor. syrup.....	1921	90,000	7,650,000	3,213,000
	1920	77,000	7,029,000	6,326,000
Sugar cane.....	1921	71,000	8,760,000	
	1920	55,000	7,665,000	

1 Pounds. 2 Tons. 3 Bales. 4 Gallons.

EDUCATION. The school population between the ages of seven and twenty-one according to the school census of 1920 was 772,276, an increase of 8 per cent over the census of 1910. The whites numbered 465,381, an increase of 19 per cent; the colored 306,895, a decrease of 5 per cent. The enrollment for 1919-20 in the elementary schools was 367,645, white, and 166,753 colored; an increase of 238,720, white, and 102,757, colored. The teachers in the public schools numbered 9888, white and 2670, colored, and the average annual salary paid was \$723, white male teachers, and \$494, white female teachers; \$253 colored male teachers, and \$212, colored female teachers.

LEGISLATION. An extraordinary session of the Alabama legislature was held beginning October 4 and continuing until October 30. Gov. Thos. E. Kilby specified eighteen subjects for action in his call and most of them were enacted into law. Among the more important acts were the submission of three constitutional amendments upon which the people of the State were to vote Jan. 30, 1922. One provided for issuance of \$25,000,000 bonds for highway improvement, another for the exemp-

tion of ex-soldiers in the World War from the payment of poll tax for two years and a third permitted the State to lend its credit to the improvement of the port of Mobile. The first two of these amendments were passed upon favorably by the voters but were declared unconstitutional by the supreme court because of a faulty enactment by a previous session of the legislature. The legislature passed much more drastic laws regarding picketing and boycotting, this having been brought on as a result of the miners' strike of 1920. A law was also enacted in this connection making unincorporated associations responsible for their acts. This was directed at labor unions, against which heretofore causes of action could not be brought because they were not incorporated. These measures were fought vigorously by organized labor. Among the measures recommended by the governor which failed of passage were: Permitting the manufacture and sale of cereal beverages, stricter Sunday observance and directing the supreme court to pass upon the constitutionality of laws suggested by the governor before their enactment.

HISTORY. The strike of coal miners in Alabama which began in September, 1920, was called off Feb. 22, 1921, after one of the most bitter industrial conflicts in the State's history. The miners were defeated and the mines of the State continued to operate on an open-shop basis. The National Guard of the State was on duty in the strike zone for nearly five months. It was estimated that the expenditures of the United Mine Workers of America in the effort to unionize Alabama amounted to approximately \$3,500,000. During the week of October 24 Birmingham celebrated the semi-centennial of its history. On October 26 President Warren G. Harding and Mrs. Harding were guests of the city to participate in the celebration. The entire week was made notable by a series of events upon which much money and effort were spent. One feature was the bringing of the most beautiful girl from each of Alabama's sixty-seven counties as queen of her county. From these in turn was selected the queen of the semi-centennial. Pageants, parades, fêtes, and expositions were arranged for each day of the week. Upon his trip to the city President Harding was accompanied by the Secretary of War, the Secretary of the Interior and Senator Underwood. During the latter part of the year new hope was infused in the Muscle Shoals (q. v.) project by the offer of Henry Ford, the automobile manufacturer, to take over and develop the electric power plant and nitrate plants built by the government. The negotiations were still under way at the close of the year. Work was completed to raise the height of the dams on the Warrior river so that a navigation depth of eight feet is now assured the entire year from Mobile to the Birmingham district. The Alabama Power company began work on its new dam at Duncan's Riffle on the Coosa river which will develop 120 thousand horsepower in addition to that now available. The company also put into service another unit of the Lock 12 power plant on the Coosa adding 20,000 horsepower. Demand for power became so great that the company leased from the government the emergency war steam plant at Muscle Shoals which develops 90,000 horsepower. This lease, however, may be terminated by the government upon sixty days' notice.

A notable feature of water power development

during the year was the hitching up of Alabama power lines with those of Georgia between Gadsden, Ala., and Rome, Ga. By this connection Alabama rivers supplied power for the mills of North and South Carolina during low-water periods in those States. When the rivers are low in Alabama power from the Carolinas is brought into the State. At Anniston, Ala., the manufacture of high-grade phosphoric acid by use of electric power was developed on an extensive commercial scale. With the completion of the fourteenth steel ship at the plant of the Chickasaw Shipbuilding and Car company at Mobile the plant built chiefly to meet war needs was closed. This company's activities were centred on the construction of steel freight cars at the Fairfield plant.

OFFICERS. Governor, Thomas E. Kilby; Lieutenant-Governor, Nathan L. Miller; Secretary of State, William P. Cobb; Auditor, H. F. Lee; Treasurer, R. L. Bradley; Attorney-General, Harwell Davis; Commissioner of Agriculture and Industries, M. C. Allgood; Superintendent of Education, John W. Abercrombie; President, Public Utilities Commission, A. G. Patterson.

ALABAMA, UNIVERSITY OF. A State institution for the higher learning situated at University, Ala.; founded in 1831. The enrollment for the fall 1921 was 1650 and for the summer session of 1920, 1300. There were 75 members in the faculty in the fall of 1921 of whom 15 had been added in the course of the year. The productive funds exclusive of State support were \$1,025,000 and the total income was \$285,000. The library contained 50,000 volumes. President, George H. Denny, Ph.D., LL.D.

ALAMEDA COUNTY, CAL. See MUNICIPAL GOVERNMENT.

ALASKA. War and economic conditions have paralyzed the development of this Territory of vast resources and potential wealth. The year 1921 discloses decrease of population, increase of taxes, closing of mines, deficiency of transportation, unsatisfactory mail service, and stagnation of business. The spending of fifty millions of Federal funds to build a railway connecting Tanana valley with the ocean has failed as yet materially to improve affairs. In part these conditions are due to the uncoordinated methods of thirty-eight Federal bureaus. The late Secretary Lane officially pointed out that in unopposed cases it had taken from three to ten years to obtain a town site; once it took nine years and \$700 to secure a homestead, and nine years for a manufacturing site. To correct these delays under executive authority the Federal affairs of Alaska have been intrusted for administration to an inter-departmental committee (1920). By its action matters have improved, and certain powers have been given to local officials, by the establishment of Federal offices at Juneau where they are in touch with the governor and the legislature.

Meanwhile, recognizing the inefficiency of governmental control and to facilitate development, Mr. C. F. Curry, Chairman of Committee on Territories, House Reports introduced bill H. R. 5695 to coordinate such Federal activities as relate to the natural resources and public utilities of Alaska and administered by Federal bureaus. An extended public hearing was held, which is printed in a report of 666 pages, the most complete Alaskan information ever collected in a single volume.

Urgent need of action on this bill is unquestionable, but the subject is non-political and its fate is uncertain.

POPULATION. The official bulletins of the Census Bureau give for 1920 full information as to the numbers, occupations, industries, etc., of the inhabitants of Alaska. The population then numbered 54,899, a decrease of 9457 since 1910. This was due largely to the conspicuous war service of its men, who volunteered in larger proportion than in any State, and in part to the unproductivity of many mines which increased costs of operation temporarily closed. While the southeastern or "panhandle" district had an increase of 2186, the interior district—upper Yukon and Tanana valleys—had the largest decrease, 6198. The Chinese, Japanese, and negroes were nearly eliminated, being reduced 1835 or 79 per cent. The mining towns lost most heavily: Nome, 1748 or 67 per cent; Fairbanks, 2388 or 67 per cent; Douglas, 803 or 47 per cent. The whites, 27,863, are now barely one-half the population, and while they outnumber the natives in the panhandle district, reverse conditions obtain along the coasts of Bering sea and of the Arctic ocean. The illiteracy of whites is unusually low, being 1.9 per cent for those over ten years, and for the native born whites is but 0.6 per cent.

NATIVE POPULATION. A surprising feature is the increase of the natives from 25,331 in 1910 to 27,883 in 1920. By linguistic stock they were: Eskimauian, 13,698; Athapaskan, 4657; Tlingit, 3895; Aleut, 2942; Tsimshian, 842; Haidan, 524; not reported by stock, 1640. Two-thirds of the natives speak English. Their improvement in education is evidenced by the reduction of illiterates from 71.4 per cent to 56.4, and among those from 10 to 25 years of age from 50 to 35 per cent. Gainful occupations are followed by 47 per cent, over 10 years, 6288 in all. The principal vocations are: Hunters, guides, etc., 2818; fisheries, 2204; reindeer herders, etc., 451; lumbering, 161; mining, 148. In professional or skilled occupations are clergyman, teachers, electricians, stationary and technical engineers, and carpenters. Among the women are bookkeepers, clerks, dressmakers, and trained nurses; despite years of domestic schooling they appear to avoid domestic service in white families, as there were only eighty-eight servants, waitresses, and laundresses. The reindeer being largely in the hands of natives have materially raised the Eskimo in standing. The herding, training, and care of 100,000 deer, which have been done with profit, were important factors in changing these natives from a migratory race of hunters to the more important stage of shepherds. The self-helpfulness of the Eskimo as a people was strikingly shown by the adoption of 250 orphans, whose parents perished through the influenza epidemic, in the regions bordering the Arctic ocean and the north Bering sea.

GOVERNMENT RAILROAD. When completed this line will connect Seward, Kenai peninsula, and Chatinika, Tanana valley, via Anchorage, Broad Pass, Nenana, and Fairbanks with a branch line into the Matanuska coal fields. During 1921 there were 44 miles of track laid, leaving 71 miles yet to be built over which right of way and grading so progressed that it was expected to be ready for track on Jan. 1, 1922. Work was

facilitated by the purchase of the Alaskan Northern railroad, from Seward to near Anchorage, at a cost of \$1,154,188, and of the Tanana Valley road,—Chena to Chatinika: both roads had to be rebuilt. The cost per mile of constructed road has been \$67,630 per mile, exclusive of rolling-stock. The cost of the railroad, fixed by Congress at \$35,000,000, was later raised to \$52,000,000. Supplementary funds and material raised the available amount to \$52,450,169, of which there remained June 30, 1921, unobligated \$3,727,325. In developing coal mines in the Matanuska region, and securing needed coal, there was spent \$1,130,242. For the 6 months ending April 30, 1921—latest data—there were carried nearly 13,000 revenue passengers, and 13,000 tons of commercial freight. Official reports indicate that the road must be operated for years without its revenues equaling the running expenses, with twice-a-week mixed trains each way—the economical method. A total of 545 miles of railroad in operation with train service twice a week in each direction, though at two river crossings temporary arrangements were used. At Riley Creek, Mile 347, a steel viaduct was to be built. The steel for this viaduct has been shipped and it was expected to have the bridge erected by the first of February. This would complete the line with the exception of a permanent crossing of the Tanana river at Nenana, about 35 miles from Fairbanks, the northern terminus now reached by through line from Seward and Anchorage. The appropriation granted by Congress for work of the Alaskan Engineering Commission for the fiscal year 1921-22 was principally to take care of this bridge. The crossing at the end of 1921 was made by means of a ferry in the summer time, and by extending a narrow-gage track over the ice in the winter time. When the bridge is built, the gage of the track from North Nenana to Fairbanks, a distance of 85 miles, will be standardized and a through line to that place secured.

ROADS AND TRAILS. Roads to serve as feeders to the railroad and to develop mining districts are of extreme importance. This system is under the Alaska Road Commission, three army officers, which administers funds appropriated by Congress, allotments from the Alaska Fund, and appropriation by the Territorial Legislature; to June 30, 1921, it had spent six million dollars. It had built to date approximately 5000 miles of wagon roads, sled roads, and trails, beside many bridges, ferries, and tramways. This year it initiated a 10-year programme for the systematic development of territorial roads. The legislature of 1921 appropriated \$25,000 for a bridge across the Nizina river, and authorized negotiation for the purchase of the Seward Peninsula (Nome) railroad, to be operated as a public tram and highway.

MAILS. This service continues to be inefficient and unsatisfactory, due partly to lack of funds and in part to existing transportation facilities.

MINERALS. Complete data are available for 1920 only. High operating costs and low prices for minerals have seriously affected mining. The largest decrease has been in gold placers. Cheaper transportation and less costly fuel are essential to future general improvement. However, promising auriferous lodes in the McKinley district—upper Kuskokwim valley; in the Susitna valley; in the Sitka district; the enactment of the

oil-leasing law; and the systematic exploration of the Matanuska and the Bering coal fields should ensure future profitable productivity. The total mineral output from 1800 to 1921, is \$478,000,000, of which 328 millions were gold and 134 millions in copper.

The Alaskan expert, A. H. Brooks, in his preliminary estimate for 1921, places the yearly product of minerals at \$16,109,000, the lowest annual yield since 1904. The principal values are: Gold, \$8,000,000; copper, \$6,971,000; coal, \$480,000; silver, \$466,000, and lead \$46,000.

Gold. The main features for 1920 were a decrease in placer output, and an increase in that from lode mines. The annual product was \$8,635,560 against \$9,426,023 in 1919. The increase of \$81,450 from 17 gold-lode mines was more than offset by a loss of \$1,097,000 in the 488 placer diggings, principally in the Yukon camps. The maximum gold output was in 1906, \$22,636,794, since which year the annual output has decreased with few unimportant increases. The gold-lode mines of the districts of Sitka and Willow Creek are most favorable for coming years.

Silver, a by-product of gold and copper ores, increased in value from \$705,273 in 1919, to \$1,097,000 in 1920, making it the maximum annual output. This increase was largely due to the galena ores of the Kantishna district.

Copper. Copper assumed an important place in 1915, rising from a value of \$2,852,934 the previous year to \$15,139,129. It touched its maximum of \$29,484,291 in 1916, fell to \$8,783,063 in 1919, and rose to 70,436,363 pounds, valued at \$12,960,106 in 1920. This last increase came almost entirely from the Bonanza, Jumbo and Mother Lode mine, Chitina, and from the Beeson mine in Prince William Sound.

Lead. The production of 687 tons, valued at \$72,822 in 1919, rose to 875 tons, and \$140,000 in 1920, the maximum tonnage of any year. Largely a by-product of the gold ores of the Juneau district, its late increase is mainly due to the Kantishna galena ores.

Tin. This metal has fallen steadily from the maximum of 100 tons, value \$123,300, in 1917, to 16 tons, \$16,112 in 1920.

Platinum metals. The output of 569 ounces, value \$73,633, in 1919, increased in 1920 to 1,477 ounces, value \$160,117. The larger part came from the Salt Chuck mine, Ketchikan district.

Miscellaneous. In 1920 quicksilver was mined in small amount, as also stibnite (antimony). Tungsten and molybdenite mining mines are closed.

Coal. The blighting effect of the restrictive legislation of 8 years ago are evidenced in the coal development. Only one mine has so far been systematically explored by private capital,—in the Bering river field. From 1915 to 1920 there were imported into this great coal-bearing Territory 566,784 tons of coal, of which 271,876 were from British Columbia. With the help of, and at the expense of the United States government the Alaskan output reached its maximum of 75,606 tons in 1918; the imports for 1920 were 82,307 tons. Of the total product of 61,111 tons in 1920, no less than 35,044 tons came from the two government mines in the Matanuska district, where the federal cost of mining has risen from \$4.66 in 1918 to about \$6, in 1920. The Eska and Chickaloon owners failing, their properties were taken over

and operated by the Alaskan Engineering Commission, which has spent in this field \$1,130,242. The development of high-grade deposits is still in the prospecting stage, and the coal actually blocked out scarcely reaches half a million tons. For low-grade coal there have been better results. The Healy River company, under lease, has developed and is exploiting a lignite superior to any previously known in the Nenana district. Its output of 9450 long tons in the past fiscal year found ready market in adjacent towns and for railways uses.

Petroleum. Over three hundred millions of gallons of oil were imported by Alaska from 1906-20. The only petroleum produced in 1920 was from the single (Chilkat) field, Katalla district, patented before the withdrawal of oil lands in 1910. Ten years later, February, 1920, was enacted the oil-leasing law, under which 494 applications have been filed, covering 1,100,553 acres, forecasting some action in 1922.

FISHERIES. These industries continue to be the most productive of Alaskan enterprises. It is a matter of regret that the output of 1920,—the latest date available,—as compared with that of 1919 shows reductions in investment, personnel, and values. The investments dropped from \$74,181,560 to \$70,986,221; the personnel from 28,534 to 27,482; and the values from \$50,282,064 to \$41,492,124; the falling off being principally in the salmon catch in southeastern Alaska. Possibly the decreases were hardly larger than those experienced in business in the States. The 1920 values were: salmon, \$36,635,836; halibut, \$1,726,798; herring, \$1,303,614; cod, \$1,117,464; whales, \$562,299; clams, shrimps, crabs, trout, etc., \$163,772.

Salmon Industry. The salmon is the most valuable of all Alaskan products, surpassing both the minerals and the fur-seal. As was expected there was a marked decrease in 1920; the falling off of 894,249 cases (48 1-lb cans to a case) in southeastern Alaska being somewhat offset by increases of 565,541 in central and of 174,483 cases in western waters. Over 96 per cent of this fish was put up at 146 canneries, an increase of 12 over 1919, by a personnel of 24,423, of whom 25 lost their lives in the work. The pack of 1920 amounted to 4,429,463 cases, valued at \$35,602,800 as against 4,583,688 cases in 1919, of a value of \$43,269,349. It is the smallest catch since 1914; the maximum pack was that of 1918, 6,605,835 cases. As compared with the previous year the catch of 1920 was as follows: cohos (silver), 192,085 cases, a decrease of 40,785; chums (keta), 1,033,517 cases, a decrease of 332,046; humpbacks (pink), 1,593,120 cases, a decrease of 18,488; king (spring), 110,003 cases, an increase of 14,017; and sockeye (reds), 1,500,738 cases, an increase of 223,077.

The condition of the salmon fisheries in 1920 was such as to cause grave concern, over-exploitation being feared and their future prosperity threatened. Over-fishing, predatory enemies, and interference with spawning seriously affected propagation and conservation. The whole problem,—of vast importance to the future of Alaska,—is being systematically studied under Dr. H. M. Smith, United States Fish Commissioner, himself an expert. The wholesale destruction of various species of trout,—predatory on the salmon,—has been initiated with success. The development of

hatcheries and investigation of spawning methods are in progress.

A most important step has been taken in the limitation of commercial fishing grounds, while leaving free the local population for their home supply. Besides affecting future commercial success, the resident population were intimately concerned. The commercial exploitation of salmon in the Copper, Kuskokwim, and Yukon watersheds threatened seriously the life and activities of the settlers, white and native alike. Winter transportation depends almost entirely on dog teams, and dried salmon is the only food for dogs that is cheap and portable. This is no small item, as for local use over 700 tons of dried salmon was put up in 1920 in the Yukon watershed alone. After due public hearings the Secretary of Commerce, under authority of section 6, Act of Congress of June 26, 1906, further limited commercial fishing. From Sept. 1, 1921, salmon fishing was prohibited in the Copper, Kuskokwim, and Yukon waters, and within 500 yards of the deltas.

As might be expected salmon canneries suffer from trap robberies on the one hand, and some of them are at times guilty of violating the federal and Territorial laws. Although there has been increased vigilance on the part of the federal vessels,—of the Fishery Commission, the Navy, the Coast Guard and Coast Survey,—to remedy these evils, yet the enormous areas to be watched cannot be well guarded. The territorial fish commission has been active, and the Territory received \$250,000 under its tax laws, which the Supreme Court has upheld.

Halibut. Caught on the high seas, only such fish are credited as were landed at Alaskan ports. The production of 1920 was 15,295,500 pounds, value \$1,726,798 against 14,278,791, value \$1,550,605 in 1919.

Herring. The value of this branch of fishery fell from \$1,676,170 in 1919 to \$1,303,604 in 1920. The largest item, \$490,485, was for herring pickled after the Scotch method.

Cod. Despite active Japanese competition, which threatens the future of this industry, the cod catch of 1920 was 12,763,899 pounds, valued at \$1,117,464 an increase over the previous year of 1,870,587 pounds, \$291,474.

Whales. Four companies only continue the whale-fishery. They took in 1920, 665 whales of six kinds, as against 580 the preceding season. The values however fell off from \$1,027,200 in 1919 to \$562,302 in 1920.

Miscellaneous. There were no material changes in the value of clams, crabs, sable-fish and trout over 1919. Shrimps, however, were valued at \$49,123, more than double that of the previous year.

Pribilof Islands and Fur Seal. The report of the United States Commissioner of Fisheries sets forth the constant improvement of the 336 natives as to their health, education, housing, and living conditions. They profit financially from the reindeer, fox-trapping, and seal-catch.

The seal herds in 1912 numbered only 215,738 animals. With the present much larger numbers their rate of increase falls off. It is about 6.5 per cent annually, excluding the annual slaughter, about 25,000 seals. By the census in recent years there were: 1917, 468,692 seals; 1918, 496,692; 1919, 524,235; 1920, 552,718; and approximately in 1921, 587,820. Improved methods of taking pelts and preparing them for market have been intro-

duced. In late years there have been taken: 1919, 25,381 pelts; 1920, 25,978; and 1921, 22,546. In addition there were taken by natives on the open sea 1287 pelts, while Japan turned over to the United States ten per cent of pelts (56) taken by their officials on Robben Island. The price of pelts dressed, dyed, and machined steadily decreases. In May, 1920, they brought an average of \$140.97, in May, 1921, \$73.74, and in September, 1921, \$32,099. On Jan. 1, 1921, there were on hand 61,198 seal-skins.

The fox farming of the islands has been most successful. The catch of 1921 is the largest made, numbering 1621 animals, of whom there were released for breeding 242 blue males and 240 blue females. Of those killed there were 1125 blue and 14 white animals. The perfection of breeding has been reached on St George Island, where there was but one white fox out of 1483 animals. In the sales of September, 1921, the blue skins averaged \$96.83 in value, about 20 per cent above the prices obtained in the auction of the preceding May.

REINDEER. The 1280 deer imported by the United States have increased to about 216,000 animals. Meantime about 100,000 have been killed for food. The estimated value of the herds on June 20, 1921, is six million dollars. In ownership they are distributed thus in percentages: United States, 3; missions, 3; Lapps, 2; corporations, 22; and natives, 70. The Loman Company is engaged in the reindeer industry, and ships to the States as many carcasses each year as transportation cold-storage facilities permit. The 30 deer sent to the Aleutian islands have increased to more than 200, and the herd on the Pribilof islands from 40 to 317. Active measures are in progress to free the deer from harmful parasites, and to increase their strain of stock.

AGRICULTURE. In the interior valleys all kinds of hardy vegetables are now raised, as well as grains. The Fairbanks valley produced in 1919 about 4000 bushels of various grains, and the establishment there of a flouring mill ensures that in future local needs for flour will be met. Lack of large local markets is the drawback. Five experimental stations are in operation under the U. S. Department of Agriculture: at Sitka attention is given to vegetables and fruits; at Kodiak to stock-raising; at Matanuska to diversified farming; and at Fairbanks and Rampart to specialization in grains. Barley, oats, rye, and wheat are acclimated and mature every summer. Twenty-two kinds of wild grass grow in such profusion as to ensure the development of a profitable dairy and stock-raising industry, especially on the Kenai peninsula and in adjacent regions.

FINANCE. The amount received by the United States for licenses dropped from \$200,000 in 1920 to \$181,000 in 1921. The territorial receipts for 1920 were \$572,000; disbursements, \$670,000; remaining treasury balance, \$316,000; these receipts are distributed in percentages: To roads and trails, 65; schools outside incorporated towns, 25; indigents, 10. The 15 territorial banks had deposits in 1920 of \$6,354,000 against \$6,620,000 the previous year; the 2 national banks on June 30, 1921, with capital of \$100,000 had surplus of \$104,000, and deposits of \$1,464,000.

TERRITORIAL LEGISLATION. At its biennial session of 1921 the legislature appropriated \$25,000 for a bridge across the Nizina river, and au-

thorized negotiations for the purchase of the Seward (Nome) Peninsula railroad, with a view to its maintenance by the Territory as a public tram and highway. Other important laws enacted were: regulating banks and trust companies; laborer's liens on lumber, oil, and gas industries; live stock inspections; operation of coal-mines; establishment of Agricultural College; on narcotic drugs; fees and taxes of corporations; system of license taxation on business professions, fur-farming, etc.

SCHOOLS. For white and mixed blood children there were maintained at territorial expense fifty-eight schools. An act provides for the active operation in 1922 of an agricultural and mining institution, which will be the first college in the Territory.

NATIVE SCHOOLS. The education, medical care and relief of the natives are administered by a special field force of the U. S. Bureau of Education. This Alaskan branch consists of 6 supervisors, 9 physicians, 13 nurses, and 133 teachers. Hospitals are maintained at Kanakanak, Juneau, Nulato, and Kotesbue. The influenza epidemic brought several thousands under medical care. In the 67 schools there were taught to over 3600 pupils English, domestic science, and the simpler forms of industrial arts. The beneficial results of this training appears in the marked advance in literacy, the formation and successful operation of coöperative stores, and the establishment of separate villages entirely under native control. Honest, law-abiding, industrious and generally temperate the natives are becoming more and more helpful factors in the development of the Territory.

PUBLIC LANDS. Townships covering 100,000 acres were approved in the fiscal year 1921; also 92 mineral surveys, 13 forest homestead surveys, and 6 miscellaneous.

FOREST SERVICE. This bureau steadily increases in the value and extent of its Alaskan work. Its annual sales of timber have risen from 2,252,000 feet b. m. in 1906 to 44,764,000 in 1919, with a value of \$99,893. The sales for 1920 were 45,403,000 board feet, and for 1921 amounted to 36,881,000 board feet. The Service estimates the various species of standing timber in billions of feet at: Western hemlock, 52; spruce, 12; western cedar, 4; other woods, 7. The work of the Service has been facilitated as regards the public by the establishment at Juneau of an Alaskan division.

The Alaskan National Forests have been divided into 15 paper-pulp units. One mill has been started at Port Snettisham to handle one hundred million board feet of lumber now under contract. Another section, known as the Behm Canal Unit, on the west side of Ravallagiedo Island has been sold. It includes 100 million cubic feet, about one million cords. Negotiations are in progress for the sale of 335 million feet on Admiralty Island. The Service is studying the combination of pulp-making and hydro-electric power, in coöperation with the Federal Power Commission. Surveys of power resources and of timber fit for sale were made the past season.

RIVERS AND HARBORS. Federal action has been taken for the improvement of the Apoon mouth of the Yukon river, and of the Nome harbor, where the mouth of Snake river will be dredged and two jetties built.

AIDS TO NAVIGATION AND COAST SURVEYS. Ten new lights, 10 buoys, and one beacon were established in 1920. The Coast Survey has continued its work in the coast waters, and reports 21 dangerous pinnacle rocks in Sumner and Clarence straits alone. Its work in 1920 included 2695 sq. m. of triangulation; 28 miles of coast lines; and 655 sq. m. of coast channels hydrographically surveyed.

LAND FUR-BEARING ANIMALS. Under a recent act of Congress these animals are now under control of the Biological Survey, Department of Agriculture. The value of such furs has been: 1916, \$931,771; 1917, \$1,064,249; 1918, \$1,363,330; 1919, \$1,379,000; 1920, \$1,148,000. Exclusive of 1273 foxes from the Pribilof islands, the following are the principal pelts shipped out of the Territory from Nov. 16, 1919 to Dec. 1, 1920: Muskrat, 138,443; foxes, 13,246; and land otter, 3017. Fur-farming has steadily grown in importance. There are now 119 fox-farms, generally on isolated islands, thus distributed: Southeastern Alaska, 8; southern, 24; southwestern, 54; Copper valley, 7; interior valleys, 26. The Federal law restricts leases to 12 islands, but over one hundred fox-farms are located within reservations, where they are occupied under permits revocable at will. Efforts to farm martens are being made.

COMMERCE. The Alaskan trade has decreased as shown by data for recent fiscal years. Shipments into the Territory were: 1919, \$35,544,034; 1920, \$33,998,462; 1921, \$27,333,972. Shipments outwards: (Gold and silver excepted), 1919, \$72,068,154; 1920, \$66,498,877; 1921, \$54,126,718. The railway material accounts for the greater part of decrease, over four million dollars. The only increase was in oils, valued at half a million. The principal falling off in exports were fish, \$7,700,000, and copper, \$2,900,000. The gold and silver shipments had values: 1920, \$8,793,085; 1921, \$7,072,114.

MANUFACTURES. Apart from industries connected with fisheries and forests there are few manufacturing establishments. The census reports show steady increase, accompanied by radical changes in method: individual enterprises of early days changing to corporations. In ten years 125 establishments with capital under \$100,000 have fallen to 52, replaced by corporations which increased from 56 to 113 in number. Capital increased from thirteen to sixty-five millions; horsepower from 3975 to 18,646, and average number of workmen from 3099 to 6575.

ALASKA FORESTS. See FORESTRY.

ALBANIA. The geographical district formerly a part of the Turkish empire, consisting of the provinces of Scutari and Janina and of parts of the vilayets of Monastir and Kossovo. Before the war its status was indeterminate and it offered one of the problems at the Peace Conference and afterwards. The estimated area is variously given at 10,500 to 11,500 square miles and the estimated population between 800,000 and 850,000, of whom about two-thirds are Moslems, the remaining one-third who are Christians being divided into Roman Catholics chiefly in the north and Orthodox Greeks in the south. The provisional capital after 1914 was Durazzo with a population of 5000. The larger towns with their estimated populations are Scutari, 32,000; Elbasan, 13,000; Tirana, 12,000; Argyrocastro, 12,000; Berat, 8500; Korytza, 8000; Valona,

6500. Albania proclaimed its independence at Valona, Nov. 28, 1912, and it was accepted in principle by the London Conference of Ambassadors, Dec. 20, 1912. The frontiers were afterwards approximately decided upon by the Powers and it was agreed that the country should be governed by a European prince. On Feb. 21, 1914, the crown was bestowed upon Prince William of Wied who was to rule under an International Commission of Control but in the confusion following the war this Commission of Control left the country which fell into a state of anarchy. The Prince of Wied departed and an attempt was made by Essad Pasha who had been driven out in May but returned in September, 1914, to set up a military government at Durazzo. This project failed, Oct. 5, 1914, and the state of disorder continued. The Austrians overran the country during the war and captured Durazzo, Feb. 28, 1916. Meanwhile the Italians had penetrated Albania, and Jan. 3, 1917, declared Albania independent and set up a provisional government at Durazzo.

GOVERNMENT. After the second attempt of the Peace Conference to divide Albania in January, 1920, a national convention was held by the Albanians at Lushnja and there the foundations of the new government were laid. Executive authority is invested in a regency council consisting of two Christians and two Moslems and in a council of ministers or cabinet consisting of the heads of departments and responsible to parliament; legislative power in a parliament of 72 members forming one chamber and elected by the people. The actual executive power has been in the hands of the cabinet subject to parliament. There have been two definite party groups, the Progressive and the Popular parties together with a smaller group of Independents. In 1921 the ministry was divided about equally between the two principal parties under the premiership of Ilias Vrioni. Plans for a new form of government were under discussion in 1921, the general desire of the people being apparently for a limited constitutional monarchy under a prince belonging to a nation that had no interests in Albania.

ECONOMIC CONDITIONS. In 1921 the country was reported to be in a sound economic condition being without a national debt and one of the few countries that stood on a gold basis. Agriculture was said to have been renewed and general conditions were reported to be prosperous, although capital was needed for the development of the country's rich mineral resources including oil fields and for her railways, wharves, warehouses, etc.

BOUNDARY DIFFICULTIES. During 1920 Albania resisted the attempts to partition her territory and was involved in war with the Italians who occupied the city of Valona and were claiming an indefinite region as its hinterland. The Albanians attacked Valona in June. This was followed by desultory fighting throughout the country and finally, August 2, a truce was signed by the Italians at Tirana. The latter evacuated the region and surrendered Valona, September 27. Albania now directed her efforts to securing recognition from the other Powers. At the meetings of the Supreme Council and of the Council of Ambassadors decision in the matter was postponed until at length in December, 1920, the Assembly of the League of Nations at Geneva having been approached by Albania with a

request for admission, it was decided by a unanimous vote to admit her to full membership in the League. The main difficulty all through had been the question of boundaries. In the first place there was the secret treaty of London whereby the province of Scutari had been assigned to Serbia and the province of Koritsa and Arghyrocastro to Greece in compensation for the Italian mandate and the Italian occupation of Valona. The arrangement with Italy at Tirana, however, involved the renunciation of Italian claims to the mandate and to territorial rights and the Albanians contended that Serbia and Greece had no just basis for their demands. These countries, however, continued to press their claims, Greece on the principle that the provinces in question were inhabited by members of the Greek Orthodox Church, and Serbia on historical, military, and commercial grounds. The conflicting claims were all discussed before the League of Nations in 1921 but no decision was reached. The League's Council referred Albania's complaints against Greece and Jugo-Slavia to the Council of Ambassadors. Albania's position was supported by the Italians who were opposed to the ambitions of Greece and Jugo-Slavia and who desired recognition of Italian rights over the little island of Saseno commanding the entrance to the Adriatic, to which, according to the press reports at the beginning of September Albania made no objection.

The attitude of the Jugo-Slavs was as follows: According to the protocol of Florence of Dec. 17, 1913, the so-called line of Franchet d'Esperey was indicated and the Serbs had taken possession up to that line after the Armistice. The Belgrade cabinet would not admit that the frontier should return to its former position, that is to say the Austrian boundary, and it had several times presented its point of view to the Allies, especially on Jan. 12, 1920, claiming the Franchet d'Esperey line with some slight changes. Nor would it accept the return to the line of the protocol of 1913 because that arrangement had been modified by the secret agreement of London in 1914, and because the frontier, accepted in the protocol, would menace the security of the southern provinces. The Albanian populations in that region were turbulent and many atrocities occurred. The Albanians had advanced into territory claimed by the Jugo-Slavs in the direction of Aras during September. If the limit were fixed in such a way as to guarantee to the Albanians the territory thus occupied, a large number of troops would be required and heavy expense involved. The modifications proposed by Belgrade were, according to the Jugo-Slav point of view, designed merely to return to Jugo-Slavia the territories which have their natural outlet in Serbia. The Conference of 1913 had cut away the regions of Prizren Debor and Djako Vica from their economic hinterland. This attitude of the Serbs had not, according to them, involved any danger to the political integrity of Albania and was true to the principle of "The Balkans for the Balkan peoples." The Belgrade government would not admit any mandate that placed Albania under the control of a great Power like Italy. It intended to respect the independence of Albania but it sought to avoid encountering on its two frontiers of the northwest and the south, as well as on the Adriatic littoral, the power of Italy. Such was the point

of view of the Jugo-Slavs and it was sustained by the French in line with the unchanging French policy of taking sides with its protégés in Central Europe.

In the autumn, military preparations had been made by Jugo-Slavia for some time past, against Albania and on November 8 the British prime minister, Lloyd George, telegraphed to Geneva requesting an immediate meeting of the League of Nations in view of the steady advance of the Jugo-Slav forces into Albania. A note had already been despatched by the Council of Ambassadors to the Jugo-Slav government requiring that the military operations in Albania should cease and the Ministers of Great Britain, France, and Italy at Belgrade gave a similar notice to the Jugo-Slav government. Meanwhile the special commission had decided upon the boundary and the Allied governments were preparing to take measures to compel the Jugo-Slavs and the Greeks to evacuate the territory on the Albanian side of the new line. See WAR OF THE NATIONS.

ALBERTA. A province in the northwest of Canada formerly constituting a large part of what was known as the Northwest Territories; bounded on the west by British Columbia, on the east by Saskatchewan, and on the south by the United States; having an area of 255,285 square miles with a population in 1921 of 581,950 and in 1916 of 496,525. The movement of population in 1919 was as follows: Births, 14,130; deaths, 5507; excess of births, 8628; marriages, 4718. The distribution of population by sex in 1916 was: Males, 277,256; females, 219,269. The rural population in 1916 was 307,776 and the urban 188,749. Chief cities with populations in 1921: Calgary, 63,117; Edmonton, 58,627. In the government which was constituted by the Alberta Act of 1905 executive power is vested nominally in the lieutenant-governor, appointed by the Dominion government but actually in the executive council or cabinet of the legislature; and legislative power is vested in the Assembly, whose members are elected by universal suffrage including women voters. Lieutenant-governor at the beginning of 1921, R. G. Brett; prime minister, Charles Stewart.

ALCOHOL. See CHEMISTRY, INDUSTRIAL.

ALCOHOL AND THE PRACTICE OF MEDICINE. It is not denied that the refusal of the American Medical Association and American Pharmaceutical Association to oppose the passage of the Volstead law had much to do with the wording of the paragraphs relating to medical practice. Neither body of men wished to be put on the light of potential bootleggers. A sort of revolt arose in the ranks of medical practitioners, which was due much less to a demand for more liberal regulations than to the apparent tendency of laymen to usurp the province of professional men. It was not only the wording of the Volstead law, but interference by central authority with the legitimate use of narcotics which provoked deep resentment against outside dictation. The *Journal of the American Medical Association*, the editorial policy of which had undergone no change, was moved to send out a questionnaire to one-half the names on its mailing list in the endeavor to discover the actual strength of this revolt. The practitioner was asked to answer a large number of questions which covered every phase of the use of alcohol in medical practice.

There was no doubt that this movement would have the force of a referendum, as far as the medical practitioner was concerned, and the result was awaited with much interest. About fifty per cent of the practitioners favored or sanctioned the use of spirits in medical practice.

ALEXANDER. King of Serbia, acceded to the throne after the death of King Peter (q. v.) in August. He was born at Cettigne, Montenegro, Dec. 4, 1888, and educated at Geneva along with his elder brother George. The latter renounced his rights in 1909 and Alexander became the heir apparent to the Serbian throne. At the time of the Balkan War he was in command of the first army which distinguished itself at Uskuv, after having broken the resistance of the Turks in a campaign of eight days, and during the latter part of the war won a decisive victory over the Bulgarians at Govedarnik. King Peter soon afterwards committed the government to his regency (May, 1914) when Alexander was barely twenty-six years old. Then came the invasion of Serbia and the exile of the royal family. After the retreat from Albania he undertook the reconstruction of the Serbian army at Corfu and succeeded in restoring discipline and re-creating an effective force. Although he performed the functions of a general on the field of battle, he bore only the title of colonel.

ALFALFA. Although alfalfa is quite extensively grown in Europe and North and South America, general statistics on the production of the crop are not available. In the United States one-fifth of the area in tame hay crops is considered as devoted to alfalfa, so that roughly estimated approximately 20,000,000 tons of the tame hay production in 1921, of 80,000,000 tons in round numbers, was alfalfa hay. The crop is now grown in practically every State, but its general distribution during the past year remained about the same and California, Nebraska, Kansas, Colorado, and South Dakota continued to produce a large proportion of the total yield.

In Canada the production of alfalfa hay has more than doubled since 1917. In 1920 the Canadian production as reported was 584,000 tons from 239,000 acres. The average yield for the 10 years 1911-1920 was approximately 2½ tons per acre. Other statistical records for past years indicate that normally Belgium produces annually about 1,000,000 tons of alfalfa and clover hay, France about 12,000,000 tons of alfalfa, clover, and sainfoin hay, and Germany approximately 1,500,000 tons of alfalfa hay as compared with an average of about 10,000,000 tons of clover hay.

In the United States the year was characterized by general inactivity in the hay market, in which alfalfa shared to a full extent. The largest portion of the alfalfa hay crop has to be shipped long distances to reach consuming centres, and high freight rates militated against an active market. In some of the producing sections farmers received only from \$8 to \$10 per ton for the better grades of hay. An outstanding feature in alfalfa marketing and transportation in 1921 was the shipment of hay from California to New York by way of the Panama Canal at a rate of \$12 per ton, this being \$5 to \$6 less per ton than the freight rates from the Central West.

Alfalfa seed importations for the year ending June 30, 1921, amounted to only 941,000 lbs., as

compared with 18,831,000 lbs. for the preceding year. The alfalfa seed crop of 1921 was injured by drought and hot weather in Kansas, Oklahoma, and other States, and late spring freezes in some sections thinned the stand and thereby reduced the acreage. This reduction was largely offset by larger areas of alfalfa for seed in Idaho, Utah, South Dakota, Montana, and Arizona. The Utah seed crop was good and ranged in some parts from 500 lbs. to 1200 lbs. of seed per acre.

ALGERIA. A region belonging to France in northern Africa, organized in two great divisions known as Northern and Southern Algeria, which in turn are divided into departments and territories as follows: Northern Algeria, (departments): Algiers, Oran and Constantine; Southern Algeria (territories): Ainsefra, Touggout, Ghardia, and the Oases of the Sahara. The territories of the Southern division constitute a separate colony. The area including the territories in the south is variously estimated at from 222,180 square miles to 343,000 square miles and the population as estimated in 1911 was: Northern Algeria, 5,069,522; Southern Algeria, 494,306; total, 5,563,828. Chief towns with population figures for 1912: Algiers, 172,397; Oran, 123,086; Constantine, 65,173, (these three being respectively the capitals of the provinces of the same names); Bone, 42,039; Sidi-bel-Abbes, 30,942; Tlemcen, 39,374; Blida, 35,461. There is a university at Algiers which in 1919-20 had 1428 students and 101 professors; and there are special schools for commerce, agriculture, fine arts, and hydrography. The Moslem schools in 1919-20 numbered 496 with 35,578 pupils. The primary and infant schools, public and private, in 1919-20 numbered 1298 with 132,617 pupils. The secondary schools in 1919 numbered 16 with 9837 pupils. There were also two normal schools for men and three for women. The larger part of the country is of slight value for agriculture, the northern part being mountainous and chiefly adapted to grazing and forestry, but near the coast is a small area of very fertile plains and valleys, which is scientifically cultivated and owned for the most part by Europeans. The most profitable returns come from the vineyards and cereals. Among the cultivators many hold their land on the system of metayage. The chief cereal crops are wheat, barley, oats, and corn, and the chief vegetables are potatoes, artichokes, beans, peas, and tomatoes. There is a profitable cultivation of flax, silk, and tobacco. Fruits are varied and grown abundantly. Mineral resources include iron, zinc, lead, mercury, copper, and antimony. The mineral output in 1919 was as follows: Iron ore, 721,584 tons; phosphate rock, 276,040 tons; zinc and lead ore, 22,116 tons; antimony, 120 tons. Fisheries in 1919 employed 4262 persons. There is a considerable revenue from forest products, the forests having an acreage of 6,560,232 and for the most part belonging to the state and the communes. Stock-raising is important including sheep, cattle, and goats. Wine and olive production are especially important. The yield of wine in 1920 was 157,136,452 gallons. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce in 1921:

The first estimates (unofficial) of the 1921 crops of cereals in the colony were as follows:

DEPARTMENT	SOFT WHEAT	HARD WHEAT	OATS	BARLEY	CORN AND MILLET
	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>
Algiers.....	80,000	100,000	45,000	175,000	400,000
Oran.....	216,400	232,500	80,650	424,300	973,850
Constantine....	25,000	375,000	45,000	500,000	945,000
Total.....	321,400	707,500	170,650	1,099,300	2,318,850

The estimated crop area in acres as of May 15, 1920 and 1921, was as follows:

YEAR	SOFT WHEAT	HARD WHEAT	OATS	BARLEY	CORN AND MILLET
	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>
1920.....	673,626	2,554,282	590,139	2,828,246	13,114
1921.....	616,285	2,288,526	573,885	2,513,943	22,350
Decrease in 1921.....	57,341	265,756	16,254	314,303	*9236

* Increase in 1921 over 1920.

Livestock in 1919 were as follows: Cattle, 1,092,996; sheep, 9,139,722; goats, 3,793,998; pigs, 108,213; asses, 247,808; horses, 202,839; mules, 184,895.

The figures for the production of mineral ores in Algeria, furnished by the governor-general of the colony, showed a substantial increase for 1920 over 1919, except for iron pyrites and petroleum, which are comparatively unimportant. Iron, lead, and zinc ores, the three leading minerals, did especially well. The table below gives in metric tons the production and shipments of the various ores in 1919 and 1920:

COMMODITY	1919		1920	
	PRODUC- TION	SHIP- MENTS	PRODUC- TION	SHIP- MENTS
	<i>Tons</i>	<i>Tons</i>	<i>Tons</i>	<i>Tons</i>

COMMERCE. Algerian foreign commerce in 1920 showed marked development. The value of the goods, including those in transit, which entered into the total trade of the colony (general commerce) during the year was placed at 4,342,000,000 francs (\$338,006,000), an increase of 1,033,000,000 francs (\$199,369,000), over 1919 and 2,692,000,000 francs (\$159,556,000) over 1918. The constant growth of the amount of goods in transit—that is, the difference between the values of the general commerce and special commerce from 120,945,000 francs (\$21,999,105) in 1918 and 261,635,000 francs (\$50,495,555) in 1919 to 365,255,000 francs (\$70,494,215) in 1920—demonstrates the importance of the country as a distributing centre for North Africa. According to the Algerian customs authorities, the same standard or valuation was used for both 1919 and 1920. The figures are permanent for the former year, but they are provisional for 1920. Conversions from Algerian paper currency to United States money have necessarily been made at the

normal rate of exchange (1 franc=\$0.193). The average exchange value during the year 1919, however, was approximately 1 franc equals \$0.135 (7.40 francs = 1 dollar), and during 1920, 1 franc equals \$0.0684 (14.62 francs = 1 dollar). Progress was shown in 1920 as to the imports for consumption within Algeria and the exports of its products (special commerce). The increase in the value of imported manufactures was especially notable, amounting to 738,325,000 francs (\$151,181,725), or over 86 per cent, as evidence of what the reserve forces of the country can do in the face of a crop failure, which caused an unfavorable balance in its trade of \$108,938,271 in cereal products alone, two-fifths due to increased imports and three-fifths to decreased exports of these commodities.

The following table shows the value of the imports and exports of Algeria from 1913 to 1920, inclusive, with the part played therein by France, the colony's principal market, and the movement of the "visible" balance of trade. It might be stated that since Algeria is a great tourist country and has few enterprises requiring the investment of foreign capital, its actual trade balance is undoubtedly more favorable than the table shows.

YEAR	IMPORTS FROM—		EXPORTS TO—	
	France	All countries	France	All countries
1913...	\$106,219,287	\$128,789,865	\$66,308,045	\$96,725,617
1914...	84,947,599	101,153,037	48,394,557	72,302,432
1915...	68,815,887	91,136,723	83,731,892	103,661,651
1916...	94,726,523	133,730,665	93,294,849	121,916,942
1917...	93,405,438	131,173,608	129,404,184	165,259,917
1918...	78,527,647	143,194,613	113,020,414	153,256,282
1919...	183,212,198	262,005,799	267,532,740	326,135,646
1920...	384,429,366	489,287,424	211,619,096	278,224,361

America's participation in Algerian imports is not very great, as is shown by the following percentages of the value of goods received directly from the United States, as compared with total imports: 1913, 0.0196; 1914, 0.0162; 1915, 0.0370; 1916, 0.0308; 1917, 0.0206; 1918, 0.0101; and 1919, 0.0364. The decline shown in the later war years may be expected as a result of submarine activity.

The war had a favorable effect on American-Algerian commerce. There was considerable room for improvement, however, even after taking into account the quantity of American goods (impossible to determine) received through French agencies and included in Algerian customs statistics as French. In 1920 the declared exports to the United States from Algeria were valued at \$5,185,894, about evenly divided between the Algiers consulate and the Oran agency. The corresponding figure for 1919 is \$2,166,940, making a gain for 1920 of \$3,018,954. It must be borne in mind in this connection that conversions have been made in the table at the same (normal) rate for both years. The gain, on a basis of actual exchange, value with United States money, becomes more apparent than real, inasmuch as the rate in 1920 was practically twice that of 1919, 14.62 and 7.40 francs per dollar, respectively.

GOVERNMENT. The centre of administration is at Algiers, the capital, and at its head is the governor-general who represents the French government and directs all services with the ex-

ceptions of the non-Moslem departments of the treasury, justice, public instruction, and worship. He is the chief executive authority, prepares the special budget of Algeria, and directs the financial policy. The budget is kept distinct from that of France and is voted by the Financial Delegations and the Superior Council. The former established in 1898 represent respectively the French colonists, the French taxpayers who are not colonists, and the native Moslems, there being one delegation for each of these classes. The Superior Council consists of elected members and the higher officials. There is also a Consultative Council which assists the governor-general. Legislative power is fixed in the French Parliament to which each department of Algeria sends one senator and two deputies. The governor-general at the beginning of 1921 was M. Abel, appointed July 29, 1921.

ALLEGHENY COLLEGE. An institution of the higher education situated at Meadville, Pa.; non-sectarian in policy but under the control of the Methodist Episcopal Church; founded in 1815. The enrollment for the year 1921-22 was 548 of whom 336 were men and 212 women. The faculty numbered 34 including one new professor in English added during the year. Productive funds amounted to \$962,091 and unproductive to \$100,000, total \$1,062,091. A campaign for \$1,250,000 of which \$1,000,000 was for endowment was successfully completed in June. The library contained 50,000 volumes. In 1921 the new gymnasium was completed and an addition to Hulings Hall, the women's dormitory. President, Fred W. Hixson, D.D., LL.D.

ALLEN, JOEL ASAPH. Curator of the American Museum of Natural History, died at Cornwall-on-Hudson, August 29. He was born at Springfield, Mass., July 19, 1838, and studied zoology under Agassiz in the Lawrence Scientific School at Harvard. He taught zoology at Harvard from 1871 to 1885 after which he became curator at the American Museum of Natural History in New York. He was the editor of several important zoological periodicals and was awarded the Walker Grand Prize in 1903. Among his writings may be mentioned *History of North American Pinnipeds*; monographs on North American rodents; *Mammals of Patagonia, Belgian Congo, etc.* He was an extensive contributor to scientific periodicals.

ALLEN, WILLIAM REYNOLDS. Judge, died, September 8. He was born in Kenansville, N. C., May 26, 1860, educated at Trinity College, N. C., and admitted to the bar in 1881. He practiced law from that time at Goldsboro, N. C. He was a member of the North Carolina House of Representatives in 1893, 1899, and 1901. From 1902 to 1910 he was judge of the superior court of North Carolina, and he was elected associate justice of the State supreme court for the term, 1910 to 1927. In politics he was a Democrat.

ALLIANCE FRANÇAISE, FEDERATION DE L'. Organized in 1902 for the purpose of encouraging and furthering in the United States and Canada the study and cultivation of the language, literature, art, and history of France. It comprises more than 200 clubs, societies, and groups in the United States and Canada. During 1921 new groups were affiliated at Athens, Ga., Buffalo, N. Y., Calgary, Can., University of California, Cleveland, Hartford, Conn., Lon-

don, Ont., New York City, Spartanburg, S. C., Roanoke, Va., Bryn Mawr College, Davidson College, Women's College of Oklahoma State University, Faribault, Minn., University of Pittsburg, Peoria, Ill., Wilberforce University, New Rochelle, N. Y., Brooklyn, N. Y., Yonkers, N. Y., Woonsocket, R. I., Atlanta, Ga., Royal Military College, at Kingston, Ont., and the College of the City of New York. Thirty others are in the process of formation. The *Assemblée Générale Annuelle* in 1921 was held April 2 in New York City, and was addressed by Mr. J. J. Jusserand, its Honorary President and French Ambassador to the United States. A communication was read from Mr. LeRoy White, the President of the Federation who was in France. Resolutions were adopted respecting the death in June of Mr. Alexander T. Mason, vice-president of the Federation since 1905. Speeches were also made by Mr. Gonzalve Desaulniers and M. Viviani. One of the important functions of the Federation is to engage lecturers who tour the country visiting and speaking before the various clubs and societies. Prominent among those of 1921 are M. Leonce Benedite, M. Regis Michaud, M. Gaston Riou, M. Frank P. Schoell, M. Emile Villemin, and M. van Gennep. In addition to its annual *Bulletin Officiel* (published in September) the *La France* devotes space to news of the Federation. Of the officers may be mentioned J. J. Jusserand, Honorary President, J. LeRoy White, President; Frank D. Pavay, Vice-President; and Felix Weill, General Secretary. Headquarters are maintained at 32 Nassau Street, New York.

ALSACE-LORRAINE. The territory taken from France by Germany in 1871, and restored to France after the War of the Nations by the Treaty of Versailles in 1919. While it was part of Germany it constituted an imperial territory or Reichsland and was divided into the three districts of Lower Alsace, Upper Alsace, and Lorraine, under a Statthalter appointed and removable by the Emperor, subject to the consent of the Diet. The latter body which constitutes the legislature, consists of two chambers, the first having all nominated members, and the second members elected by general direct suffrage. On the return of the provinces to France they became the provinces of: Bas-Rhin, Alsace, with an area of 1848 square miles and a population of 700,938; Haut-Rhin, with an area of 1354 square miles and a population of 517,865; and Moselle, with an area of 2402 square miles and a population of 655,211. The population according to the German census of 1910 was 1,874,014 of whom the German-speaking numbered 1,634,260, and the French-speaking 204,262; and the population according to religion at that census was: Catholics, 1,428,343; Protestants, 408,274; Jews, 30,408. The number of Germans banished from the provinces down to October 20 according to the press was as follows, distributed among the three departments: Moselle, 47,579; Bas-Rhin, 19,024; Haut-Rhin, 15,852. There was no way of knowing the number of Germans who had left the country of their own free will. In the first place the latest census before the Armistice dated from 1910. In the second place during the war there was an extensive movement of the population toward the west owing to the requisition of working-men in the mines or at the front. According to the German figures which

the French considered untrustworthy, there had been in Alsace before the Armistice about 123,000 Germans. On the basis of these figures there would have been from 40,000 to 50,000 German citizens who voluntarily left the country after the Armistice.

ALUMINUM. Demand for aluminum appeared to decline during the year owing in part to the depression of the automobile industry. Quotations for domestic aluminum, which at the first of 1921 were 28.3 to 28.5c. per lb., declined to 24.5 to 25c. in July and in November were cut to 20c. Foreign aluminum was quoted from 3 to 7c. cheaper. Imports of crude aluminum for the first nine months of 1921 were 26,177,852 lbs. with a declared value of 22c. per lb., and exports of domestic aluminum in the same period totaled 1,024,346 lbs., valued at 27c. per lb. French aluminum plants were reported to be operating at about normal capacity, but the German plants were having difficulty, as many of them derived their power from coal, and were therefore at a disadvantage. Japan was still endeavoring to establish an aluminum industry. See **BAUXITE**.

AMES, CHARLES WILBERFORCE. Publisher, died, April 4. He was head of one of the prominent publishing houses in the West, and associated with many important enterprises in Minnesota. He was born at Minneapolis, Minn., June 30, 1855, and graduated at Cornell University in 1878. He learned the printer's trade in the office of a Californian periodical, and after a few years in which he was employed in railway engineering and on the Pennsylvania State geological survey, he served (1879-1890) on the editorial staff of the *Christian Register*, Boston, Mass., of which his father was the editor. After 1899 he was general manager of the West Publishing company and director of the American Law Book company in New York City. Down to 1913 he was director of the Northwestern Trust company. He was a member of the Winter, Truesdell, Ames company of Minneapolis, and a member or director in various institutions in St. Paul and elsewhere. He was a trustee of the American Fellowship in French Universities, and visited France in its interest in 1917.

AMHERST COLLEGE. An institution of the higher learning, situated at Amherst, Mass.; founded in 1821. Students enrolled for 1921-22 numbered 528. There was 1 graduate student and there were 7 Fellows. The members of the faculty numbered 53. Productive funds, \$4,810,576; income for the year \$476,087. The library contained 300,000 volumes. President, Alexander Meiklejohn. On June 18-22, Amherst celebrated its centennial. Lord Jeffery Amherst, a descendant of Lord Amherst from whose name the college was taken, was a guest of the occasion. The celebration included historical exercises and addresses by well-known Amherst alumni and others.

AMUMSDEN. See POLAR RESEARCH.

ANALYTICAL CHEMISTRY. See CHEMISTRY.

ANATOLIA. The part of the former Turkish empire which corresponds to Asia Minor, consisting of a peninsula at the western extremity of Asia, bounded by the Black Sea on the north, and by the Mediterranean on the west; with an area variously estimated at from 196,000 to 199,272 square miles, and a population estimated at from 9,000,000 to 10,186,900, of whom about 7,000,000 are Turks. The administrative divisions or vilayets on the basis of calculations made under the old empire, with their estimated areas and populations are as follows: Brussa or Brusa, area, 25,400 square miles, population, 1,626,800; Smyrna or Aidin, area, 25,801, population, 2,500,000; Konia, area, 39,410, population, 1,069,000; Angora, area, 27,370, population, 932,800; Adana, area, 15,400, population, 422,400; Sivas, area, 23,970, population, 1,057,500; Trebizond, area, 16,671, population, 1,265,000; Kastamuni, area, 19,570, population, 961,200; there were also the two independent sanjaks of Ismid (area, 3130 and population, 222,700) and Bigha (area, 2550 and population, 129,500). The above figures, however, do not indicate present conditions, the country being the seat of war between Greece and Turkey during the year, and the status of parts of it being indeterminate, as for example, Smyrna which was in the possession of the Greeks. Anatolia is the purely Turkish part of the former empire, and after the war was regarded as the only proper basis for the new Turkish state. It was overrun by the Nationalists under Mustapha Kemal who became the main power in the state, completely overshadowing the authorities at Constantinople. See the articles—TURKEY; GREECE; and WAR OF THE NATIONS.

ANDRADE, FRANCESCO D'. Portuguese baritone, died in Berlin, February 9. He was born in Lisbon, Jan. 11, 1859. After his debut in San Remo, Italy, in 1882, he soon became famous and sang at the principal opera houses of Europe, equally esteemed as one of the foremost Liedersingers of his day. An unconquerable fear of the sea caused him to decline several flattering offers from American managers. During the last twenty years he lived in Berlin.

ANGLO-SAXON. See PHILOLOGY, MODERN.

ANGOLA or PORTUGUESE WEST AFRICA. A Portuguese colony on the western coast of Africa bounded by French Congo, Belgian Congo, the Union of South Africa and the former German colony of Southwest Africa. It has belonged to Portugal since 1575, and its present boundaries were fixed by conventions of May 12, 1886, May 25, 1891, June 11, 1891, and Dec. 30, 1896, as regards French Congo, Belgian Congo, British South Africa, and German Southwest Africa, respectively. The estimated area is 484,800 square miles, and the population has been given at about 4,120,000, but an estimate in 1914 placed the native population as low as 2,124,361: Capital, San Paulo de Loanda; other important towns, Cabinda, Ambriz, Novo Revondo, Benguella, Mossamedes and Port Alexander. The military forces maintained in the colony vary between 2721 and 4731, the majority being natives. The chief products are: Coffee, rubber, wax, sugar, vegetable oils, coconuts, ivory, oxen, and fish. The supply of rubber which was formerly an im-

portant industry has latterly declined. There are large resources of copper, malachite, iron, petroleum, and salt, and gold has been found. Trade is chiefly with Portugal. Textiles are the chief imports, and coffee and rubber have been the chief exports. Imports in 1919 exclusive of Congo 10,208,893 escudos, exports exclusive of Congo 11,718,322 escudos. The railway line open for traffic, according to latest figures, was 818 miles. The government is under a high commissioner whose headquarters are at Loanda, and the colony is divided for administrative purposes into nine districts.

ANHALT. A free state of Germany, formerly a duchy of the German empire, bounded by the Prussian provinces of Brandenburg and Saxony; with an area of 888 square miles and a population in 1919 of 331,258. Capital, Dessau, with a population in 1919 of 57,658; other cities, Bernburg, 33,724; Cöthen, 23,416; Zerbst, 19,210; Rossau, 11,354. The great majority of the population are Protestants. The estimated income and expenditures, 1920-1921, stood at 62,285,300 marks. Before the war the government was under a duke with a legislature or diet of thirty-six members, but in 1918 the system was changed, and the duchy declared a republic. A constitutional assembly having been voted, the new state received a constitution, July 18, 1919. In accordance with this the diet was elected by choice for three years, and the executive power was placed in a state council of five members, one of whom, the chairman, bears the title of president.

ANIMAL INDUSTRY. See LIVE STOCK.

ANKENY, LEVI. Former United States Senator from Washington, died, March 29. He was born near St. Joseph, Mo., August 1, 1844, and educated at Portland, Ore. He became prominent in the commercial and political life of Oregon and Washington, serving at one time or another as the president of seven banks in these two States. He was a Washington delegate at the Republican National Convention of 1900 and 1914, and was a member of the Republican National Committee, 1904 to 1908. Meanwhile he was elected senator from Washington for the term 1903-1909.

ANNAM. A French protectorate, constituting part of French Indo-China (q. v.), its present status dating from the treaty ratified at Hué, Feb. 23, 1886. Area, about 52,100 square miles; population in 1919, 5,952,000 including 2117 Europeans, aside from the military forces. The capital is Hué (60,711), and the largest town, Binh-dinh (74,400). In the towns and along the coast the population is Annamite and in the Highlands it consists chiefly of Moi tribes. Education was reorganized at the end of 1920, and the official schools were placed directly under the control of the French government. According to the latest available figures there were: 98 elementary schools with 5985 pupils; 685 village schools with 14,438 pupils; 16 secondary schools with 5058 pupils; and a few other institutions for more advanced education. Agriculture is carried on mainly in the interior where irrigation has been provided, and rice is one of the chief products, the others being: Cotton, corn and other cereals, areca nuts, mulberries, cinnamon, sugar, tobacco, betel, bamboo, manioc, coffee, dyes, and a variety of medicinal plants. There is a small exportation of raw sugar. Stock-

raising is carried on to some extent. Mineral resources include copper, zinc, gold, coal, salt, and hematite iron. The chief imports are: Cotton yarn and cottons, petroleum, tea, tobacco, and paper goods and the chief exports: Sugar, rice, cotton and silk tissues, tea, cinnamon, and paper. The exports in 1919 were 51,556,788 francs and the imports, 9,243,049 francs. Shipping in 1919 showed the Japanese with the largest tonnage, 42,580 and the British next, 15,114. The total tonnage at the port of Tourane was 97,924. The nominal head of the government is the king, Khai-Dinh, who succeeded to the throne in 1916, but the government is under French control and internal affairs of the country are administered by the French, although a large number of Annamite officials are appointed.

ANTARCTIC REGIONS. See **POLAR RESEARCH.**

ANTHRAX. This communicable disease, chiefly occupational in origin and prone to occur in wool-sorters, workers in hides and others who handle animal products of industry has been much in the public eye in recent years through its transmission by infected shaving brushes. The conditions for inoculation are almost ideal, for the razor makes the small wound which admits the virus, or, even before application of the instrument a preëxisting abrasion may be inoculated while lathering. The public has been repeatedly cautioned against buying cheap shaving brushes and some attempts have been made at routine inspection of such articles in the market in order to determine whether or not they are dangerous. But aside from its burdensome character this resource is hardly adequate to protect the community and recently the Public Health Council of the State Department of Health has passed a regulation effective Jan. 1, 1922, prohibiting the manufacture, sale, or offering for sale shaving brushes made from horsehair, it having become apparent that brushes of this origin were the ones responsible for the communication of the disease. The comparative infrequency of the latter at the present day as a result of progressive sanitation robs anthrax of much public interest, but every one should know that it is prominent in the list of diseases communicated from animals to man, that it has a high mortality, that it appears in several entirely distinct forms, of which the externally inoculated is one and that since this form is sometimes called malignant carbuncle, it is occasionally confused with common carbuncle, which is also a dangerous and sometimes fatal disease.

ADDENDUM ON ANTHRAX. During the past few years a large number of cases of anthrax have been reported as occurring in Pennsylvania, quite a few ending fatally. In a number of instances the source of infection was traced to cheap shaving brushes made from horsehair. Early in 1920 five workers in a horsehair dressing plant outside of Pennsylvania developed the disease and as Philadelphia is the centre for the preparation of horsehair for manufacturing purposes, the Division of Industrial Hygiene of the Pennsylvania Department of Labor and Industry undertook a survey of the entire State for anthrax in these workers. While no case was found it was thought best to issue a ruling that all horsehair should be subjected to dry heat for

24 hours at 200 degrees F. or for 2 hours to steam at 15 lbs. pressure, or finally to continual boiling in water for 3 hours. In another industry, tanning, which involves handling possibly infected hides, there were in 1920 sixteen cases of anthrax in the workers, the largest for many years. The report of the survey of anthrax in tannery workers has not yet been made public.

ANTHROPOLOGY. **ANTIQUITY OF MAN AND PHYSICAL ANTHROPOLOGY.** Under the influence of practical considerations, such as eugenic and military aims, physical anthropology is receiving even greater attention than before. Thus, in Munich Professor Rudolf Martin, Germany's most eminent physical anthropologist, is applying his somatological knowledge to the ambitious programme of improving the physique of German students, and the Anthropological Committee of Denmark has investigated problems related to the condition of children's teeth, the growth of boys and girls, the influence of economic conditions on the stature of recruits, etc. In America Dr. Hrdlička has added a manual of *Anthropometry* to his earlier book on *Physical Anthropology* and *A Laboratory Manual of Anthropometry* has also been published by Professor Harris H. Wilder. In India the *Principles and Methods of Physical Anthropology* have been discussed in a special treatise by Sarat Chandra Roy.

Apart from this subdivision of the general field there is a widespread interest in the science of man, which not even adverse financial conditions have been able to check. Indicative of this interest is the issuance of a new quarterly entitled *Man in India* (edited by Roy), which purports to supply a record of anthropological research with special reference to the country of its birth.

While other writers have begun to explain racial differences through the influence of the ductless glands, Eugen Fischer continues to develop the correlation of race origins with the domestication of the human species. A brief summary of his views appears in *Natur und Technik*, 1921, p. 1 seq., while an article of his own is contributed to the *Eduard Hahn Festschrift*, pp. 1-10. There can be no doubt that from the very beginning of human culture mankind has lived under conditions of alimentation and shelter corresponding closely to those to which domesticated animal species are subjected. As a result there is a close parallelism between human traits and those of such species as are distinguished from their wild kin. One general trait is the excessive variability shared by human and other domesticated forms, to which there is nothing corresponding in wild species. More specifically, variation develops in the same direction and in the same organs. Thus, all wild forms have an ample and quite definite pigmentation of the iris, and this does not vary with high latitudes, for white Arctic animals have precisely the same eye-color as their darker-skinned cousins. On the other hand, among all light-skinned domesticated forms pigmentation of the eye oscillates, decreases, and occasionally disappears; and the lighter tints of the human eye must be directly connected with this biological phenomenon. Fair hair, gigantism, dwarfish stature, and other features likewise exist both in man and the domesticated varieties of various species. This mode of regarding racial traits

raises the important query, whether a like variation in different areas has genealogical value or should be treated merely as a spontaneous variation due to the capricious operation of the laws of domestication. Jens Paulsen in an essay on *Wesen und Entstehung der Rassenmerkmale* (Archiv für Anthropologie, 1920, pp. 60-70) combines the theory that the action of the ductless glands has shaped racial differences with the view that this endocrine functioning itself is partly the result of domestication.

Professor Eugene Dubois has electrified the scientific world by a communication to the Royal Society of Amsterdam, in which he states that prior to his discovery of *Pithecanthropus* he had found in Java two fossilized human skulls strongly resembling those of aboriginal Australians, though still more primitive, and thus suggesting the specialization of the Australian type in southern Asia and during the Pleistocene period (*Man*, 1921, p. 32).

As the year closed, another find of far-reaching significance was reported in the British and American press (*Science*, Dec. 9, 1921), viz. the discovery of a fossil human skull from Northern Rhodesia with practically complete and intact cranium. The prognathism of the upper jaw is extreme, as is the maxillary height between the anterior nasal spine and the alveolar margin. The nasal bridge is rather prominent and the supraorbital ridges are more pronounced than in any other known fossil human skull. Cranial height and breadth are small, suggesting a low cranial capacity. From the preliminary statements it appears that the Rhodesian find is ruder than any of the Neandertal skulls hitherto unearthed and may turn out to be intermediate between *Pithecanthropus* and the Neandertal species. The relic is now at the British Museum, where it is to be studied by Professors A. Keith and Elliott Smith.

The conventional classification of European types is assailed by Professor Jan Czekanowski (*Recherches anthropologiques de la Pologne, Bulletins et Mémoires de la Société d'Anthropologie*, 1920, pp. 48-69), who finds not only the brachycephalous medium-sized Alpine and the dolichocephalic tall Nordic type but at least four other local varieties in Eastern Europe. Of these a mesocephalous short "pre-Slavic" group represents the oldest and most widely distributed element in Poland, while a broad-skulled, tall, and blond type and an obsolescent short, fair, and extremely dolichocephalic variety are equally noteworthy.

In the different field of prehistoric archaeology two general works may be cited. A brief and unpretentious sketch of Neolithic times is offered in Professor J. M. Tyler's *The New Stone Age in Northern Europe*. M. C. Burkitt's *Prehistory, a Study of Early Culture in Europe and the Mediterranean Basin* represents the work of a British scholar who has personally done excavation in Spain under the supervision of Abbé Breuil and paid special attention to prehistoric art. Two valuable summaries of our knowledge of prehistoric Spain are furnished by Professor Pedro Bosch-Gimpera of Barcelona in his *La arqueología preromana Hispánica* and *Prehistoria Catalana*. Among the results may be mentioned the proof that the Iberian earthenware formerly derived from Mycenaean sources does not ante-

date the last pre-Christian centuries. Purely anthropological in content, though written by a zoölogist, S. J. Holmes's *The Trend of the Race* embodies a singularly cautious and trustworthy summary of eugenicist thought with searching criticism of its statistical documentation.

Under the unpretentious title of "A Few Andamanese Skulls with Comparative Notes on Negrito Craniometry" (American Museum of Natural History, Anthropological Papers, vol. XXIII, pt. 4), L. R. Sullivan supplies in reality a very worth-while survey of the whole Negrito problem. The three Andamanese skulls described by him conform very closely to those noted by earlier writers. In general the brain capacity of the Islanders averages 1269 for males and 1128 cc. for females. The skull is decidedly broad, with an index of 82.5. In a majority of characters the Andamanese are considerably less variable than their fellow-Negrito of the Philippines. These, as well as the Semang Negrito of the Malay Peninsula, exceed the Andamanese with reference to all skull diameters. The inference is not that they are racially distinct but merely that the Andamanese separated from the common Negrito stock at a fairly early date. On the other hand, Sullivan hesitates to extend the theory of a close community of stock to the very short Negroid type recently discovered in New Guinea. His opinion is that these Papuan "Negrito" may turn out to be merely dwarfed Melanesian Negroids.

In an article on "Alt-und neuweltliche Kalender" (*Zeitschrift für Ethnologie*, 1920-21, pp. 6-37), F. Graebner himself resumes discussion of the question whether the higher civilizations of the New World have an alien origin and arrives at an affirmative result. According to him, the peculiar Mexican calendar with its mutual adjustment of two distinct cycles is widely duplicated in East Asia, including Malaysia, Siam, and China. The calendric coincidence is further supported by a series of ethnographic and especially mythological parallels, the latter being mainly derived from a comparison of Preuss's North Mexican tales with the folklore of the Old World. An immediate contact between Mexico and South-eastern Asia is argued for, but the suggestion is offered that the relationship can be traced much farther to the West, though at present it may be premature to determine the ultimate source of origin for Peruvian and Central American culture. Graebner finds that a number of significant parallels thus connect America and the Sudanese area, for example, the Swastiks, the plastic style of Benin as well as its plaitwork band-ornamentation, shared with Ceylon, Mexico, and Colombia.

THEORETICAL ETHNOLOGY. Pursuing his application of psychoanalytic theory to ethnological phenomena, W. H. R. Rivers devoted his presidential address before the Folk-Lore Society to a discussion of "Conservatism and Plasticity" (*Folk-Lore*, 1921, 10-27). He suggested that the concept of the father-ideal which figures in Freud's system could be fruitfully adapted to the needs of ethnographic interpretation. In Melanesia the place of the individual father is occupied by the group of old men wielding authority. Their joint influence would account for the slavish conformity to established usage noticeable among the young in this area and in savage society generally. It is further strengthened by the

nature of religious worship—an ancestral cult. Nevertheless the variety of funeral rites in Melanesia indicates a certain degree of plasticity. To account for this Rivers utilizes the concept of transference, supposing that a group of immigrants possessing a superior culture would be able to overcome the native conservatism by establishing the same sort of relation between themselves and the aborigines which in our civilization is created by the transfer of paternal authority to a priest or physician. An attempt to correlate psychology with ethnology is also made by R. H. Lowie in "A Note on Aesthetics" (*American Anthropologist*, 1921, 170-174), where exact measurement is suggested as a means for determining distinctive tribal decorative styles, Fehner's aesthetic experiments being taken as the point of departure.

The Graebnerian theory persists as a factor in arousing discussion. In an article on "Masks and Moieties as a Culture Complex" (*Journal of the Anthropological Institute*, London, 452-460), A. L. Kroeber and C. Holt reject the Graebnerian assumption that moieties and masks are linked elements in a single cultural stream or layer. This has led Father W. Schmidt to defend once more the basic doctrines of the Graebner school ("Die kulturhistorische Methode u. die nordamerikanische Ethnologie," *Anthropos*, XIV-XV, 546-563), in the course of which, however, he discovers much unity of purpose in the American and modern German culture-historical schools, especially as regards the repudiation of evolutionary schemes. All relevant problems are briefly characterized from the American point of view in Franz Boas's "The Methods of Ethnology" (*American Anthropologist*, 1920, 311-320). Boas rejects alike the older evolutionist and the recent diffusionist doctrines in their extreme forms but pleads for a stricter historical approach with the emphasis on the dynamics of cultural change. It is also interesting that, while recognizing the suggestiveness of psychoanalytic thinking, Boas is skeptical as to the solution of symbolism by Freudian principles.

Questions of social organization are discussed in E. S. Hartland's *Primitive Society* and Father W. Koppers' *Die Anfänge des menschlichen Gemeinschaftslebens*. Hartland defends his old thesis that maternal descent precedes patrilineal reckoning of kinship. Koppers' book is devoted to a rejection of Morgan's philosophy of social evolution for which he substitutes a scheme derived from Father W. Schmidt's modifications of Graebner's theory. Specifically, Koppers attempts to prove that the very oldest culture—that represented by the modern Pygmies—lends no support to the hypotheses of primitive promiscuity and communism. He also holds that maternal descent did not precede paternal descent but that both evolved independently of each other from a primeval form of society, in which neither parental side was weighted more than the other. It is interesting to find that this representative of the Austrian Catholic school attaches great significance to economic factors, especially in explaining the status of woman. The sociological aspect of anthropology also continues to receive attention at the hands of distinguished scholars in adjoining branches of inquiry. Thus, the first volume of Sir Paul Vinogradoff's *Outlines of Historical Jurisprudence* largely summarizes ethno-

graphic material and supports the traditional doctrine that ownership of land was originally communal. Precisely the opposite view is defended by the Austrian historian Alfons Dopsch in *Wirtschaftliche und soziale Grundlagen der europäischen Kulturentwicklung*, where old Roman and later medieval sources are interpreted to prove the existence of private property among the ancient Germanic peoples.

The synthetic tendency lately noticeable in other fields of anthropology has quite recently found expression in Dr. Edward Sapir's volume on *Language*, probably the first general work on the subject by one who combines the advantages of traditional philological training with experience as a field student of primitive tongues. One of the remarkable features of the work is the rejection of the current classification into isolating, agglutinative, and inflective languages. For this time-worn scheme Sapir substitutes another pivoted on the relative importance of derivational and relational concepts. In spite of its abstract formulation this scheme accords very well with established historical relationships. On the subject of linguistic methodology Franz Boas offers some important remarks in "The Classification of American Languages" (*American Anthropologist*, 1920, 367-376), where recent attempts to connect linguistic families hitherto considered distinct are deprecated and the plea is made for a more intensive study of dialectic differentiation.

In the long-neglected domain of anthropogeography Isaiah Bowman and Richard Dodge's adaptation of Jean Brunhes's *La Géographie humaine* under the title *Human Geography* merits attention since Brunhes, in contrast to other geographers who have dealt with ethnographic phenomena, displays singular sanity in applying climatic and other environmental conditions to the study of culture.

The rapprochement between the various sciences concerned with human conduct is indicated by a number of articles and other publications. Among these may be cited Professor Harry Elmer Barnes's "Some Contributions of Sociology to Modern Political Theory" (*American Political Science Review*, November, 1921, pp. 487-533), where the contributions of modern anthropology on the race question and on the character of the state are concisely and accurately summarized. Robert E. Park and Ernest W. Burgess's *Introduction to the Science of Sociology*, a comprehensive source book, also pays specific attention to anthropological theory. The announcement of R. Thurnwald's *Psychologie des primitiven Menschen*, copies of which are not yet available in this country, will be eagerly awaited by those who expect much enlightenment from a synthesis of psychological and ethnological data and points of view.

ETHNOGRAPHY. Under the influence of Max Schmidt's investigations of Peruvian ornamentation, the late H. Haeblerlin examined Pueblo ceramic patterns for the purpose of correlating the designs with those automatically produced by the technique of twilled plaiting. His results are embodied in a paper entitled "Das Flächenornament in der Keramik der alten Pueblo-Kultur" (*Baessler-Archiv*, vol. VI, pp. 1-35), which has recently become accessible in this country. Haeblerlin finds that the ancient Pueblo potter transferred the plaiting designs to her

earthenware without the least recognition of the greater freedom granted by a surface imposing hardly any limitations. There was no tendency to inject naturalistic interpretations into the ornamentation. Whatever realistic motives occur are in no way genetically related to the geometric patterns.

In "The House of the Great Kiva at the Astec Ruin" (American Museum of Natural History, *Anthropological Papers*, XXVI, pt. 2), E. H. Morris describes a very unusual building discovered in northern New Mexico. It consists of a double circle, the inner, or kiva proper, corresponding to the disproportionately large hub of a wheel, while the outer comprises a series of arc-shaped rooms. Many of the details of the structure have as yet enigmatic functions, but the elaborateness of the whole suggests that it represented the sanctuary of the entire community. Somewhat similar edifices have been described in other sections of the Pueblo area, and through a comparison of relevant data Morris is led to the provisional hypothesis that buildings of this category will ultimately turn out to have a distribution coterminous with that of the Chaco Cañon type of community dwelling.

S. J. Guernsey and A. V. Kidder have published an additional report on "Basket-Maker Caves of Northeastern Arizona" (*Papers of the Peabody Museum*, VIII, no. 2). Their earlier conclusion of a distinct Basket-Maker culture is substantiated by their recent finds. There is no evidence of coursed masonry or pottery in Basket-Maker caves, corn was cultivated in a single variety, cotton and beans were not planted, and the turkey was not domesticated. The positive traits distinguishing these people from the Cliff-dwellers include twined bags, square-toed sandals, coiled basketry as a mortuary offering, and the dart-thrower. Chronologically the Basket-Maker culture is earlier, since Cliff-dweller remains are superimposed on a Basket-Maker burial in Sunflower Cave. The dart-thrower points to Mexican influence, and some of the other material suggests a connection with southern New Mexico and the Coahuila caves of northern Mexico, but beyond these hints it seems impracticable to go at the present time.

An important additional installment on the "Ethnology of the Kwakiutl" by Franz Boas has been issued by the Smithsonian (*35th Annual Report, Bureau of American Ethnology*); it embodies a vast amount of both descriptive data on customs and linguistic material in the form of texts. Great activity in publication of extraordinarily beautifully illustrated monographs is evinced by the Museum of the American Indian, Heye Foundation. Three of the recent volumes merit special notice—Marshall H. Saville's *The Goldsmith's Art in Ancient Mexico*, M. R. Harrington's *Religion and Ceremonies of the Lenape*, and A. Skinner, *Notes on Iroquois Archaeology*.

A noteworthy paper summarizing the theoretical results of years of investigation by the American Museum of Natural History has been published by L. Spier under the caption "The Sun Dance of the Plains Indians" (American Museum of Natural History, *Anthropological Papers*, vol. XVI, pt. 7). Spier corrects a number of current misconceptions: the ceremony, despite its popular name, is not essentially connected with the sun, nor except among the Dakota with

torture of the main celebrants. The objective nucleus of the whole procedure seems to be the erection of a pole in an inclosure and a dance around the pole. Priority lies between the Arapaho and the Cheyenne, with odds slightly in favor of the former. To this historical inquiry Spier adds a psychological one as to the processes involved in the dissemination of the phenomenon. The main elements of the ceremony are common to nearly twenty tribes, yet there has been a "differential borrowing" since each tribe has exercised a certain amount of selection regarding the features offered for acceptance. Spier finds that the objective procedure is far more stable than the methods for organizing the dance, while the interpretation given to the set routine of the performance varies from tribe to tribe. In this respect the sun dance conforms to a general rule observed in the transmission of ceremonies. Another question consists in the reasons for adopting some elements and rejecting others. According to Spier, the modifications occurring are due in part to the innovations of powerful leaders and to elaborations due to the intrusion of minor rituals; the interests of the recipient group, the possible rivalry of some other ceremonials also play their part. It becomes obvious that no full understanding of any diffused ceremonial is possible unless a dynamic mode of approach taking such variables into consideration is substituted for the customary static point of view.

The detailed results of the Duke of Mecklenburg's expedition to Africa are beginning to come to hand now. In the first installment of his *Forschungen im Nil-Kongo Zwischengebiet* Dr. J. Czekanowski discusses the culture of Ruanda and neighboring regions, where the tall pastoral Batutai rule over a horticultural Bantu population designated as Bahutu and over the hunting tribe known as Batwa. The last-mentioned group is very short, but does not represent genuine Pygmies, though Pygmy strains are discernible in the population. The Batutai, on the other hand, while speaking a Bantu language, differ racially, belonging to the same East African division as the Somali and Galla, i. e., to the so-called Hamitic tribes. Culturally and socially the distinctions of the three racial types is clearly marked, the Batwa being a pariah-like people but providing the remainder of the natives with pottery and also functioning as rain-sorcerers.

In an article on "Les langues de l'Afrique" Maurice Delafosse (*L'Anthropologie*, XXX, p. 545 seq.) offers a linguistic grouping differing in part from accepted classifications. The aboriginal languages are divided into three basic groups—the Malayo-African, composed of Malagasy alone; the Afro-Asiatic, including the Semitic, Hamito-Berber, and Hamito-Kushitic; and the Negro-African. The last-mentioned is subdivided into eight categories, of which one is formed by the Hottentot and Bushman, while the Bantu appear as a sub-group in another category, the remaining categories being all composed of languages customarily classed as Sudanese. G. W. Murray in an essay on "The Nilotic Languages" (*Journal of the Royal Anthropological Institute*, London, 327-368) contends that Masai, Nubian, and Bari are fundamentally related and at bottom Sudanese, though transformed by a common Hamitic influence

due to a probably extinct tongue related to Galla; the ancestral speech of the three groups was also connected with Shilluk. A far more spectacular discovery, if established, is presented in A. Drexel's "Bornu und Sumer" (*Anthropos*, XIV-XV, 215-294), where the ancient Sumerian language of Babylonia is brought into connection with the Sudanese languages of Bornu, south of Lake Chad.

Under the title of "Nouveaux Documents sur l'Ethnographie ancienne de la Mauritanie (*L'Anthropologie*, XXX, 323-368), R. Verneau describes and interprets finds made by Doujat d'Empeaux in the Hodh and Aouker districts of the Sahara. This region had not yet been desiccated at the time it was occupied by a Neolithic population, which, it turns out, was relatively numerous, skillful in the manufacture of stone tools, pottery, and woodwork, and capable of erecting stone habitations. The people were both hunters and tillers, but there is no evidence for or against the domestication of animals. Certain interesting differences appear between the ancient dwellers of the Northern and the Southern Sahara. In the North polished axes are rare, but they multiply as one goes southward till the percentage of such tools in a total of stone finds becomes nearly twenty-five. Further, the Northern axes are flat and elongated and have a narrow blade, while those from the South are massive; the former resemble European types, the latter are identical with Nigerian forms, such as are still worn as talismans by Negroes.

The relations between Madagascar and Malaysia are more definitely formulated by J. Hornell (*Man*, XX, pp. 134-139), who demonstrates that the outrigger-canoe of Madagascar and East Africa is a direct descendant of Javan forms. The contact must antedate Hindu invasion of Java.

The present state of scientific knowledge of Egyptian culture, so important for the solution of all African culture-history, is outlined, primarily for ethnologists, in A. Wiedemann's *Das alte Agypten*.

Mr. and Mrs. S. W. Routledge's work on *The Mystery of Easter Island* has stimulated W. H. R. Rivers to an interpretation of "The Statues of Easter Island" (*Folk-Lore*, 1920, pp. 294-306). Rivers suggests that the motive for the erection of the huge figures on burial-places was a religious one, the statues serving as resting-places for the souls of the dead. The crowns of separate red material adorning the heads of the effigies do not represent the frizzly Melanesian hair as it appears when bleached with lime but represent the hats worn in other regions of Oceania in association with a cult of the dead. This hypothesis is consistent with the fact that one group of statues lacks crowns, the presumption being that these represented living individuals or minor deities. Another Oceanian problem is dealt with in A. C. Haddon's Huxley Memorial Lecture on "Migrations of Cultures in British New Guinea" (*Journal of the Royal Anthropological Institute*, London, pp. 237-280), where the author contends that the culture of southern coastal New Guinea comes from the North and specifically that the initiation ceremonies so highly developed in the island are associated with the Papuan rather than the Melanesian element of the population.

A linguistic result of considerable importance,

if substantiated by further research, is announced by W. Pröhle in his "Studien zur Vergleichung des Japanischen mit den uralischen u. altaischen Sprachen" (*Keleti szemle*, XVII, 147-183). He finds that the morphology of Japanese is essentially identical with that of the Ural-Altaic stock and that its phonetic character likewise proves an ultimate affiliation with that family. A useful collection of "Notes on the Stone Age People of Japan" (*American Anthropologist*, 1921, 50-76) has been published by Professor H. Matsumoto.

EXPEDITIONS, MEETINGS, PERSONALIA. Possibly the most comprehensive field-work of the year has been that attempted in Polynesia by the Bayard Dominick Expedition—in reality a series of expeditions by a considerable number of investigators. Most of the participants returned to Honolulu or the Pacific coast of America in August, R. T. Aitken and J. F. G. Stokes remaining in the Austral Islands which they had succeeded in reaching only after a considerable delay. From preliminary reports it appears that E. W. Gifford has obtained important results relating to Tongan society and kinship nomenclature, while William C. McKern secured worthwhile archaeological data on the same group; in the Marquesas E. S. Handy conducted the ethnological research while R. Linton devoted himself to archaeology. Dr. L. H. D. Buxton of England has returned from a successful trip to Malta, where he investigated the physical anthropology of the people. Drs. Carl E. Guthe and S. G. Morley of the Carnegie Institution have investigated the archaeology of Guatemala, while local excavations in New York State and Wisconsin were conducted respectively by Messrs. A. C. Parker of the State Museum in Albany, and A. B. Skinner of the Public Museum of Milwaukee. Father W. Koppers, one of the editors of *Anthropos*, has started on a field trip to the Terra del Fuegians of southernmost South America.

Through the initiative of Drs. Henri-Martin and Charles Peabody there has been established near La Quina, the famous Mousterian station, an American Foundation for Prehistoric Study in France. American students of archaeology will thus have an opportunity to get training in the technique of their science on a typical Old World site. Professor George Grant MacCurdy is the first director of the Foundation. In the new Estonian University of Dorpat Dr. A. M. Tallgren, noted for his researches into Siberian archaeology, has become professor of prehistory.

A number of noteworthy scientific gatherings merit chronicling. The Institut International d'Anthropologie organized by the Ecole d'Anthropologie de Paris met in Liège, July 25-August 1, special attention being given to prehistoric archaeology. The British Association for the Advancement of Science held a meeting in Edinburgh, September 7-14, and Section H (Anthropology) made a special point of discussing the racial origin of the Scotch people. An international Eugenics Congress met in New York, September 22-28; it was attended by a number of notables from abroad, such as Major Leonard Darwin and Lucien March. At the Philadelphia meeting of the American Anthropological Association, Dec. 27-28, 1920, a fundamental change of its official personnel occurred, Dr. William C. Farabee being elected president, Dr. A. V. Kidder secretary, and Dr. John R. Swanton editor-treasurer. The

1921 meeting of the Association was held at the Brooklyn Institute of Arts and Sciences, December 28-30, in conjunction with the American Folk-Lore Society. A proposed amendment to the Constitution authorizing the establishment of regional branches was booked for discussion.

Anthropologists mourn the death of Miss M. A. Czaplicka, lecturer on anthropology in Bristol College, and esteemed for her Siberian researches, especially her book on *Aboriginal Siberia* and her trip of exploration to the upper Yenisei, of which so far only a popular account has been issued. Professor Rudolf Pösch, the Viennese anthropologist, known for his discussions of the Bushman and Papuans, and Professor Émile Houzé of Brussels are also to be numbered among the losses of the year. Of American scholars, Charles Pickering Bowditch, patron of Central American investigations, in which he himself participated, passed away on June first.

ANTIGUA. See LEeward ISLANDS.

ANTIMONY. Except for the antimony in hard lead, no antimony was produced in the United States from domestic ores since 1918, according to the United States Geological Survey, Department of the Interior. This situation, however, is not considered altogether unfortunate, as our meagre supply of ore may thus be kept for a time when we will need it, perhaps as urgently as we did during the World War. Hard lead carrying about 14 per cent of antimony is a by-product of the smelting of the precious metals, and the quantity of hard lead produced in 1920, which was 12,535 short tons, carried 2033 tons of antimony and was obtained from both domestic and foreign ores. A small quantity of metallic antimony was produced by one smelter from both foreign and domestic ores, and about 5000 tons of secondary antimony was recovered from old alloys, scrap, and dross.

The average price of antimony in 1920 was 8.49 cents a pound. The highest price, which was reached in February and March, was 11 5/8 cents, but owing to large imports and heavy offerings of war scrap and shrapnel by several governments, the price fell in December to 5½ cents, the lowest in more than six years.

The imports for consumption, calculated in terms of metallic antimony, were 11,768 short tons, as compared with 7867 tons in 1919. Their value was \$1,435,823. They consisted of 1709 tons of 40 per cent ore, 1375 tons of 75 per cent matte, 9817 tons of metallic antimony, and 298 tons of 80 per cent antimony oxides and other compounds.

The general imports were 12,474 tons of antimony and 1709 tons of ore containing 682 tons of antimony. They showed an increase of about 76 per cent as compared with those of 1919. The metal came mostly from China and Japan and the ore from China, France, and Bolivia. The imports of metal from China increased 175 per cent over those of 1919.

The imports of type metal were 14,944 short tons, or more than twice those of 1919. Their antimony content was assumed to be 2063 tons, or about 14 per cent.

The exports of foreign antimony from the United States in 1920, mainly to Canada, amounted to 448 tons, more than double those of 1919.

About 1877 short tons of antimony were in bond in December, 1920, as compared with 1200 tons for December, 1919.

The world's production of antimony in 1920 was about 14,000 metric tons, as compared with 11,900 tons in 1919. Nearly all of it was produced in China, Mexico, and France. For several years China has produced more than 60 per cent of the world's supply.

The world's average annual peace-time consumption of antimony, not including that in antimonial lead, is about 22,000 metric tons, of which the United States consumes 7000 tons. The United States also uses annually about 2100 tons of virgin antimony contained in domestic antimonial lead and 3500 tons of secondary antimony recovered from old alloys, scrap, and dross, a total of 12,600 tons.

ANTI-SALOON LEAGUE OF AMERICA.

This organization was established in 1895 by the coalition of the Anti-Saloon Leagues of five States. It is a national federation of organizations for the purpose of exterminating the beverage liquor traffic. In 1921 there were 49 subsidiary State leagues, and it had affiliations with 40 other national temperance associations. More than a thousand representatives conduct the work of the League. Legislation affecting the operations of the League during the year consisted of the Volstead Enforcement Bill No. 2, adopted by Congress in June. It prohibited the use of beer as medicine and limited the alcoholic strength and quantity of wine that may be prescribed. Also in June the Willis-Campbell bill was adopted; this contained a provision prohibiting the manufacture or sale of beer for medicinal purposes. The work of the League throughout the year was concerned chiefly with the enforcement of these and other provisions of the Volstead Act. It is claimed that great steps have been made in the movement during 1921. Drunkenness is not the chief harm of alcohol, according to the League, but the poisoning which it causes. The *Anti-Saloon Year Book* published for 1921 shows complete statistics in the matter. They indicate considerable decrease in the number of deaths throughout the country from alcoholism. Tables furnished show a decrease also in the number of drug addicts and persons committed to insane institutions. The number of tubercular cases resulting from the use of alcohol was less than ever before. As to the economic aspects of prohibition, the League pointed to the conversion of many breweries and distilleries into prosperous industrial establishments and the increased valuation of saloon and hotel property. The hotel business experienced an era of prosperity under prohibition, according to the report, reflected by a 20 per cent increase in the quantity of food ordered by its patrons. To it also, the League attributed the astonishing figures recorded of industrial savings in the United States. Of replies from 526 labor leaders to questionnaires as to whether prohibition was a benefit to the workingman and his family, 345 replied in the affirmative. Figures compiled by the League showed a slight increase in 1920 of arrests for all causes, but a great decrease in the number of arrests for drunkenness. It was denied that a crime wave had been the result of prohibition, but that it was due to the return of soldiers and a general depression and prevailing unemployment. A marked improvement in morals and public welfare was claimed, due largely to prohibition. In June, 1920, there were in the United States 583

operating breweries, as compared with 669 the previous year, and 37 industrial alcohol plants compared with 47 distilleries in 1919. The quantity of fermented liquor fell from 27,712,648 barrels in 1919 to 9,231,280 barrels in 1920.

The officers of the League for 1921 were: Bishop Luther B. Nicholson, president; Hon. S. E. Nicholson, secretary; Rev. P. A. Baker, general superintendent; Ernest H. Cherrington, general manager of publishing interests. The official organ of the League is *The American Issue*, published weekly; there are 27 subsidiary and State periodicals. The publishing house and executive are offices in Westerville, Ohio. A vast amount of literature is turned out daily. The legislative committee has its headquarters in the Bliss Building, Washington, D. C.

APPENDICITIS. It is commonly believed that appendicitis is largely a condition under surgical control. Many operators can show long series of operations without deaths and still longer ones with very slight mortality rates. Individual contact with appendicitis patients in large cities reveals that one's friends and acquaintances usually recover from their operations, where once on a time death was often the outcome. Nevertheless the returns of the U. S. census for 1920 show that deaths from this cause are on the increase. In the registration area of continental United States for 1919 the number of deaths from this cause was 10,029, while in 1920 the figure was 11,702. The number of deaths per 100,000 population was 11.8 in 1919 and 13.4 in 1920, so that the increased number of deaths is not due to mere growth of population. It should be remembered that the mortality from this disease in general hospitals, in which many advanced and hopeless cases are subjected to operation, is much higher than is commonly believed; and that counting patients who come to operation with those who die in the absence of surgical intervention the case mortality must be high to account for nearly 16,000 deaths annually—for that is about the figure calculated for the entire United States, registered and unregistered. The cause of the increased death rate during 1920 is a complete mystery, save that it must depend on increased frequency of occurrence. It appears, however, that all of the diseases of civilized man, as contrasted with those of the savage, show a similar increase, and this slow and steady increase in the death rates of heart disease, arteriosclerosis, diabetes, Bright's disease, etc., etc., even in the presence of improved sanitation, will probably continue with the march of civilized progress.

ARABIA. The peninsula in southwestern Asia, south of Syria, Mesopotamia and the Persian Gulf; area estimated at from 1,000,000 to 1,200,000 square miles, the higher figures including the Syrian desert and the Sinaitic Peninsula; population variously estimated at from 5,000,000 to 7,500,000. These figures are not trustworthy owing to the nomadic habits of a large part of the population, which consists of Bedouin tribes; and by some observers the figures are believed to be much too high, and the population is placed as low as 4,000,000. Great tracts of the country are unsettled, and others are only half settled by wandering tribal communities who obey the authority only of their own chiefs. This is true chiefly of the hinterland of Yemen, the interior of Oman, the Asir Highlands, and the northern

outskirts of the Nefud desert. Stable communities, however, inhabit the oases of central Arabia and the fertile coast regions. The divisions of the country of late years have been defined as follows: The Kingdom of Hejaz or Hedjaz, with uncertain frontier, but an estimated area of 100,000 square miles, and an estimated population of about 750,000. Politically and religiously it is the chief principality of Arabia, being the seat of the Holy Places, namely, Mecca, with a population of 80,000, and Medina, with a population of 40,000. It was formerly a part of the Turkish empire, constituting the vilayet of Hejaz, but during the war became an independent kingdom under British influence. (2) The Emirate of Nejd and Hassa, the stronger of the two principalities in central Arabia, with its capital at Riyadh. It is the seat of the Saud dynasty whose authority has increased since the beginning of the war. The population is estimated at 250,000. (3) The Emirate of Jebel Shammar to the north of the above and formerly within its jurisdiction, but since the middle of the nineteenth century, an independent region under the rule of the Rashid dynasty; capital, Hail, seat of the Emir, Abdullah Ibn Mitah in 1921 who succeeded on the assassination of his father in May, 1920, though only thirteen years of age. The population is estimated at 200,000. (4) Principality of Asir, lying on the western coast between Hejaz and Yemen, with its capital at Sabiyah. It has been under the Idrisi dynasty, the ruler at the beginning of 1921 being Mohammed Ibn Ali el Idrisi, but without effective control over the highland region which was largely independent. Population estimated at 1,000,000. (5) The Emirate of Yemen, tracing descent from the daughter of the Prophet. Within this region lies a considerable tract of cultivable land, and agriculture is carried on with success. The area is estimated at 75,000 square miles and the population at about 1,000,000. The capital, Sana, has a population of about 25,000. The chief ports are Mocha and Hodeida, with a population each of about 40,000. Comprised also within the peninsula of Arabia are the British sultanates of Oman and Koweit and the Emirate of Kerak or Trans-Jordan. See ADEN, and OMAN, and KOWEIT.

HISTORY. As noted in the preceding YEAR BOOK the Kingdom of Hejaz was founded during the war (1916), when supported by the British, Hussein, Sherif of Mecca, threw off the Turkish power and was crowned king. Owing to the line taken by political ambition and rivalries, Hejaz was the subject of much discussion during the years following the war, and not much attention was given to other parts of Arabia. A brief review of events more important to the country as a whole than those of the Kingdom of Hejaz is given in the preceding YEAR BOOK.

The British Colonial Office in the autumn announced that the Arabs in the central Arabian Emirate of Nejd had chosen as sultan the Emir Bin Saud who had expressed gratitude for the British friendship and a desire for friendly relations with the new state of Irak.

During the autumn of 1921 it was announced that service had been resumed on the Hedjaz Railway between Haifa, an important port on the Mediterranean, and Amman, the capital of Transjordan, 162 miles distant. Trains

accordingly were in operation for the first time since the beginning of the war. This line passed through an important grain-producing territory, and was expected to open up a profitable market for goods of foreign manufacture, particularly agricultural hardware and textiles. Haifa itself, besides being a port of call, was the terminus of five railways, and also was being considered as the terminus of a proposed oil pipe line from Mesopotamia.

ARBITRATION, INTERNATIONAL. See INTERNATIONAL PEACE AND ARBITRATION.

ARBITRATION AND CONCILIATION. See LABOR ARBITRATION.

ARCHÆOLOGY. The further the war recedes into the distance the more activity is noticeable in archæological exploration.

EGYPT. In Egypt the most important work has been done respectively by the Americans and the English. The joint expedition of Harvard University and the Museum of Fine Arts of Boston has thrown much light on the civilization of Ethiopia. At Napata in the Sudan, at the foot of the Fourth Cataract, the royal cemeteries were found outside the city. At Nuri a group of pyramids were examined and found to be the tombs of the kings and queens of Ethiopia from 660-250 B. C. The burial chamber of King Tihaqa, mentioned in the book of Isaiah, was uncovered among others. It was discovered from the digging that the Ethiopian dynasty was of Libyan origin and had originated in a tribe of nomads who had entered the country about 900 B. C. and had eventually conquered Egypt. At Giseh, Reisner, who was in charge of the expedition, excavated the two temples belonging to the third pyramid. Nine very fine statues were recovered. Besides, a head of Chefred and eight portrait heads of his children were discovered. At Kerma, in the Northern Sudan, the investigators found the cemetery of an Egyptian garrison. These men had been here from the time of Sestris III to that of the Hyksos kings. It was at Kerma also that Reisner found one of the finest of the private statues of the middle empire in the likeness of Lady Gennuwy. At Barkal the burial chamber of the pyramids was found.

The important work of the English in Egypt has been on the site of Tel El-Amarna where the Egyptian Exploration Society has been engaged in carrying on the excavations interrupted by the war. Perhaps one of the most astonishing things in connection with the place was the discovery of streets that in some cases were as wide as 180 feet. The digging has been of especial value in throwing light upon the private house of the Egyptian. The typical house of the medium or larger size took a very definite plan. In the centre of the building was a square living room which received its light from a clearstory. In it was a large clay brazier for heating and a limestone ablution slab for the ceremonial washing of the hands and feet. Out of this room led at least four doors; on the north into a long narrow room lighted by two large windows which were so big as to leave half of the room open; on the west side into a similar room; on the third side another door led to a staircase which went up to the roof; and on the fourth side was a door which gave into various rooms at the back of the house. As a rule the house was entered by two doors—

one on the north and one on the west. The roof was made by first laying roughly cut beams from wall to wall, covering these with twigs, matting, and mud. Every house had its own garden with its well and summer house. Around the garden was a high wall. Trees were planted in pits filled with river mud. Near the house were the granaries which were circular structures made of sun-dried bricks. The objects found in these houses were those of every day use, such as bronze axes, knives, needles, pins, parts of hand looms, and bits of pottery. In the tomb-chapels in the foothills the essential features of these structures were found to be an outer and an inner court, and a shrine with niches. Evidence turned up during the year to show that Tel El-Amarna was occupied sporadically from time to time.

SYRIA AND PALESTINE. At 'Abu-Ghooh an ancient Palestinian tomb was examined. The tomb is excavated in the face of a ledge and consists of a depression surrounded by a bench on which the dead were laid. At Askalon the Palestine Exploration Fund under Garstang began its work as early as the summer of 1920. Near the surface was discovered the remains of a Crusaders' church and parts of a Byzantine church building. Here also was found the foundation of a temple or some other public building built in good Roman style. From the same area were recovered two remarkable statues representing Fortune and Victory. A pool was uncovered which seems to be the one mentioned by Antoninus Martyr.

GREECE. During April and May the American School of Classical Studies in Athens conducted a bit of excavation at Zygouries, a low mound about halfway between Corinth and Mycenæ. Although the place was small Blegen who was in charge of the work uncovered most thoroughly a small town which is of great value for the Helladic period of Greek history. More than 500 more or less complete vases were found among which early and late Helladic fabrics are especially richly represented. Numerous stone foundation tell of the architectural habits of this early period. Many houses were laid bare. Generally speaking they all contained a square chamber, which differs much from the rectangular megaron of Mycenaean days. The streets were crooked and narrow. Among the finds should be mentioned a small female figurine, a button seal, both of terra cotta, and a fine bronze dagger. The most important Middle Helladic find came from a cist grave and consisted of a necklace of beads of crystal and glass, a number of coils and rings of bronze for the hair (?), and a couple of pins and vases in dull paint decoration. Particularly interesting was the finding of a potter's shop containing a fairly complete stock of wares. All date in the late Third Helladic. Most were in fragments due to fire.

At Mycenæ the British School began its second campaign on May 22. The purpose of this year's campaign was to examine the Acropolis and the graves. The Ramp House, south of the royal grave circle, has been uncovered and found to be of the megaron plan. It dates about 1400-1100 B. C. Under it were found bits of frescoes of the 1st or 2nd Late Helladic (1600-1400). Excavations at this place showed that the famous circle of graves was originally part of a cemetery that extended down the hill. This cemetery was used from Middle Helladic times down to 1400 B. C.

An examination of the palace shows that an earlier one existed there about 2200-1800 B. C., which antedates the time of the palace at Tiryns. This early Mycenaean palace was replaced by a later one of the first Late Helladic period, and the latter by a much larger one. The palace in its elaborate arrangements reminds one of the palace at Knossos. Near the beehive tombs three more of the same kind were discovered. Another group of more primitive chamber tombs dating from the Late Helladic Period was found on the northern side of Kalkani Hill. In one of the burials was found a stirrup-cup of the same style as those found at Tel El-Amarna. From the finds at Mycenae it appears that while the earliest settlement goes back to the Bronze Age it was not until about 1800-1600 that the city became important. By the fourteenth century, after the fall of Knossos it became the chief centre of culture in that part of the world.

ITALY. In Rome, under the Palazzo Caffarelli, excavations have brought to light remains of the temple of Capitoline Jove. These consist of parts of an imposing temple terrace with parts of its huge supporting walls, and a few bits of architectural sculpture to the southwest of the house of Livia. Under the Villa Torlonia on the Via Nomentana has been found an interesting Jewish catacomb dating in the second or third century. On the Via Salaria the cemetery of Pamphilus has come to light, and two previously unexplored galleries have been examined. The loculi and the galleries themselves were found to be in good condition. Outside the city, near the Porta Maggiore an important hypogeum was discovered. It lies about one half mile from the famous Basilica. It dates late in the second or early in the third century. The upper part contains a sepulchral chamber. Down to this leads a staircase which ends on a landing just outside. To the left of the landing is the entrance into the main chamber. This room is 15 by 17 feet and has a vaulted roof which has a light shaft in the centre. On the right and left walls are *arcosolia*; the one opposite the door has been destroyed. Besides the two rooms there are several galleries and chambers. Some very interesting paintings were found on the walls and ceiling of the main chamber. One group of figures seems to represent the twelve apostles.

At Ostia between the great *Horrea* and the main street a series of shops has been found. Progress too has been made in clearing the forum of the town. At Civita Lavinia remains of a temple with a triple cella like that of the temple of Apollo at Veii. It dates somewhat later than the latter building, being of the 4th or 5th century. At Bologna the widening of the streets brought to light remains of pavement of the old Roman city. This road joined the Via Emilia at the edge of the city. In Siena vestiges of baths and what appear to be other public buildings have been uncovered.

In Sardinia excavations carried on on the plateau of S. Maria della Vittoria discovered an open-air shrine in the form of a small rectangular building with entrances on the west and east. In front of the latter were three altars.

At Selinus in Sicily excavations have been made in the temenos of Demeter Malophores. The site is to the west of the town. It was found that an entrance to the sacred area was afforded by a porch on the left hand side of which was a smaller temenos, in which were a number of buildings.

Among these was a temple of peculiar plan with an arched niche in the back wall. In the western corner of the large temenos the excavators found many archaic terra cotta statuettes as well as fragments of Corinthian and black figured ware. Unfortunately no chronological sequence could be made out.

In Syracuse many important finds have been made. Near the amphitheatre two foot-rules of bone and bronze came to light. These objects are very rare. In the Canalicchio necropolis several Hellenistic tombs were opened. At Megara Hyblaea an archaic Doric temple was discovered, while at Assaro a very fine Hellenistic bronze bucket, one of the best bronzes of that time, was recovered.

ARCHITECTURE. Contrary to general hopes and expectations, the close of 1921 did not see a general resumption of building activities in this country on a normal or prewar basis. Marked reductions in many building materials, it is true, have taken place, but labor remained throughout 1921, a discouraging element in the building field. Answers to questionnaires sent out to Chambers of Commerce in all cities of more than 10,000 population, to Real Estate Boards and members of Federal Reserve Banks indicated that both labor and materials are still too high to encourage anything like a "building boom." Concensus of local opinion, however, seemed to show a firm belief that 1922 will usher in an unusually active period.

An increasing demand for the services of draftsmen in the early autumn of 1921 indicated a gradual increase in building, many small architectural offices reporting business progressing in full volume in small residential work. This type of work, in the vicinity of New York, received a considerable impetus from tax-exemption provisions in the local legislature. General construction costs, moreover, at the close of 1921, showed a 30 per cent drop for the year, representing something like 35 per cent under the peak reached directly after the war.

The tax-exemption provision, in brief, provided for a ten-year exemption on all residential construction except hotels, to the extent of \$5000 of appraised valuation per family, with a limit of \$1000 per room on apartments smaller than five rooms. The provision came into effect Feb. 1 1921, but was made retroactive from April 1, 1920, to extend for a period of two years from that time.

This provision, combined with the urge of necessity and the actual decrease in building costs, resulted in a great increase in residential building operations. In the five boroughs of greater New York, for example, in the four months after Feb. 1, 1921, plans for 20,897 homes were filed, representing an increase of 215 per cent over the same period of the preceding year. The greater proportion of buildings were for moderate cost one-and two-family houses. The corresponding impetus in apartment house building is seen in the filing of 447 plans in the same period, representing a 674 per cent increase over the same period the year before.

In actual figures, the tax-exemption provision represents a saving of \$1400 per family for a period of ten years, and has resulted in millions of dollars of investment in residential construction. Combined with general decreases in construction

cost, this type of building has come back to a point not far from prewar levels. Another result has been the release of large amounts of mortgage money for moderate cost residential construction. In response to an appeal by Mr. Hoover, that institutions holding peoples' savings should lead in loaning money for home building, eleven New York companies, including banks, trust companies and insurance companies formed combinations for the immediate loan of three million dollars on small houses.

In the Borough of Queens, in New York, the apartment buildings called Jackson Heights have demonstrated that the coöperative ownership plan, originally tried out in very expensive apartments, is a practical plan for the moderate cost apartment as well.

In many New England industrial towns, plant owners have been obliged to undertake housing developments in order to have employees to operate plants. Housing has become a question of plant equipment rather than paternalistic philanthropy, and architects have shown keen interest and a high order of ability in developing solutions of the industrial housing problem.

For some years to come the outstanding need will be for more homes, and as a constructive means toward this end there are innumerable "Own Your Own Home" expositions and clubs and Chamber of Commerce Committees. Many of these expositions feature competitions among architects for four, five, and six room houses in brick, frame and metal lath construction.

The Architects' Small House Bureau, of Minnesota, organized several years ago, succeeded in directing nation-wide attention toward the problem of securing better designed small houses, and its first modest advertising was widely noticed and quoted by the Press throughout the country. Among other results, the Southern Pine Association became interested, and coöperated with the Bureau in the publication of a book of a hundred house plans, with full working drawings, specifications, and bills of material, for houses of three, four, five, and six rooms. The Southern Pine Association undertook to pay for publication, and to carry on a national campaign of advertising. The designs cover all typical kinds of construction, brick, hollow tile, and stucco, as well as frame. The Bureau, utilizing these plans and specifications, aims to prove to the public that architecture is a real profession, and that an architect can and does give real service. It is hoped that Regional Bureaus may be established, supplying work to many architects, and improving the general standard of design for the small and moderate sized house throughout the country. Mr. Robert D. Kohn, Chairman of the Congress of the Building Industry, reports that the idea is widely welcomed in the West. In some cities contractors had already approached architects in an effort to get together. Steps are being taken to organize local groups in Philadelphia, Boston, New York, Omaha, Minneapolis, Seattle, Portland, San Francisco, Los Angeles, Dallas, Louisville, and New Orleans.

In work other than residential work, it is difficult to draw many general conclusions, because of special interests involved in construction. There has been much re-figuring in architects' offices on buildings, the cost of which was too high last year. The most hopeful sign in this

connection is a different attitude on the part of contractors and subcontractors, who now show a real anxiety to cut costs.

The Architectural Forum of January, 1922, gave some interesting figures on postponed building operations. In normal years the total estimated cost of projected works is 50 per cent in excess of amount of contracts actually awarded. In 1919 it was 67 per cent in excess; in 1920, 92 per cent in excess.

The disclosures of the Lockwood Committee, investigating the corrupt and coercive conditions existing in many "building rings," and seriously restricting the fair and normal supply of materials, as well as the conduct of labor, have corrected many abuses which were highly detrimental to the resumption of building activity after the war. The ringleader of the malefactors in the building industry, Brindell, was sentenced to a prison term of five to ten years, and heavy fines were imposed upon others who carried on their business in restraint of trade. It appeared in the course of the investigation that there were rigidly organized "rings" in the thirty or more trades and materials connected with building, and these "rings" compared estimates on "competitive" work with a view to keeping all bids up to the maximum that the traffic would stand. Labor, too, was so manipulated by a few powerful chiefs that it was actually possible for Brindell to ask a \$50,000 tribute as "strike insurance," from the builders of the Cunard Building.

As a result of the Lockwood investigation, legislation was proposed for control and regulation of the building industry. A bill was introduced by Senator Calder for the creation of a Bureau of Construction of Housing in the Department of Commerce.

Similarly, in Chicago (Sept. 7, 1921), Judge Landis handed down a decision amounting to an Emancipation Proclamation for the building industry in Chicago. In a controversy between the Chicago Building Trades Council and the Building Construction Employers' Association, Judge Landis ruled that cost of labor, both skilled and unskilled, be reduced 20 per cent, that the owner, who pays the bills, be allowed a representative upon his own work, that an employer may use non-union labor, when the supply of union labor is inadequate, that labor "rulings" designed to make work last as long as possible be abolished, and that artificial provisions necessitating representatives of many different trades on a simple job be also abolished.

This decision of Judge Landis was aimed to strike at the root of much of the recent trouble with labor. Troubles, and high cost have not been entirely due to rate of pay, but to restrictive rules and absurd regulations which call for an unnecessary number of men to do a given piece of work, and which divide small operations among many different trades.

Much may result from another movement, designed to meet the difficulties experienced by architects in dealing with the varying requirements of the building codes of different cities. Professor Woolson, of the National Board of Fire Underwriters is engaged with a committee appointed by Secretary Hoover to establish national standards of building practice and regulation. Through local Chapters of the American Institute of Architects, increasing activity is shown in this direction by

architects in general. In Minneapolis the American Institute furnished the chairman who brought about a housing code which proved to be so excellent that it now serves as a model for twenty or thirty other municipalities. These movements are of great significance in that they show an increasing professional consciousness on the part of architects, and a tendency to coöperate in various measures which are aimed toward community betterment, and the correction of many undesirable conditions in the building industry.

In England an interesting development has been in operation in the form of Building Guilds, designed to overcome the serious labor troubles which came in the wake of the war. A National Building Guild is now formed, and all local bodies have become a part of it. One reason for its organization was the sudden abandonment by the government of its building programme. The slogan of "Economy" took the place of the wartime "Houses for Heroes" slogan, and the burden of financing and construction of the many needed homes fell upon citizen enterprise and industry.

As early as January, 1920, a "Guild Committee" was organized by the building trades unions of Manchester. The guild proposed to undertake housing projects without the intervention and profit-taking of private contractors. By May the Manchester experiment had proved so effective that a similar guild Committee was formed in London, and 800 working-class houses were soon under way in the two cities. In London the cost of the houses (£950) is £100 under any private contractor's bid, representing a saving of at least 10 per cent, with promise of still greater saving when the Guild becomes more thoroughly organized. There is no lack of work, and it soon became apparent that the Guild would become nationally effective. It is believed that the men will work better under the self-governing provisions of the Guild than under private capitalism, and the appeal is for new ideals and a new spirit in industrial organization. The Guild ideal, moreover, is found to encourage the old spirit of honest craftsmanship, and the desire to do good work.

In May, 1921, the Building Guilds in England were reported as being at work on seventeen large and important housing contracts for public authorities, and entering the field of privately owned houses. As might be expected, the Guild idea met with considerable opposition from certain interests, but now bids fair to become a far-reaching force in the world of industry. In an address to the Master Builders in Manchester Mr. Stephen Easton said: "One thing which the Guilds had demonstrated was that many workmen, (in contract work) were doing less than half a day's work for a full day's wage. It was boasted that in Guild work a man would lay 700 to 800 bricks in a day, while on the other housing schemes the amount laid was less than half that."

The years 1920 and 1921 brought five new Chapters into the American Institute of Architects: Arkansas, Florida, Kansas, Montana, and Utah. At the 54th Annual Convention of the Institute in Washington (May 11, 12, 13) President Kendall commented upon the extraordinary growth in membership during 1920.

Recent French recognition of American architects is shown by the fact that Americans have been chosen to plan the restoration of Rheims, and to rebuild Louvain—the latter undertaking

being assigned to Mr. Whitney Warren. The planning of New Constantinople, also, one of the largest and most difficult problems confronting the European architect, has been referred to American architects, and, for the first time, American architects were invited to make an extensive exhibit of American architecture at the Paris Salon, which opened in May, 1921.

Without doubt the most interesting architectural development affecting the tall building is the radical change in its profits as necessitated by the recent New York "Zoning Laws" which require a stepping-back of the mass as it exceeds certain heights. This question is fully treated in *The Architectural Forum* of October, 1921, in an article by Aymor Embury II, instancing the following recent examples of important buildings affected by the new regulation: The Association Building (Starrett & Van Vleck), The Heckscher Building (Warren & Wetmore), The Aronson Building (Schwartz & Gross), The Garment Centre Buildings (Walter M. Mason), The Fisk Building and the Liggett Building (Carrere & Hastings). To these might now be added the colossal building by the same architects, projected for the Standard Oil Company, the proposed new Murray Hill Hotel, the new addition for the store of R. H. Macy & Company, and the proposed Borden Building (Buchman & Kohn). The greater part of the October, 1921, issue of *The Architectural Forum* is given over to the subject, which is also dealt with in an article in *The Century Magazine* for September, 1921, and in an interesting group of drawings by Hugh Ferriss, shown by Helnite & Corbett, architects, in the 1922 Exhibition of the Architectural League of New York, illustrated in its Year Book.

Among important buildings completed in 1921 should be recorded the Cunard Building (Benjamin Wistar Morris), the S. W. Straus Building, and the Ambassador Hotel (Warren & Wetmore).

At the 37th Annual Exhibition of the Architectural League of New York, which was held at the Fine Arts Building from Feb. 5 to March 4, 1922, much interesting work was shown. One of the most important competitions shown was that for the Kansas City Victory Memorial, the winning design, by H. Van Beuren Magonigle being exhibited with several other entries.

A fine showing was made by the photographs and a complete scale model of the recent work of James Gamble Rogers for Yale University—The Memorial Quadrangle and the Harkness Memorial—an exceptional rendering in the English Collegiate style.

An attainment of the "large effect," now becoming characteristic of the architecture of this country, was seen in the splendid building for the Pennsylvania Railroad's Chicago Freight Station (McLanahan & Bencker), and in the U. S. Army Supply Base in South Brooklyn (Cass Gilbert). Both these buildings express their large essentials without any attempt at ornamental detail, and both are admirably architectural in quality.

Residential architecture did not appear in great volume in this exhibition, but such examples as were shown indicated a continuation of the tendencies which were evident last year—the most promising tendency being toward a greater sincerity and simplicity. The meretricious and artificial were conspicuous by their absence, and there was a distinct feeling that architects

are coming more frankly to grips with the fundamentals of their varied problems, and are both molding and following present tendencies toward a clean-cut and logical architectural technique.

Despite many unfavorable conditions obtaining since the war, a fair number of really admirable buildings have been completed or projected, and the outlook for the coming year is better than for several years past. According to reports received from a thousand architectural offices in various parts of the country covering prospective and definitely anticipated work, 1922 is to be a far busier year than 1921.

ARCTIC REGIONS. See POLAR RESEARCH.

ARELLANO, C. S. See NECROLOGY.

ARGENTINA. A south American republic, lying on the eastern coast of the southern part of the continent; capital, Buenos Aires.

AREA AND POPULATION. The area is 1,153,119 square miles, and the population, Dec. 31, 1919, was 8,533,332 as compared with 7,885,237 in the census of 1914. The following table of population by provinces and territories is taken from the *Salesman's Year Book* of 1921:

Federal District, Provinces and Territories	Area: English sq. miles	Popula- tion Dec. 31, 1919	Popula- tion Census 1914
Federal District			
Buenos Aires.....	72	1,649,977	1,575,814
Martin Garcia Island.....			783
Provinces			
Buenos Aires (La Plata).....	117,777	2,279,500	2,066,165
Santa Fé.....	50,713	983,840	899,640
Córdoba.....	66,912	787,748	735,472
Entre Rios (Parana).....	29,241	461,570	425,373
Corrientes.....	33,535	364,818	347,055
San Luis.....	29,035	128,087	116,266
Santiago del Estero.....	55,385	293,501	261,678
Tucumán.....	10,422	350,973	332,933
Mendoza.....	56,502	307,560	277,535
San Juan.....	37,865	128,993	119,252

Los Andes (San Antonio de Los Cobres).....	34,740	2628	2487
Total.....	1,153,119	8,533,332	7,885,237

According to the statistics published in the June, 1921, number of the *Revista de Economía Argentina*, the estimated population of the country on Dec. 31, 1920, was 8,698,516. The number of immigrants in 1920 was 188,688, and of emigrants, 148,907. The number of agriculturists, merchants, manufacturers, and workmen of all classes was 2,355,130.

The movement of population 1918 was as follows: Births, 271,980; deaths, 146,775; immigrants, 50,662; emigrants, 59,908. The number of immigrants by sea between 1857 and 1917 was 4,812,729. The population of the larger cities was as follows: Buenos Aires, the capital, (1914) 1,575,814; estimated, Dec. 31, 1920, 1,674,000; Rosario, estimated in 1918, 235,000; Córdoba, estimated Nov. 30, 1918, 156,000; La

Plata, estimated, 119,000; Avellaneda, 105,000, Tucuman, 100,000.

EDUCATION. Primary education is free and compulsory between the ages of six and fourteen, and is subsidized by the general and provincial governments. The progress of education during recent years is indicated by the following figures for national schools: In 1906, there were 291 schools, with 357 teachers and 26,152 pupils; in 1916, 1385 schools with 2640 teachers and 128,488 pupils; in 1920, 2722 schools with 4901 teachers and 218,326 pupils. The National University of Córdoba in 1920 had 1603 students divided as follows: Law, 345; medicine, 840; dentistry, 157; pharmacy, 85; science, 104. Secondary education is under the general government and is carried on by 42 national schools, with 11,022 pupils and 1244 teachers, and by 33 private institutions, with 2959 pupils and 398 teachers. There were also 59 military schools, 82 normal schools, 37 schools for special instruction, commerce, industry, art, etc. Higher education is supplied by the following national universities: Buenos Aires, La Plata, and Córdoba, together with a new university, founded in 1920 at Rosario, known as the University of the Litoral; and the provincial universities at Santa Fé and Tucuman. There are museums at Buenos Aires and La Plata; a national meteorological bureau at Buenos Aires; and a national observatory at Córdoba. The budget for education in 1920 totaled 71,885,335 paper dollars.

PRODUCTION. The main sources of wealth are agriculture and stock-raising, the area available for these purposes being placed at 401,000,000 acres. In 1918-1919 the total area under cultivation was 59,716,550 acres. The following table shows the acreage and production of leading crops in metric tons in 1920-21:

Crops	Acreage	Production
Wheat.....	15,004,306	6,070,000
Oats.....	2,006,315	830,000
Corn.....		
Flax.....	3,482,817	1,400,000

The figures for corn for 1920-21 were not available but in 1919-20 the acreage under corn was 8,180,000 and the production in 1918-19 was 5,696,150 metric tons. Farm animals in 1920 numbered: Cattle, 27,392,126; horses, 9,366,455; sheep, 45,303,419; pigs, 3,227,346; mules, 565,069; asses, 260,157. Crop estimates for 1920-21 were as follows: Wheat, 5,015,000 tons; linseed, 1,082,000 tons; barley, 691,000 tons. There has latterly been a rapid development of rice culture, which has been aided by the government, the area under cultivation increasing from 3021 hectares to 10,654 in 1920. The crop in 1919-20 was 18,500 tons. The oil fields though discovered thirteen years before were just beginning in 1921 to draw foreign capital, and various Dutch, French, German, and English interests were competing there for concessions. There was also a certain amount of Swiss and Belgian capital interested in the oil fields. In the summer it was reported that German bids for engineering work were far below the American estimates and that many American articles were being driven out by German competition. Ocean traffic between Argentina and Russia was renewed, September 2,

Architect James Gamble Rogers

AT YALE UNIVERSITY**

a vessel leaving the capital for Russia with a cargo of flour on that date.

COMMERCE. According to the Bureau of General Statistics, foreign trade in 1920 was as follows: Exports, 1,007,000,000 gold pesos; imports, 850,000,000 gold pesos; the trade balance favorable to the country thus being 153,000,000 gold pesos. The chief exports were wheat, corn, linseed, and oats.

The total imports into the United States from Argentina for 1921 were estimated at \$60,000,000, as compared with \$207,776,868 for 1920; and American exports to that country in 1921 at about \$110,000,000, as compared with \$213,725,984 in 1920.

The following table shows the quantities of exports from Argentina during the first 10 months of 1921, as compared with those for a similar period in 1920:

EXPORTS FROM ARGENTINA DURING FIRST 10 MONTHS OF 1920 AND 1921

See NAVAL PROGRESS.

RAILWAYS. During the year work continued on the Salta-Huatiquina Railway, in Argentina. The Chilean government informed the Argentine government that construction on the Antofagasta-Huatiquina section was being pushed vigorously, and it was expected that work would begin on the line from Embarcacion to Yacuiba on the eastern frontier of Bolivia. There was also rate trouble during the year and increases put into effect on the British-owned railways of Argentina were declared null and void in a decree of President Yrigoyen, on the ground that they were increased without the sanction of the government. The railways, however, contended that they had the right to raise rates and the government assessed heavy fines against the carriers. Under the president's decree these fines were to be remitted if the rates were lowered to the former level.

HISTORY. The Pan-American postal congress at Buenos Aires in November adopted an agree-

ment whereby parcel-post was to pass free through the contracting countries. In the autumn the president signed and put into effect the law against rent profiteering which forebade the increase of rents over the point charged before Jan. 1, 1920. A note for \$50,000,000 with interest at 7 per cent maturing in two years was subscribed by a group of American financiers. Exports to the United States according to official figures during the first months of the year averaged 75 per cent higher than those during the same period in the five years preceeding the war. Riots were reported at the end of May, attributed to Communists, and resulting in over 600 arrests at Buenos Aires. The strikers attacked the customs house warehouses, destroying them and causing a loss of several millions pesos.

OTHER EVENTS. There were disorders during the year in the territory of Santa Cruz but they were suppressed in the latter part of the year by a regiment of cavalry. In the budget for 1922 woolen cloth made in foreign countries out of raw material from Argentina was declared free of duty for three years. Toward the end of the year it was learned that the government had decided to acquire eight submarines of 800 tons each. See CHILE.

ARIZONA, POPULATION. According to the report of the census of 1920, there were 334,162 residents in the State, Jan. 1, 1920, as compared with 204,354 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acres	Prod., bu.	Value
Corn.....	1921	35,000	1,015,000	\$ 1,015,000
	1920	29,000	638,000	1,085,000

IRRIGATION. Statistics of irrigation issued by the Bureau of the Census are shown in the table on page 56.

MINERAL PRODUCTION. The value of the gold, silver, copper, and lead produced by mines in Arizona in 1921, according to the estimate of the United States Geological Survey, was about \$26,000,000, a decrease from \$114,628,584 in 1920. As most of the copper-smelting plants were closed after March or April the output of copper was less than one-third of that in 1920. No zinc was marketed, the output of lead was abnormally reduced, and the output of gold and silver was only half that of 1920. The gold produced by mines in Arizona decreased from \$4,786,122 in 1920 to about \$3,046,000 in 1921, largely because of the closing of the copper mines but partly because of the smaller output of gold ore. The mine output of silver decreased from 5,355,303 ounces in 1920 to about 2,179,000 ounces in 1921. As most of the silver is associated with copper ore the decreased output of silver was due to the

decreased mining of copper. The mine output of copper decreased from 558,256,302 pounds in 1920 to about 163,087,000 pounds in 1921. The value of the output decreased from \$102,719,160 in 1920 to about \$20,565,000 in 1921, owing to the curtailment of production and the decrease in the average price of copper from 18.40 cents to 12.50 cents a pound. The mine production of lead in Arizona decreased from 14,599,765 pounds in 1920 to about 5,182,000 pounds in 1921. The value of the output decreased from \$1,167,981 to about \$238,000. No shipments of lead ore or concentrate were made from the Shattuck mine, which was the largest producer of lead in 1920. Much silver-lead ore, however, was shipped from the Copper Queen mine, especially from September to the close of the year, and the Bunker Hill Co., at Tombstone, shipped much lead ore as well as silver ore to El Paso, Tex. As the demand for zinc was poor and the price decreased to about 5.11 cents a pound, no zinc ore was shipped from mines in Arizona.

MANUFACTURES. The following information in respect to manufactures was supplied by the United States Bureau of the Census in 1921. Arizona has a gross area of 113,956 square miles, of which 113,810 represent land surface. The inhabitants of the State in 1900 numbered 122,931; in 1910, 204,354; and in 1920, 334,162. Both in total population and in density of population Arizona ranked forty-fifth among the States in 1920. The number of inhabitants per square mile in 1910 was 1.8, the corresponding figure for 1920 being 2.9. There were in the State in 1920 only two cities having more than 10,000 inhabitants—Phoenix and Tucson. These cities, with a combined population of 49,345, formed 14.8 per cent of the total for Arizona in 1920 and reported 9.9 per cent of the value of the State's manufactured products in 1919. The large increases in wages, cost of materials, and the value of products, as presented in the following table, were chiefly due to the change in industrial conditions brought about by the World War, and therefore can not properly be used to measure the growth of manufactures during the census period 1914 to 1919. However, the increases in average number of wage earners and horsepower are significant evidences of the growth of the manufacturing

activities of the State. The addition of the Federal income tax since 1914 will account for the large increase in "rent and taxes." The percentage of increase in the cost of materials (135.8), as compared with that for value of products (88.4) resulted in a small increase (13.4) in value added by manufacture. This condition was due to the copper smelting and refining industry, which in 1919 formed more than two-thirds of the total value of products for the State. Between the time of purchase of the materials used and the turning out of the products the market value of copper had greatly decreased, necessarily affecting the normal business conditions pertaining to the disposition of the products.

TRANSPORTATION. The two railways of the State have a mileage of 2429. Two main lines cross the State. The extensions and branch lines are mainly dependent on the mining industry, and there was curtailment of service on some of them on account of the decline in the copper output noted above.

FINANCE. The total net receipts in the year ending June 30, 1921, were \$3,088,310; total net expenditures, \$7,451,996; excess of revenue over expenditure, \$636,313; treasurer's cash balance, June 30, 1921, \$2,610,968. The State indebtedness was \$869,972; county indebtedness, \$1,967,805; city indebtedness, limited to Prescott, Tombstone, and Tucson, \$130,498; total, \$2,966,275.

EDUCATION. School enrollment (graded) 72,586; daily attendance, 44,587; number of teachers, 2042; average salary of teachers, \$193 for men and \$151 for women. High school enrollment, 6716; daily attendance, 5201; number of

teachers 410. Cost of maintenance, \$4,448,-884 (graded) and \$1,174,872 (high schools).

CHARITIES AND CORRECTIONS. The State institutions with approximate number of inmates, in December, 1921: Penitentiary, Florence, 422; Pioneers' Home, Prescott, 69; Industrial School, Fort Grant, 106; Hospital for Insane, Phoenix, 550.

LEGISLATURE. The regular session of the legislature was held in January, 1921. Legislation of importance included the creation of a State Child Welfare Commission, Soldier Land Settlement Commission, Immigration Commission, State Board of Nurse Examiners, State Board of Chiropractic Examiners, State Board of Registration for Engineers, Architects, and Land Surveyors.

OFFICERS. Governor, Thomas E. Campbell; Secretary of State, Ernest Hall; Auditor, Charles W. Fairfield; Treasurer, Raymond Earhart; Attorney-General, W. J. Galbraith.

JUDICIARY. Supreme Court: H. D. Ross; E. J. Flanagan; A. G. McAlister.

ARIZONA, UNIVERSITY OF. A co-educational State institution at Tucson, Ariz.; founded in 1885. The enrollment for the year 1921-22 was 1645. The income was \$300,000 and the library contained 40,000 volumes. A new women's dormitory was completed at a cost of \$200,000 and the new observatory was completed. President, Rufus Bernhard von Klein Smid.

ARKANSAS. POPULATION. According to the report of the census of 1920, there were 1,752,204 residents in the State, Jan. 1, 1920, as compared with 1,574,499 in 1910.

AGRICULTURE. The following table is compiled from estimates of the United States Department of Agriculture, covering the years 1920 and 1921.

Crop	Year	Acreage	Prod., bu.	Value

¹ Tons. ² Pounds. ³ Bales. ⁴ Gallons.

IRRIGATION. Statistics of irrigation supplied by the United States Bureau of the Census are given in the table on page 58.

TRANSPORTATION. There were 5175 miles of railroad operating in the State. No new lines, except side trackage, were built in 1921.

FINANCE. Receipts for the State during 1921 were \$6,711,000; expenditures, \$6,702,000; balance, \$5,515,000. The total State debt was \$2,538,000. These figures are approximate.

EDUCATION. Total school population in 1921, 675,000; enrollment, 490,000; attendance, 349,000; number of teachers, 11,750; average salary of teachers, \$83; total expenditures for education during year, \$3,652,000.

CHARITIES AND CORRECTIONS. Charitable and correction institutions of the State are as follows: Hospital for Nervous Diseases, at Little Rock (population 2000); Deaf Mute Institute, located at Little Rock (pupils, 300); Blind School, at Little Rock (pupils, 100); Confederate Home, at Sweet Home (population, 165); Tuberculosis Sanatorium, at Booneville (patients, 176); Farm for Women, at Jacksonville (inmates, 13; opened for inmates, June 20, 1920); Boys' Industrial School, at Pine Bluff (population, 121); Girls' Industrial School, at Alexander (inmates, 20; opened for inmates, March 24, 1919); State Penitentiary, at Little Rock, Ark., and with farms at Tucker and Cummins (prisoners, 728).

LEGISLATURE. Responding in part to the recommendations of Governor McRae for the abolition of certain commissions and offices, the 1921 legislature replaced the paid penitentiary commission with an honorary commission. The corporation commission was abolished and a railroad commission created, but control of local public utilities was restored to municipalities. An act was passed which based the motor vehicle license on weight, horsepower and carrying capacity; thirty per cent of the proceeds to go to the State highway department and each county to receive 70 per cent of the tax paid on motor vehicles owned within its borders. A tax of one cent a gallon was levied on gasoline, the proceeds being divided equally between the State and the counties. Before the legislature met, initiative petitions for the submission of two proposed constitutional amendments, one to provide new initiative and referendum machinery and the other to remove the 12-mill limitation on local school taxes, had been filed with the Secretary of State. As only three amendments can be submitted at one election, the legislature could submit only one. It adopted a resolution for an amendment to permit the taxation of personal property by improvement districts, but the resolution was vetoed by Governor McRae, who desired the submitting through the initiative, of a proposed amendment to end local legislation. The power of the Governor to veto a resolution for a constitutional amendment was in dispute, and the Secretary of State announced that he would put on the ballot the proposed amendment to permit the taxation of personal property by improvement districts.

The 1921 legislature made the fiscal year July 1 to June 30, for appropriations, reports, etc. All appropriations are made for one-year periods, each session of the General Assembly making two such appropriations for each project, and a ruling of the State Comptroller requires these annual appropriations to be budgeted as to months. A re-levy of all taxes was made in order more clearly to define the purposes for which collected. The so-called State tax rate was 8.7 mills on each dollar assessed. As a matter of fact, about 5.5 mills of this merely came through the Treasury for distribution to the counties—3.5 mills for school purposes and 2 mills for pensions. Of the remainder, 1.92 mills was for State educational institutions and 1.2 mills for State charitable institutions, leaving only .08 of a mill—or less than one one hundredth of the total—for purposes other than schools or charity. This small balance was used to create a sinking fund to retire the State's bonded indebtedness.

POLITICS AND GOVERNMENT. The executive, judicial, and legislative departments of government, including many boards and commissions, and the correctional institutions are supported by indirect taxes, such as franchise, inheritance, insurance, and cigarette licenses. Many departments, such as the bank department, feed inspection bureau, etc., are self-supporting, their revenues coming from inspection or examination fees. The highway department derives the State money with which it aids road districts from 30 per cent of the automobile license and 50 per cent of the gasoline tax.

A suit was pending in the State supreme court, filed by 112 stock fire insurance companies, attacking the order of the State Insurance Commissioner for a lowering of fire insurance rates. The law fixes a net underwriting profit of 5 per cent as the maximum, and the contention was over what are proper debits and credits in determining this net underwriting profit.

The State supreme court decided that a plea of former acquittal or conviction in the Federal court for a violation of the liquor laws cannot be pleaded as a defense to a charge in the State courts based on the same act; that the same act may be a violation both of the State and the Federal law and punishable under both jurisdictions. The court also decided that, in the absence of any statute, there is no authority for confiscating a vehicle unlawfully carrying intoxicating liquor.

A suit was instituted in the United States Supreme Court to settle a boundary dispute between this State and the State of Mississippi along the side of Lee County, Ark. Attorney-General Utley authorized an intervention on behalf of the State of Arkansas in the boundary suit in the United States Supreme Court pending between Texas and Oklahoma.

OFFICERS. Governor, Thomas C. McRae; Secretary of State, Ira C. Hopper; Attorney-General, J. S. Utley; Treasurer, Joe Ferguson; Auditor, James Guy Tucker; Adjutant-General, Joe S. Harris; Superintendent of Public Instruction, J. L. Bond.

JUDICIARY. Supreme Court: Chief Justice, E. A. McCulloch; assistant justices, Caroll D. Wood; J. C. Hart; Frank G. Smith, T. H. Humphreys.

ARKANSAS, UNIVERSITY OF. A co-educational State institution at Fayetteville, Ark.; founded in 1871. It comprises colleges of arts and sciences, education, engineering, agriculture (including an experiment station), and medicine, the last named being at Little Rock. The enrollment for 1921-22 was 1086; for the summer school of 1921, 656. The faculty numbered 93, an increase of 10 in the course of the year. The number of volumes in the library was 40,000. The following changes of interest in the course of the year may be noted: a department of Agricultural Education has been added to the curriculum. A unit of the Federal Board for vocational instruction to Federal students is maintained. At the request of the University, the United States Bureau of Education made a survey of the University in June, 1921. The tax levy for the support of the institution was raised from four-ninths of a mill to one mill. President, John Clinton Futrall.

ARMAMENTS, CONFERENCE ON LIMITATION OF. See WAR OF THE NATIONS, AND NAVAL PROGRESS.

ARMENIA. A term applied before the war, sometimes to the territory occupied by the Armenians within the former Turkish empire, and sometimes to the whole region in which Armenians were the dominant race element, but since 1918 applied specifically to the new state, known as the Armenian Republic of Erivan. As applied to the regions inhabited by the Armenians it included an extensive region partly in the former Turkish empire and partly in Russia. In the Turkish empire the Armenians made up about 38.9 per cent of the following vilayets: Erzerum, Tiflis, Kharput, Diarbekr, Sivas, and Van, being in the minority in the first five and in the majority in the last named. Owing to the massacres, deportations, and migrations of the last few years, the present number is unknown. See preceding YEAR BOOK.

ARMENIAN REPUBLIC OF ERIVAN. In February, 1918, the Armenians of Russia along with the other two main peoples of Trans-Caucasia, the Georgians and the Tartars, sent representatives to an assembly known as the Diet of Trans-Caucasia which declared the independence of the Republic of Trans-Caucasia. The three parts of this federation, namely, Armenia, Georgia, and Azerbaijan, soon separated, and Armenia and

Georgia each declared its independence in May, 1918. The Armenian Republic of Erivan was then constituted in the territory comprising the south-eastern part of Trans-Caucasia division of Russia. It was thus a fragment of the former Russian government. In January, 1920, its *de facto* independence was recognized by the Allies, and in August, 1920, its *de jure* independence was recognized in the treaty of Sèvres with Turkey, which treaty was signed by the Armenian Republic along with the other Powers. Its area as indicated by the treaty and by the proposals of President Wilson, who had been requested to arbitrate the question of boundaries, was placed at about 80,000 square miles, but, if other regions were added in accordance with the recommendation of President Wilson, the total area, according to the figures then published, would come to 170,000 square miles. The population in 1917 had been placed at 2,159,000 of whom 1,416,000 were Christians and most of the rest were Mohammedans, but, after the war there was a great shifting of the population owing to the removal of about 300,000 Mohammedans, and the return of a large but indeterminate number of Armenians. The chief cities with their estimated population are: Erivan with about 90,000; Alexandropol with 50,000; and Kars with about 35,000.

FAMINE CONDITIONS. According to the report of a committee of the Near East Relief that made a survey of the conditions in Armenia in 1921 the situation was more serious than it had been at any time since the Armistice. They reported that 400,000 people were without means of support and 100,000 orphaned children in a state of destitution. The conditions as described by the commission were like those of the famine district of Russia. Government aid in 1921 was no longer available, and the starving people were depending solely on private assistance under the Near East Relief. According to the commission that visited the famine area the distress was due to the fact that the Turks when they invaded the country destroyed about 140 villages, driving the inhabitants out into the country. This occurred in April when it was too late to plant crops. The number of Armenian refugees from Turkish Armenia was placed by the commission at 585,000. In the Armenian republic there were 280,000 of these fugitives and the Turkish invasion added about 120,000, making a total of about 400,000. On the commission's visit in August to the cities and towns it was estimated that about 50,000 Armenians were concentrated in them, of whom the greater part were in a starving condition and also suffering from ravages of the cholera. Over 60,000 children were turned over by the government to the Near East Relief to be fed, clothed, and sheltered. In the orphanages of the city of Alexandropol alone there were 18,000 children. In the summer, outside the orphanages some 50,000 children were being fed one meal a day and provided with clothing sent from the United States.

SITUATION AT THE CLOSE OF THE YEAR. Soviet control over the country was still unshaken at the close of the year in spite of the efforts of certain groups to free the country from both Russian and Turkish influence. A representative of this element sent a letter to the League of Nations, saying that the Armenians would persist in their hostility to the Turks until their account was

settled. Massacres of Armenians were reported in Cilicia in the latter part of the year and it was feared that conditions would grow worse there after the withdrawal of the French in accordance with the Franco-Turkish treaty. Estimates published at the close of the year placed the number of Armenians killed in Cilicia since 1920 at 25,000. A portion of the territory claimed by Armenia was taken away by the treaty between the Angora government on the one hand and the Soviet republics of Armenia, Azerbaijan, Georgia, and Daghestan on the other, signed at Kars, October 13, and was to be established as a self-governing state under the title of Nakhitchevan under the protection of Azerbaijan. The treaty superseded all other Caucasian treaties, except the Russian-Turkish convention concluded at Moscow in 1920, and it conceded to the Turks about half of Caucasian Armenia and extensive regions of Georgia.

ARMSY, HENRY PRENTISS. Specialist in animal nutrition, died at State College, Pa., October 19. For the fourteen years preceding his death he was Director of the Institute of Animal Nutrition at the Pennsylvania State College. He was born in 1853 (?) and was a member of the faculty of the Pennsylvania State College for thirty-four years, becoming one of the best known specialists in animal nutrition in the country.

ASIA MINOR. See ANATOLIA and TURKEY.

ASPHALT. The quantity of native asphalt and native bitumens sold in the United States in 1920 was 198,497 short tons valued at \$1,213,908 according to the United States Geological Survey, Department of the Interior. This was an increase of 125 per cent in quantity and of about 78 per cent in value over 1919. Gilonite was reported from Uinta County, Utah, wurtsilite (or elaterite) from Duchesne County, Utah, and grahamite from Pushmataha County, Okla. The sales of manufactured asphalt obtained from domestic petroleum amounted to 700,496 short tons, valued at \$11,985,457, or \$17.11 a ton. Compared with 1919 these figures indicate an increase of 14 per cent in quantity and 37 per cent in value. The sales of asphalt manufactured in the United States from Mexican petroleum in 1920 amounted to 1,045,779 short tons, valued at \$14,272,862, or \$13.65 a ton. This was an increase of 55 per cent in quantity and of 85 per cent in value over 1919.

ASTRONOMY. The outstanding work of the year emanated from the Mt. Wilson Observatory. A notable event was the publication, by Dr. Adams and his associates, of the absolute magnitudes and spectroscopic parallaxes of 1646 stars. In complete confirmation of the earlier work of Adams and Joy, these data establish beyond doubt the validity of Russell's views on giant and dwarf stars. In their early or giant stage the stars are immensely inflated gaseous masses, so tenuous that their density may be as low as one-thousandth that of atmospheric air. As they grow older and condense, their temperature rises and their reddish color changes to yellow and then to white. A critical point is reached

when the increasing pressure carries the mass beyond the state of a perfect gas and into the period of declining stellar life. Beyond this stage lie the denser and smaller stars known as "dwarfs," of which our sun, 1.4 times as dense as water, is one. As the shrinkage goes on, the colors that mark the giant state return, first yellow and then through deepening shades of red as the star approaches final extinction.

Upon combining the knowledge of the distances of the stars with their known proper motions and radial velocities, it is found that the space velocities of yellow and red stars, especially the giants, depend upon their absolute luminosities, the fainter stars moving more rapidly than the brighter ones; this probably means that stars of small mass move more rapidly, on the average, than those of large mass. Of the many other important conclusions of this investigation, one of the most significant is that the stars with large velocities, most of which are dwarfs, are moving towards the centre of the galactic system.

Work has been continued with Michelson's interferometer, which was described in last year's report. The fringes of Arcturus and of Antares disappear at mirror separations corresponding to angular diameters of $0''.022$ and $0''.040$, respectively, and linear diameters of about 21,000,000 and 400,000,000 miles (there is some uncertainty as to the parallaxes). Thus Antares, although apparently fainter than Betelgeuse, is in reality three times as bright, being twice as far away; its surface brightness appears to be rather less than that of Betelgeuse. The spectrum of the faint companion of Antares has been obtained, and found to indicate a temperature higher than that of our sun; yet the pair seem to constitute a true binary system. In the case of several other stars, even when the angular diameter is much smaller, distinct decrease in visibility has been observed when the mirrors were separated. Prof. Michelson has made very precise estimates of decreasing visibility for white stars, and has devised a simple auxiliary apparatus for producing comparison fringes of known visibility. Thus, if uncertainties due to variations in seeing can be allowed for, it may even become possible with the 20-foot interferometer to obtain approximate measures of stars of very small diameter. The measures of Arcturus and of Antares have again provided substantial confirmation of the theories of Russell and Eddington regarding stellar evolution.

One of the most significant features of recent astronomical progress is the increasing liaison between astronomy and the fundamental sciences of physics and chemistry. Scores of illustrations might be advanced to indicate how often the clue to fundamental physical and chemical problems may be found in the stars, and how frequently advances in pure physics aid in the solution of astronomical problems. The utilization of laboratory experiments as the necessary means of interpreting astronomical phenomena has been strongly emphasized at Mt. Wilson ever since the inception of the Observatory; a physical laboratory formed part of the original equipment there, and soon advanced from a secondary to a primary place in the scheme of work. Although planned with special reference to the practical problem of interpreting astronomical phenomena, it was never limited narrowly

to the viewpoint of the astronomer, but attacked problems with the general interests of physical and chemical research in mind. However, an unlimited pursuit of purely fundamental physical aspects would result in too great a scattering of effort and departure from the primary objectives of the institution; hence a particularly important event of the year was the establishment in Pasadena of the Norman Bridge Physical Laboratory of the California Institute of Technology, with Dr. Millikan as director, which will maintain close relations with the Mt. Wilson Observatory and with the Gates Chemical Laboratory. The problem of the constitution of matter may in many cases be approached even more effectively by the astrophysicist than by the physicist or the chemist, and is becoming of increasing importance to the two problems of the evolution of stars and the structure of the universe which have hitherto been particularly attacked at Mt. Wilson. The equipment of the Mt. Wilson Observatory, with the close coöperation of great physical and chemical laboratories, will be peculiarly adapted to the purpose of raising the problem of the constitution of matter, so richly and abundantly illustrated under the extreme ranges of pressure, of temperature, and of electrical excitation exhibited by the sun and the stars, from a minor to a major position in the astronomer's scheme of research.

Besides numerous investigations in precision spectroscopy, photometry, etc., the work of the year at Mt. Wilson included an investigation of the combined effect of electric and magnetic fields on radiation, resulting in an almost conclusive proof of the absence of an electric field in sunspots; a demonstration of the constancy of position of the telluric oxygen and water vapor lines of the solar spectrum, which are therefore of great value as standards; the proof of the absence of both oxygen and water vapor in the atmosphere of Venus above the cloud layer; the verification of the large internal motions discovered in the Crab nebula by Lampland; and the obtaining of definite evidence, by van Maanen, of outward motion along the arms of the spirals M51 and M81, in agreement with the theories of Jeans.

Dr. Megh Nad Saha, of the University of Calcutta, has, through a study of the ionisation of the elements according to the principles of physical chemistry, offered explanations of many of the most puzzling phenomena of solar and stellar spectra. It has hitherto been impossible to understand why the H and K lines of calcium, an element of comparatively high atomic weight, extend to the highest levels in the solar atmosphere, far outreaching the lines of sodium, magnesium, and other lighter elements. According to Dr. Saha, the H and K lines are the enhanced lines of a calcium atom which has lost one electron, whereas the fundamental line of neutral calcium is $\lambda 4227$. In the higher levels of the chromosphere, where the ionisation, which is only partial at the higher pressures of the lower levels, becomes complete, neutral calcium disappears, while the lines representing the ionized atoms remain conspicuous. The lines corresponding to the ionized atoms of the other elements fail to appear because they lie in the extreme ultra-violet. Russell has extended the theory to the case where atoms of several kinds are present, and has tested it in a preliminary study of the spectra of sunspots;

among the interesting results of this work is the discovery in the sun of rubidium, two lines appearing in the infra red spot spectrum as predicted by Saha.

STRUCTURE OF THE UNIVERSE. Work on this problem has been continued by Kapteyn, Jeans, and Shapley. Kapteyn, from his results on the distribution of stars, has derived the value of the attraction of all the stars on any particle within the system, and calculated the systematic motions which the stars must have in order to produce equilibrium; the results are in fair agreement with facts so far as known. The work of Jeans indicates that the universe probably has not yet attained dynamical equilibrium, and may be collapsing somewhat rapidly towards a steadier condition. The distance of the cluster N. G. C. 7006, previously found by Shapley to be 220,000 light years, has been confirmed by a study of its variable stars; investigations of the distances of the galactic clouds by Seares also indicate a scale for our stellar system in harmony with that derived by Shapley. Shapley's studies of star clusters have led him to the conclusion that the universe is approximately 300,000 light years in diameter, and 30,000 or more in thickness, with our sun at least 50,000 light years from the centre of, but in the plane of, the galaxy; the globular clusters are remote objects, but a part of our own galaxy; the spirals are probably of nebulous constitution, and possibly not members of our own galaxy, driven away in some manner from the regions of greatest star density. The older views, of which Dr. Curtis is a champion, hold that our galaxy is probably not more than 30,000 light years in diameter, and perhaps 5000 in thickness; the clusters and all other types of celestial objects except the spirals are component parts of our own galactic system; the spirals are a class apart—*island universes*, perhaps, of the same order of size as our galaxy, and distant from us 500,000 to 10,000,000 light years or more.

EINSTEIN THEORY OF RELATIVITY. All discussion has tended to confirm the eclipse results of 1919 relative to the gravitational deflection; the effects of numerous other causes tending to displace the star images all seem to be entirely inadequate; additional confirmation is afforded by Campbell's examination of plates taken at several eclipses since 1900. Likewise, attempts to explain the motion of Mercury on other grounds continue to fail. The greatest interest still centres around the spectral shift: several European investigators, after making arbitrary assumptions and applying various corrections for different effects, have claimed to have found this shift and to have explained why others have failed to find it; but final conclusions do not yet seem to be warranted. At Mt. Wilson a most extensive investigation of pressure shifts, temperature effects, pole effects, etc., and interferometer observations of solar lines extending over a range of 2500 Angstrom units, has been undertaken by St. John, Babcock, and others. The Michelson-Morely experiment is also being repeated there, and a new test devised by Silberstein is being carried out. Dr. Einstein, during his visits in the interests of the Zionist movement, delivered lectures at several institutions in the United States and England.

TIDES. Important work on the tidal theory has recently emanated from the Tidal Institute

of the University of Liverpool. Furthermore, the problem of tidal friction seems at last to have been cleared up. An exhaustive investigation of available ancient lunar and eclipse observations, carried out by Fotheringham, has shown that the outstanding solar and lunar accelerations can be accounted for by a slowing down of the rate of rotation of the earth by $1/800$ of a second per century. This requires abstraction of energy from the rotation at a rate corresponding to the action of about two and one-half billion horsepower acting continuously. Jeffreys and Taylor, collecting all available information about tides and currents in shallow seas over the world, have shown that tidal friction in such seas amounts to a total of about three billion horsepower. The most remarkable region is Bering sea, where strong tidal currents sweep in and out over large areas of shallow water and cause more friction here than in all the seven seas besides.

ASTRONOMICAL PHENOMENA. But one solar outbreak of importance occurred: A great spot in May was notable for its size, its position exactly on the equator, its eruptive activity, its mixed polarity, and its connection with brilliant auroras and violent magnetic storms on the earth. Observations of the Zeeman effect showed the spot to consist of two large areas of opposite polarity in each of its chief members; as any direct magnetic effect at a distance would thus be largely annulled, the evidence for the view that terrestrial phenomena connected with spots are due to the eruptions which take place in the area surrounding the spot was greatly strengthened by this interesting case.

In January there was discovered a minor planet, HZ, with a cometary orbit—perihelion near Mars and aphelion near Saturn; 933 minor planets had permanent numbers at the beginning of the year.

There were four comets: Reid, 1921a; Dubiago, 1921c; a return of Encke, 1921d, and of Pons-Winnecke, 1921b. The last-named returned much behind schedule, and departed widely from the calculated orbit; before its rediscovery by Barnard, on April 10, there appeared to be a chance of a close approach to the earth, and there was the usual newspaper talk about a collision; however, even the expected meteor shower failed to materialize to any extent.

Two spiral nebulae with unprecedented radial velocities were found by Slipher—N. G. C. 584, 1800 km./sec.; and N. G. C. 936, 1300 km./sec.

There was an eclipse of Rhea by the shadow of Titan, April 8.

On August 7 an unidentified and very brilliant star-like object was seen a few degrees from the setting sun by several observers in Europe and America, and was never found again afterwards. It was probably a comet which had approached the sun from behind, in a retrograde orbit lying near the plane of the ecliptic, but the object still remains somewhat of a mystery.

MISCELLANEOUS. After a lapse of eight years, the *Astronomische Gesellschaft* met at Potsdam, August 24-27, with representatives of sixteen nations in attendance. The *Astronomische Nachrichten* celebrated its centenary.

Dr. Harlow Shapley was appointed director of the Harvard College Observatory; plans are being made to put into operation there a 60-inch reflector, the mirror for which has been in storage

since 1902 when it was received from England and found unsuitable for the work then being done. A Municipal Observatory was opened in Des Moines. The Observatory of Copenhagen continues to act as the distributing point for astronomical telegrams for the Central Powers and certain other observatories, but an agreement has been reached between Copenhagen and Uccle whereby each distributes to its subscribers the telegrams received by the other.

NÉCROLOGY. Sherburne W. Burnham, the noted double-star observer, March 11; Mary W. Whitney, emeritus professor of astronomy at Vassar College, January 20; Wilhelm Foerster, former director of the Berlin Observatory, January 18; W. R. Brooks, director of Smith Observatory of Hobart College, and the discoverer of 27 comets, May 3; Luis Garcia Y. Carbonell, Director Observatorio Nacional de Cuba; Henry Bourget, Director of the Marseilles Observatory; C. Grover, variable star observer, of Rousdon, Devonshire. See METEOROLOGY, paragraph AUTHOR.

ATHLETICS, TRACK AND FIELD. This branch of sports missed the international flavor afforded in 1920 by the Olympic Games, but the visit of the Oxford-Cambridge athletic team to the United States in July attracted considerable interest and resulted in keen competition on the track and field. The first meet engaged in by the Britons was against a combined Yale-Harvard team, the Americans winning eight first places out of ten. The second meet was between the Britons and a Cornell-Princeton team, the outcome being a tie. The first of these international contests was notable for the new world record established in the running broad jump by Edward Gourdin of Harvard. His leap was 25 feet, 3 inches, which excelled the former record made by Pat O'Connor of Ireland in 1901 by 3 1-4 inches. A squad of French runners took part in the relay carnival held at Philadelphia under the auspices of the University of Pennsylvania, but the visitors were completely outclassed.

The individual star of the year was Charles W. Paddock of the University of Southern California who set eleven new marks for the sprints, six of which were for standard distances. Paddock's most remarkable feat was running the 100 yards in 9 3-5 seconds on four different occasions and on four different tracks. This world record time he shares with Dan J. Kelly and Howard Drew.

Other U. S. athletes to break records during 1921 were Larry Brown of the University of Pennsylvania, August Desch of Notre Dame University and Willie Plant of the Morningside A. C. of New York City. Brown ran 1000 yards in 2 minutes, 12 1-5 seconds, clipping one-fifth of a second off the time made by "Mel" Sheppard in 1910. Desch went over the 440-yard low hurdles in 53 4-5 seconds, while Plant added to his laurels by setting new figures for the fifteen-mile and two-hour walks. In relay running three new records were established, quarter-mile, half-mile, and mile. The time for the one-mile relay was 3 minutes, 16 2-5 seconds made by Larry Brown, Earl Eby, Dewey Rogers, and Bob Maxam all of the University of Pennsylvania but competing as an American Legion team. The New York A. C. was responsible for the other two relay records which were estab-

lished within a half hour of each other by a team comprising Bernie Wefers, Jr., Harold Ray, Edward Farrell, and F. K. Lovejoy.

The senior outdoor championships of the Amateur Athletic Union were held at Pasadena, Calif., in July, the team winner being the Los Angeles A. C. with a total of 34 points. The New York A. C. was second with 30 points and the Olympic Club third with 23 points. Other teams scoring points were: Chicago A. A., 17; Illinois A. C., 17; Boston A. A., 16; Multnomah A. C., 13; Notre Dame University, 10; Loughlin Lyceum, 8; Edgar Thomson S. W. A. A., 5; Harvard University, 5; Morningside A. C., 5; Ninety-second St. Y. M. H. A., 5; unattached, 5; Phoenix Indian School, 3; University of Pennsylvania, 3; Meadowbrook Club, 2; Millrose, A. A., 2; University of Missouri, 2; Baylor University, 1; Yale University, 1.

The individual winners in the senior outdoor meet were: 100-yard dash, Charles W. Paddock, Los Angeles A. C., 9 3-5 seconds; 220-yard dash, same athlete, 21 4-5 seconds; 440-yard run, W. E. Stevenson, New York A. C., 48 3-5 seconds; 880-yard run, A. Helffrich, New York A. C., 1 minute, 54 4-5 seconds; 1-mile run, J. W. Ray, Illinois A. C., 4 minutes, 16 4-5 seconds; 5-mile run, R. E. Johnson, Edgar Thomson, S. W. A. A., 25 minutes, 53 2-5 seconds; 3-mile walk, Willie Plant, Morningside A. C., 22 minutes, 42 seconds; 120-yard high hurdles, Earl J. Thomson, Boston A. A., 15 seconds; 220-yard low hurdles, same athlete, 24 3-5 seconds; 440-yard low hurdles, August Desch, Notre Dame University, 53 2-5 seconds; running broad jump, Edward Gourdin, Harvard University, 23 feet, 7 3-4 inches; running high jump, D. Y. Alberts, Chicago A. A., who won jump-off from J. Murphy, Notre Dame University, both clearing 6 feet, 4 inches; running hop, step, and jump, Kaufman Geist, Ninety-second St. Y. M. H. A., 46 feet, 3 inches; pole vault, Edward Knourek, Illinois A. C., 12 feet, 7 1-2 inches; putting 16-pound shot, Clarence Houser, Los Angeles A. C., 46 feet, 11 3-4 inches; throwing 16-pound hammer, Patrick Ryan, Loughlin Lyceum, 170 feet, 7 1-2 inches; throwing 56-pound weight, Patrick McDonald, New York A. C., 37 feet, 8 inches; throwing the discus, Gus Pope, Multnomah A. C., 144 feet; throwing the javelin, Milton Angier, unattached, Chicago, 189 feet, 3 1-4 inches.

The junior outdoor meet of the Amateur Athletic Union also was held at Pasadena, the Olympic Club carrying off the team honors by reason of its first places although tied with the Los Angeles A. C. at 75 points. The Chicago A. A. finished third with 16 points and the Boston A. A. fourth with 10.

The New York A. C. won the senior indoor championship meet of the Amateur Athletic Union held at the Twenty-second Regiment Armory, New York City, in March with 22 points. Unattached athletes finished second with 9 points and Brown University third with 8 point. The junior indoor championships were won by Syracuse University which scored 31 points. The Niagara A. A. was second with 13 and the Mohawk A. C. third with 10.

The University of California was the victor in the forty-fifth annual outdoor meet of the Intercollegiate Association of Amateur Athletes of America, gathering 27 1-2 points as against

Harvard University with 27. Other colleges to score points were: Dartmouth, 20; Pennsylvania, 18 1-2; Leland Stanford, 15; Princeton, 13; Cornell, 13; Massachusetts Institute of Technology, 10; Penn. State, 10; Yale, 9 1-2; Lafayette, 9; Syracuse, 8; Georgetown, 5; Rutgers, 4; Holy Cross, 3; Columbia, 1 1-2; Bowdoin, 1.

The individual winners were: 100-yard dash, M. M. Kirksey, Leland Stanford, 10 seconds; 220-yard dash, Allen Woodring, Syracuse, 21 2-5 seconds; 440-yard run, Bob Maxam, University of Pennsylvania, 49 seconds; half-mile run, Earl Eby, Pennsylvania, 1 minute, 55 1-5 seconds; mile run, J. J. Connolly, Georgetown, 4 minutes, 17 1-5 seconds; 2-mile run, R. C. Brown, Cornell, 9 minutes, 32 seconds; 120-yard hurdles, Earl J. Thomson, Dartmouth, 14 4-5 seconds; 220-yard hurdles, same athlete, 24 2-5 seconds; shot-put, J. A. Shelburne, Dartmouth, 45 feet, 3 1-2 inches; high jump R. W. Landon, Yale, and H. P. Muller, California, tied at 6 feet, 3 1-2 inches; hammer throw, G. Dandrow, Massachusetts Institute of Technology, 157 feet, 4 1-2 inches; pole vault, A. G. Norris, California, G. D. Brown, Yale, and R. W. Harwood, Harvard, tied at 12 feet; broad jump, Edward Gourdin, Harvard, 23 feet, 10 3-4 inches.

The twenty-first annual outdoor championships of the Western Conference Athletic Association were won by the University of Illinois with a total of 61 points. Michigan finished second with 35 1-5 and Wisconsin third with 29. Massachusetts Institute of Technology captured the New England Intercollegiate, scoring 46 points. Williams was second with 21 and Holy Cross third with 11. The Oxford-Cambridge dual meet resulted in a tie, each team winning five first places.

AUGUSTA, VICTORIA. Former Empress of Germany, died at Doorn, April 11. She had lived at Doorn with the ex-Kaiser for about a year and had been ill for a long time past. She was born at Dolzig Castle near Frankfort-on-the-Oder, the eldest daughter of the Prince of Schleswig-Holstein-Sonderburg-Augustenburg, and her full name was Augusta Victoria Fredrica Louise Feodora Jennie, Princess of Schleswig-Holstein. She was betrothed to William after her father's death in January, 1881, and the marriage took place, Feb. 27, 1881. She was reputed to have little knowledge of foreign affairs and she had not been a popular figure with the public at large. The Kaiser's public references to her exhibit her in the light of a model of domesticity, associated with the activities summed up in the celebrated phrase *Kinder, Kirche, und Küche*.

AUSTRALIA, COMMONWEALTH OF. A self-governing dominion of the British Empire, consisting of the island continent of Australia with its dependencies. It comprises the six original states of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania. The government of the present Commonwealth dates from Jan. 1, 1901, when the Act of Union was passed. In addition to the above states it also includes the two territories known as the North Territory and the Federal Territory which were both transferred to the Commonwealth, Jan. 1, 1911. The seat of the government is provisionally at Melbourne, pending the completion of the work on the new site of the capital at Yass-Canberra in the Federal Territory.

AREA AND POPULATION. The following table from the *Statesman's Year Book* for 1921 gives the estimated area in square miles, and the population according to the census of April 3, 1911, together with the estimates of Dec. 31, 1919.

AREA AND POPULATION

States and territories	Area sq. miles	Population census, April 3, 1911	Population estimated Dec. 31, 1919
New South Wales.....	309,432	1,646,734	2,002,631
Victoria.....	87,884	1,315,551	1,495,938
Queensland.....	670,500	605,813	725,220
South Australia.....	380,070	408,558	468,194
West Australia.....	975,920	282,114	331,660
Tasmania.....	26,215	191,211	216,751
Northern Territory.....	523,620	3310	4706
Federal Territory.....	940	1714	1919
Commonwealth.....	2,974,581	4,455,005	5,247,019

Excluding aborigines. These are estimated to number from 75,000 to 100,000.

The above table does not include the aborigines whose number has been placed between 75,000 and 100,000. The estimated populations of the capital cities with their suburbs, Jan. 1, 1920, were as follows: Sydney, New South Wales, 828,700; Melbourne, Victoria, 743,000; Brisbane, Queensland, 289,576; Adelaide, South Australia, 256,660; Perth, Western Australia, 142,000; Hobart, Tasmania (June 30, 1920), 50,000. The movement of population in 1919 was as follows: Births, 122,290; deaths, 65,930; surplus of births, 56,360; marriages, 40,540. The latest figures of immigration and emigration were for 1919, when the arrivals were 222,956; the departures, 62,776; the excess of arrivals 160,180.

EDUCATION. In 1919 New South Wales had 3336 government schools with 9002 teachers and 288,965 pupils enrolled; 681 private schools with 3830 teachers and 81,061 pupils. Victoria had in 1918, 2272 state schools with 6570 teachers and 240,664 pupils; 493 registered schools with 1903 teachers and 560,996 scholars. Queensland had in 1919, 1574 public elementary schools with 4194 teachers and an average daily attendance of 92,569 pupils; 156 private schools with 896 teachers and an average daily attendance of 18,305 pupils. South Australia had in 1919, 945 government schools with 75,681 pupils; 166 private schools with 13,209 pupils. Western Australia had in 1919, 680 government schools with 47,314 pupils; 124 private schools with 11,939 pupils. Tasmania had in 1917, 486 public elementary schools with 36,350 pupils. There are in addition various high and technical schools in all the states. Each of the capital cities of the states is the seat of a university: Sydney (1919), 2797 students; Melbourne (1919), 1987 students; Brisbane (1919), 263 students; Adelaide (1913), 720 students; Perth (1913), 182 students; Hobart (1920), 221 students.

MINERAL PRODUCTION. Australia has been one of the chief gold-producing states of the world. Down to the close of 1918 the gold production amounted in value to £594,536,723, the leading states in respect to output being New South Wales, Victoria, and Western Australia. In 1920 gold was the only mining industry which had approximated a return to normal conditions. Other important minerals are silver, lead, copper, and tin. Many men were thrown out of employment in all

these industries after the war, but the coal mining was less affected than the others. Strikes and other labor difficulties added to the depression, but the main cost was the collapse of the world market for metals. As Australia with its small population can absorb only a small part of the minerals and other raw materials, the industries are dependent on the export trade. In 1920 the exports steadily declined and this decline continued during the early months of 1921. In silver, lead, and zinc mining, the unemployment was especially severe in 1920. Coal is found in every part of the Commonwealth, but the coal production of New South Wales averages more than five times as much as all the other states combined. In 1920 it amounted to 10,715,999 tons, while the average total of the other states during recent years was about 1,840,000 tons.

COMMERCE. Trade with the chief countries in 1918-19 was as follows:

From or to	Imports 1918-19	Exports 1918-19
	£	£
United Kingdom.....	37,971,346	61,603,958
Canada.....	2,282,978	891,529
New Zealand.....	2,420,724	4,156,860
India.....	7,558,858	7,741,081
Ceylon.....	1,628,939	648,426
South African Union.....	5,779,795	2,347,367
Java.....	1,819,186	2,277,887
Belgium.....	725	104,890
France.....	144,544	1,045,182
Germany.....	2356	1608
U. S. America.....	27,930,085	9,009,425
Japan.....	8,281,439	3,846,951
Russia.....	31	2069
Italy.....	165,970	1,724,801

The shares of the respective states in 1919-20 were as follows:

	Imports	Exports
	£	£
N. S. Wales.....	43,148,697	54,696,571
Victoria.....	33,782,164	42,953,749
Queensland.....	7,219,589	14,403,972
S. Australia.....	7,501,158	20,530,337
W. Australia.....	4,959,825	13,698,623
Tasmania.....	813,342	2,000,403
Northern Territory.....	32,124	278,868
Total.....	97,456,899	148,564,523

FINANCE. The Commonwealth budget for the financial year ending June 30, 1922, showed a estimated deficit of £2,817,108, reducing the credit balance brought forward from £6,618,327 at June 30, 1921, to £3,801,219 at June 30 next.

A comparison of the estimated Commonwealth revenue and expenditure for 1921-22 (excluding payments to the state governments), with actual figures for the two previous years, is as follows:

Revenue and expenditure	1918-20	1920-21	1921-22
	£	£	£
Taxation.....	41,101,730	52,229,493	47,281,000
Other revenue.....	11,811,372	13,288,115	14,506,350
Gross revenue.....	52,783,102	65,517,608	61,787,350
Deduct payments to states.....	6,720,492	6,840,163	7,022,500
Net revenue.....	46,062,610	58,677,445	54,764,850
Expenditure.....	43,860,862	57,783,924	57,581,958
Surplus.....	2,201,748	893,521	
Deficit.....			2,817,108

The reduced estimate of taxation was due to the decline in customs revenue, which was estimated at only £16,105,000, against the exceptionally high amount of £21,731,210 received in 1920-21 as the result of excessive importations. The expenditure of £57,581,958 included £18,910,560 for interest on war and other Commonwealth debt (excluding interest on loans issued in London on behalf of the States), against £17,246,381 in 1920-21 and £15,366,700 in 1919-20. In addition to expenditure out of revenue, expenditure out of loans was placed at £11,196,000 for war and repatriation purposes and £5,597,174 for public works. The Commonwealth public debt on June 30, 1921, inclusive of £16,750,000 borrowed in London on behalf of the states, amounted to £401,720,024, afterwards increased by the £10,000,000 loan in September.

PENSIONS. Under the Invalid and Old Age Pension acts of 1916 the rates were not to exceed £32, 10s. a year and the pensioner's entire income was not to exceed £58, 10s. The requirements for pensions were attainment of 65 years of age and residence in Australian territory for at least 20 years; for invalid pensions, residence of at least 5 years in Australia. Under the Maternity act of Oct. 9, 1912, a bonus was paid up to £5 for every child of white parents born in Australia. Disbursements for old age and invalid pensions in 1919-20 were £4,546,879. The maternity allowance for 1919-20 was £625,865. Old age pensioners in the Commonwealth, March 31, 1920, numbered 98,364, and invalid, 34,333; war pensioners, June 20, 1919, 181,529.

COMMUNICATIONS. The following table taken from the *Statesman's Year Book* for 1921 gives the statistics for government railways, state or Federal, for the year ending June 30, 1919.

State or Federal	Miles open	Cost of construction and equipment	Passengers carried	Goods and live stock carried	Gross receipts	Working expenses
		£	Number	Tons	£	£
N. S. Wales.....	4825	76,601,591	98,568,768	12,714,012	9,958,173	6,904,450
Victoria.....	4190	57,403,576	111,904,786	6,515,470	6,432,277	4,279,663
Queensland.....	5469	38,244,494	26,414,817	3,783,334	3,984,597	3,690,445

Total.....	22,647	224,921,708	276,360,834	28,697,700	25,306,781	19,003,633

The private railways opened for general traffic in 1919 had a mileage of 11,025 and not opened for general traffic, of 18,085.

A summary of the total mileage of the Australian railways open for traffic showed some 25,652 miles of various gauges, as follows:

	Miles
New South Wales Government Railways.....	4824
Victoria Government Railways.....	4189
Queensland Government Railways.....	5469
South Australia Government Railways.....	2289
Western Australia Government Railways.....	3538
Tasmania Government Railways.....	601
Commonwealth Government Railways.....	1733
Private companies' railways.....	3009
Total Australian railways.....	25,652

The New South Wales State Railways in 1921 were practically all of the standard gauge, 4 ft. 8½ in. The Victorian State Railways were nearly all of the 5 ft 3 in. gauge. The Queensland State Railways were of the 3 ft. 6 in. gauge. The South Australia State Railways comprise 1080 miles of 5 ft. 3 in. and 1029 miles of 3 ft. 6 in. gauge. The Western Australia State Railways' entire track of 3353 miles was of 3 ft. 6 in. gauge. The Tasmania State Railways were of 3 ft. 6 in. gauge. The Commonwealth Government Railways (chiefly in the states of South Australia and Western Australia) comprised 1051 miles of 4 ft. 6 in., 478 miles of 3 ft. 6 in. and in the Northern Territory 200 miles of 3 ft. 6 in. gauge. The private company lines comprised 1609 miles of 3 ft. 6 in. gauge and 1070 miles of 2 ft. 6 in. gauge. The unaccounted for gauges are of comparatively unimportant feeder lines varying from 1 ft. 8 in. to 3 ft.

The commission appointed by the Federal government in December, 1920, to investigate the subject of a uniform railway gauge for Australia recommended the adoption of the 4 ft. 8½ in. gauge, which had been used on the New South Wales Government Railways from the very beginning and which also was deliberately adopted for the Trans-continental railway of the Federal government from Kalgoorlie to Port Augusta, which was opened in 1917. The estimated cost in 1913 of the general conversion of the Australian railways to the 4 ft. 8½ in. gauge was \$115,000,000, but at the conference of the chief civil engineers of the different state railways held in December, 1920, it was estimated that the conversion of the whole of the existing railways would amount to \$468,000,000. Therefore it was suggested as an initial undertaking that the gauge be made uniform between the five state capitals. This, at prevailing prices, was estimated to cost \$132,500,000, and brought up the very serious question of finance, which was to be discussed in a general conference called to develop a systematic plan for the entire conversion work. Such an undertaking was not altogether promising in view of the fact that the annual report of the government railways of South Australia for the fiscal year ended June 31, 1921, showed a deficit of \$2,733,550 (£ to \$ at par). As in other countries this loss was due to increased costs—primarily wages—which increased rates were not sufficient to cover. The lines totaled 2333 miles, of which some 1209 miles were of 3 ft. 6 in. gauge and 1124 of 5 ft. 3 in. gauge. The New South Wales Railways for the same period showed a deficit

of \$2,200,653. The mileage of these lines was 5043.

ARMY AND NAVY. The principle of military service is universal compulsory training and the system rests on defense acts after 1903, the main legislation having been passed in 1903 and 1904, and later amended by various enactments. Military service in time of war under the original defense acts was required of every male inhabitant between the ages of 18 and 60. Liability to military training was imposed by the Act of 1909, which was the first measure of the kind in any English-speaking country. There was a division into junior cadets of 12 to 13 years of age, and senior cadets of 14 to 18 years, which aimed at the physical development of the young. Between the ages of 18 and 26 the citizen forces were trained during 166 days each year for 2 years and were then registered for a period of 6 years. A plan was proposed in the latter part of 1920 whereby permanent troops were to be maintained only in sufficient number to administer and instruct the citizen forces. A supplemental organization consisted of a series of rifle clubs which constituted a military reserve. The total military forces including rifle clubs on June 30, 1919, were 264,884.

In 1920 the sea-going fleet consisted of 6 submarines, 6 destroyers, the light cruiser, *Brisbane*, the training cruiser, *Sydney* and 2 sloops. The personnel at that time totaled 10,697 including those under training and the Royal Australian Naval Brigade. In addition to the above vessels the British government recently presented to the Commonwealth 19 vessels. The estimates for 1920-21 were £3,265,000. In 1921 measures were under consideration for the establishment of a combined military and naval air corps.

GOVERNMENT. Executive power is vested in the King and exercised by the Governor-General aided by an Executive Council of responsible Ministers, who must be members of the Federal Parliament. Legislative power so far as it is not expressly in reserve to the states is vested in a Federal Parliament consisting of a Senate and a House of Representatives. The Senate is made up of 6 Senators from each of the original states elected for 6 years, to be renewed to the extent of one-half each 3 years, and the House of Representatives consists of twice as many members as there are Senators, the representation being in proportion to the population according to the latest enumeration. The representation was as follows according to the population down to 1920: New South Wales, 27 members; Victoria, 21; Queensland, 5; Tasmania, 5; (?). The Governor-General at the beginning of 1921 was Lord Forster of Lepe and the Ministry was as follows: Prime Minister and Attorney-General, W. M. Hughes; Navy, William Henry Laird Smith; Treasurer, Sir Joseph Cook; Defense, George Foster Pearce; Repatriation, Edward Davis Millen; Public Works and Railways, Littleton Ernest Groom; Home and Territories, Alexander Poynton; Trade and Customs, Walter Massey Greene; Postmaster-General, George Henry Wise; Vice-President of the Executive Council, Edward John Russell; Assistant Minister for Defense, Sir Granville de Laune Ryrrie; Assistant Treasurer, Arthur Stanislaus Rodgers. For new Ministry, see below.

HISTORY. The project for land settlement proposed by Sir Joseph Carruthers, former prime minister of New South Wales attracted much interest toward the close of the year. It aimed to open up for settlement a vast tract of Crown lands with the design of establishing in the course of the next twenty or twenty-five years a million settlers on a million separate farms, most of them to come from Great Britain; and it included ambitious plans for the building of railways, roads, and waterworks for the purpose. The acreage of the Crown lands was placed at 1,740,000,000, while only 163,000,000 were in private hands. Another important development scheme was the government's plan for the irrigation of an extensive region by means of the Murray River which forms the boundary between South Wales and Victoria before it enters South Australia. A plan formed conjointly by these three states involved the building of a great dam and reservoir near Albury and a reservoir near the boundary of South Australia, the undertaking being on a vast scale comparable only to the Nile and Mississippi irrigation systems. The area affected was over 240,000 square miles. The immigration question continued to be discussed throughout the year.

IMMIGRATION QUESTION. The principal point in the problem was the fact that although the Australian continent was one-tenth larger than the United States it had a population only about as large as that of the city of New York, while the neighboring continent of Asia had an enormous mass of inhabitants and in certain regions suffered from excess population. The Australians naturally wished to keep their continent for the white race and feared the influx of Asiatics. It was announced by the Australian minister of defense toward the close of the year that so far as former German New Guinea was concerned Asiatic immigration was prevented except for the arrival of Japanese laborers occasionally to take the place of those who had already been there. In Australia, Asiatic immigration was definitely prohibited with the exception that Asiatics might enter as students, merchants, or travelers.

The Australian government was highly dissatisfied with the joint administration of the New Hebrides by Great Britain and France. See the article **NEW HEBRIDES**. The Australians complained that they had not been represented at the Anglo-French conference on the subject or consulted in the negotiations. Among the British residents were many free or escaped convicts from Australia or New Caledonia. While France claimed a settlement of this question in her interest, the Australians on their side favored the purchase of the islands and the Australian parliament offered the sum of £500,000 for them. It was proposed that Great Britain should receive this amount and that the French share should apply to the extinction of the war debt of France to Great Britain.

On December 27 the ministry was reconstituted as follows:

Prime Minister and Minister for External Affairs, W. M. Hughes; Home and Territories, George Foster Pearce; Repatriation, E. D. Millen; Attorney-General, L. E. Groom; Navy and Defense, Maesy Greene; Trade and Customs, A. S. Rodgers; Postmaster-General, Alexander Poynton; Treasury, S. M. Bruce; Works and

Railways, R. W. Foster; Vice President of the Executive Council, J. Earle. See **EXPLORATIONS**.

AUSTRIA. A republic of central Europe, proclaimed, Nov. 12, 1918, and comprising territories defined by the treaty of Saint Germain, signed Sept. 10, 1919. It includes the following seven provinces: Upper Austria, Lower Austria, Tirol, Salzburg, Styria, Carinthia, Vorarlberg, and the city of Vienna; also the Burgenland, that is to say, the German and western portion of Hungary, which under the terms of the treaty was added in 1921. The area of the former Austrian provinces was 39,012 square miles, and the population, according to the census of Dec. 31, 1910, was 7,529,935. A census of the new republic was taken, Jan. 31, 1920, and the details of it were included in the preceding **YEAR BOOK**. The total population on that date was 6,139,197 of whom 2,940,346 were males and 3,198,851 females. The Burgenland had a population estimated at about 439,000 in 1920. The total population showed a falling off of 3.6 per cent since 1910, and the male population of 6.61 per cent. The chief cities with their populations in 1920 are: Vienna, 1,842,005; Graz, 157,032; Lins, 93,473; Innsbruck, 55,659. Official estimates of the number of Austrians killed in battle range from 160,000 to 180,000, and the total loss due directly or indirectly to the war based on the normal rate of increase in population during peace, was placed at 814,461.

EDUCATION. Education is compulsory between the ages of six and fourteen. In 1918 there were 4763 elementary schools with 30,667 teachers and 914,258 pupils. Secondary education is supplied by the *gymnasias* and *real-schulen* of which, in 1917-1918, the former numbered 73 with 20,955 pupils, and the latter, 38 with 14,632. There were also secondary schools for girls, numbering 26 with 4896 pupils. There were four universities maintained by the state as compared with eight in the former kingdom. The universities and the number of teachers and students in 1917-1918 are as follows: Vienna, 810 teachers and 5510 students; Graz, 232 teachers, 1142 students; Innsbruck, 164 teachers, 982 students; and Salzburg (numbers not available). There were two technical high schools, one at Vienna with 212 teachers and 1292 pupils, and the other at Graz with 72 teachers and 186 students; and 18 theological schools, of which 15 were Roman Catholic. In 1918 there were also 37 training colleges for teachers with 736 professors and 5043 students.

PRODUCTION. The chief occupation is agriculture. The total area under cultivation in 1919 was 4,084,121 acres, of which 2,123,175 were in Lower Austria, and 929,988 in Upper Austria. The chief crops in 1920 with their acreage and yield in metric tons were as follows:

Crop	Acreage	Met. tons
Wheat.....	374,032	149,515
Rye.....	688,687	251,410
Barley.....	240,915	97,207
Oats.....	658,740	187,730
Potatoes*.....	290,697	584,996
Turnips*.....	87,285	536,182

* Only 1918 figures were available.

The degree of recovery of the agricultural industry of Austria was indicated by the following figures, giving the official estimate of the

**AUSTRIA, HUNGARY,
CZECHO-SLOVAKIA,
ROUMANIA,
AND JUGO-SLAVIA**

acreage and yield of the most important grains for 1921, compared with the previous year and the 1904-13 average:

ACREAGE AND YIELD OF GRAINS

Grains	Average, 1904-13		1920		1921	
	Acreage	Metric tons	Acreage	Metric tons	Acreage	Metric tons
Wheat.....	465,000	254,000	371,000	148,000	378,000	211,000
Rye.....	1,013,000	553,000	711,000	255,000	758,000	398,000
Barley.....	336,000	170,000	238,000	96,000	267,000	143,000
Total.....	1,814,000	977,000	1,320,000	499,000	1,403,000	752,000

The production of foodstuffs is insufficient for the country's needs, and the distress arising from the scarcity has been extreme. The mineral resources were diminished as the result of the war. The production for 1920 was as follows: Lignite, 2,387,996 tons; anthracite, 133,173 tons; iron ore, about 2,000,000 tons; pig iron, about 500,000 tons. In 1920, 11 anthracite mines were worked, and 61 lignite mines. There are also resources of zinc, copper, lead, salt, and silver and gold ore.

ECONOMIC CONDITIONS. According to expert calculations the cost of living in Austria had increased more than in any other of the central European countries. The index figure based on 100 in 1914 was 1788 in 1918; 5570 in 1920; and 11,000 in June, 1921. The index figure of the Austrian Statistical Bureau for 1921 based on 100 on January 1 of that year had risen to 578 on November 18. Wages rose continually during these periods, but did not keep pace with the cost of living. In December the average monthly wage of skilled workmen was from 12,000 to 18,000 crowns. Unemployment diminished greatly from May 1, 1919, when 132,000 were reported to be out of employment. In January, 1921, the figure was 24,293 and it remained near that point during the year, being 24,158 on October 1. The above figures are exclusively for the city of Vienna, but they suffice to indicate the conditions, because, during the first six months of 1921, 83 per cent of the unemployed were in that city. The largest numbers of unemployed were in the metal industries and in hotels and restaurants. The chief difficulties were the coal shortage, the high freight rates, the depreciation of the crown, and the German competition in the domestic market. Only about one-fifth of the necessary coal was produced in Austria, and importation was checked by the high freight rates and the depreciation of the crown. There was, however, a slight increase in coal production during the first eight months of 1921. Some of the chief industries had made hardly any advance toward recovery. The leather industry toward the close of the year had attained about 35 per cent of its prewar activity; the textile industry had reached only about 10 per cent, and was totally unable to supply the home demand of textiles.

Toward the close of the year the cost of living had greatly increased, the government index figure for September being 215 on the basis of 100, as the index for January, 1921, based on a family of four persons, and during the following month the index increased. There was a serious condition of unemployment throughout the year. In Vienna the number officially reported on September 24 was 22,525 of whom 9642 were metal-workers. There was a slight increase in

coal production during the first eight months as compared with the first eight months of 1920, the output being 2,200,000 tons as compared with

2,100,000 tons. In foreign trade the total imports of coal during the first half of 1921 were 3,800,000 metric tons which was an increase over the same period in the preceding year.

In the closing months of the year the government was making desperate efforts to increase its income and avert disaster by raising the postage, telephone, and telegraph rates, railway fares, and the prices of tobacco, gas, electricity, and food, in some cases by as much as several hundred per cent. The discontinuance of government food subsidies was announced, although the government asked for unlimited authority on January 1 to borrow money for further purchases of food and raw materials. An unofficial estimate for the deficit of the current half year was 100,000,000,000 crowns. The official estimated deficit for the fiscal year 1921-22 of 165,000,000,000 crowns was criticised as too optimistic and the deficit was placed by some economists as high as 400,000,000,000 crowns. There was a certain amount of industrial activity with a fair demand for products, but it was doubtful, considering the circumstances of production, whether real profits were being made. There were 19,000 unemployed in Vienna in November, consisting mainly of metal-workers (7000) and city employees (5000). There was sufficient grain supply until December 3 and contracts were in force covering the grain supply up to January 1. The cost of living was steadily increasing. The official index figure (based on 100 for Jan. 1, 1921) had increased to 337 from 215 in September.

COMMERCE. Total imports into Austria in 1920 were 60,610,719 quintals (1 quintal equals 110 pounds), and exports from Austria were 13,175,800 quintals. The chief imports were grain, flour, and rice, amounting to 6,104,504 quintals; fuel and coal, 41,644,787 quintals; glass and stoneware, 626,553 quintals; and coal, 181,370 quintals; while the chief exports were wood and manufactures thereof, 3,997,688 quintals; manufactures of textiles, 873,948 quintals; paper and manufactures thereof, 887,599 quintals; minerals, 3,009,035 quintals. It is interesting to note that Austria's foreign trade was mainly conducted with Czecho-Slovakia and Germany, with a total trade of around 26,500,000 quintals. The total trade with the United States was 3,104,788 quintals. Complete figures for foreign trade in 1921 were not available, but the following table shows imports and exports for the first six months of 1920 and 1921, respectively:

Period	Imports, tons	Exports, tons
January-June, 1920.....	2,066,000	222,400
January-June, 1921.....	3,800,000	700,000

Iron and steel are the most important exports Austria has to sell. During 1920 shipments amounted to 184,634 tons, an advance of 109,078 tons over the latter half of 1919. The largest item of export was 75,000 tons of pig iron, 63,000 tons of which were sold to Czecho-Slovakia. This requires comment, since the Austrian industry was held back by a shortage of raw material and the country had to import a large quantity of manufactured articles. The reason was the convention with Czecho-Slovakia according to which Austria was required to give up pig iron in order to secure indispensable coke. As might be expected from its lack of iron, Italy received the largest amount of Austria's exports, importing 31,000 tons, including 16,000 tons of finished goods. Next came Hungary and Jugo-Slavia, with purchases to the amount of 16,000 and 14,000 tons, respectively. Owing to their comparative dearth of industrial plants and comparative abundance of food they are the natural complements of Austria. In less degree the same is true of Poland and Roumania, which bought 10,000 and 7000 tons, respectively. Iron and steel imports into Austria were 116,699 tons, an advance of 42,605 tons over the latter half of 1919. Of this quantity, 57,000 tons came from Czecho-Slovakia, of which the largest item was 26,000 tons of finished manufactures. The Austrian market was made favorable for Czecho-Slovakian sellers through the working of the commercial convention already referred to. The large item of 41,000 tons from Germany consisted mainly of pig iron, brought in to replace the export of this commodity to Czecho-Slovakia.

A new commercial treaty was signed on September 30 between Austria and Roumania, in which each party agreed practically to give the other the most-favored-nation treatment.

FINANCE. The budget for 1920-1921 indicated an expenditure of 33,194,000,000 crowns as compared with 16,873,000,000 in 1919-1920, and the deficit was 12,539,000,000 crowns, an increase of 1,960,000,000 over the preceding year. On January 11 the government declared itself at the end of its resources and informed the Allied Powers that it was ready to retire, January 15, and give the administration of the country over to the Reparations Commission. Thereupon the Supreme Council invited the Austrian government to send representatives to a conference on the subject of financial relief. This conference was held, March 12, but aside from expressions of good will on the part of the Allies nothing definite came of it. According to the budget figures for the fiscal year, 1921-1922, announced by the finance minister, November 8, the deficit was about 165,000,000,000 crowns, which was three times as large an estimate as had been made in July. Even this was criticised by economists as too low; and according to a well-known Austrian economic writer, the real deficit was about 400,000,000,000. The public debt according to the figures published, November 8, was 667,745,000,000 crowns which included the old Austro-Hungarian debt as well as the debts of the present government. The old debt amounted to 144,700,000,000 paper crowns. Measures of financial reorganization were undertaken by the Austrian government in agreement with the Finance Committee of the League of Nations. The main points in the plan of reorganization

were as follows: Equalisation of income and expenditure so as to avoid further deficit; regulation and reform of the currency to prevent further depreciation; reductions as soon as possible of the state contributions for the cheapening of the cost of provisions; reduction of the personnel of the government service. The government urged the Finance Committee of the League to procure the foreign credits necessary for providing food-stuffs. As means of preventing depreciation of the crown, it declared its readiness to give the exclusive right to issue notes to a new bank which should be founded in part with foreign capital. By October the crown had depreciated to such an extent as to be practically worthless and offers of 3400 crowns for a dollar were reported in Vienna during October, the normal value of the crown being five to the dollar. The effect on business was destructive. As in the case of Germany there was an influx of foreigners seeking to profit by the fall of exchange before it had produced its effect upon the prices of goods. For a few days trade on the stock exchange was suspended.

COMMUNICATIONS. The railways of Austria had a total length of 6940 kilometres, most of them state-owned and all under government control. The expenditures for the railways, according to the 1921 budget, amounted to 17,000,000,000 crowns of which 8,000,000,000 were for wages; and the receipts to only 7,800,000,000, the deficit being due to the drop in the value of the crown. Owing to the loss of ships and barges during the war, the Danube river transportation which before the war was important had virtually ceased to exist.

ARMY. For the states of Austria-Hungary before the war, see preceding YEAR BOOKS. At the end of the war the whole military system had collapsed, but a defense force was created in 1919 with a strength of about 34,000 men. By the terms of the treaty of Saint Germain, compulsory military service was abolished, and the Austrian army was limited to 30,000 officers and men. It was further provided that no mobilization measure should be taken, and that police officers, gendarmes, etc., should be kept down to the limit of 1913. For further details, see preceding YEAR BOOK.

GOVERNMENT. Portions of the former Austro-Hungarian Empire began to split off and declare their independence in October, 1918, and what had been the Empire was in the course of the next few months divided among the separate states of Austria-Hungary, Czecho-Slovakia and Jugo-Slavia. On the proclamation of the Austrian Republic, Nov. 12, 1918, the National Assembly appointed a provisional cabinet, and provided for the election of a National Constituent Assembly. This body was elected on the basis of universal suffrage, Feb. 16, 1919, and set to work on the drafting of a constitution which was published, Feb. 15, 1920, and went into force, Nov. 10, 1920. Executive power was vested in a president, chosen for four years, and not eligible for re-election more than once; and in a ministry, responsible to the assembly. Legislative power was vested in an assembly, elected for four years by popular vote; and an upper house elected by the provincial diets in proportion to the population, this upper house having only advisory powers. The new constitution declared Austria

a democratic republic, composed of seven provinces and the city of Vienna; abolished all special privileges; and granted equal rights to all citizens. The president and the ministry at the beginning of 1921 were as follows: At the beginning of 1921 the President of the Republic was Dr. Michael Hainisch, and the ministry was constituted as follows: Chancellor and Minister for Foreign Affairs, Dr. Michael Mayr; Vice-Chancellor and Minister of Education, Walter Breisky; Commerce, Edouard Heini; Social Insurance, Dr. Joseph Resch; Agriculture, Alois Hauers; Finance, Dr. Ferdinand Grimm; Justice, Dr. Rudlof Paltauf; Food Controller, Dr. Alfred Grünberger; Interior and War, Walter Breisky; Railways, Dr. Karl Pesta.

GERMAN UNITY. After the Armistice the element in Austria which agitated for union with Germany gave the Allied Powers much concern and caused especial alarm in France where various rumors were constantly circulating in regard to it. On April 14 the Allied representatives demanded that the Austrian government should suppress agitation to this end under pain of the withdrawal of the Allied proposals for financial relief.

TIROL. There were frequent reports of monarchist movements in the Austrian Tirol and early in October, according to press dispatches, the monarchist party was already in considerable strength there. It was said that the inhabitants desired an independent republic in alliance with Bavaria and that a considerable element favored the restoration of the Wittelsbach dynasty; also that large bodies of troops had been recently moved from Bavaria into the province. There was much alarm in Switzerland over this danger in their neighborhood. In the Swiss parliament the government declared that if Austria should lose the Tirol, the Austrian province of Vorarlberg ought to have the right to decide its own destiny. In that case it was expected that the latter province would vote to join Switzerland, because at a referendum taken on that subject in May, 1919, 81 per cent of the votes favored union with Switzerland. On that occasion the Swiss government refused the offer lest it might complicate the European difficulties.

BURGENLAND. In October representatives of Austria and Hungary had agreed, in the presence of the Italian Foreign Minister acting as mediator, on a plebiscite at Odenburg and certain other centres in Burgenland to decide whether they would join Austria or Hungary. This was held toward the end of the year. See HUNGARY.

OTHER EVENTS. On May 29 it was announced in the press that Salzburg had cast 90 per cent of its votes in favor of union with Germany. In September it appeared from newspaper accounts that an American syndicate under Charles H. Sabin had acquired the estate of Archduke Frederick.

AUSTRIA-HUNGARY. See NAVAL PROGRESS.

AUTHORS' LEAGUE OF AMERICA. An organization founded in 1912 for providing mutual assistance in the technicalities and difficulties of publishing and copyrighting. Confidential information is supplied its members regarding managers, producers, etc. Recently the League was divided into four Guilds to simplify its operation. They act separately but are subject to the government and discipline of the League. The total membership at the close of 1921 was 1822, divided among the Guilds as

follows: The American Dramatists, 250; The Authors' Guild, 156; The Guild of Free Lance Artists, 253, and The Screen Writers' Guild, 130. Membership is limited to persons of recognized standing in the literary or artistic professions. An Authors' Fund is maintained for the purpose of providing aid to those working in the fields embraced by the League who may be in need through illness, age, or misfortune. The annual meeting in 1921 was held in April; also in November, due to a change of constitution which makes the fiscal year begin October 1. Previous presidents of the League are Rex Beach and Winston Churchill. Following are the officers for 1921: President, Jesse Lynch Williams; Vice-President, Channing Pollock; Secretary-Treasurer, Eric Schuler. Officers of the Guilds are: American Dramatists, Owen Davis, President; Percival Wilde, Secretary; The Authors' Guild: President, Louis Joseph Vance; Secretary, Ellis Parker Butler. The Guild of Free Lance Artists: President, C. B. Falls; Secretary and Treasurer, F. G. Cooper; The Screen Writers' Guild: President, Frank E. Woods; Secretary, Dwight Cleveland. Headquarters of the Screen Writers' Guild are 6718 Sunset Boulevard, Hollywood, Calif. Headquarters of The League are maintained at 22 East 17th Street, New York City. The managing secretary was Luise M. Silcox.

AUTOMOBILES. The year 1921 was certainly one for readjustment in the automobile industry and conditions were very different from those of previous years. Naturally the decreased purchasing power of the farmers and many other elements of the country was apparent, and there was a decline in prices which became very marked late in the year, when a number of manufacturers announced their prices and styles for the spring of 1922. While profits in the motor industry in 1921 had been small, or even absent in some cases, yet there was in general a cleaning out of high inventories and adjustment of finances and more healthy and efficient conditions of production were established. These seemed to indicate a stabilizing of the industry so that it would be ready for a steady demand and particularly for a larger export business. Of course the use of the motor car for passengers was absolutely established, but there were important developments in the field of motor busses and motor transport of freight. Here it was believed that conditions would bring about a more efficient handling of passengers and goods in connection with steam and electric railways, particularly at terminals, though as it was in 1921 over 1,200,000,000 tons of freight were handled by motor trucks.

By the end of 1921 the number of automobiles registered in the United States was approximately 10,000,000, of which 9,000,000 were motor cars and 1,000,000 motor trucks. With 1,680,000 new cars added in 1921 it was estimated that the replacements would amount to about 1,400,000 cars.

Grand Totals.....9,211,296

* For three-year period ending Dec. 31, 1920.

For the first 10 months of 1921 the total registration reported was 10,259,164 or a net increase of 1,069,702 cars and trucks over 12 months in 1920.

The National Automobile Chamber of Commerce, through its general manager, Alfred Reeves, conservatively estimated the production of motor cars and trucks in 1921 at 1,680,000, which represented a decrease from the 1920 production of 24 per cent. This production embraced 1,535,000 cars and 145,000 trucks. The wholesale value of cars and trucks produced in 1921, \$1,222,350,000, showed a decrease from 1920 value of 45 per cent. The wholesale value of the motor cars produced in 1921 was \$1,088,100,000, while the value of motor trucks was \$134,250,000. The average wholesale price of a motor car in 1921 was \$702 as compared with \$897 in 1920. The average wholesale price of a motor truck in 1921 was \$968 as compared with \$1273 in 1920.

In 1921 the automobile industry, which had just rounded out twenty-eight years from the first car made in 1893, was ranked by the Bureau of the Census third among American manufactures; slaughtering and packing held first place, then came steel, and in a very respectable third position, automobiles, though among finished products the automobile industry stood first. In 1921 manufacturers and owners of automobiles

paid special taxes amounting to \$228,759,000, of which the Federal government received \$115,546,000 and there was paid to state governments in license fees \$108,213,000. In addition there was paid in miscellaneous taxes \$5,000,000.

According to the annual report of the United States Commissioner of Internal Revenue, for the fiscal year ended June 30, 1921, the automotive manufacturers and accessory manufacturers paid \$115,546,000 in sales taxes to the government, representing sales by them of \$2,446,125,000. The sales taxes were divided as follows: Passenger cars, \$64,388,000; accessories, \$39,518,000, and trucks \$11,640,000. The total amount was well distributed over the entire country and proved the healthy condition of the industry even in an off year.

In 1921 there were 105 motor car factories and 140 motor truck factories in the United States located in 32 different States. The employees engaged in car and truck manufacture totaled 256,000. In 1921 the passenger car dealers numbered 38,216, motor truck dealers 24,488, garages 59,093, and repair shops 55,521.

The value of exports of motor vehicles and parts, including engines and tires shipped from the United States in 1921, aggregated \$102,945,610. There were exported 30,639 motor cars valued at \$33,712,208, and 7748 motor trucks valued at \$11,457,616. Automobiles were exported during the year to 114 different countries.

Of the total oil output of the United States motor vehicles consumed 27 per cent of which 24.6 per cent was refined in the form of gasoline and 2.4 per cent was lubricating oils. In 1921 the gasoline production of the United States was 5,360,014,000 gallons and the consumption 4,506,706,900 gallons; or an increase in production over 1920 of 9.3 per cent and an increase in consumption of 5.9 per cent.

The relation of the rubber industry to the automobile was shown in the production of tires. See RUBBER. During the year there were produced 19,379,000 tire casings; 24,157,000 tire inner tubes; and 377,000 solid tires.

The motor vehicle was no less indispensable to the American farm than to other industries as the number of farms which had automobiles on Jan. 1, 1920, according to the Bureau of the Census, was 1,979,564, or 30.7 per cent of all farms in the United States. These farms reported a total of 2,146,512 automobiles on the census date. More than 100,000 automobiles on farms in the following States were reported in 1920: Iowa, 177,558; Illinois, 139,090; Ohio, 128,384; Kansas, 111,055; Minnesota, 107,824; Texas, 105,292; Nebraska, 104,453; and Indiana, 102,122. Motor trucks were reported on 131,551 farms in 1920, or about 2 farms out of every 100 in the United States as a whole. The number of motor trucks on these farms was 139,169. At the end of 1921 the National Automobile Chamber of Commerce estimated that 2,850,000 motor cars and 150,000 motor trucks were owned by the farmers of the United States. Also that during the year 134,400,000 tons of farm products were handled by motor transport.

Motor bus transportation figured in 1921 on a larger scale than ever, it being estimated that there were about 20,000 motor buses in operation. Some 12,000 schools were using motor bus transportation for children, while 600 cities had organized motor bus lines.

There were 1500 organized public motor express lines in the United States in 1921, while during the year 6,000,000 head of live stock were transported by motor truck. On 35 street railway lines motor busses were used and 12 steam railroads employed motor trucks with flanged wheels on regular tracks.

DEATHS FROM AUTOMOBILE ACCIDENTS IN 1920. According to the Bureau of the Census, during the year 1920 there were 9103 deaths resulting from accidents caused by automobiles and other motor vehicles, excluding motorcycles, as recorded within the death-registration area of the United States, which area contains 82 per cent of the total population. This number represented death rate of 10.4 per 100,000 population, as against 9.4 in 1919, 9.1 in 1918, 8.9 in 1917, 7.3 in 1916, and 5.8 in 1915. Between 1915 and 1920, therefore, the death rate per 100,000 population from motor-vehicle accidents and injuries increased by about four-fifths.

The actual number of deaths resulting from motor-vehicle accidents in the 25 States from which data for 1915 were available increased from 3571 in that year to 7433 in 1920, the rate of increase being 108.1 per cent. During the same period, according to the Bureau of Public Roads, the number of registrations of automobiles, motor trucks, and commercial motor vehicles in the same States increased from 1,767,055 to 6,085,150, the rate of increase being 244.4 per cent. The death rate per 1000 motor vehicles in use in the 25 States in question decreased from 2 in 1915 to 1.2 in 1920, being only three-fifths as great in the later as in the earlier year.

RACING EVENTS. Roscoe Sarles and Tommy Milton were the leading automobile drivers of the year. Sarles won the Uniontown race of 225 miles and the Santa Rosa race of 150 miles. Milton was victor in the Indianapolis 500-mile classic and in the 250-mile contest held at Tacoma. At Indianapolis he drove his Frontenac at the rate of 89.62 miles an hour, or slightly under the record time of 89.84. Jimmy Murphy added to his fame by winning the French Grand Prix race and establishing a new world speed record in the San Carlos race at San Francisco where he averaged 110 6:10 miles an hour for the 250 miles.

AVIATION. See **AERONAUTICS.**

AYRES, STEPHEN COOPER. Oculist, died, September 2. He was born at Troy, Ohio, June 5, 1840, graduated at Miami University in 1861, and at the Medical College of Ohio in 1864, and served in the Civil War first as a private in an Ohio regiment and later as medical cadet, 1863, and as assistant-surgeon 1864 in the regular army. He afterwards practiced medicine at Cincinnati where he was a lecturer at the Cincinnati Hospital and a professor in the Medical College of Ohio, afterwards the University of Cincinnati.

AZACARATE, SEÑOR TOMAS DE. See **NECROLOGY.**

AZERBAIJAN. A portion of Trans-Caucasia, consisting mainly of the two former Russian provinces of Baku and Yelisavetpol, bounded on the east by the Caspian Sea, on the north by the Caucasus and Daghestan, on the west by Georgia and Armenia, and on the south by Persia; with an area of about 40,000 square miles, but claiming additional territory which would bring

* Including the District of Columbia.

† Not admitted to registration area until a later date.

Notes. For figures by cities 1915 to 1919, see **YEAR BOOK** for 1920.

it to about 58,000 square miles; and with a population roughly estimated on the basis of Russian statistics at 4,615,000, of whom 3,482,000 were Moslems, 795,000 Armenians; the racial stock of the majority being Turk and Tartar. The capital is Baku with a population of about 250,000.

In 1920 the country, like the other Caucasian states, was under Soviet control, but there was a considerable element that struggled against it.

Patriotic bands were fighting for the country's independence and various native bodies were protesting against the Soviet government. At the end of October certain properties that had been taken away by the Soviet authorities were restored to their former owners. The treaty of October 13, signed by the government and the Turkish Nationalists, placed the newly created Armenian state of Nakhitchevan under the protection of Azerbaijan.

B

BACHAUS, WILHELM. See *MUSIC, Artists, Instrumentalists.*

BADEN. Former grand duchy of the German Empire, proclaimed a republic, Nov. 22, 1918; bounded by Bavaria on the east and Alsace-Lorraine and the Palatinate on the west; with an area of 5819 square miles, and a population in 1910 of 2,142,833; estimated in 1919 at 2,208,503, of whom 1,051,405 were males, 1,157,098 females. Capital, Karlsruhe with a population in 1919 of 135,952; largest city, Mannheim, 229,576; other cities with their populations: Freiburg, 87,946; Pforzheim, 73,839; Heidelberg, 60,831; Konstanz, 30,119; Baden, 25,444. Elementary instruction is free and compulsory, and is supported by the state or by the communes. No later figures were available than those given in the preceding *YEAR BOOK*. There are two universities—at Heidelberg and Freiburg—and there is an academy of arts at Karlsruhe, besides technical and commercial high schools, high schools for girls, training colleges for teachers, and various technical and special schools, 17 gymnasia, and 50 *real-schulen*.

The present constitution was proclaimed March 21, 1919, having been framed by the National Assembly which met Jan. 15, 1919. Its main features are given in the preceding *YEAR BOOK*. Executive power is vested in a cabinet of five ministers and four state councilors, the latter being without portfolios, who are all elected by the legislature, and of whom the chief is officially styled State President; and legislative power, in a single chamber, the Landtag, elected for four years in the proportion of one member to about 10,000 voters. The Landtag in session at the beginning of 1921 was elected Jan. 15, 1919, and its seats were distributed as follows: Centre, 39; Majority Socialists, 36; German Democratic party, 25; Conservatives, 7. The ministry or cabinet was made up at the beginning of 1921 as follows: President, and minister and justice, G. Trunk; social affairs and public work, A. Engler; interior, A. Remmele; finance, H. Köhler; education, H. Hummel. Of these two were Socialists, two belonged to the Centre party, and one to the Democratic party.

BAER, BEN. See *NECROLOGY.*

BAGOT, RICHARD. British novelist, died in Westmoreland, England, December 12. His literary work dealt largely with Italian subjects. He was born in November, 1860, and was privately educated. In 1882-1883 he was private secretary to the governor of Western Australia. In 1920 he succeeded to the estate of his nephew, Sir Alan Bagot of Levens. He was the recipient of special honors from the Italian government on account of his literary and international services. His publications include: *A Roman Missionary* (1899); *Casting of Nets* (1901); *The Just and the Unjust* (1902); *Donna Diana* (1903); *Love's Proxy* (1904); *The Passport* (1905); *Temptation* (1907); *The Lakes of Northern Italy* (1907); *Anthony Cuthbert* (1908); *The House of Serravalle* (1910); *My Italian*

Year (1911); *The Italians of Today* (1912); *Dar-neley Place* (1912); *The Gods Decide* (1918).

BAHA, ABDUL, or ABDUL BAHÁ ABBAS. Leader of the Bahai movement, died at Haifar, Syria, on November 28. The Bahai movement or Bahaism, of which he was the third great exponent had adherents in this country and all over the world. He was born in Shairaz, Persia, May 23, 1844. At the time of his birth this religious movement was developing under the leadership of Mirza Ali Mohammed known as the "Báb," who proclaimed the coming of a great world messiah. It was not a separate religion, so much as a body of rules and principles governing conduct, and of fundamental ideas at the root of all constructive religions. Mirza was assassinated in 1850. The next to take up the revelation was the teacher known as Baha-Ullah, who began his preaching about 1869. Abdul Baha was the eldest son of this prophet and upon the latter's death in 1892 became his successor as a leader of the movement. He was proscribed by the authorities and most of his life was spent either in prison or in exile. After the Young Turk revolution in 1907 he was released from prison and lived until his death at a villa on Mount Carmel, at Haifar. He was found there by the invading British during the war and General Allenby provided him with a bodyguard for his protection. Frequent messages were received from him during the debate over the League of Nations which he did not believe would put an end to war, but which he considered a step in the right direction. He had visited the United States in 1912 where he was not only welcomed by the societies of Bahaism that had developed here, but by several universities including Leland Stanford, where for several days he was a guest. No precise figures for the strength of the movement in this country are available but a recent estimate indicated that in the neighborhood of New York his followers numbered about 1200.

BAHAMAS. A group of West Indian islands, constituting the northern part of British West Indian colonies, and consisting of 29 islands, 661 small islets, and more than 3000 reefs, lying off the southeast coast of Florida. They are of coral formation, and about twenty of them are inhabited; area 4404 square miles; population estimated, Jan. 1, 1918, at 59,928. The chief islands and their populations in 1911 were as follows: New Providence (13,554), containing the capital, Nassau; Andros (7545); Eleuthera (6533); St. Salvador (5072); Abaco (4463); Long Island (4150); Exuma (3465). In 1919 there were 48 government schools with 7530 pupils, and 16 aided schools with 1035 pupils; also schools maintained by the Church of England and Roman Catholic Church, and private schools. Fruit production is important, and has latterly been on the increase. There are also sponge and turtle fisheries. The chief imports in 1919 were: Flour; cotton, linen, and woolen goods; spirits, wines,

and malt; butter, lard, etc.; and manufactures. The chief exports were: Sisal, sponges, and turtle shell. The imports in the calendar year 1919 amounted to £539,242, as compared with £367,180 in the preceding year, and the exports, £382,140 as compared with £278,171 in the preceding year. Over four-fifths of the trade has been with the United States. The revenue in 1919-20 was £204,296; the expenditures, £108,938. Governor at the beginning of 1921, Major Sir H. E. S. Cordeaux. The liquor trade gave greater opportunity for gain to the inhabitants that had ever been afforded before and in Nassau other business was largely abandoned on account of it. The situation arose as a result of Prohibition in the United States, the American customs being enormous. In the summer vessels under the British flag were supplying the American trade outside the three-mile limit although there was a difference in the point of view of the American and local authorities in that respect, the United States authorities contending that they had a right to seize British vessels at a distance of twelve miles from the shore and the British authorities denying it.

BAIER, VICTOR. American organist, died in New York, August 11. He was born in New York, July 25, 1861. At the age of ten he began his musical career as chorister at Trinity Church, New York. Then he lived some years in Jersey City as organist and choirmaster and director of singing in the public schools, returning, in 1884, to Trinity Church as assistant organist. From 1897 till his death he was principal organist.

BAIL, JOSEPH. Painter, died in December. His best known works were in the style of the Dutch and Flemish painters and excelled in depicting interiors. They were remarkable for the close and exact details, especially his paintings of women. His works have been highly successful, being admired for their sober and conscientious coloring, and he was regarded as among the first genre painters of our time. He received the medal of honor from the Salon in 1902.

BAILEY, FRANK HARLEY. Naval officer, died in El Paso, Texas, April 9. He was born at Cranesville, Pa., in June, 1851; graduated at the Naval Academy in 1875, and rose to the rank of chief engineer in 1896. During the Spanish War he served in the Philippine Islands, and distinguished himself for eminent services in battle. He attained the rank of captain, July 1, 1908, and rear-admiral, Feb. 13, 1913, retiring on account of age, June 29, 1913. He served for eight years as chief of the Bureau of Steam Engineering, and he was on duty at that bureau during the war with Germany.

BAKER, ALBERT C. See NECROLOGY.

BAKER, WILLIAM EDGAR. Civil engineer, died in New York City, November 7. He was born in Springfield, Mass., Oct. 18, 1856, and graduated in civil engineering in Lafayette College, Pa., in 1877. He was the chief engineer and general manager of several railways and was one of those who opened the way for the Canadian Pacific, leaving some interesting notes on that undertaking. From 1894 to 1899 he was the General Manager and Chief Engineer of the Metropolitan West Side Elevated Railway of Chicago, and was the General Superintendent of the Manhattan Railway in New York, 1899-1902, introducing the electric system. He was con-

sulted by the British experts in the construction of the London Underground.

BALFOUR OF BURLEIGH, ALEXANDER HUGH BRUCE, LORD. British peer, former cabinet minister, died early in July in London, England. He was born, June 13, 1849, educated at Eton and Oxford and was Secretary of the Board of Trade 1889-92. From 1892 to 1895 he was chairman of the London Water Supply Commission but when the Unionist party returned to power in 1895 became Secretary for Scotland. He retired from the Ministry in 1903 owing to his opposition to the measures of fiscal reform proposed by Mr. Chamberlain.

BALKAN STATES. The states which make up the Balkan peninsula in southeastern Europe and west of the Aegean sea. See ALBANIA, BULGARIA, CZECHO-SLOVAKIA, GREECE, JUGOSLAVIA, ROUMANIA, TURKEY, and also the article WAR OF NATIONS.

BALLARD, W. A. See NECROLOGY.

BALLIVIAN, MANUEL VICENTE. Bolivian scientist and civil official, died August 7. He was one of the best known and most highly esteemed public men of the country. He was born at Arequipa, Peru, June 16, 1848, of a Bolivian family temporarily staying there and was educated in Bolivia and in Europe. After serving in 1875 as secretary to the president he was appointed to serve on a commission of exploration in the northwestern part of the country. He was next placed in charge of the newly established Bureau of Statistics and Immigration. When the Department of Colonization and Agriculture was formed in 1904 he was appointed minister for the four-year term. Largely through his efforts as a collector the National Museum at La Paz was established. He was the chief of the Bolivian delegation to the Panama-Pacific Exposition at San Francisco. He was well known to American travelers for his hospitality. He published various works on exploration, geography, and the history of Bolivia.

BALLOONS. See AERONAUTICS.

BALTIC PROVINCES. The name applied to the three former provinces of the Russian empire in the region of the Baltic sea: Courland, Livonia, and Esthonia, which during the war were under German control. The German evacuation was completed at the end of 1919. Meanwhile steps had been taken toward the organization of the new republic of Latvia and Esthonia out of parts of the region, the former including Courland and the southern part of Livonia, and the latter including Esthonia and the northern part of Livonia. By the end of 1920 the new states had been recognized by several of the Powers, but during that year and the following France and the United States were withholding recognition on the ground that they formed an integral part of territory which should belong to a properly constituted Russian state. In 1921 the new Baltic states were tending toward an alliance for the protection of their interests with Finland and Poland, in spite of the fact that the relations between Lithuania and Poland continued to offer difficulties. In 1920-21 many conferences were held for this purpose. Nothing resulted in 1920, but during the current year the conferences took on a more definite character. In the autumn the Lithuanian foreign minister invited the representatives of Esthonia and

17

Latvia to a conference in Kovno and after this meeting a second conference was arranged at the instance of the Poles, to be held at Warsaw. The Finnish government was invited to send a representative. The question before them was that of a border-state league, comprising Esthonia, Latvia, Lithuania, Finland, and Poland. See ESTHONIA, LATVIA, LITHUANIA, and WAR OF THE NATIONS.

BALTIMORE, MD. See GARBAGE AND REFUSE DISPOSAL.

BANCROFT, LADY, born MARIE EFFIE WILTON. British actress, died at Folkestone, May 22. She was born in 1840 and after acting at professional theatres appeared at the Lyceum in 1856. For several years after that she confined herself to burlesque. In 1865 she started a small theatre on her own account and played in it with extraordinary success in the play called *Society*, which had a long run, and which marked the tendency toward a more realistic style of drama. She married Squire Bancroft in 1867, who afterwards became a baronet. She appeared in several other plays by Robertson and made a great success in an elaborate revival of *The School for Scandal*. She was one of the most admired comedienues of her time. She wrote a number of novels and a volume of stage reminiscences in collaboration with her husband.

BANK CLEARINGS. See FINANCIAL REVIEW.

BANKS AND BANKING. See FINANCIAL REVIEW.

BAPTISTS. This denomination is composed of three main groups: The Northern Convention, the Southern Convention, and the National Convention (colored). The report for 1921 shows a total membership of 7,943,331, as compared with 7,646,746 the year previous; 59,744 churches and 42,088 ordained ministers. In the Northern Convention there were 8409 churches, 8566 ordained ministers and 1,253,878 church members. The Southern branch had 29,551 churches, 15,551 ordained ministers, and an enrollment of 3,434,246. The National Negro Convention had 20,486 churches, 17,103 ministers, and a membership of 3,116,325. Sunday Schools in the Northern Convention numbered 7162 with an enrollment of 984,011; in the Southern Convention, 19,267 schools and 1,872,457 enrollment; and the National Negro Convention 17,476 schools with 947,116 enrollment. Statistics for the Canadian Branch showed 1302 churches, 868 ministers, 138,882 membership, and 1200 Sunday Schools with enrollment of 109,834. Foreign-speaking Baptist bodies include the Swedish, Danish, French, Italian, Finnish, American Magyar (Hungarian), Norwegian, Czecho-Slovak, Polish, Portuguese, Russian Baptist Conferences and Unions, and several unorganized groups of foreign-speaking Baptists. In addition there are several other smaller branches of the denomination, among which may be mentioned the following: General Six Principle Baptists, Seventh-Day Baptists, Free Will Baptists (Bullockites), Free Will Baptists (colored), General Baptists, Separate Baptists, Regular Baptists, United Baptists, Duck River and Kindred Associations (Baptist Churches of Christ), Primitive Baptists, Colored Primitive Baptists, and Two-Seed-in-the-Spirit Baptists. All of these have separate organizations and carry on extensive missionary work. The denomination proper carries on its missionary

work through special boards of the various branches. Total contributions to the church from all sources amounted to \$59,784,843 in 1921. The denomination maintained 13 theological seminaries, 9 training schools, 65 universities and colleges, 30 junior colleges, and 159 academies, institutes, and seminaries, 98 institutions for negroes, 2 Indian schools, and 8 educational institutions in Canada.

World statistics of the denomination given in the *British Baptist Handbook* for 1921 show there are in the Americas, including Mexico and the West Indies, 60,702 churches, 42,471 ministers, and a total membership of 8,020,714. European figures show 5231 churches, 3658 ministers, and 633,128 communicants; Asia, 2457 churches, 1793 ministers, and 252,892 communicants; Africa, 543 churches, 571 ministers, and 28,372 communicants; and Australasia, 393 churches, 319 ministers, and 30,888 communicants. The grand totals for the world are 69,326 churches, 48,812 ministers, and membership of 8,965,995.

BAPTISTS, FREE. This denomination was still in the process of full organic union with the Baptists of the North. Its General Conference had only a legal existence for the purpose of winding up property and other interests. It was not functioning in any ecclesiastical way.

BAR ASSOCIATION, AMERICAN. An association organized in 1878 for the purpose of advancing the science of jurisprudence, promoting the administration of justice and uniformity of legislation and of judicial decision throughout the nation, and upholding the honor of the legal profession. Its meeting in 1921 was held at Cincinnati, Ohio, August 31 to September 2, in joint session with the Ohio State Bar Association. Acting President Hampton L. Carson of Pennsylvania presided and in opening the session asked that the members rise and stand for a moment in silence as a mark of respect to the memory of the late President, William A. Blount. The secretary's report was read and showed there were 11,941 active and 18 honorary members at the date of the publication of the 1920 report. Since then there have been 306 deaths and resignations and 4446 new active members proposed and elected by the Executive Committee. The membership includes representatives of all States, of the District of Columbia and of Hawaii, Porto Rico, and the Philippines. There were 49 State bar associations then in existence, including Hawaii and the District of Columbia, also 900 local bar associations of which there is record. The president's address was delivered by the Hon. James M. Beck, Solicitor-General of the United States on "The Spirit of Lawlessness," in which he inquired into the causes of a revolt against authority. He furnished statistics to show an unprecedented growth in crimes, and referred to Pope Benedict's statement that five plagues were afflicting humanity: the present challenge to authority, an unprecedented hatred of man for man, an abnormal aversion to work, an excessive thirst for pleasure, and a gross materialism. He attributed much to the submergence of the individual into the group or class as a result of our modern mechanical civilization. At the second session, President Giddings of the Ohio State Bar Association, introduced Attorney-General Harry M. Daugherty, who spoke on the "Respect for Law." He mentioned some of the

problems confronting the Department of Justice and explained the principles on which they were decided. At the third session, the Hon. John W. Davis addressed the association on "Our Brethren Overseas," and Sir John A. Simon, former attorney-general of England on "Our Common Inheritance of Law." President Carson delivered a tribute to the memory of Hon. Edward Douglass White, former Chief Justice of the Supreme Court of the United States; he spoke of his life and notable work as chief justice. A tribute was also paid to Hon. William Alexander Blount, President of the Bar Association, who died at Baltimore, Md., at the age of 69 years. At the fourth session the reports of the various committees were heard. Speeches were made at the fifth session by Senator Charles S. Thomas of Colorado, on "Without a Friend," by Dr. R. Masujima, President of the International Bar Association of Tokyo, Japan, and by Mr. T. Yamamoto, a delegate from the Japan Bar Association. At this meeting resolutions were adopted condemning the conduct of Kenesaw M. Landis as derogatory to the dignity of the bench and undermining public confidence in the independence of the judiciary, in engaging in private employment while holding the position of a federal judge. Other addresses were made at this meeting and considerable discussion had on the subject of "Aviation" and the laws of aeronautics. Luther Z. Rosser of Georgia, spoke on the "Illegal Enforcement of Criminal Law," at the final session, as well as Marcus A. Kavanaugh of Illinois on the "Adjustment of Penalties," and Charles S. Whitman of New York on "Unenforceable Law."

The treasurer's report showed assets amounting to \$12,766.48. The *American Bar Association Journal* is the official organ of the association. Complete minutes of the yearly meetings are published in book form. The officers in 1921 were: President, William A. Blount, Pensacola, Fla.; secretary, W. Thomas Kemp, Baltimore, Md.; and treasurer, Frederick E. Wadhams, Albany. Headquarters are maintained at 901 Maryland Trust Bldg., Baltimore, Md.

BARBADOS. The most westerly of the Caribbean islands, forming a colony of Great Britain, and lying to the west of the Windward islands, with a length of 21 miles and a breadth of 14 miles; area, 166 square miles; population (1911) 171,893; estimated, Dec. 31, 1919, 200,368. Capital and chief city, Bridgetown, 16,648. Figures for revenue, expenditure, exports, and imports in pounds sterling for 1919-20 were as follows:

Revenue.....	420,136
Expenditure.....	351,851
Exports.....	3,305,382
Imports.....	3,893,458

The public debt in 1919-20 was £530,000. The executive power is vested in a governor with an executive council, and an executive committee; the legislative power, in a legislative council of nine members appointed by the King, and a house of assembly of 24 members elected by the people annually. Governor at the beginning of 1921 was Lieutenant Colonel Sir C. R. M. O'Brien.

BARCLAY, FLORENCE L. British novelist, died, March 10. She was born Dec. 2, 1862, and wrote *The Wheels of Time* (1908); *The Rosary*

(1909); *The Mistress of Shenstone* (1910); *The Following of the Star* (1911); *Through the Postern Gate* (1912); *The Upas Tree* (1912); *The Broken Halo* (1913); *The Wall of Partition* (1914); *My Heart's Right There* (1914); *In Hoc Vince* (1915); *The White Ladies of Worcester* (1917); *Returned Empty* (1920).

BARKER, WHARTON. Financier and author, died, April 8 at Philadelphia, Pa. He was born at Philadelphia, May 1, 1846, and during the Civil War aided in organizing a regiment of colored troops; after the war graduated at the University of Pennsylvania in 1866. He was a member of the banking firm of Barker Brothers and company, Philadelphia. In 1879 he was special financial agent for the United States in Russia and he was afterwards an adviser to the Russian government on the development of coal and iron resources. In 1887 he obtained from the Chinese government important railway and other concessions which were subsequently withdrawn and he was later in correspondence with the leaders of the revolutionary movement which afterwards resulted in establishing a republic in China. He published a weekly devoted to social-economic and political discussion in Pennsylvania. Down to 1896 he was a Republican, but turned Populist and was the Populist nominee for President in 1900. He was regarded as an authority on Far Eastern affairs and was widely informed in regard to all public questions, especially those of public finance.

BARLEY. The barley production in 1921 of 28 countries as reported to the International Institute of Agriculture, Rome, amounted to 937,488,000 bu., representing an increase of 2.9 per cent over the total production of the same countries in 1920. The yields of the principal producing countries were as follows: Spain 94,487,000 bu., Japan 89,900,000 bu., Germany 82,348,000 bu., Roumania 64,952,000 bu., Canada 64,253,000 bu., Poland 53,306,000 bu., Algeria 50,496,000 bu., Czechoslovakia 47,365,000 bu., England and Wales 44,242,000 bu., and France including Alsace-Lorraine 37,805,000 bu. A striking feature of the year was the large increase in yield over the preceding year secured in parts of northern Africa. The crop of Algeria was over 5 1/3 times and that of Tunis over 4 1/3 times the production of 1920 which was accounted for mainly by a larger yield per acre. The harvest of 1920-21 in South America gave a return of over 11,000,000 bu. in Argentina, the largest crop ever produced there, and of 5,385,000 bu. in Chile.

In many countries barley production has been much reduced since the beginning of the war in Europe. For instance, the average yield for the 5 years 1909-13 was over 150,000,000 bu. in Germany, about 50,000,000 in France and Alsace-Lorraine; 50,000,000 bu. in Great Britain and over 400,000,000 bu. in the former Russian Empire, which was the leading barley producing country of the world. With Russian agriculture disorganized and famine conditions prevailing in that country the United States has taken first rank in the production of this crop.

As estimated by the U. S. Department of Agriculture, the crop of 1921 amounted to 151,181,000 bu. from an area of 7,240,000 acres, the average yield per acre being 20.9 bu. In 1920 the yield was 189,332,000 bu., the area 7,600,000 acres and the average acre yield 24.9 bu. The

average farm value on Dec. 1, 1921, was 42.2 cts. per bu. and on this basis the total value of the crop was \$63,788,000. In 1920 when the corresponding bushel value was 71.3 cts. the total crop value amounted to \$135,083,000, and in 1919 with the bushel value at 120.6 cts. the total value reached \$178,080,000. The principal barley producing States in 1920 mentioned in the decreasing order of production were—California, South Dakota, Minnesota, North Dakota, Kansas, and Wisconsin. These six States produced approximately 70 per cent of the country's crop.

BARNARD, EDWARD CHESTER. Geologist and geographer, died at Washington, D. C., February 5. He was born in New York City, Nov. 13, 1863, and entered the United States Geological Survey in 1884 where he was topographer, 1884-1907, and geographer, 1907-15. He mapped large divisions of the southern States and the Far West and also a section of the State of New York. He was the chief topographer of the United States and Canadian survey, 1903-15, and surveyed the boundary line along the forty-ninth parallel from the Pacific coast to Rainy river through the Lake of the Woods. In April, 1915, he was appointed to the work of defining the boundary between the United States and Canada and between Alaska and Canada.

BARNARD COLLEGE. See COLUMBIA UNIVERSITY.

BAROTSELAND. See RHODESIA.

BARRON, SIR HARRY. British soldier, died in England in March. He was born August 11, 1847, served in the Royal Artillery and in 1904 attained the rank of major-general. He was then appointed to the command of Malta where he remained until 1909. In the latter year he was appointed governor of Tasmania, and in 1917 governor of Western Australia, holding the latter office till 1917.

BARTLETT-ASHMEAD. See BURDETT-COUTTS.

BARTO, DANIEL O. See NECROLOGY.

BARTON, JOHN KENNEDY. Naval officer, died at Philadelphia, December 23. He was born at Philadelphia, April 7, 1853, graduated at the Naval Academy in 1873 and by March 15, 1899, had risen to the rank of lieutenant-commander. He served on board the *Richmond* in the Spanish-American War. In 1907-08 he was head of the department of Steam Engineering at the League Island navy yard and became engineer in chief and Chief of the Bureau of Steam Engineering at the Navy Department, Washington in 1908.

BARUCHE, SIMON. Physician, died, June 3. He was born at Schwesens, Germany, July 29, 1840; educated first at the Royal Gymnasium at Posen, and later, after removing to the United States, at the Medical College of Virginia, where he graduated in 1862. He served during the Civil War with the Confederate troops in Lee's army, and was captured while in charge of the wounded on the battlefield of South Mountain, Maryland, and was again taken prisoner at Gettysburg. From 1865 to 1881 he practiced medicine in Camden, S. C., and after that in New York City where he became well known as a consulting physician in chronic diseases. To him is attributed the diagnosis of perforating appendicitis in the first case recorded in which a successful operation was performed. He was a leader in the movement for free municipal bath-

houses, and he was professor of hydrotherapy at the College of Physicians and Surgeons. He wrote works on the water treatment in modern medicine which had an extensive vogue in this country and in Europe. Free municipal baths were named in his honor in Chicago in 1910 and in New York in 1917.

BASEBALL. The year 1921 saw a great change for the better in the conduct of the professional game of baseball. The selection of Judge Kene-saw M. Landis of Chicago in 1920 as the High Commissioner of the sport bore fruit and the petty bickerings and squabbles, not to mention scandals, which had characterized the business side of the game in previous years came to an end. Judge Landis was forced to interfere on only a few occasions, notably when he banished certain players from organized ball and imposed fines and suspensions on three others for violation of the rules regarding "barnstorming" by members of championship teams. These three offending players were "Babe" Ruth, Bob Meusel, and Bill Piercy, all of the New York American League Club, or Yankees. Ruth and Meusel were fined \$3360 each and Piercy \$3280, these amounts equaling the sums each received as sharers in the world series "dividends." In addition the three men were suspended until May 22 of this year.

As in 1920 the outstanding star was "Babe" Ruth who shattered all records by knocking fifty-nine home runs during the season. John "Stuff" McInnis of the Boston Red Sox excelled defensively playing through 152 contests with only one error. The leading batter of 1921 was Rogers Hornsby of the St. Louis Cardinals who finished the season with a mark of .397. Carl Mays of the New York Yankees was the most successful pitcher in the American League, winning 27 games and losing 9. In the National League, the veteran twirler "Babe" Adams of the Pittsburg Pirates led the way with 14 victories and 5 defeats.

The struggle for the pennants in the two major leagues was the keenest in the history of the national game and resulted in the triumph of the two New York entries, the Giants and the Yankees. This marked the first time that two teams from the Metropolis had battled their way to the World Series and the contests between the two for the championship attracted a total of 268,876 spectators who paid \$900,233 in admissions, the largest amount this baseball classic has ever realized.

All the games were played at the Polo Grounds between October 5 and 13 and the Giants finally carried off the laurels despite the fact that they lost the first two games of the eight played. The statistics of the various contests follow:

First game—Yankees, 3 runs, 7 hits, no errors; Giants, no runs, 5 hits, no errors. Batteries, Mays and Schang; Douglas, Barnes, and Snyder.

Second game—Yankees, 3 runs, 3 hits, no errors; Giants, no runs, 2 hits, 3 errors. Batteries, Hoyt and Schang; Nehf and Smith.

Third game—Giants, 13 runs, 20 hits, no errors; Yankees, 5 runs, 8 hits, no errors. Batteries, Toney, Barnes, and Snyder; Shawkey, Quinn, Collins, Rogers, Schang, and De Vorme.

Fourth game—Giants, 4 runs, 9 hits, 1 error; Yankees, 2 runs, 7 hits, 1 error. Batteries, Douglas and Snyder; Mays and Schang.

Fifth game—Yankees, 3 runs, 6 hits, 1 error;

Giants, 1 run, 10 hits, 1 error. Batteries, Hoyt and Schang; Nehf and Smith.

Sixth game—Giants, 8 runs, 13 hits, no errors; Yankees, 5 runs, 7 hits, 2 errors. Batteries, Toney, Barnes, and Snyder; Harper, Shawkey, Piercy, and Schang.

Seventh game—Giants, 2 runs, 6 hits, no errors; Yankees, 8 hits, 1 run, 1 error. Batteries, Douglas and Snyder; Mays and Schang.

Eighth game—Giants, 1 run, 6 hits, no errors; Yankees, no runs, 4 hits, 1 error.

The final standing of the clubs in the National League was: New York won 94, lost 59; Pittsburgh won 90, lost 63; St. Louis won 87, lost 66; Boston won 79, lost 74; Brooklyn won 77, lost 75; Cincinnati won 70, lost 83; Chicago won 64, lost 89; Philadelphia won 51, lost 103.

The final standing of the clubs in the American League was: New York won 98, lost 55; Cleveland won 94, lost 60; St. Louis won 81, lost 73; Washington won 80, lost 73; Boston won 75, lost 79; Detroit won 71, lost 82; Chicago won 62, lost 92; Philadelphia won 53, lost 100.

The pennant winners in the more important minor leagues were: International League, Baltimore; American Association, Louisville; Pacific Coast League, Los Angeles; Southern Association, Memphis; Western League, Wichita; Western Association, Fort Smith; Texas League, Fort Worth; Eastern League, Pittsfield, Three-I League, Moline; South Atlantic League, Columbia.

Among the colleges Harvard, Georgetown, and Holy Cross were represented by strong nines. Yale and Princeton both lost their series with Harvard, while Georgetown and Holy Cross playing long schedules met with few defeats.

BASKETBALL. The Middle West furnished the champion basket-ball team of 1921 in the Kansas City A. C. five which triumphed in the annual tournament of the Amateur Athletic Union. The University of Pennsylvania for the fourth year in succession carried off the laurels in the Intercollegiate League, winning 10 games and losing 2. Dartmouth finished second with 7 victories and 3 defeats and Cornell third with a count of 6 and 4. The Western Intercollegiate Conference series resulted in a tie for first place between Wisconsin, Michigan, and Purdue, each of which won 8 games and lost 4. The year was marked by the increased interest shown in professional basketball, many of the larger cities supporting local leagues. The Canadian colleges also took up the sport on a fairly large scale, the University of Toronto capturing the championship title.

BASQUE LANGUAGE. See PHILOLOGY, MODERN.

BATES COLLEGE. A non-sectarian institution of higher education at Lewiston, Me.; founded in 1864. In the autumn of 1921 there were 556 students enrolled, of whom 319 were men and 237 women. The summer school enrollment was 126, and there were 36 members of the faculty, of whom 6 were added in the course of the year. The endowment in 1921 amounted to \$1,212,841 and the income to \$186,148. There were 48,701 volumes in the library. President, Clifton Daggett Gray.

BATTLE CRUISERS. See BATTLESHIPS AND OTHER WAR VESSELS.

BATTLESHIPS AND OTHER WAR VESSELS. BATTLESHIPS. The 4 battleships of the new

Japanese programme which were to be laid down in 1921-24 are said to be of 45,000 tons, to carry 8 18-inch guns, and to have a speed of 24 knots. These are the largest warships so far commenced though the new British battle cruisers (if built as originally designed) may be as large or larger. The American battleships of the *Massachusetts* class of 43,200 tons are the largest ones actually under construction. The Japanese battleship *Nagato*, 33,800 tons, is the largest so far completed. It carries the same battery as the U. S. S. *Maryland* of 32,600 tons, but is about 2 knots faster. New battleship design up to the present has been chiefly concerned with increased battery power, better protection against torpedoes, and a slight increase of speed—all involving large increases in dimensions. The result of the United States naval tests of attack by bombing planes has materially altered the situation. No special changes in battleship design are yet advocated, but the destructive effect of heavy aircraft bombs when dropped in the water near the hull of a vessel is receiving much careful attention. Whether the design of battleships will be modified or not, there is no doubt that greater attention will be paid to anti-aircraft guns and devices, and that pursuit planes for attacking bombers will form a more important part of fleet equipment. If the American plans for the limitation of naval armaments are approved, all of the newest battleships, American and Japanese, will be scrapped; and modification of design will await a future day. See NAVAL PROGRESS: *Aircraft Attack on Surface Vessels*.

BATTLE CRUISERS. The four new British battle cruisers that were contracted for in 1921 are said to be improved *Hoods*, but no specific details have been published. The Japanese battle cruisers of the *Amagi* type have practically the same tonnage, speed, and battery as the American vessels of the *Lexington* class. The Japanese battle cruisers of the new programme were not to be laid down before 1922 or 1923. No details have been published except that they will carry 18-inch guns.

CRUISERS. The new light cruisers of the U. S. S. *Omaha* class (10 in number) are of 7500 tons, 33¼ knots speed, and carry 12 6-inch and 2 anti-aircraft guns. The larger of the Japanese cruisers now under construction are of 5770 tons, 33 knots speed and carry 7 5.5-inch guns: 2 cruisers of about 7100 tons are to be laid down in 1922 but the exact dimensions, speed, and armament have not been disclosed. The British cruisers of the *Raleigh* class, all launched, some completed, are of 9750 tons, 30 knots speed, and carry 7 7.5-inch and 12 3-inch (of which 4 are anti-aircraft) guns. The *Dispatch* class, also nearing completion, are of 4650 tons, 29 knots speed, and carry 7 6-inch and 2 3-inch anti-aircraft guns. The designs of the new French cruisers of the *Bouvet* class are probably not completed; they are to be of about 8000 tons, carry 7.5-inch guns, and have a speed of 35 knots. In view of the results of the recent American bombing tests an increase in the anti-aircraft battery of all these ships is probable.

FLOTILLA LEADERS. These vessels are very large destroyers designed to act as flag boats of destroyer flotillas. The latest types of which the details have been published are given in the accompanying table.

	British	German	Japanese	Italian	French
Launched...1918	1917	1921	1920	bldg.	
Tons....1740	2400	1900	2200	2000	
Speed, kts .36	35	38	34		
Guns.....54.7 in.	45.9 in.	55 in.	84.7 in.		
Tubes....4 21 in.	6 21 in.	4 23.6 in.	6 18 in.		

The United States has no flotilla leaders at present and none has yet been laid down.

DESTROYERS. Nothing particularly new in regard to destroyers has developed during the year. The latest types are of 800 to 1400 tons with speeds of 35 to 38 knots.

SUBMARINES. The production of submarines during the Great War was so rapid—the exigency so urgent—that many of the types brought out were of little value and will have to be rebuilt or scrapped. In most navies there is to-day a combing out of the failures and a study of the successful types with a view to improvement. The British government is urging the barring of submarines in future warfare but it is doubtful if the other Powers will agree to this: it is also doubtful if such an agreement will hold. In the Second Hague Conference the Germans agreed to the rules for land warfare which were developed during the American Civil War. But when the war began the conventions of the Hague Conference became “scrap of paper” and the Germans paid no attention whatever to their agreements. The Allies threatened punishment but have really done nothing and some future warring nation, remembering this post-war indifference, will feel that they can safely follow the German footsteps. As of land war, so of submarines. Future wars are likely to perpetuate the horrors of the last because of our failure to punish. A submarine legitimately used is certainly no more objectionable than a torpedo boat or torpedo. And any attempt to bar the construction or use would in war receive no more attention by a German, Turk, Bolshevik Russian, or similar faithless brute than the Germans paid to their solemn agreements or to the dictates of humanity or decency. If faith-keeping nations are debarred from building, the faithless ones would be the first to build them after war broke out.

At present there seems to be a sort of pause in submarine development. This is due to many causes, but mainly to the lack of urge. Few nations are regarding war as imminent or even probable for many years to come, so that all feel that there is plenty of time to study submarine design from the standpoint of what has been accomplished—successes and failures.

Two types seem most in favor at present—one of about 900 tons on the surface and 1200 tons submerged and one of about 1600 tons on the surface and 2000 tons submerged. The former is designed to operate independently, the latter to accompany the fleet. Much attention is being given to the battery. On all the larger submarines guns of 5-inch or 6-inch calibre are mounted. The British *M* Class each carry a 12-inch gun. Germany is not allowed to build any submarines at present but the Germans are studying submarine design. Professor Flam of the superior technical school at Charlottenburg has developed the following designs:

Type 1. 1443 tons: speed on the surface, 17.5 knots; inclined armor on exposed top, 1.5 inches;

weight of armor, 134 tons; 2 4-inch guns in turrets, one near each end; a torpedo launching tube on deck with wide arc of train; submerged tubes at bow and stern.

Type 2. 4870 tons; speed on surface, 25 knots; armor, 2 inches; 2 8-inch guns; 6 or 8 tubes.

Type 3. 8400 to 9000 tons; speed, 28 knots; hull armor, 2.5 inches; 4 8-inch or 9.4-inch guns in turrets with 6-inch armor; 8 torpedo tubes.

The value of submarines as mine-layers is fully appreciated everywhere. A recent French boat of this type, launched in 1921, will have a surface displacement of 875 tons, submerged 1230. See NAVAL PROGRESS.

BAUXITE. According to figures collected by the United States Geological Survey, 321,308 long tons of bauxite in the United States in 1920 valued at \$3,247,345, was produced as compared with 376,566 long tons, valued at \$2,201,747 in 1919. The mines in Saline and Pulaski counties, Ark., produced 481,279 long tons, or 92 per cent of the total output in 1920. The production from these mines in 1919 was 333,490 long tons. Georgia ranked second, Alabama third, and Tennessee fourth in production, and the combined output of these three States was 40,029 long tons in 1920, as compared with 43,076 long tons in 1919. In Georgia the bauxite producing counties, arranged in order of quantity produced, were Sumter, Wilkinson, Floyd, Randolph, Meriwether, Macon, and Bartow. A number of the mines in Bartow and Wilkinson counties that were worked in former years have been abandoned, but new deposits in Randolph county were opened in 1920. The bauxite imported 1920, most of it from South America and France, amounted to 42,895 long tons, as compared with 6082 long tons in 1919.

The production of bauxite in the United States for 1921 was estimated by the United States Geological Survey, at approximately 130,000 long tons as compared with 521,308 long tons in 1920, a decrease of 391,308 tons. This great decrease in the production of bauxite was largely the result of the curtailed demand for aluminum, particularly aluminum used in the automobile industry, though the curtailed consumption of chemicals containing alumina lessened the output of some of the mines, particularly in the Georgia-Alabama field.

BAVARIA. Formerly a constituent kingdom of the German empire but after November, 1918, a free republican state in the new German government. Area 30,562 square miles; population (1910) 6,962,109; estimated (1919) 7,150,146. The following table taken from the *Statesman's Year Book* of 1921 shows area and population by divisions.

Regierungsbezirke	Area sq. miles	Population	
		1910	1919
Upper Bavaria (Oberbayern)....	6686	1,532,065	1,584,885
Lower Bavaria (Niederbayern)....	4298	724,331	750,663
Palatinate (Pheinpfalz).....	2372	937,085	957,348
Upper Palatinate (Oberpfalz)....	3862	600,284	612,021
Upper Franconia (Oberfranken)....	2798	661,862	657,473
Middle Franconia (Mittelfranken)...	3036	930,868	949,524
Lower Franconia (Unterfranken)...	3360	710,943	737,135
Suabia (Schwaben).....	3934	789,853	836,753
Coburg.....	216	74,818	74,344
Total.....	30,562	6,962,109	7,150,146

The free city of Coburg decided by the vote of a large majority, Nov. 30, 1919, to join with Bavaria and the Bavarian Diet ratified the union by a unanimous vote, March 11, 1920. The chief cities of Bavaria with their populations in 1919 are: Munich (the capital), 630,724; Nuremberg, 352,679; Augsburg, 154,567; Würzburg, 86,581. According to the census of 1910, Roman Catholics numbered 4,862,233; Protestants, 1,942,385; Jews, 55,065. Education is compulsory between the ages of 6 and 16. In 1913-14, the latest figures available, there were 7534 elementary schools with 19,564 teachers and 1,091,884 pupils. In 1919 the chief crops with their area and yield in metric tons were as follows: Wheat, 659,982 acres and 266,822 metric tons; rye, 1,135,622 and 441,130; oats, 1,076,082 and 581,142; potatoes, 690,347 and 1,619,141; vines, 43,782 and 10,014,290 gallons; hops, 18,405 and 450 metric tons. Live stock on September 1, 1919, were: Horses, 348,634; cattle, 3,684,626; sheep, 712,628; pigs, 1,430,797; goats, 442,453. The budget is voted for two years. For the year 1920 it balanced at 1,954,238,368 marks, and the extraordinary budget balanced at 809,704,315.

Down to Nov. 11, 1918, the executive power was in the hands of the Wittelsbach dynasty which had ruled for over one hundred years, and the legislative power was in a parliament consisting of an Upper House whose members were various dignitaries of the state and life members appointed by the crown, and a Lower House whose members were elected by direct vote. The king down to November, 1918, was Ludwig III. On Nov. 22, 1918, the dynasty was deposed and Bavaria was proclaimed a republic. A cabinet was thereupon formed under the leadership of Kurt Eisner, a Socialist, who was assassinated in February, 1918. After this the moderate element tended to gain the upper hand and finally power passed over to the more reactionary group. (See preceding YEAR BOOKS.) Meanwhile the constituent assembly had been in session and on August 14, 1919, the new constitution was adopted. According to this instrument the supreme power lies with the people. The executive power was vested in a ministry or cabinet taken as a whole and the legislative power in a diet, consisting of one chamber elected for four years on the basis of one member for every 4000 inhabitants. Down to 1921 the members numbered 183. The ministry constituted, March 7, 1920, was as follows:

Premier and Minister of Foreign Affairs, Dr. von Kahr; Education, Dr. Matt; Commerce and Industry, Herr Hamm; Social Welfare, Herr Oswald; Agriculture, Herr Wutzelhofer; Interior, the Premier; Finance, Dr. Krausneck; Justice, Dr. Roth. See GERMANY.

BAVARIA, LUDWIG, KING OF. Ludwig, Count Palatine of the Rhine, Duke of Bavaria, Franconia, and Suabia, King of Bavaria after Nov. 5, 1913, died on his estate of Sarval, October 18. He was born at Munich, Jan. 7, 1845, the son of Prince Luitpold, who was regent after June, 1886, during the insanity of King Otto. Prince Ludwig became regent on the death of his father in 1912 and Parliament having established the permanence of the King's madness, he became king Nov. 5, 1913, under the title of Ludwig III. He was extremely popular and was often seen on the

streets of the capital among the people. In views he was liberal and influenced the Bavarian Chamber in 1906 to adopt universal suffrage. In his youth he served with the rank of captain in the war of 1866 against Prussia and was wounded. He married Maria Theresa of Austria, daughter of the Archduke Francis of Este, by whom he had twelve children, the eldest son being Prince Rupprecht, Crown Prince of Bavaria, born in 1869, who commanded a group of the German armies during the war. Ludwig III was the last reigning prince of the House of Wittelsbach which had governed since 1186.

BAXTER, JAMES PHINNEY. Historian, died at Portland, Me., May 8. He was born at Gorham, Me. March 23, 1831, and was mayor of Portland for six terms, 1893-97, and 1904-05. He organized the Associated Charities and was the first president and he built and donated to Portland its public library. He was the president of a savings bank. His writings mainly dealt with the colonial history of America and included: *The British Invasion from the North* (1887); *Sir Ferdinando Gorges and his Province of Maine* (1890); *The Pioneers of New France and New England* (1894); *The Voyages of Jacques Cartier* (1906); *The Greatest of Literary Problems* (1915); and he edited twenty volumes of a documentary history of Maine.

BAYLOR UNIVERSITY. An institution of the higher learning at Waco, Texas; founded in 1845. The enrollment for the fall of 1921 was 1098 and for the summer session and normal school, 705. The faculty numbered 61. There were 40,604 volumes in the library. President, Samuel Palmer Brooks, LL.D.

BEAUX-ARTS INSTITUTE OF DESIGN. A society organized in 1916 to take over the educational work formerly done by the Society of Beaux-Arts Architects, after the plan of the Ecole des Beaux Arts of Paris. The director's report for 1921 showed that notwithstanding adverse conditions affecting the architects' profession and the decorative arts in general, there was a 27 per cent increase in enrollment over the previous year. The total of 1336 is distributed among the four departments as follows: Architecture, 900; Sculpture and Life Drawing, 320; Mural Painting, 57; and Interior Decoration, 59. The 14th Paris Prize of \$1200 given by the Society of Beaux-Arts Architects through the Institute for 2½ years' study in architecture at the Ecole des Beaux Arts in Paris, was awarded to Lloyd Morgan. There were 119 competitors. Especial success was had in the Department of Sculpture, one of the students winning the Roman Academy Prize. It is stated also that the quality of the work of the Department of Interior Decoration, established but four years ago, is remarkable. The officers for 1921 are Lloyd Warren, director; Thomas Hastings, chairman of the Board of Trustees; and Henry T. Sedgwick, secretary. Headquarters are 126 East 75th Street, New York.

BECKWITH, CHARLES D. See NECROLOGY.

BEEF. See LIVE STOCK.

BELGIAN CONGO. See CONGO, BELGIAN.

BELGIAN RELIEF. See RELIEF FOR WAR VICTIMS.

BELGIUM. A European kingdom lying between France and the Netherlands; held by the Germans throughout the war but restored to

independence in the autumn of 1918; Capital, Brussels.

AREA, POPULATION, ETC. The total area is 11,373 square miles; the population, Dec. 31, 1910, was 7,423,784; estimated Dec. 31, 1919, 7,577,027, showing a density per square mile in 1910 of 652. Of the nine provinces the four having the greatest population are in their order; Brabant, Hainaut, East Flanders, Antwerp. Brussels, including suburbs, had a population on Dec. 31, 1919, of 685,268. The two next largest cities with their populations on that date are: Antwerp, 322,857; Liège, 166,697; Ghent, 165,655. In 1910 those who spoke Flemish only numbered 3,220,662; French only, 2,833,344; French and Flemish, 871,288; German only, 31,415; all three languages, 52,547. The majority of the inhabitants are Roman Catholics but no recent figures are available. There are four universities. The primary schools Dec. 31, 1920, numbered 7959 with 960,819 pupils; the infant schools 3366 with 205,418 pupils. The middle class schools numbered 97 for boys with 25,903 pupils, and 48 for girls with 13,638 pupils. Higher education was provided for by 23 Atheneums and colleges with 7962 pupils; by municipal and private colleges, and by the four following universities: Brussels, with 1644 students in 1919-20; Ghent, 1006; Liège, 2656; Louvain, 2783. There are besides, various commercial, agricultural and art institutions and special technical schools.

PRODUCTION. In 1920 the area under cultivation was placed at 1,340,415 hectares. The following table from the *Statesman's Year Book* of 1921 shows acreage and production of principal crops in 1913 and 1919 respectively.

Crop	Acreage		Produce in cwts.	
	1913	1919	1913	1919
Wheat.....	398,735	346,685	8,039,010	5,665,657

* Tons.

Livestock, Dec. 31, 1920, were as follows: Horses, 198,154; cattle, 1,292,271; pigs, 545,774; sheep, 126,202; poultry, 3,839,853. The minerals include iron ore, coal, and coke. In 1920 the coal output was 22,413,530 metric tons and the coke was 1,800,000 metric tons. The persons engaged in the production of coal, coke, and briquettes numbered 167,924.

ECONOMIC CONDITIONS. There was much fear expressed in 1921 of the growing competition

with Germany, German exports having developed in the course of the year to a remarkable degree owing to the fall of German exchange, which made German manual labor much cheaper than that of Belgium, thus reducing in comparison the cost of production. German exports of raw materials had decreased owing to the demands for them in German industries, falling from 94,000,000 marks during the first six months of 1920 to 52,000,000 during the corresponding period of 1921 and from 188,000 tons to 112,000 tons. The above figures do not include the German exports of coal, amounting to 304,000,000 marks, an increase over 1920. German exports of manufactured products in the first six months of 1921 came to 373,816,000 francs, as against 193,340,000 francs in the first six months of 1920, or 184,000 tons or against 110,000 tons. These products included machinery, railway cars, and chemical products. Certain branches of the Belgian hardware industry were the chief sufferers. Important glass works in Belgium had to close their doors, as Germany was exporting glass products to the value of 7,667,000 francs in 1921, as against 2,757,000 francs in 1920. Owing to defects in the trade-mark law Belgium was unable to prevent German counterfeits. The trouble was due in part to the lack of an adequate tariff system preventing her taking any special measures against German competition. The condition of Belgium reacted unfavorably upon the French market.

COMMERCE. According to statistics issued by the Minister of Finance it appeared that the commerce of Belgium in 1920 amounted to 22,495,041 metric tons (1 metric ton = 2204.6 pounds), of which 11,946,448 tons were imports and 10,548,593 tons were exports. This commerce was valued at 19,879,549,000 francs (\$1,443,161,451) of which 11,171,467 francs (\$810,995,789) were imports and 8,708,082,000 francs (\$632,165,670) exports, the balance of trade against the country being 2,463,385,000 (\$178,830,127). The imports for 1920 exceeded those of 1919 by 5,948,420,000 francs and the exports by 6,419,246,000 francs. Belgium's principal foreign commerce is with Argentina, Belgian Kongo, France, Germany, Great Britain, Netherlands, and the United States. The quantity and value of the trade with foreign countries in 1919 and 1920 are shown in the following table. [In the tables in this report the figures for 1919 are final, but those for 1920 are subject to revision. Quantities are given in kilos (1 kilo = 2.2046 pounds) and values in Belgian francs, the average exchange value of which was 9 to the dollar in 1919 and 13,775 to the dollar in 1920.]

Ministries.....	2,313,041,850
Total.....	2,759,565,850
Grand total expenditures.....	9,689,742,307

The increase in the cost of administration was largely due to laws of 1920, providing for additional salaries, pensions, etc. The railway and postal service had improved and promised to reduce the deficit to one-half of that of the previous year. One of the heaviest extraordinary charges was that of the ministry of industry, labor, and provisioning, required for the purchase of foreign foodstuffs. Normal taxation showed an increasing yield, especially the income tax. The increase in custom duty went into effect in April, 1921. Throughout the year the tax on exceptional profits was continued. The debt during 1921 was increased by treasury notes authorized up to 2,000,500,000 francs and by a loan of \$30,000,000 concluded early in the year with American bankers. The internal consolidated debt at the beginning of June was 5,372,529,789 francs, and the external consolidated debt 295,291,377; the internal floating debt, 10,388,142,000, and the external floating debt together with advances from the Allies, etc., 8,171,672,221 francs. The total debt, consolidated and floating, was, therefore: 24,227,635,387. Including the uncovered deficit in the budget the total obligations of the country were thus about 29,000,000,000 francs which was practically equal to the total movable fortune of the country. It was estimated at about 34,000,000,000 francs at the close of the year. The pre-war debt of Belgium was 5,000,000,000 francs.

The new 1 per cent sales tax which went into effect on November 14 was expected to prove an important source of revenue. The yield of indirect taxes and other items in the first section of the ordinary budget for the first seven months of 1921 amounted to 1,149,712,304 francs, or 42,737,075 francs below the budget estimates, but 227,064,671 francs in excess of the yield for the same period of 1920.

RAILWAYS. The total length of railways in 1919 was 400,649 miles of which 2759 were state lines: 184 miles, private lines; and 1706 miles, light railway.

GOVERNMENT. The executive power is in the King who acts through a responsible ministry and the legislative in the King, the Senate and the Chamber of Representatives. The King in 1921 was Albert, born April 8, 1875, and married, Oct. 2, 1900, to Princess Elizabeth of Bavaria. He succeeded to the throne Dec. 17, 1909, and his oldest male child is Prince Leopold, Duke of Brabant, born, Nov. 3, 1901. At the beginning of 1921 the ministry was constituted as follows:

Prime Minister and Minister of Interior, Henry Carton de Wiart; Finance, Georges Theunis; Economic Affairs, Aloys Van de Vyvere;

Foreign Affairs, Henri Jaspar; Education, Jules Destrée; Agriculture, Baron A. Ruzette; National Defense, Albert Devèze; Justice, Emile Vandervelde; Colonies, Louis Franck; Industry Food Supply, and Labour, Joseph Wauters; Railways, Marine, Posts and Telegraphs, Xavier Neujean; Public Works, Edouard Anseele.

HISTORY

THE LANGUAGE QUESTION. The sharp division between the Walloons and the Flemings of the last few years was attributed in part to the German policy during the occupation, for the Germans had done their best to persuade the latter that they belonged to the German race and ought to separate from their Latin associates. For many years the question of the Flemish university at Ghent had been a point of dissension. The question when revived in 1921 showed that the gap had widened between the two races. Violent attacks were made during 1921 as in previous years on Cardinal Mercier. Other instances of intolerance on the part of the Flamings were quoted by their adversaries but it was generally admitted that they were making progress. The Chamber of Deputies carried the bill for the use of the two languages in the administration, to go into effect Jan. 1, 1922. This measure, however, was the object of so much hostility from the parliamentary minority and from the Walloons outside Parliament that the application of it was believed to be impossible, even if it were attempted. The new measure was based on the principle of territoriality, the country thenceforth to comprise two linguistic regions, Flemish and Walloon. The Flemish and French tongues were placed on the same footing, although the friends of the Walloons pointed out that French was in far more general use and of far greater practical advantage than Flemish and that the use of two languages until now did not exist in the Walloon region. The law required henceforth that the officials of the Walloon region must speak both languages, which in many cases would oblige them to acquire French from the beginning. There was talk, furthermore, of extending these advantages for Flemish as soon as the Flemish party succeeded in getting complete possession of the government. French sympathizers with the Walloon element considered this victory for the Flamings the more deplorable as tending to advance the interests of Germany. Its opponents in Belgium also made much of this argument, saying that their adversaries were trying to Germanize the country. Three members of the de Wiart Cabinet voted against the bill. For the first time in the history of the Belgium Parliament, Walloons and Flemings voted against each other in solid blocs. This racial division was regarded with some anxiety. The Chamber had the bill concerning the administrative use of the two national languages under consideration in August. The Senate under pressure of certain political elements had framed an alternative measure the year before which aimed at a compromise between the spirit of separatism and the principle of bilingualism. Common to both measures was a division of the country into two linguistic regions, but the Senate measure contained provisions that were believed to prejudice the rights of the

French-speaking element. It required officials of the higher ranks in the central administration to have a thorough knowledge of both languages and it introduced bilingualism in the Walloon regions where French had hitherto been exclusively employed. The Chamber attacked these provisions. A modification of the Senate proposals might have been possible but the Flamings would not accept it. In November, 1920, the de Wiart Cabinet in order to secure the support of certain Flemish elements of the Right had accepted the bill voted by the Chamber, which met all the requirements of the Flamings. The latter, however, desired more than was granted by this law. A series of amendments were offered by a special committee in the Chamber, of which the Flamings controlled the majority, but there was one point they insisted upon, namely, the use of the two languages in the Walloon regions. This point then became the main issue of the discussion.

POLITICAL PARTIES. The elections were due at the end of October. The Belgian parties, it will be remembered, consist mainly of the three great groups, Catholic, Liberal, and Socialist. The party system dating from before the war did not seem to respond to the actual needs of the hour, and there was a tendency toward disintegration in each party and toward a new grouping. The spirit of Parliament was in general democratic, but while the great majority were in agreement in this respect, there was much division on the specific programmes. The Catholic Right contained Christian Democrats, Agrarians, Moderates, and Conservatives. This group was in a minority in the Chamber but in a majority in the Senate. The subdivisions of this group were, however, hostile to one another and they were no longer held together even by the policies that united them before the war. The Socialist Left though apparently a solid bloc, was also subdivided. Thus, the majority of the Socialist Deputies favored a nationalist policy in foreign affairs, whereas a small group of Flemish Socialists from Antwerp and Brussels were internationalists. Moreover, while in general the Socialists of the Right and Left were in accord on socialist principles, the Communists had broken away from them. Finally the Liberal Left was divided into Moderates and Radicals, the former inclining toward the Conservative Right and the latter toward the Socialists. While it seemed natural that in respect to social policy Christian Democrats, Liberal Radicals, and Moderate Socialists should come to some understanding, there were other issues which rendered this difficult, if not impossible, as for example, the question of military service, which was one of the main points at issue in the coming election. The Socialists demanded six months' military service; the Christian Democrats, from six months to nine months; the Liberals, one year, and there seemed no chance of agreement among them. Then there was the linguistic difference (See above, *Language Question*). The Catholic Right was under the control of the Flamings, who made up two-thirds of their number, or 46 out of 72. They were supported in Parliament by a small group of Socialist deputies from Antwerp and a few Liberals; and in general all the Flemings, whatever their political party, were in accord in opposing any alliance with France and in favoring an understanding with

Holland. To this national grouping was opposed the Walloon deputies of all parties, including about fifty Socialists out of seventy-five, most of the Liberal deputies, and fifteen of the Catholic deputies. These elements tended toward a pro-French policy but they were outnumbered by the Flemish groups. Finally there were some deputies of both races that aimed at national unity and therefore favored concessions to the Flemish element at the expense of the Walloon. The language question was especially important as it reacted upon various political motives. Thus, all the Socialists were on the side of the Flemish element for political reasons without regard to the language question because the Flemings of the Right demanded the recruiting of the army by regions, which would divide it into Walloon and Flemish regiments respectively. The Socialists favored this because it would create a deep line of cleavage in the Belgian people. This was the somewhat complicated situation on the eve of the campaign. There was a tendency before the election to divide parties into two *blocs*, one composed of Flemish extremists and the other of Moderates. The former contained the internationalist element of the Socialist party, the latter contained the majority of the Walloon Socialists.

ELECTIONS. At the time of the elections two main questions were before the public. The first was the reduction in the term of military service. The Socialists demanded a service of only six months for the national defense and the elections indicated a rejection of that demand, but, at the same time the Flamings among the Catholics, themselves, favored the six months service and also recruiting by regions. The other was the language question. The 42 Flamingant Catholic deputies in the Chamber persisted in their programme of reform which was condemned by their opponents as tending to divide the country and check the spread of French culture in Belgium. Their international policy was also anti-French tending toward friendship with the Netherlands and Great Britain rather than with France. In respect to the language question the Flamings among the Socialists lined up with the Catholic Flamings. The Liberal programme in the coming elections contained as its chief features the following: Revision of the law for the use of both languages in the public services; economic understanding with France; defense of Belgian industries against German penetration; free passage of the Escaut; and solution of the Limburg question. The Minister of National Defense, M. Devèze, a Liberal, declared against military service for six months and the division of the army into Walloon and Flemish regiments; asserted the necessity of defending the social legislation, but objected to any coalition with the Flamings and the Socialists.

The elections were held, November 20. The distributing seats among the parliamentary groups was as follows: In the Chamber, the members of the Catholic Right numbered 82, elected from the different groups; the Socialists, 66; and the Liberals, 33. The Flamings (Activists) numbered 4. In the former chamber there were: Catholics, 73; Socialists, 70; Liberals, 34; Activist-Flamings, 15; and Dissenters, 4. The new Senate was composed of: 42 Catholics; 32 Socialists; and 18 Liberals as compared with 43 Catholics and 30 Liberals and Socialists in the

former Senate. Thus the general result was a set-back to the Socialist party, attributed to its too advanced attitude both in respect to internal and international politics; the disappointment of the Liberal party; and the unexpected success of the groups of the Right. The fall in the Socialist vote was even more considerable than was indicated by this loss of seats. The results of the election were a surprise to many observers, especially in respect to the comparative failure of the Liberal element. It was generally explained as due to the swing of reaction which carried the hostility to the Socialists over to the side of the extreme Right, instead of to the moderate parties who were opposed to the more radical Socialist policy. It was, apparently, a protest against the eight-hour day, the prohibition policy, and the new financial legislation. The vote went to one extreme in 1919 and it passed to the other in 1921. Aside from the fear of Socialism, there was a feeling that the country would be more safely governed by the Catholic groups which had the long experience of thirty-five years of control. A conservative and orderly government meant to many people a Catholic government, and the voters had not forgotten that the Liberals joined forces with the Socialists in 1913. The Liberal programme moreover was a democratic one which appealed to the intellectual classes and the small bourgeoisie rather than to the working class and peasantry.

NEW MINISTRY. A political deadlock followed the elections of November 20. The Socialists refused to support the government while the Catholic groups having succeeded beyond all expectations began to consolidate their party in the interest of Flamings and to draw up an extreme programme. The Liberals were firm in their refusal to ally themselves with either the Socialists or the Catholics. In this crisis the King, after taking council with the Liberals and the Catholics, appealed to M. Theunis, Minister of Finance, who was not identified with any of the party groups but who enjoyed the confidence of them all owing to his excellent record as expert financier at Versailles after the war and as delegate to the Reparations Commission as well as Finance Minister, in which capacity he had reduced expenses and consolidated a part of the floating debt. M. Theunis accepted the charge and in spite of the political difficulties succeeded in forming a cabinet of business men and specialists for the purpose of efficiency and in the spirit of political conciliation, representing especially the Catholic groups and the Liberal Left. The ministry as announced, December 16, was as follows: President of the Council and Minister of Finance, Colonel Theunis; Justice, M. Masson; Industry and Labor, M. Moversoen; Sciences and Arts, M. Hubert; Foreign Affairs, M. Jaspar; National Defense, M. Devèze; Railways, M. Neujean; Colonies, M. Louis Franck; Agriculture and Public Works, M. Rumette; Interior, M. Berryer; Public Economy, M. Van de Vyvere.

BELL, EDWARD THEODORE. Banker, died at Paterson, N. J., August 12. He was born at Stanhope, N. J., March 26, 1843, and began his business career as a messenger in the Hacketts-town, N. J., bank in 1860. By 1894 he had become president of the First National Bank of Paterson and he held offices in important social and financial institutions of the city.

BELLINGHAM, SIR (ALLAN) HENRY. Roman Catholic landlord in Ireland and Member of Parliament, died early in June in County Louth, Ireland. He was born in 1846, educated at Harrow and Oxford, studied law and was admitted to the bar, afterwards joined the Royal Irish Rifles. He was returned to Parliament as a Conservative Home Ruler in 1880 and sat until 1885.

BENNETT, CHARLES EDWIN. Classical scholar, died, May 2. He was born at Providence, R. I., April 6, 1858; graduated at Brown University, 1878, and studied at Harvard and in Germany. From 1889 to 1891 he was professor of Latin at the University of Wisconsin; 1891 to 1892, of classical philology at Brown; and after 1892 of Latin at Cornell. He edited the *Cornell Studies in Classical Philology*, wrote a variety of school and college text-books which had a wide circulation, and also edited a great variety of classical texts. He was the translator of the Odes and Epodes of Horace in the Loeb Classics. Among classical scholars he was specially praised for his work in the field of syntax; and his Latin grammar was remarkably serviceable for its clearness and its compactness.

BERMUDA. A group of small islands constituting a British colony in the West Indies situated about 580 miles from Cape Hatteras, N. C. and 677 miles from New York; for many years a celebrated resort for American tourists. About twenty of the islands are inhabited. Area, 19.3 square miles; population Jan. 1, 1920, 21,869, of whom 7441 were whites. American visitors have numbered about 22,000 annually. Commerce and finance statistics follow:

* Tonnage entered and cleared.

The chief imports are: Provisions, flour, and meal, cotton goods, boots and shoes, ale and beer, hardware, and cutlery, oats, coal, sugar, cattle, etc. The chief exports are onions, potatoes, and other vegetables and lily bulbs. By far the greatest share of the imports come from the United States. It is under a governor assisted by an executive council and seven members and a legislative council of nine members, both appointed by the crown; and a representative assembly of 36 members. Governor at the beginning of 1921, Sir James Willcocks.

BERTHOLF, ELLSWORTH PRICE. Officer in the United States Coast Guard known for his

services in the Arctic, died in New York City, November 11. He was born, April 7, 1866; and entered the Revenue Cutter Service as a cadet in 1885 rising to the rank of first lieutenant in 1900, captain 1907, captain commandant 1911, and commandant 1918. While still a lieutenant he accompanied Captain Francis Tuttle on the Cutter *Bear* when he went to the rescue of the 265 whalers who had been caught in the ice off Point Barrow and did such effective work that he received from Congress a gold medal. This was at the time of the Spanish-American War and he was so completely cut off from communications that he did not know until months afterwards that the war had occurred. In the winter of 1901 he made a journey alone through Siberia for the purpose of selecting a herd of reindeer for Alaska and in 1908-10 he was in command of the *Bear* in Bering sea and Arctic waters. He retired in 1919.

BESELER, HANS VON. German general, died at Berlin, December 22. He was in command of the forces that captured Antwerp during the war and was afterwards governor-general of Poland under the German occupation. He was born in Pomerania in 1850, and entered the German army in 1868. By 1904 he had risen to the rank of major-general. After the capture of Antwerp he was at the head of affairs in Belgium for a short time. He then was engaged on the eastern front, where he captured a strong Russian fortress in August, 1919. After that he operated with success against the Russians on the river Dvina. He was then made governor-general of Poland and it was he who read the manifesto of the German and Austrian emperors in respect to the independence of Poland. In 1918 as the victory of the Allies approached he was obliged to flee from Warsaw, escaping by concealing himself on board a river barge.

BESSARABIA. A former government of the Russian empire united in 1919 to Roumania. Area, 17,146 square miles; population, estimated Jan. 1, 1915, 2,686,600; estimated in 1919, 2,344,800.

BETHLEHEM BACH FESTIVAL. See **MUSIC, Festivals.**

BETHMANN-HOLLWEG, THEODORE VON. Former German Imperial Chancellor, died near Eberswalde, Germany, January 2. He was born in the province of Brandenburg in 1856, educated at the universities of Strassburg, Leipzig, and Berlin, and became president of the province of Brandenburg in 1901. He was made Minister of the Interior in 1905 and also held the post of Vice-Chancellor under Prince von Bülow. He succeeded Chancellor von Bülow July 13, 1909, and held the office of Chancellor to July 14, 1917. He was a moderate Conservative in politics and from early manhood was friend and adviser of the Emperor William. Down to the time of his appointment he had been mainly engaged on domestic questions, being in that respect a contrast to his predecessor, whose chief concern had always been foreign affairs. The popular knowledge of Bethmann-Hollweg is mainly confined to the celebrated phrase about the violation of the treaty with Belgium, likening it to a "scrap of paper," and to his declaration that the necessity which knew no law obliged Germany to hack her way without regard to the neutrality of Belgium and Luxemburg. These indicated

his general tendency to observe a certain candor in his declarations of policy and thus try to win credit for honesty. The result, however, as is well known, was quite the reverse of his expectations, these two phrases having done more to injure the German cause than almost anything else that was said either by the Germans or their enemies. His subsequent efforts to explain the phrase about the scrap of paper away served only to deepen the bad impression that it had made. The main feature of his policy toward the war, however, indicated a clearer sense of the actual conditions than was shown by the persons in control, for he opposed from the first the submarine policy and saw plainly the effect it was certain to have on the United States. But his opposition was not active and when he made the peace offer of December, 1916, he was actually aiding in preparation for the submarine warfare. It was his policy of frequently suggesting terms of peace that caused his overthrow. General Ludendorff opposed these peace overtures and they were detested by the whole military party. When he fell from power, there was no sign of regret in any quarter, official or popular.

BIBLE SOCIETY, AMERICAN. A society founded in 1816 which strives for a wider circulation of the Bible to all people without denominational or racial discrimination. The Bibles are furnished at cost prices and distributed through the society's home, foreign, and other agencies. The Home Agencies distributed 660,635 volumes in 1920; the Foreign Agencies, 2,388,241, and fields not covered by the agencies, 42,192. The society supplied the Scriptures in 149 languages in 1921, including editions in Roman and Gothic characters and embossed systems for the blind. In the circulation in the United States 101 languages were used by the Home Agencies and the Bible House Scriptures, while the foreign distribution accounted for 102 languages. The total issues of the Society in the 105 years of its service have been 141,729,340 volumes, 84,044,492 of which were in the United States, and 57,112,181 in foreign lands. The number of issues in the United States in 1920 was 1,346,941, of which 2177 were for the blind, and 2,478,460 in other lands, making a total of 3,825,401. Workers in the nine Home Agencies totalled 637, of which 455 were volunteers; workers in the eleven Foreign Agencies numbered 1275, of which 400 were volunteers. The work of revising and translating the Bible into additional languages was going on constantly and progress was reported to have been made in 1921. The year saw the completion of electroplates for the Portuguese Testament and Psalms and for the Psalms in French, Spanish, and Italian. Plates were also finished for the Gospel of Mark in Albanian. The Scriptures were printed in no new language during the year except Scriptures for the blind.

The total receipts of the society for the year from invested funds, legacies, donors, sale of books, etc., amounted to \$1,033,227.35; its expenses were \$1,053,610.85. The society has affiliations with 150 auxiliary bible societies throughout the United States which assist in the circulation of the scriptures and contribute to it. The contributions from this source in 1921 amounted to \$25,386.61.

The officers in 1921 were: Churchill H. Cutting, president; Rev. William I. Haven, LL.D., and Frank H. Mann, general secretaries; Rev. Lewis B. Chamberlain, recording secretary; and Gilbert Darlington, treasurer. The official organ of the society is *The Bible Society Record*. Headquarters are at Bible House, Astor Place, New York City.

BICKETT, THOMAS WALTER. Former governor of North Carolina, died at Raleigh, N. C., December 28. He was born at Monroe, N. C., Feb. 28, 1869, graduated at Wake Forest College in 1890, and studied law at the University of North Carolina. He began practice at Monroe, 1893, and later at Danbury, N. C. In 1907-08 he was a member of the State house of representatives; 1906-16, attorney-general of the State; 1917-21, governor of North Carolina. In politics he was a Democrat.

BICYCLING. See CYCLING.

BIGELOW, MELVILLE MADISON. Lawyer, died, May 4. He was born at Eaton Rapids, Mich., August 2, 1846; and was educated at the University of Michigan and at Harvard. He was a lecturer and professor in the University of Michigan, the Northwest University Law School, and Boston University Law School, being for some time dean of the last-named institution. He was known for his scholarly researches in the origin of the American legal system, and his essays and addresses on the relation of law to social progress. His first important work was *Placita Anglo-Normannica* (1878). His writings on the relation between law and society in general included a volume of essays and other papers entitled, *False Equation* (1911). His other works were: *The Law of Estoppel* (published in 1872; 6th edition, 1912); *The Law of Torts* (1878-1901); *History of English Procedure* (1880); *The Law of Bills, Notes and Checks* (1895-1900); *The Law of Wills* (1898); *The Law of Fraudulent Conveyances* (1911). He also edited for the American public *Jarman on Wills*. His law works have been widely circulated in this and other countries.

BILLIARDS. William Hoppe, who had long reigned supreme in professional billiards, was forced to relinquish his crown to Jacob Schaefer as the result of the world's professional 18.2 balkline championship tournament held at Chicago in November. Hoppe and Schaefer each won 5 out of 6 games but in the play-off Schaefer triumphed by a score 500 to 346. The new champion also established a record run of 436 at 18.2 balkline billiards and of 155 at 18.1 balkline billiards. During 1921 Edouard Horemans of Belgium and Roger Conti of France visited the United States and took part in several tournaments with indifferent success. Of the two, Horemans made by far the better showing. In the three-cushion professional game John Layton after being defeated by August Kieckhefer early in the year retrieved his lost laurels from the same opponent in December. The leading professional pocket billiard player was Ralph Greenleaf, who defended his championship title with success on several different occasions. Charles Heddon dethroned Percy Collins as amateur billiard champion at 18.2 balkline. Earl Looga-baugh outclassed the amateur three-cushion players, while J. Howard Shoemaker for the eighth year retained the amateur pocket billiards' title.

BIRNBAUM, ZISLAW ALEXANDER. Polish orchestral conductor, died in Berlin, October, 14 (suicide during temporary insanity). He was born at Warsaw in 1878, and at an early age attracted attention as a prodigy on the violin. In 1903-04 he was a violinist in the Boston Symphony Orchestra. His career as conductor began in 1905, in Hamburg. From 1911 till his death he directed the Warsaw Philharmonic Orchestra, also appearing as guest-conductor in the principal European cities.

BIRTH CONTROL. A mass meeting to discuss the question whether birth control was morally right was broken up by the police in New York City, November 13. The chief speakers were to be Mrs. Margaret Sanger, Miss Mary Winsor, and Mr. Harold Cox, the editor of the *Edinburgh Review*. The speakers were at first locked out but afterwards succeeded in entering the hall where in spite of the presence of a large body of police, who warned them not to speak, they attempted to make addresses. Thereupon Mrs. Sanger and Miss Winsor were arrested and brought before a magistrate. It appeared that a request for the suppression of the meeting had been received by the police from the office of the newly appointed Catholic Archbishop of New York, Patrick J. Hayes, but no complaint was made before the magistrate and it was recommended that the matter be dismissed. Mrs. Sanger announced that the meeting of the Birth Control Conference which had been prevented would be held at another hall in New York City on November 16, saying that a prominent authority of the Roman Catholic Church had been invited to the last meeting and that the Archbishop of New York would be invited to the next, and that the subject would be discussed just as it had been in her book, entitled *Women of the New Race*, which was admitted to the United States mails.

BIRTH RATE. See VITAL STATISTICS.

BISPHAM, DAVID SCULL. Opera singer, died October 2. He was born at Philadelphia, Pa., Jan. 5, 1865, graduated at Haverford College in 1876 and appeared in opera for the first time in 1891. He was afterwards at Covent Garden, London, and in the Metropolitan Opera company at New York, where he sang leading rôles in French, German, Italian, and English opera, and was regarded as among the leading lyric artists. He wrote *A Quaker Singer's Recollections* and edited song books for high schools and community singing and an album of solos.

BLACK, SAMUEL CHARLES. Clergyman, died, July 25. He was born at Monticello, Iowa, Sept. 6, 1869; graduated at Parsons College, Iowa, 1892; and McCormick Theological Seminary, Chicago, 1898. He was engaged for a time as a telegraph operator and in the banking business, but was ordained to the Presbyterian ministry in 1897. After holding pastorates at several towns in Illinois, he was minister of the Collingwood Avenue Church at Toledo, Ohio, 1910-19. On June 1, 1919, he was appointed president of Washington and Jefferson College. He wrote: *Plain Answers to Religious Questions*

(1910); *Building a Working Church* (1911); *Progress in Christian Culture* (1912).

BLACKMON, FREDERICK LEONARD. Former Congressman from Alabama, died, February 8. He was born at Limebranch, Ga. Sept. 15, 1873; and educated at the State Normal College at Jacksonville, Ala., and at Douglasville, Ga. He was admitted to the bar in 1894, and practiced from that time on at Anniston, Ala. From 1900 to 1910 he was a member of the Alabama Senate, and from 1911 to 1921 he served in the United States House of Representatives. In politics he was a Democrat.

BLACKWELL, ANTOINETTE LOUISA BROWN. First woman ordained as minister in the United States, pioneer in the woman suffrage movement, died at Elizabeth, N. J., November 5. She was born at Henrietta, N. Y., May 20, 1825, of poor parents and was obliged to earn her living when a child. After teaching school she entered Oberlin College where she formed a friendship with Lucy Stone. Inequality in the opportunities afforded to the two sexes was thrust upon her when admission to a debating society in the college was refused. She was admitted reluctantly to the Theological School of Oberlin in 1847 and when she tried to support herself by teaching the faculty prevented it by passing a rule forbidding graduates of the college to teach in the preparatory school. She addressed the first national woman's rights convention at Worcester, Mass., in 1850. This occasioned so much scandal that she lost her position as a worker in a woman's society in New York City. Afterwards she became a lecturer and gained a considerable degree of popularity and success. In 1853 she was ordained as an orthodox Congregational minister and was afterwards appointed by the church as a delegate to the World's Temperance Convention in New York City. Both her ordination and her appearance at the Temperance Convention raised loud protests from the religious press and the ministry. At the Convention the audience composed largely of ministers shouted her down and she was not permitted to finish her speech. She afterwards resigned from the Congregational ministry and became a Unitarian. In the suffrage campaign she was associated with Susan B. Anthony and Julia Ward Howe, accompanying them in their lecture tours. Among her writings may be mentioned *Studies in General Science* (1869); *The Sexes Throughout Nature* (1875); *The Philosophy of Individuality* (1893); *The Making of the Universe* (1914); and a novel entitled *The Island Neighbors* (1871).

BLANCK, MARGOT DE. See MUSIC, Artists, Instrumentalists.

BLESSING, GEORGE FREDERICK. Mechanical engineer, died, June 25. He was born at Carrollton, Ky., July 2, 1875; and graduated in mechanical engineering at the State University of Kentucky, 1879. He taught mechanical engineering in the Nevada State University from 1899 to 1904, meanwhile, having done important designing and research work for large industrial plants, including especially, steam turbine pumps. He was professor of mechanical engineering and in charge of the engineering department at Swarthmore College after 1908, and in 1918 engineer in plant facilities under the United States Ordnance Department. He wrote elementary books on drawing and descriptive geometry, and also in

1917 a volume on *The Small College and Technical Education*.

BLOMFIELD, SIR RICHARD MASSIE. British admiral, died in London, June 25. He was born March 3, 1835, entered the Royal Navy in 1848 and was present at the bombardment of Alexandria in 1882 and a member of the landing party, having risen to the rank of captain. He remained for nearly thirty years in the Egyptian service in which he became director-general of ports and lighthouses and afterwards controller-general, and director-general. He was made a rear-admiral in 1889. The achievement for which he was best known was the improvement of the great harbor of Alexandria.

BLOUNT, WILLIAM ALEXANDER. See NECROLOGY.

BLYDENBURGH, CHARLES EDWARD. Judge, died, April 20. He was born at Brooklyn, N. Y., March 19, 1854, and graduated at the Columbia School of Mines, 1878. He went soon afterwards to Wyoming where he was in charge of the territorial assay office until 1880. He was admitted to the Wyoming bar in 1889, a delegate to the Democratic National Convention in 1900, and associate justice of the supreme court of Wyoming from Oct. 4, 1917, to the time of his death. From 1915 to 1919 he represented Wyoming at the Conference on Uniform State Laws.

BOGART, JOHN B. Journalist, died in New York City, November 16. For seventeen years, from 1873 to 1890, he was city editor of the *New York Sun*. He was born in 1845, ran away when a boy and served in the Civil War and in 1871 became a reporter on the *Sun*. He was regarded as one of those who gave that newspaper its individual quality and he was highly esteemed in journalistic circles, being particularly successful in the training of young journalists.

BOHEMIA. A former crownland of Austria which after the collapse of the Central Powers in 1918 became a constituent member of the new Czecho-Slovak state (see CZECHO-SLOVAK); situated in the northwestern part of the former Austro-Hungarian empire; bounded on the north by Saxony and Silesia, on the east by Moravia, and on the south by Moravia and Lower and Upper Austria. The area is about 20,065 square miles; population, 1910, 6,768,548; estimated, 1913, 6,860,029. The race elements according to the census of 1910 were: German-speaking, 36.7 per cent; Bohemian, Moravian, and Slovak, 63.19 per cent. According to the same census the Catholics constituted 95.6 per cent of the population. Prague, the capital and largest city, had an estimated population, June 30, 1914, of 541,500, including suburbs. In 1910 over 2,000,000 of the people were reported as engaged in agriculture, and 2,780,457 in industries. In the old empire the country was governed locally by a single chamber which was represented in the lower house of the Reichsrath by 130 members. Under the new Czecho-Slovak constitution five out of the fifteen electoral areas were assigned to Bohemia.

BOILERS. In this important department of the steam power plant there were few notable developments outside of refinements and steps towards increased capacity to record in 1921, but the following items derived in larger measure from the annual review in *Power* (New York) give the mere significant features of the year.

There seemed to be a tendency during the year to secure greater furnace volume, that is in relation to the area of water heating surface, along with the increased temperatures sometimes employed. There were experienced difficulties with the refractory materials used in the furnaces, valves, expansion joints, and pipe line rather than in the boiler and steam turbine. As a result there was not in 1921 the general desire to employ temperatures for the superheated steam approaching 700 degrees F., and in several new larger plants steam temperatures of about 600 degrees F. were employed. In particular was this true for America, but in Europe with the effort for increased economy and higher fuel costs as at the North Tees station in England and the Superpower Station in Paris steam temperatures of 700 degrees or more were being employed or higher than was found in American practice. In the English plant mentioned a pressure of 450 lbs. was also a notable feature.

The tendency in the boilers for the larger power units was to use cross-drum boilers of the modified Stirling type with bent tubes in ever increasing sizes. These were arrayed so that the boilers could be knocked down and assembled where they were to be erected. The largest boilers in operation at American power plants were those of the Detroit-Edison Company and the Ford River Rouge Plant, but ordinarily for the larger central stations the surface per boiler varied from 14,000 to 20,000 square feet and the steam capacity from 125,000 to 200,000 lbs. per hour. A double-ended boiler of Annelly design installed in the Congress Street Heating plant of the Detroit Edison Co. had a record for surface with 29,820 square feet. This boiler was designed to supply steam at from 75 to 160 lbs. pressure. In the new Calumet Station of the Commonwealth Edison Company of Chicago which was put in commission there were seven cross-drum boilers each of 15,089 square feet heating surface supplying steam to two 30,000 kw. turbines. These had a final steam temperature of 685° F. derived from a pressure of 350 lbs. and 250° F. of superheat, the aim being to supply steam to the turbines at 300 lbs. pressure and 225° of superheat, in which case the final steam temperature was 650° F.

At the great Ford Motor Co. Plant at River Rouge, Mich., the four largest boilers for power purposes in the United States were in operation. In these boilers powdered coal and blast furnace gas were burned and with the former unusually high efficiency was secured without difficulty of any kind. Here a steam temperature of 600° F. was used with a pressure of 225 lbs. and superheat of 200° F. These boilers had vertical heating elements on either side and were 83 feet in height above the ash floor. Here on account of the different fuels used there was a larger furnace volume amounting to about 0.5 cubic feet per square foot of steam making surface.

These cross-drum boilers of 16,000 square feet each with superheaters, but no economizers, were installed in the Seward Station of the Penn. Public Service Corporation, a mine-mouth plant which had two 20,000 kw. units but was planned for subsequent enlargement to a capacity of 100,000 kw. Here a steam temperature of 596° F. was used attained by a pressure of 280 lbs. and a superheat of 180° at 200 per cent rating. Four

boilers each with 14,000 square feet of water heating surface, one-quarter of the proposed installation, were put in use at the South Meadow plant of the Hartford Electric Light Co., at Hartford, Conn., which ultimately was to have 130,000 kw. capacity, though in 1921 only one 20,000 kw. unit was in operation. Here there would be a steam temperature of 640° F. at 200 per cent rating when operating at a pressure of 275 lbs. and a superheat of 225° F. One of the important boiler installations of the year was at the Delaware Station of the Philadelphia Electric Co. where eight boilers serve two 30,000 kw. turbine units. Each boiler had 15,080 square feet of steam-making surface or counting in the economizer, which was an integral part of the installation 19,030 feet or a furnace volume of 0.48 cubic feet. The steam temperature in these boilers was to be approximately 600° F. or at the turbine throttle about 575° F. on the average. The boilers were designed to operate at a pressure of 250 lbs. and the superheat was to range from 170° F. at normal rating of the boiler to 220° F. at the maximum rating of 330 per cent. This plant was interesting in that the furnaces were averaged for burning either bituminous coal or stokers, powdered bituminous coal, powdered anthracite or oil. During the year the Hell Gate plant of the United Electric Light and Power Co. of New York City was being constructed. There were being installed 12 of the 24 boilers each of 18,900 square feet of water-heating surface. These were double stoked and used a total steam temperature of approximately 600° F. operating without economizers.

BOILER EXPLOSIONS. Naturally with a large number of industrial plants either shut down or operating at reduced capacity there were fewer serious and fatal boiler explosions in 1921 than usual. Among the return-tubular boiler accidents resulting in fatalities, were the explosions at Monterey, Tenn.; at Taft, Calif.; and at Lumber, S. C. The most serious accident of the year was at Mechanicsville, N. Y., where a return-tubular boiler exploded from overpressure due to a defective safety valve. This explosion resulted in four killed and property damages in excess of \$40,000.

During the year there was held the first annual convention of the National Board of Boiler and Pressure Vessel Inspectors, organized in the interest of securing greater safety to life and property through concerted action and maintaining uniformity in the construction, installation and inspection of steam boilers and other pressure vessels and their appurtenances, and to secure interchangeability between political subdivisions of the country. Further progress toward uniform laws and rules, one of the objects of this organization, was secured and the A. S. M. E. Code was adopted and was acceptable to the departments of seventeen States and twelve smaller political divisions represented on the board. See RAILWAY ACCIDENTS.

BOKHARA. A state of central Asia bounded on the north by the Russian provinces of Syrdaria and Samarkand; on the south by Afghanistan; on the east by Ferghana; and on the southwest by Trans-Caspia and Khiva; formerly under the Russian empire. The area is estimated at 83,000 square miles and the population at about 1,250,000. The chief towns are Bokhara with about 75,000 inhabitants, and Karshi with

about 25,000. The chief products are wheat, fruit, silk, tobacco, cotton, hemp, and farm animals. Camels are also raised. Mineral resources include: Gold, salt, alum, and sulphur. There is a considerable trade with India to which the country exports raw silk, and from which it imports green tea, indigo, muslins, drugs, etc. The Amir, Sayid Mir Alim Khan, was driven out after the revolution of August 30, 1919, and a Soviet government was set up.

BOLIVIA. A South American republic of the interior, lying to the west of Brazil and to the east of Chile. The actual seat of the government and largest city is La Paz, but Sucre is the seat of the supreme court and is historically considered the capital.

AREA AND POPULATION. The area is estimated at from 514,155 to 532,437 square miles and with the inclusion of the disputed territory, 562,047; population in the census of 1900 was 1,744,568; estimated in 1915 at 2,889,970. La Paz has a population estimated in 1918 of 107,252; Cochabamba, 31,014; Potosi, 29,795; Sucre, 29,686.

EDUCATION. Elementary education is free and compulsory. No later figures were available than those given in the preceding YEAR BOOK. Elementary schools (1918) numbered 450 with 3960 teachers and 54,192 pupils. For secondary instruction there were: 21 colleges of which 14 were national; 5 clerical institutions; and 5 private lycées. For higher education there are two universities, at Sucre and La Paz, respectively.

PRODUCTION. Agriculture while it is the main occupation is still backward. The cultivated area, according to the latest available figures which, however, are not recent, had an acreage of 4,940,000, but measures have latterly been taken for extending the cultivable area by means of irrigation. The chief crops are: Corn, wheat, barley, beans, potatoes, and other vegetables, which are mainly produced for home consumption, and rubber, which is the main commercial crop, Bolivia standing next to Brazil as a rubber-exporting country. The mineral resources include: Tin, copper, antimony, bismuth, wolfram, lead, silver, gold, borate of lime, and other minerals. The output of tin constitutes one-quarter of the world's production, Bolivia ranking in this respect next to the Malay Peninsula. The minerals constitute a more important part of the economic life of Bolivia than in any other South American country. In 1919, 87.88 per cent of the total exports consisted of minerals which were valued at 126,632,675 bolivianos or \$49,300,633. Oil abounds but has not been much exploited. It was reported that in certain portions of the country that oil was so plentiful on the surface that the natives were accustomed to take it in pail-fuls from holes for local use.

COMMERCE. The principal imports are: Provisions; wines, and spirits; hardware; cotton, woolen, linen, and silk goods; and clothing. The chief exports are: Tin, rubber, and silver. The foreign trade for 1919 was: Imports, £4,824,671; exports, £11,225,799. There was an increase in the imports and a decrease in the exports as compared with the preceding year. In 1919 Great Britain took 49 per cent of the exports and the United States 41 per cent. In 1920 the exports from Bolivia to the United Kingdom amounted to £1,931,203; imports from the United Kingdom to Bolivia, £747,296.

FINANCE. The following information in respect to the 1921 budget was supplied by the *Pan-American Union* in 1921: According to the budget, expenditures for the fiscal year of 1921 have been proportioned to the departments of the government as follows: Legislative, 630,631.50 bolivianos; foreign relations, 1,145,560 bolivianos; churches, 103,780 bolivianos; Government, 5,066,207 bolivianos; courts of justice, 1,975,860.07 bolivianos; Treasury, 25,654,563.82 bolivianos; industry, 146,800 bolivianos; public education, 3,220,381.25 bolivianos; agriculture, 30,000 bolivianos; commerce, 882,779.06 bolivianos; militia, 7,501,277.10 bolivianos; colonization, 529,748.60 bolivianos; total, 46,887,588.40 bolivianos.

COMMUNICATIONS. The railway open for traffic in 1918 had a mileage of 1354. The principal line is the Antofagasta and Bolivian railway. During 1921 American financial and engineering interests entered into a contract with the Bolivian government for the construction of a railway 128 miles in length to connect the railways of Bolivia with those of Argentina. The new line was planned to extend from Atocha, Bolivia, to Villazon, on the Argentine frontier, and in connection with existing railways, would afford a transcontinental route from the Pacific to Buenos Aires. The financial arrangement made by the American capitalists involved the purchase of \$7,000,000 of Bolivian 8 per cent bonds, the proceeds of which would be applied to construction costs. These bonds were to be secured by a first lien on export duties on rubber and minerals and an absolute mortgage on the railway.

GOVERNMENT. Executive power is in a president elected for four years by direct popular vote, and ineligible for reelection, and in a cabinet of six departments; and legislative power is in a congress of two houses, the senate with sixteen members elected for six years, and chamber of deputies with seventy members elected for four years. The president elected for the term 1921-25 was Dr. Bautista Saavedra.

HISTORY. On January 24, the national assembly elected Señor Saavedra, president, and his government was recognized by the United States, February 10. He had led a successful revolution during the previous year which had overthrown the government of President Guerra. In the summer the Bolivian government requested the Secretary of the League of Nations to refer to the Assembly one of the aspects of the Tacna-Arica dispute and early in September Bolivia requested of the League the revision of the treaty of 1904 with Chile whereby Chile's rights in Antofagasta were recognized while Bolivia secured from Chile the custom houses there and at Arica, as well as the promise on Chile's part to build a railway from Arica to La Paz. Discussion of the question before the League was postponed. On September 11, Chile consented to the reference of her dispute with Bolivia over the treaty of 1904, to a commission of three jurists. On December 25 the Bolivian government declared in a note to Chile that there was no treaty which could condemn a country to be forever deprived of free access to the sea. The government of Bolivia declared just as Peru had done that the question of the Pacific could not be confined to a discussion of the third treaty of Ancon but must deal with all the causes of future conflicts. That was why, it added, the Bolivian government was obliged to call the

attention of any one who was interested in the problems of the Pacific in order that Bolivia might participate therein since there could not be any solution which did not relieve Bolivia from the geographical injury that she suffered. The note also cited certain violations that Chile was alleged to have committed against the treaty of 1903 and declared that the difference of opinion could only be reconciled by means of an international conference. Competition on the part of European interests was increasing during the year. Railway development was advanced by a contract with an American company for the building of a line which would unite the railway systems of Bolivia and Argentina. Statistics published during the year indicated that Bolivia had made great progress in the past few years in the production of tin.

BOLO, MONSIGNOR. See **NECROLOGY.**

BOLOGNA, CLEMENTE. Italian baritone, died in New York, April 9. He was born in Genoa, 1856. Having established his reputation at various Italian theatres, he sang with great success in the United States under Strakosch and Mapleson. For thirty-nine years he was soloist at the Temple Emanu-El in New York.

BOLSHEVISM. See **WAR OF THE NATIONS; SOCIALISM; RUSSIA;** and articles on countries under **HISTORY.**

BOMBING OF SURFACE VESSELS BY AIRCRAFT. See **NAVAL PROGRESS.**

BONAPARTE, CHARLES JOSEPH. Former Attorney-General of the United States, died, June 28. He was born at Baltimore, Md., June 9, 1851, the son of Jerome Napoleon; graduated at Harvard, 1871, and Harvard Law School, 1874. He practiced law in Baltimore, where he took a prominent part in municipal and national affairs. He was on the board of Indian Commissioners (1902-04); chairman of the National Civil Reform League (1904); president of the National Municipal League (1905); and in the latter year was made Secretary of the Navy, from which office he was appointed in the following year, to that of Attorney-General. He was a strong supporter of Roosevelt, and a leader among the Progressives. Among the important non-political positions held by him may be mentioned those of overseer of Harvard University and trustee of the Catholic University of America. He was made a member of the Council of National Defense in 1917. He wrote: *The Essential Elements in Good City Government* (1901); *Some Duties and Responsibilities of American Catholics* (1905); and *Civil Service as a Moral Reform Question*.

BONDS, MUNICIPAL. See **MUNICIPAL GOVERNMENT.**

BONUCCI, ARTURO. See **MUSIC, Artists, Instrumentalists.**

BOOHER, CHARLES F. Former Congressman from Missouri, died, January 21. He was born at East Groveland, N. Y. Jan. 31, 1848; educated in the district schools, and having been admitted to the bar in 1871, began the practice of law in Savannah, Mo., of which city he was mayor for six years. He was appointed to the Fiftieth Congress for an unexpired term, and again to the Sixtieth Congress, serving from 1907 to 1921. In politics he was a Democrat.

BOOK, GEORGE MILTON. Naval officer, died, January 22. He was born at New Castle, Pa.,

May 25, 1845. He graduated at the Naval Academy in 1865, and had risen to the rank of captain in 1899. He served in the latter part of the Civil War on board the *Marblehead* in pursuit of Confederate vessels in 1864. After the war he served successively on several vessels, and from 1875 to 1876 was at the navy yard at Norfolk, and from 1890-93 at the navy yard at New York. He was again assigned to the navy yard at Norfolk from 1895 to 1896, and in 1897 to the navy yard at Mare Island. He was retired in 1900 with the rank of rear-admiral.

BOOKER, CHARLES F. See **NECROLOGY**.

BOOT AND SHOE INDUSTRY. This industry in 1921 was typical of the deflation and general depression prevalent in the United States. Prices declined to somewhere near pre-war levels and at most shoe manufacturing centres production was curtailed or restricted. There was a tendency to reduce the number of styles of shoes while low shoes both for men and women continued to have a wide vogue. While figures of total production were not available at the end of the year the following returns from representative centres may be considered typical. Thus from Brockton, Mass., in 1921 there were shipped 631,536 cases of shoes or 15,788,400 pairs, valued at \$102,624,600, as compared with 611,006 cases of 15,257,150 pairs valued at \$110,744,837.50 in 1920, representing an increase of 513,250 pairs but a loss in value of \$8,120,237.50. In Brockton the union shoe workers numbered 12,300. The average output of the factories for the year was not over 65 per cent their capacity, the smaller firms being the busiest and in most instances approaching nearer to their capacity than did the larger plants. Milwaukee also was an important shoe and leather centre in 1921, there being 31 shoe firms employing 6113 persons with wages of \$5,682,267 and turning out products valued at \$27,613,760. Baltimore, Md., was developing an important shoe manufacturing industry with an annual output of more than 2,000,000 pairs valued at about \$ 5,000,000. In addition there was a wholesale business amounting to about \$25,000,000.

In 1921 the exports of boots and shoes from the United States totaled 8,957,697 pairs valued at \$24,678,701 as compared with 16,841,592 pairs valued at \$67,144,342 in 1920. Naturally boot and shoe manufacturers were anxious that no high protective duties should be placed on their raw materials in any revision of the tariff.

There was some activity in the shoe manufacturing industry in Germany during the year though towards the end of the year it was largely confined to foreign orders as the domestic demand had been filled up to the purchasing power of wage earners who were unable in many cases to pay the prevailing prices. See **LEATHER**.

BORAX. RECORD PRODUCTION OF BORAX IN 1920. The quantity of borax produced and sold in the United States in 1920 was 35,280 short tons, valued at \$5,674,000, according to the United States Geological Survey. This was a record production and value, exceeding even those of 1919—28,518 tons and \$4,351,891—which were higher than those of any previous year. For many years borax has been manufactured in the United States from the mineral colemanite, a calcium borate, which is mined in California, but for the last two years some borax

has also been obtained from the water of Searles Lake, Calif., as it is one of the salts that the brine yields by a certain method of treatment. This method of treatment marks a new departure in the borax industry and recalls the old days in the 60's when borax was made by recrystallizing the crude salt found in the mud of Borax Lake. The total quantity of crude borates produced in the United States in 1920 amounted to 120,320 tons, valued at \$2,173,000. This was a record in quantity though not in value, on account of the lower grade of the ores. Borax, called in chemistry sodium tetraborate, is used in large quantities in making the enameled coating for cast-iron and steel ware used in plumbing fixtures, chemical equipment, and kitchen utensils. It is also a constituent of borosilicate glasses, such as are employed in making lamp chimneys, baking dishes, and laboratory glassware. Borax is also used in the laundry and kitchen, in making soap and starch, in paper sizing, and in tanning and welding.

BORNEO. See **BRITISH NORTH BORNEO**.

BOSNIA. See **BOSNIA AND HERZEGOVINA**.

BOSNIA AND HERZEGOVINA. Former provinces of the Turkish empire, acquired by Austria-Hungary in 1908, and after the collapse of the Austrian Hungarian empire included in the new southern Slav state, Jugo-Slavia (q. v.). Area, 20,709 square miles, population estimated in 1920, 1,931,802.

BOSTON, UNIVERSITY OF. A non-sectarian institution of the higher learning at Boston, Mass.; founded in 1869. The enrollment for the fall of 1921 was 8543, of whom 5089 were men and 3454 were women. Of this total, 3212 were in the college of business administration. The next largest department was that of secretarial science, 969, and the next of education, 842. The summer school enrollment was 672. The productive funds amounted to \$4,384,108 and the income to \$1,064,059. The library contained 77,539 volumes. The university comprises besides the departments mentioned above, colleges or schools of liberal arts, teachers, theology, law, medicine, a graduate school and a school of religious education and social service. In the winter of 1921 a campaign for the fiftieth anniversary fund for endowment and development was going on and at the close of the year \$300,000 had been already subscribed. President, Lemuel Herbert Murlin.

BOSTON SYMPHONY ORCHESTRA. See **MUSIC, Orchestras, Novelties**.

BOTANY. Important meetings of botanists were held in conjunction with many of the annual meetings of national scientific societies. The Botanical Society of America, American Phytopathological Society, Ecological Society of America, and other affiliated societies met with the American Association for the Advancement of Science at Toronto, Canada, Dec. 27-31, 1921. One of the outstanding events of this meeting was the address of Professor William Bateson on Evolutionary Faith and Modern Doubt, in which he expressed disagreement with the usual conception of the common origin of species and of the acquisition of new characters by plants and animals. The summer meeting of the American Phytopathological Society and the conference of

Cereal Pathologists was held at St. Paul, Minn., and Fargo, N. D., July 19-22, 1921.

The British Association for the Advancement of Science met at Edinburgh, Scotland, Sept. 7-14, 1921. The annual meeting of the French Association for the Advancement of Science, was held at Rouen, August 1-7, 1921. The South African Association met at Durban, July 11-16, 1921. The British Mycological Society met in London, Nov. 19, 1921. The Association of Economic Biologists met in London Dec. 9, 1921. An International Potato Congress was held in London, Nov. 15-18, 1921, special consideration being given to plant breeding and potato diseases. The Botanical Society of India has been organized as a result of encouragement given by the Indian Scientific Congress at its meeting in 1920. A Russian Mycological and Phytopathological Society was established in 1921 with Dr. A. A. Jaczewski as president. The National Institute of Agricultural Botany, established in connection with the University of Cambridge, was formally opened Oct. 7, 1921. A Division of Mycology and Plant Pathology was established in the Department of Agriculture, Manila, P. I. A Plant Breeding Institute has been established at Aberystwyth, Wales. The Tropical Research Laboratory of the United Fruit Company, closed during the war, has been reopened for investigations on plant diseases at Changuinola, Panama.

Revue de Botanique appliquée et Agriculture Coloniale is a new publication begun by the Laboratoire d'Agriculture Coloniale, Paris. The Biological Division for Agriculture and Forestry, Berlin-Dahlen, has begun a monthly bulletin devoted to matters of current interest to the plant protection service.

Among botanists of international note who recently died are: Dr. Hans Solerederer, professor of botany, University of Erlangen, Nov. 8, 1920; Dr. G. Cuboni, director of the Plant Pathology Experiment Station, Rome, Nov. 3, 1920; Dr. G. Hieronymus, editor of *Hedwigia*, Jan. 18, 1921; Emile Bourquelot, plant chemist, Jan. 26, 1921; L. Matruchot, University of Paris, July 6, 1921.

A large amount of botanical literature appeared during the year, only a very small part of which can be noted.

PHYSIOLOGICAL STUDIES.—Several investigators are continuing their studies on growth by the study of artificial cells, gels, biocolloids, etc. Some of the gels are found to possess properties of diffusion and permeability simulating those exhibited by protoplasm. The methods of Osterhout for the study of permeability by electrical conductivity is being quite extensively used and Raber found antagonisms exhibited between the anions of certain compounds. Quite a number of compounds were found to decrease resistance to permeability. Investigations at the Carlsberg Laboratory of the relation between the hydrogen-ion concentration and the natural distribution of plants are said to show that the quantity of nutrient substances in soils does not materially affect the distribution of plants. It is considered probable that the hydrogen-ion concentration in soils may have a direct influence on the constitution of vegetation.

The osmotic properties of plant cells under the influence of low temperatures was investigated by Lewis and Tuttle and they found change

in osmotic pressure was due to the non-electrolytes in the plant cells. Sap expressed from *Pyrola* leaves froze at about -3°C . while the leaves themselves could be cooled to -32°C . before freezing. Panatelli found injury to plant cells was in proportion to the loss of water during cooling. Sugars and other carbohydrates, phosphates, and a lack of autodigestive enzymes, enable plants to retain water when undercooled. Onslow made a study of oxidizing enzymes in 286 orders of higher plants and found such enzymes present in about 60 per cent of the orders examined. Hepburn and associates report proteolytic enzymes in all the species of *Sarracenia* examined but none were found in *Darlingtonia*. The unopened pitchers of these plants were free of bacteria but open ones soon contained proteolytic bacteria.

Delf reports on a study of accessory food factors in plants and found vitamins may be produced in connection with photosynthesis or with the deposition of reserves in various parts of the plant. Linoesier, Gortner and others report that certain fungi require vitamins for their growth or at least their development is greatly favored by the presence of such accessories in culture media. Wann found certain algae are able to fix free atmospheric nitrogen when grown in cultures containing glucose and nitrates. Loeb has added to his contributions to the regeneration of *Bryophyllum*, and claims in defoliated stems the mass of new shoots from a long stem is equal to the mass that would be produced by the same length of stem cut to single nodes. The polar character of regeneration of shoots is considered due to the fact that the material available for growth reaches the apical regions of the shoot and none is transferred to the lateral buds on a long stem.

Sinnot found the size of the plant body is not the direct causative factor in determining the size of the leaves, fruits, or seeds which it produces but the size of such organs is the result of the size of the growing point out of which they have been developed. Any factor, as drought, cold, etc., that influences the size of the meristem, will alter the size of organs produced from it. Dixon and Poole, discussing the electrotonic theory in relation to photosynthesis, report that negative electrons are responsible for the absorption of radiant energy from the ether and by this means chlorophyll renders carbon dioxide and water reactive in the presence of light. Moore claims photosynthesis occurs throughout the spectrum and that chlorophyll acts as a color screen to protect the organism against the injurious effects of blue and ultra violet rays. Investigations of Briggs seem to indicate the presence of some other factor in addition to chlorophyll necessary for the photosynthetic activity of leaves, and this factor increases with age during the early stages of leaf development. Coupin found etiolated cotyledons and leaves require from 1 to 5 days in maximum light to develop chlorophyll. Starvation due to absence of light required 15 to 60 days with different plants. Wurmsier found that for equal amounts of absorbed energy photosynthesis was most active in the green light where absorption is the least.

Experiments have been reported in Germany and elsewhere on the effect of added amounts of carbon dioxide on plant growth, and where largely increased amounts of the gas were avail-

able increases in crop production of from 18 to 210 per cent were reported. Frenkel found plants grown under glass jars absorbed carbon dioxide very rapidly and Gradenwitz reports increased growth and fruit production in greenhouses supplied with purified carbon dioxide from waste gases of industrial works. Tjebbes and Uphof claim large financial benefits from growing plants under electric light when carbon dioxide was freely added to the atmosphere.

Studies were reported on the effect of poison gases, etc., on plants. Mieghe found chloropicrin is decidedly detrimental to the germination of grass seeds. Guerin and Lormand found exposure of plants for two hours to small amounts of chlorin, chloropicrin, bromacetone, and mustard gas caused the leaves to fall without any other injury to the plants. Ewert claims the injury to plants by coal tar is due very largely to anthracene. Ciamician and Ravenna found butylamin causes albinism in leaves. Isoamylamin is even more active in this respect. Plants that contain specific poisonous compounds are immune to the toxic effect of the same poisons.

PLANT BREEDING. Bonnier has reported on thirty years' experiments in transferring lowland plants in the same soil to mountains and he claims they now show the same characters as typical Alpine species of the same genera. He claims the environment is one of the principal causes of transformations in organisms. Rawson reports that by screening plants at selected intervals of daylight, latent potentialities are brought out that are fixed without further screening. A double poppy is said to have been produced in this manner. Anthony has given an account of selection experiments with violets in which definite strains were secured. The occurrence of asexually inherited differences is considered due to their presence before the experiment began and not to the advent of new characters.

Brainard and Peitersen, from an extended study of blackberries in New England, claim there is no question of hybridization being responsible for the production of new species in this group. Stomps has taken exception to the claim of Correns that white variegation in *Eurotia* is due to disease. Saunders claims that chromosomes are the hereditary mechanism in plants as well as in animals and that the cytoplasm, aside from the nucleus, has no special hereditary function. Richey has shown marked inequalities in three sets of reciprocal maize crosses which he attributes to inequality of food materials furnished by the pistillate plants, as well as to different reactions of the germ plasma.

East and Jones claim high protein strains of maize can be obtained more quickly by the isolation and recombination of homozygous high protein strains than by the method of mass selection. Kempton described a dwarf type of maize that appeared in the F₂ generation of a cross between Algerian pop corn and Chinese waxy endosperm maize. The new form is believed to be especially valuable for dryland agriculture.

There were published during the year a large number of contributions to various phases of plant breeding but their technical character prevents adequate notice in this place. Considerable attention has been given to the breeding of plants resistant to diseases, and progress has been reported in securing varieties of important crops

that are quite resistant and in some cases immune to destructive diseases. Evidence has been submitted by Hodson, Collins, and others that seems to indicate that the American chestnut is acquiring a degree of resistance to the chestnut blight. In most cases cited resistance to disease appears to be inherited by the progeny of the new varieties.

PLANT DISEASES. The Plant Disease Survey of the U. S. Department of Agriculture reported reduced crop production due to diseases in 1920 as follows: Wheat, 104,129,000; oats, 78,199,000; corn, 220,862,000; potatoes, 119,474,000; sweet potatoes, 39,150,000; peaches, 10,505,000; apples, 47,474,000 bushels and cotton, 2,002,000 bales. Extreme heat and lack of moisture in many portions of the country in 1921 very greatly reduced the losses of many crops through the nonappearance or late attack of destructive diseases. The stem rust of wheat was less abundant on winter and spring wheat in the United States than has been the case for several years.

The white pine blister rust, that has been present for some time in the white pine area from New England to Wisconsin and Minnesota, was found on currants and gooseberries in Wayne County, Pa., during the year. Continued efforts are being made to control this disease by the destruction of currants and gooseberries that serve as alternate hosts of the fungus. Since the beginning of this work 123,034 acres of land have been cleared of these shrubs at a cost of 51.5 cents per acre. Late in 1921 the fungus was found on planted pine trees at Vancouver, British Columbia, and on cultivated black currants in other places in that vicinity. It has also spread to northwestern Washington. Studies made in Europe have shown the western white pine and sugar pine are readily attacked by the fungus causing the blister blight and the presence of the fungus in this region threatens the destruction of timber valued at over \$220,000,000. The chestnut blight is steadily spreading southward and westward through the Appalachian Mountains. Eight additional counties in West Virginia, three in Virginia, and seven in North Carolina were reported infested in 1921. In New Jersey and Pennsylvania where the disease has been present for some years less than 1 per cent of the original chestnut trees are alive.

The Florida Plant Board reported no new nursery infections of citrus canker for the quarter ended Sept. 30, 1921, and only 5 infected orchards within the State. No new infections have been observed since 1920. Citrus canker now appears to be under control throughout the Gulf region where it has prevailed for some years. Plant pathologists throughout the sugar cane-producing countries are giving much attention to the mosaic or yellow stripe disease. Described in Java in 1898, this disease has spread to many of the most important sugar-producing countries, and during the past year it has been found in all the sugar producing areas of Louisiana. The extent to which it reduces yields has not been determined. Experiments in Porto Rico seem to show that roguing the fields, reducing the number of ratoon crops and planting resistant varieties of cane offer means of control.

The same disease apparently attacks corn and a number of grasses. Mats reports the presence of a plasmodium-like body in infected areas of diseased canes, and Kunkel has confirmed their

presence in corn attacked by mosaic. In Hawaii the disease on corn is said to be much more destructive than on sugar cane. Wilbrink has studied sugar cane gummosis in Java and claims the disease is due to anaerobic bacteria. This disease has recently appeared in Porto Rico where it is causing some loss.

Thomas and Kirby, who reported the suspected presence of take all of wheat in New York in 1920, have made additional studies of the disease and found it was due to *Ophiobolus graminis* identical with that species as known in Europe, Australia, and elsewhere. Apparently the same fungus is reported as having been observed in 1921 in wheat fields of Indiana, Arkansas, and Oregon. Outbreaks of a foot disease of wheat are reported in Illinois, Kentucky, and Kansas but they have not been definitely connected with the take all fungus. The flag smut of wheat due to *Urocystis tritici* reported in Madison County, Ill., in 1919 has spread somewhat in the original area and is now known to be present in an adjoining county.

A downy mildew of wheat caused by *Sclerospora macrospora* was reported in several localities in Tennessee and Kentucky. An additional downy mildew of corn, sugar cane, and various grasses in the Philippines was described by Weston. Mackie reported a new disease of wheat in California due to *Leptosphaeria* sp. A severe epidemic of ergot on rye and durum wheat was reported in North Dakota. Root, stalk, and ear rots of corn due to *Gibberella saubinetii*, *Fusarium* spp., etc., were of common occurrence during the past season causing considerable losses. The corn ear worm was very prevalent in the corn-growing States during 1921 and an increased amount of kernel rot and moldy corn is reported. *Cephalosporium sacchari*, a fungus originally described on sugar cane in India, was reported by Manns and Adams for the first time as a parasite of corn in this country.

The Plant Disease Survey and various state organizations are continuing their search for the potato wart disease due to *Chrysophyctis endobiotica*, and report it in three new localities in Maryland and two in Pennsylvania. Potato wart seems to be confined in this country to gardens in certain mining and lumbering districts of Pennsylvania, Maryland, and West Virginia. Investigations conducted in Europe indicate the organism may remain active in the soil for eight years or more. During 1921 potato wart was discovered in five districts in Holland near the German border. Considerable attention was given to certain obscure diseases of the potato that appear to be transmissible but the exact causes of which are as yet unknown. Among this complex of diseases, mosaic, leaf roll, net necrosis, spindling sprout and others have been differentiated.

Early in the spring of 1921 Smith and McKenney reported a dangerous disease of tobacco due to *Peronospora hyoscyami* present in Florida and Georgia. This fungus was known to attack tobacco in seed beds in Australia, South Africa, and elsewhere but it had not hitherto been recorded in cultivated tobacco in this country. Wildfire, a bacterial disease of tobacco, appeared in a number of new localities in the United States.

A large number of new plant diseases were described during the year, some of which, together with the attributed causes, are given below.

Leaf spot of celery (*Pseudomonas apii*), rot of lettuce and celery (*Sclerotinia minor*), bud rot of cannas (*Bacterium cannae*), tomato leaf spot (*Bacterium exiliatum*), cotton blight (*Phoma* sp.), leaf spot of velvet beans (*Aplanobacter stizolobii*), bacteriosis of barley (*Bacillus cerealeum*), rot of rhubarb (*Phytophthora terrestris*), peony bud rot (*Phytophthora* sp.), collar rot of tomato (*Verticillium lycopersici*), bacterial disease of castor beans (*Bacterium solanacearum*), bacteriosis of gladiolus (*Bacterium marginatum*), nematode disease of bananas (*Tylenchus musicola*), nematode disease of coconuts (*Aphelenchus cocophilus*), etc.

G. Hall, *Diseases of Economic Plants*, rev. ed. (New York, 1921); J. J. Taubenhause, *Diseases of Greenhouse Crops* (New York, 1920); R. W. Thatcher, *Chemistry of Plant Life* (New York, 1921).

BOTKIN, JEREMIAH DUNHAM. Clergyman and former member of Congress, died at Liberal, Kansas, December 29. He was born in Logan County, Ill. April 24, 1849, and ordained to the Methodist Episcopal ministry. He was presiding elder 1886-92. He was a republican at first but became the prohibition candidate for governor in Kansas in 1888 and afterwards became a Populist. He was a member of the 55th Congress. In 1913-15 he was warden of the State Penitentiary at Lansing, Kansas.

BOURGET, HENRY. See NECROLOGY.

BOURQUELOT, EMILE. See NECROLOGY.

BOUTROUX, EMILE. French philosophical writer died in Paris, November 22. For many years he had been the head of the institution known as the Thiers Foundation. He was born at Montrouge in 1845. His philosophical work brought him the position of professor at the University of Paris and in 1912 he was elected to the French Academy. His writings have been widely read throughout the world and are distinguished for clarity of expression as well as for their point of view. He was a teacher in philosophy of M. Bergson and a friend of William James. In the latter part of his life he served as president

of the Institute. During the war teaching at the Thiers Foundation ceased and the building was converted into a hospital for wounded officers. Among his writings may be mentioned the following: *De la contingence des lois de la nature*, which contains a profound criticism of the doctrine of necessity (1874; 6th ed., 1907); *De l'idée de loi naturelle dans la science et la philosophie contemporaines* (1895; Eng. trans., 1911); *Questions de morale et d'éducation* (1895; 4th ed., 1905), Eng. trans. by Fred. Rothwell, as *Education and Ethics* (1913); *Pascal* (1900; 4th ed., 1907; Eng. trans., 1902); *William James* (1911, 2nd ed., 1912, Eng. trans., London, 1912); *Henri Poincaré* (1913).

BOWDITCH, CHARLES PICKERING. Antiquarian and trustee or director of archaeological and other institutions, died, June 1. He was born at Boston, Mass., Dec. 30, 1842; graduated at Harvard, 1863, and was an officer of important manufacturing and commercial institutions in Massachusetts. He served during the Civil War, becoming captain of the Fifth Massachusetts Volunteer Cavalry in 1864. He was a member of many scientific and learned societies in the State and elsewhere, including well-known associations of archaeology, ethnology, history, natural history, geography, etc.

BOWDOIN COLLEGE. An institution of the higher learning at Brunswick, Me.; founded in 1794. The enrollment for the fall of 1921 was 458, and there were 34 members of the faculty, of whom 3 were added in the course of the year. The productive funds amounted to \$2,683,367 and the income to about \$200,000. The college library contained 125,000 volumes. There was a marked decrease in the number of students taking the more humanistic courses and a larger number in Chemistry and Economics. About \$250,000 had been raised toward additional endowment funds of \$600,000. Bowdoin Medical School discontinued during the year. President, Kenneth Charles Morton Sills.

BOWEN, WILLIAM ABRAHAM. Editor and publisher, died, April 15. He was born at Bagdad, Fla., April 14, 1856; studied at the Southwestern University of Texas; owned and edited the *Advance Guard* at Decatur, Texas (1873-74); founded the *Montague News* (1874); and was for five years political editor of the *San Antonio Daily Express* and from 1886 to 1890 was on the editorial staff of the *Chicago Times*. He subsequently served on the staff of various papers in Texas; and in 1908 he founded the Arlington Printing Company, of which he was president. He was editor and owner of the *Farmer's Fireside Bulletin* and the *Arlington Journal*. He wrote: *Chained Lightning* (1883); *Why Two Methodist Episcopal Churches in the United States?* (1901); *Uncle Zeke's Speculation* (1910).

BOWLING. The twenty-first annual tournament of the American Bowling Congress was held at Buffalo, N. Y., in March. Fred Smith of Detroit won the individual championship with a score of 702. F. Snyder of Erie, Pa., was second with 686. The other winners were: Doubles, O. Kallusch and A. Schieman, Rochester, N. Y., 1314; five-man team, The Saunders, Toronto, Canada, 3066.

BOXING. The battle between Jack Dempsey of the United States and Georges Carpentier of France for the heavyweight championship of the world undoubtedly attracted more widespread

interest than any other sporting event of 1921. The contest took place in an open-air arena at Jersey City on July 2 and drew a throng of wildly-excited fans to the number of 80,000. The receipts of the bout amounted to the huge sum of \$1,552,422, setting a new record in this regard. The battle itself was replete with thrills despite its brevity, the sympathies of a vast majority of the spectators being with the Frenchman. The first real "action" came in the second round when Carpentier landed squarely on Dempsey's jaw, staggering the American for a few seconds. But the Frenchman was unable to follow up his advantage and soon the superior weight and condition of Dempsey began to tell. The end occurred in the fourth round when Carpentier went down for the count.

The bantamweights proved the most popular class, the championship changing hands twice during the year. Joe Lynch first captured the title from Pete Herman only to lose it again to the same boxer who in turn was forced to bow before Johnny Buff, the present champion. Benny Leonard had no difficulty in successfully defending his lightweight laurels and barring Lew Tendler. There seems to be no one capable of displacing the champion. Johnny Wilson retained his middleweight title but failed to make an impressive showing in any of his bouts of the year. Johnny Kilbane, the featherweight champion, met no opponents of sufficient skill to jeopardize his standing.

The championships of the Amateur Athletic Union were held at Boston in April, the results of the final bouts being: 108-pound, John Hamon, Pittsburg, defeated Willie O'Connell, New York, 3 rounds; 115-pound, George Daley, New York, defeated Pascal Colletti, New Orleans, 3 rounds; 125-pound, Dan Gartin, Philadelphia, defeated Ray Rodgers, Pittsburg, 3 rounds; 135-pound, Ben Ponteau, New York, defeated Edward Crozier, New York, 3 rounds; 145-pound, Charles Jenkissen, Los Angeles, defeated Henry C. Bohlin, Brockton, 2 rounds; 158-pound, Sam Lagonia, New York, defeated B. Feeney, New York, 4 rounds; 175-pound, Magnus Larson, New York, won by default from Roggo Milane, Quincy; heavyweight, Gordon Munce, New York, defeated James Flavin, Boston, 2 rounds.

BOY SCOUTS OF AMERICA. A movement similar to the Boy Scout Movement in Great Britain, founded by Sir Baden Powell. The organization was established under the title of Boy Scouts of America in February, 1910, and incorporated by Act of Congress in June, 1916. Membership at close of 1921 numbered 403,156 scouts and 120,430 scout leaders, a number greater than the combined scout membership in all other countries of the world according to latest report of the International Scout Bureau at London. The governing body of the organization is known as the National Council. Wherever practicable local councils are organized throughout the country to supervise the scouting activities in a given community or district. In 1921 there were 611 such local councils in operation, 416 of these being what is known as First Class Councils, that is, councils supporting paid executives and maintaining permanent local headquarters. The entire United States is also divided into 12 so-called regional scout districts, each including several States and each under the

supervision of an official appointed by the National Council, known as a Regional Scout Executive.

Scouts are organized into Troops (maximum membership 32 boys) each troop in turn being made up of Patrols, of eight boys each, each patrol under the direction of a boy leader. Every troop is under the charge of a Scoutmaster, who holds a commission from the National Council and must be an adult American citizen of proved fitness for boy leadership. The Scoutmaster may have one or more assistants who must be at least 18 years of age and are preferably young men who have themselves come up through the Scout ranks. Twelve years is the minimum age for a scout. There is no upward age limit. Older boys find plenty to interest them in advanced and specialized scout activities and not infrequently develop naturally into scout instructors and leaders.

Troops are usually formed in connection with churches, schools, clubs, or other institutions, though in some cases a group of representative citizens interested in boy welfare makes itself responsible. Each troop is under the direct sponsorship of three or more adults known as a troop committee, who selects the Scoutmaster and are responsible for the proper execution of the scout programme within the troop.

The movement is non-sectarian, non-military, and non-political. It is founded on a platform broad enough to meet the needs and interests not alone of one class or type of boy in any one locality, but of all boys everywhere. Its underlying objectives are character building and citizenship training, the "making of real men out of real boys." The Scout Motto is "Be Prepared." The purpose of the organization, as stated in the National Constitution is "to promote, through organization and cooperation with other agencies, the ability of boys to do things for themselves and others, to train them in scoutcraft, and to teach them patriotism, courage, self-reliance, and kindred virtues, using the methods which are now in common use by the Boy Scouts, by placing emphasis upon the Scout Oath and Law for character development, citizenship training, and physical fitness." The oath taken by the scout requires him upon his honor to do his duty to God and his country, and to obey the scout law; to help other people at all times; and to keep himself physically strong, mentally awake, and morally straight. The Scout Law enjoins the members to trustworthiness, loyalty, cleanliness, helpfulness, courage, courtesy, etc., and particularly to the fundamental scout obligation of the daily Good Turn.

The scout programme is regarded generally as the best system and recreation education for boys yet devised. Its activities include swimming, hiking, camping, first aid, signaling, nature study, knot tying, bridge building, etc. The scout progresses successively through the Tenderfoot, Second, and First Class ranks, each of which has certain definite and increasingly difficult requirements, after which, the whole field of Merit Badge subjects is open to him, ranging from aviation, to apiary, from music to masonry, 67 subjects in all. Qualifying in a certain number of these, a scout may achieve Life, Star, or Eagle rank, the latter rank the highest in Scouting standing for proficiency in at least twenty-one

Merit Badge subjects. In 1921 there were 110,836 Merit Badges awarded; 2667 qualified as Life Scouts, 2589 as Star Scouts, and 1306 as Eagle Scouts. Seascouting is a branch of regular scouting open also to older scouts and proving in the few years since its establishment, both popular and profitable.

During the war scouts did notable service in the sale of Liberty Bonds and War Saving Stamps, locating black walnut timber, collecting peach pits, and operating war gardens at government request, as well as serving the Red Cross, War Community Service, American Library Association, Salvation Army, etc. Since the war their community service has been varied and important. They have coöperated with Forestry Departments in fighting and preventing forest fires, helped conserve wild life, planted trees, conducted clean-up and safety-first campaigns, acted as traffic aides and firemen's aides, guarded dangerous crossings, saved hundreds of lives by their knowledge of first aid and emergency service, and performed millions of individual and troop Good Turns. During the year the National Court of Honor awarded for conspicuous acts of courage and efficiency in the saving of life 3 gold medals, 64 silver medals, and 80 bronze medals. Thirty letters of commendation were written.

The Scouts participated in the ceremony for the Unknown Dead and the Disarmament Conference in Washington. Hon. Warren G. Harding is Honorary President; Honorary Vice-Presidents are Woodrow Wilson, William H. Taft, Daniel Carter Beard, and William G. McAdoo. The active officers are as follows: Colin H. Livingstone of Washington, D. C., president; James E. West, Flushing, N. Y., Chief Scout Executive; Mortimer L. Schiff, New York, N. Y., vice-president; Milton A. McRae, Detroit, Mich., vice-president; Harold F. McCormick, Chicago, Ill., vice-president; Benjamin L. Dulaney, Bristol, Tenn., vice-president; Arthur Letts, Los Angeles, Calif., vice-president; and George D. Pratt, New York, treasurer. The National Headquarters of the organization are at 200 Fifth Avenue, New York City.

BRAIN, Sir F. W. T. See NECROLOGY.

BRANDT, MARIANNE (MARIE BISCHOF). German operatic singer, died at Vienna in July. She was born in Vienna in 1842 and studied at the Conservatory there. She was associated with the Royal Opera at Berlin from 1868 to 1886, and in the latter year went to New York where she sang at the Metropolitan Opera House for several seasons in contralto rôles under Seidl. Besides an exceptionally rich contralto voice she possessed unusual talent as an actress and in her prime was one of the chief German contraltos. She was especially successful in Wagnerian parts. After 1890 she retired from the stage and taught singing at Vienna.

BRANN, HENRY ATHANASIUS. Roman Catholic priest, died in New York City, December 28. He was born at Parkstown, Ireland, Aug. 15, 1838; came to the United States at the age of twelve, and was educated at Catholic colleges at Wilmington, Del., and New York City; and studied for the priesthood in Paris and at the American College in Rome, graduating at the last-named institution in 1862,—its first alumnus. On returning to the United States he was made a

professor at Seton Hall and vice-president of the College. He was director of the Seminary at Wheeling, W. Va., from 1868 to 1870; and was for ten years pastor at Kingsbridge and Fort Washington, New York City. From 1890 to the time of his death he was rector of St. Agnes in New York City. For thirty years he was active in political affairs and matters of public interest, and was well known not only as a preacher but as a writer and lecturer. He was an ardent supporter of the movement for Irish Independence.

BRANTING, HJALMAR. Swedish Socialist, recipient of the Nobel Peace Prize in 1921. He was born in 1860, and at an early age went into journalism and acquired wide influence as editor of a Socialist newspaper, the *Social Democrat* of Stockholm. In March, 1920, he became prime minister, being the first Socialist to hold that office, and his ministry lasted until December, 1920. After the elections of 1921 when the Socialists secured a majority, he again formed a cabinet, October 11, and was still prime minister when the prize was awarded to him. He was a strong supporter of peace along the lines of the Wilson programme at the Peace Conference, and he was prominent in the various meetings of the Socialists and in discussions of international policy during and after the war.

BRAUN, MARCUS. See NECROLOGY.

BRAZIL, UNITED STATES OF. A federal republic of South America, the largest country on the continent. Capital and largest city, Rio de Janeiro.

AREA AND POPULATION. The area is estimated at from 3,275,510 square miles to 3,280,900 square miles, which is divided into twenty states and one territory. The population according to the census of 1900 was 17,318,556, and according to preliminary figures of the census of 1920, 30,645,296. The density is given at about 9.3 per square mile. The population includes about 600,000 native Indians who are found in the Amazon area. Rio de Janeiro in 1913 had a population of 975,818 and in 1920 of 1,157,873; São Paulo, 450,000 in 1913 and 504,300 in 1919. Other cities with their populations as estimated in 1913 are: Bahia, 348,130; Pernambuco, 216,484; Belem, 275,167; Porto Alegre, 150,343. From 1820 to 1919 the immigration amounted to 3,576,275 of which nearly one-third entered between 1908 and 1919. The leading elements have been in their order: Portuguese, Spaniards, Italians, and Germans. The number of immigrants that entered Brazil during 1920 was 71,026, according to official figures; 33,883 of this number came from Portugal, 10,005 from Italy, 9136 from Spain, 4853 from Turkey, and 4120 from Germany. In 1921 the government was continuing its policy of encouraging immigration with a view to agricultural development and a measure was before Congress for the purpose of promoting plans among the several states for colonization and the cultivation of idle lands. Among the advantages proposed to prospective colonists were free board and rent for a period of eight days and the advance of a small sum for the purchase of agricultural tools and free transportation.

EDUCATION. Primary education is free but not compulsory. In 1914 there were 12,744 primary schools with 700,120 pupils and 20,590 teachers; and 327 secondary schools with 30,258

pupils; and 151 professional schools with 19,294 pupils. For higher education there is the University of Rio de Janeiro founded Sept. 17, 1920. There are also 25 faculties which confer degrees; besides various military, engineering, commercial, industrial, normal, fine arts, and other special or technical institutions.

PRODUCTION. The chief occupation is agriculture, though only a small part of the country has been brought under cultivation. The chief product and by far the most important article commercially is coffee. The single state of São Paulo supplies four-fifths of the world's coffee. The average annual production of coffee has been placed at about 12,000,000 sacks, a sack weighing 132 pounds. In 1920-21 the production was estimated at 7,143,000 sacks, and for 1921-22 at 7,104,000 sacks. Next to coffee in importance are: Rubber, sugar, tobacco, mate, cotton, timber, cocoa, and nuts. Brazil furnishes about one-half the supply of India-rubber which is grown chiefly in the forests of the Amazon and the districts of Para, Ceara, and Manaus. The rubber crop in 1917 was 41,500 tons; the cotton production in 1919 was estimated at 119,500 tons; the sugar output, 1920-21 at 612,899 metric tons, and, 1921-22, at 526,116 metric tons; and the average tobacco output at 50,000,000 kilos. Mineral resources include: Coal, gold, diamonds, petroleum, manganese, monazite, mica, talc, copper ore, platinum, etc. The chief manufacturing industry is cotton-weaving which has greatly developed of late years. In 1918 there were 202 cotton factories with 78,186 workmen. Other important industries are silk which has latterly been developing, tobacco manufacturing, and brewing.

COMMERCE. The following official figures give a comparative study of the development of Brazil's foreign trade. Amounts are given in milreis, the exchange value of which averaged about \$0.24, United States currency, in 1916 \$0.25 in 1918, and \$0.25 in 1920.

Countries of origin	1916 Milreis	1918 Milreis	1920 Milreis

Japan.....	467,000	6,168,000	10,687,000
Total importation	810,759,000	989,404,000	2,090,633,000

NOTE.—Beginning with 1918, the importations are according to countries of consignments.

It can be seen from these figures that the increase of imports from the United States during the period from 1916 to 1920 was 177 per cent, while the increases for Great Britain and Japan for the same period amounted to 274 per cent and 2280 per cent, respectively. In the two years

since the war Germany has enjoyed an increase of 3268 per cent. The following table shows the distribution of these imports by states or customs districts:

States	1916 Milreis	1918 Milreis	1920 Milreis
Rio de Janeiro.....	358,009,000	460,426,000	966,795,000
Sao Paulo.....	215,572,000	257,700,000	613,457,000
Rio Grande do Sul.....	51,711,000	79,558,000	144,189,000
Pernambuco.....	49,493,000	70,568,000	138,431,000

Total.....	1,136,888,000	1,137,100,000	1,752,411,000

In the sugar trade the United States has latterly taken first place among the purchasers. In 1917-18 Argentina had by far the largest share. In 1919 the United States rose to the first place, and in 1920 took double the amount of Great Britain which stood next in order. In the latter year the United States imported about 58,000 metric tons, the total exportation from Brazil being 109,000 metric tons.

The chief countries of destination for the

coffee exports in 1920 were as follows: United States, 6,246,000 bags; France, 1,539,000 bags; Italy, 1,002,000 bags; and the following countries in their order: Germany, Sweden, the Netherlands, Belgium, Argentina, Denmark.

Statistics published in the autumn showed imports for the first half of 1921 at £38,485,000 as compared with £72,763,000 in the last six months of 1920. An attempt to deal with the depression of exchange took the form of an emergency bill. Imported merchandise was relieved of storage charges at the custom houses up to October 31; the government was endeavoring to secure from the railway companies a reduction of freight rates; the selling of products manufactured in Brazil as imported goods was prohibited under a severe penalty.

FINANCE. The real is the unit of currency but the common denomination is milreis consisting of a thousand reis. A canto equals a thousand milreis. In 1921 the revenue was estimated at 102,005,000 gold milreis and 624,761,000 paper milreis; the expenditure at 75,680,000 gold milreis and 711,640,000 paper milreis. The budget bill presented to the budget committee of the Brazilian Chamber of Deputies estimates the revenue for 1922 at 98,486,320 gold milreis and 660,363,000 paper milreis and the expenditures at 75,089,605 gold milreis and 734,753,244 paper milreis. A comparison of the total amount of the revenue and expenditure shows a balance of 23,396,715 gold milreis and a deficit of 74,390,244 paper milreis. On August 30 the second half of the issue of \$50,000,000 in twenty-year eight per cent gold bonds of Brazil was offered for sale in New York and was almost immediately over-subscribed.

RAILWAYS. Of the total mileage, 18,708, open for traffic March 31, 1919, 9455 miles belonged to the Central government; 6231 miles to private owners; and 1527 to the states, the chief owners among the states being São Paulo and Minas Geraes. During the year a project was set on foot for a third railway in the state of Matto Grosso, which would act for the future development of this rich section of Brazil. One of the existing railway lines connected the two navigable stretches of the Madeira river, while the other, crossed the southern part of the state, connecting the Paraná and Paraguay rivers. The proposed line which was considered even more important in its possibilities was to commence at the Agua Clara station on the Northwest of Brazil Railway and, with an extension of approximately 620 miles, reach Cuyaba, after having passed by Bahu, Santa Rita do Araguaia, and the important village of Rondonopolis.

It was also planned that this railway should form the trunk line of a system of future railways along the Madeira river and other important tributaries of the Amazon.

During the year the American electric freight locomotives shipped to the Paulista Railway of Brazil was put in service in that country between Jundiáhy and Louveira. These locomotives haul trains of from 43 to 45 units over grades as steep as 1.5 per cent. The so-called "unit car" of 10 tons gross weight and the term referred to the old wooden car of 30 years previous. Modern cars were said to be two, three, or four units according to their size and load. Thus a train of 45 units represented 450 tons weight and was approximately 675 ft. long.

Under former steam operation such trains could not be carried over a 1.5 per cent grade at a speed greater than about nine miles an hour. The electric locomotives negotiated such grades at 29 miles an hour.

Another important railway project discussed during the year had as its aim to connect Brazil and Paraguay making the latter country independent of Argentina for outlet to the Atlantic. In addition the new railway would open the Paraguayan market to the Paulista manufacturing interests of Brazil and create a stronger current of trade between that country and the north-eastern provinces of Argentina. A bill was introduced in the Brazilian Congress granting to the state government of either São Paulo or Paraná a concession to build a line from Santa Cruz to Rio Pardo, the terminus of one of the lines of the Sorocabana railway system, to some point on the Rio Paraná between the Guayra Falls and the mouth of the Iguassu, and also to build another connection from Guarapuva to some point on the main line to be constructed, thus offering another outlet by way of Curytiba to the Atlantic at Paranaguá. This concession would carry with it a subsidy of \$44,000 a mile and if neither state cared to take advantage of the plan it would be offered to the highest bidder, and failing offers by private interests, the government would construct the line.

A connection thus effected between São Paulo and Corrientes would offer an economy of 684 miles over the existing roundabout route by Buenos Aires, and would soon correct the unfavorable trade balance suffered by Brazil in its commerce with Argentina. There are several different schemes being advanced by the various promoters, and it was considered possible that the bill might be altered before it was finally enacted.

SHIPPING. The merchant shipping of Brazil comprises 588 steamships of 433,000 tons and 55 sailing vessels of 17,920. In that year 23,126 vessels entered with a tonnage of 17,954,320 and 23,170 cleared with a tonnage of 17,946,010.

POSTS AND TELEGRAPHS. In 1920 the post offices numbered 3,696. In 1919 there were 54,536 miles of telegraph line.

GOVERNMENT. Executive power is vested in the President, elected directly by the people for four years and ineligible for the succeeding term. Along with him the Vice-President is elected in the same manner. Legislative authority is vested in the National Congress, which consists of the Senate and the Chamber of Deputies. The Senate has 63 members elected by direct vote for three years and the Chamber of Deputies, 212 members elected by direct vote for three years on the basis of proportional representation. The President in 1921 was Dr. Epitacio de Silva Pessoa elected for the term 1918-22 and the Vice-President, Francesco Alvaro Bueno de Paiva.

Measures toward improving relations between Brazil and Paraguay were being taken in the latter part of the year. Conferences were held between the secretaries of state of both countries and plans were under discussion for the hastening of the construction of the railway from Santos to Asuncion which would supply the capital of Paraguay with a direct rail route to the Atlantic; also a measure for wireless communication between Rio de Janeiro and Asuncion. BREMER, ALEXANDER. American violinist, died in New York, January 5. He was born in Copenhagen, Jan. 15, 1850, and came to the United States in 1867. For more than twenty years he played in some of the larger symphony orchestras, and for twelve years served as president of the Musical Mutual Protective Union.

BRETHREN, CHURCH OF THE. A religious denomination, commonly known as "Dunkers"; organized in 1708 at Schwarzenau, Germany. It comprised in 1921 a total of 1014 churches with total membership of 108,936. There are 3551 ministers. Foreign mission work is carried on in Denmark, Sweden, China, and India, with a mission in Africa in contemplation for 1923. Workers in foreign fields in 1921 numbered 120. Of these, 13 are at present on furlough, 7 were appointed in 1920, and 5 in 1921. The work of home missions is carried on through the medium of 48 district boards. Receipts for missionary work for the year amounted to \$295,384.52; for other relief work \$142,238.95; 1921 marked the second year of the Five-Year Movement in the church. The programme consists of general expansion in membership, missionary, and educational fields. The denomination maintains ten colleges with total enrollment in 1921 of 2397 students. The enrollment of the Sunday Schools was 107,808. There are more than 1200 schools and twelve thousand officers and teachers. The headquarters of the various church boards are located in Elgin, Ill., including the General Mission Board, General Educational Board, General Sunday School Board, General Christian Workers Board, Temperance Board, General Relief Committee, and the Peace Committee. The publishing house is also at Elgin, Ill. The official organ of the denomination is the *Gospel Messenger*.

BRIAND, ARISTIDE. Prime Minister of France, assumed office January 16. He was born in 1863 and after studying law devoted himself to journalism and politics. During the early part of his political career he was known as a Socialist of radical tendencies and accused of revolutionary aims, as well as of violent anti-clericalism. He was elected to the Chamber in 1902 as a Socialist-Radical. His first important appointment was that of Minister of Education in 1906 and as such it was his duty to carry into effect the law of separation of church and state. To the surprise of his critics he showed great tact and moderation in the execution of this measure, with the result that little friction ensued. On July 23, 1909, he succeeded M. Clemenceau as Prime Minister and held office until February, 1911. It was during this administration that he dealt in summary fashion with the great railway strike which threatened to bring the whole industrial life of the country to a standstill. He resorted to the simple expedient of calling to the colors the railwaymen as reservists. The other cabinets of which he was successively Prime Minister down to that of 1921, were: Jan. 21, 1913, to March, 1913, and Oct. 29, 1915, to Dec. 12, 1916. In politics Briand has always been regarded as one of the strong men of

France and there has been a popular acceptance of his own description of himself as a "tenacious Breton." He has also won great renown for his eloquence as a public speaker. The policy as announced by the new Prime Minister involved the following points: Disarmament of Germany and the execution of the Treaty; payment by Germany of her just dues to France; execution of those aims in close union with England and the other Allies; nonintercourse with the Russian Soviet government but abandonment of aggressive Anti-Bolshevist campaigns; the maintenance of a strong army but with a reduced period of military service; return to normal conditions of finance, agriculture, and industry; reconstruction of the devastated regions along the lines of decentralization; prompt relief of unemployment; recognition of war victims as first creditors of the nation; in general, an appeal to the stable majority of the nation as against the extremists on either side.

BRICKS. The average price per unit in all kinds of ware except vitrified brick increased considerably more in 1920 than in 1919. Common brick increased in price 35 per cent; face brick, 34 per cent; hollow building tile, 47 per cent; vitrified brick or block, 18 per cent; and fire brick, 22 per cent. The average increase in price in all these wares from 1916 to 1920 was 124 per cent. The structural clay products as a whole (mainly brick and tile) produced in 1920 were valued at \$147,640,000, or 57 per cent of the total of all brick and tile products, as compared with \$102,850,000 in 1919 and \$66,209,300 in 1918. Engineering products (vitrified brick, sewerpipe, and drain tile) rose in value from \$37,800,000 in 1919 to \$47,340,000 in 1920, or 18 per cent of the total brick and tile products. Refractories (fire brick and stove lining) increased in value from \$36,900,000 in 1919 to \$53,640,000, or 21 per cent of the total. Miscellaneous products constituted 4 per cent of the total value in 1920. Common brick was the leading product in quantity and value in 1920, as it had always been except in 1918, when, on account of war restrictions and the unusual demand for fire brick, common brick was relegated to second place in value. The output in 1920 was 4,709,000,000 brick, an increase of 156,333,000 brick over the output in 1919. Notwithstanding this gain the output of 1920 was the smallest recorded by the Survey except the output of 1919 and that of 1918 and was less than one-half as large as the maximum, which was in 1906. The value of this product, \$81,330,000, was the highest recorded and represented an increase of \$23,110,000 over 1919. This was the largest gain recorded by a clay product in 1920. The average price per thousand in 1920, \$17.27, was also the highest recorded. In 1919 the average price was \$12.79.

BRIDGES. In 1921 there was active discussion and preparation of plans for long spans and important bridges generally, as well as a certain amount of minor construction. At New York, Philadelphia, Detroit, and elsewhere large projects were discussed and furthered. These aroused the interest of engineers as well as the general public and their discussion was followed with more than ordinary concern. An important discussion of the year was presented before the Philadelphia Section of the American Society of Civil Engineers by Gustav Lindenthal on Nov. 7, 1921, in which he not only referred

to the Delaware River bridge, mentioned below, but discussed long-span bridge design in general, having been a leading worker in this field in American bridge work. This paper slightly condensed was published in *Engineering-News-Record* (New York), Nov. 24, 1921, p. 861, vol. 87, and contained a remarkable outline of long-span bridge fundamentals worthy of consideration in connection with Mr. Lindenthal's own designs as well as others under course of development.

DELAWARE RIVER BRIDGE. The Delaware River Bridge Commission, composed of the interstate bridge commissions of Pennsylvania and New Jersey, on June 23, 1921, approved the recommendations made by the board of engineers appointed in October, 1920, and consisting of Ralph Modjeski, chairman, George S. Webster, and Laurence A. Ball. The commission adopted the Franklin Square location, as against the Spring Garden Street and Washington Square locations advocated by various interests. The first named location, it stated, was the most suitable to "convey traffic to its desired destination with economy and directness." The commission also approved the adoption of the suspension bridge design, and provided for the organization of the Engineering Staff for the immediate preparation of contract plans.

The city council of Philadelphia later made the necessary appropriation of money for construction, which was necessary to legalize further steps in construction. The States Pennsylvania and New Jersey also had appropriated sums to cover their contributions to the cost of the bridge, the amount required from the State of New Jersey being estimated at \$2,500,000.

The design of the suspension bridge as recommended provided for a central span of 1750 feet, or 150 feet longer than the longest existing suspension bridge. The distance from anchorage to anchorage was 3536 feet and the total length of the bridge structure including approaches was 8126 feet. The central span was at a height of 135 feet above high water for a distance of 800 feet. The suspension type was selected after a careful consideration of both cantilever and arch types, and the governing considerations in its adoption were a comparison of tests, greater ease and safety of erection, and a shorter time required for construction.

Inasmuch as there was a distance of 1690 ft. between pierhead lines or 1750 ft. between pier centres at the Franklin Square location, and arch construction was not deemed feasible on account of the depth of rock, only suspension and cantilever structures were considered. The suspension bridge was very much lighter, and was considered to involve less risk in construction, as well as to be adapted to subdivision of contracts. Then also it would require less time to build, and would be cheaper in maintenance on account of having less metal exposed. Furthermore detail designs and comparative cost estimates showed a difference of \$1,986,000 in favor of the suspension bridge. For the cantilever bridge the computed weight of metal was 47,000 tons as compared with 33,000 tons for the suspension bridge, though for the latter more costly material and more expensive anchorages were required.

The engineers estimated the total cost of the suspension bridge design at the site chosen as

PROFILE VIEW OF BRIDGE

APPROACHES TO THE NEW BRIDGE
PHILADELPHIA-CAMDEN BRIDGE

\$22,479,000 for construction and \$6,392,000 for the acquiring of the necessary real estate. In the construction cost were included \$13,355,000 for the main bridge, \$6,468,000 for the approaches, plazas, sewer and grade revision, and \$2,656,000 for engineering administration and contingencies. It was the belief of the engineering board that the bridge could be completed by July 4, 1928, the 150th anniversary of the Declaration of Independence.

The Delaware bridge of course was for vehicular traffic and after due consideration of the volume and density of such traffic it was concluded that six vehicular lanes should be provided on the bridge, each of $9\frac{1}{2}$ ft., making a total width between curbs of 57 ft. Two car tracks in each direction were also provided, outside of the 57-ft. roadway; and two 10-ft. pedestrian ways were considered necessary, the latter being placed above on the upper lateral bracing.

The two towers were to be solid built steel posts bearing the cables firmly attached to their saddles (instead of having movable saddles on rollers) following the practice in the Manhattan Bridge across the East river at New York. The cross-section of each post increases from 7x12 ft. at the top to 7x40 ft. at the base.

The towers support two main cables spaced 89 feet from each other, as such an arrangement was considered preferable to four cables. Consequently there were required 30-in. cables, which represent a large increase over the $15\frac{3}{4}$ -in. cables of the Brooklyn bridge, or even the 18 $\frac{5}{8}$ -in. and 20 $\frac{1}{4}$ -in. cables of the Williamsburgh and Manhattan bridges. Each cable was to be made up of 16,500 parallel wires, 0.192 in. diameter.

The hangers are spaced about 20 ft., and consist each of four 2 $\frac{5}{8}$ -in. galvanized wire ropes attached to a cast-steel saddle. A short panel length was considered desirable for the stiffening trusses (20.5 ft for main span, 20.75 ft. for side spans). The trusses were of simple triangular web system, were continuous across the span, and were supported at the towers by stiff hangers.

There was a simple steel floor system, including a concrete slab roadway structure with wood block paving, and open tie floors for the railway tracks. The pavement, the only inflammable material in the bridge, rests on concrete slabs.

Inasmuch as local conditions required that the anchorages be placed considerable distance back of the towers, suspended side spans were adopted, whose length was fixed at slightly less than half the main span. The sag of the cables was set at two hundred feet, as the most desirable compromise between increased cost of towers and increased stresses in stiffening trusses, cables, and anchorages.

For the main parts of the structure high-strength alloy steel was selected, and high-carbon steel wire for the cables and hangers of the suspension bridge design. In the design a unit stress of 72,000 lbs. per square inch in the cable wires was considered permissible under the emergency live loading and 60,000 lbs. under normal full loading.

The plans for the bridge received the formal approval of the Secretary of War and Chief of Engineers, U. S. Army, on Sept. 26, 1921. The plans duly carried out the conditions previously imposed when it was stated that a clearance of 135 ft. above mean high water and a span with piers outside the pierhead lines, would be acceptable.

Work straightway began in earnest, the commission starting in to begin acquisition of the property required for the approaches by condemnation. During the autumn the plans for the caissons and masonry of the two river piers of the bridge were completed and bids were called for. These piers as designed measured 70x143 ft. at the base and required for both some 62,000 cu. yd. of masonry. They were to be granite faced down to a point below low water level. The borings made at the site of the two piers showed rock at from El. —58 to El. —73 on the Philadelphia side and from El. —80 to El. —90 on the Camden side. Eleven bids for building the two main piers were received by the Joint Commission on Dec. 19. Lump-sum bids had been asked for, based on sinking the Philadelphia caisson to El. —62 and the Camden caisson to El. —86, with some excavation below cutting edge and some rock left above cutting edge. The totals ranged from \$1,669,275 to \$2,553,000, the average being \$2,138,279.

DETROIT-WINDSOR BRIDGE. During the year announcement was made of the proposed design for the eight-cable suspension bridge with span 1803 feet centre to centre of towers, to be built across the Detroit river. There was proposed a suspension bridge with unloaded backstays having two decks for railway and highway traffic respectively. The plan proposed that the highway deck carried from four cables should be built first and put in service, while later the extra cables and stiffening truss capacity required for the railway deck could be added. The bridge would have a minimum height of 110 feet at the centre of the channel and at either end there would be approach spans of 925 feet length. The towers of steel were to rise to a height of 330 feet. There would be four railway tracks on the lower deck, and two trolley tracks and two 28-foot roadways as well as two 7-foot sidewalks on the upper. The exceptionally heavy loading was duly considered and it was for this reason that eight cables were required, of course the long span also being a governing factor. Six of the eight cables were to be 21 inches in diameter and contain 7980 parallel wires, each of .192 inch diameter, while the two lower outside cables were to be of 18 inches with 6700 wires. The cables were to be continuous from anchorage to anchorage. The preliminary design was prepared by Charles E. Fowler, chief engineer, while the plans were under consideration by an advisory board of engineers. The necessary authority from Congress and the Dominion Parliament for erection of the bridge and suitable charters had been secured, so that the companies organized to promote the work were in a position to act in the near future.

PROPOSED HUDSON RIVER BRIDGE. During the year 1920 the interests concerned in the development of the project for a bridge across the Hudson river from New York City to New Jersey on designs prepared by Gustav Lindenthal and outlined in the YEAR BOOK for 1920 were active in their efforts, but comparatively little of a positive or definite nature was accomplished save in the way of further engineering and development studies and arousing increased interest in this scheme and endeavoring to correlate it with the much discussed and agitated terminal and port improvement of the City and

Port of New York. There was no question, apparently, as to the need or desirability of such a bridge, just as there was no question on the engineering side of its practicability or feasibility, but large as the subject was it was in 1921 considered rather as a part of the great unsolved question of the port and water front development of New York City and only to be considered in that connection.

SUSITNA RIVER BRIDGE, ALASKA. A bridge erected under extraordinary conditions on the United States Government Railway in Alaska was that across the Susitna river, which was completed in February, 1921. This crossing of the Susitna included in addition to a steel 504-ft. through truss channel span, two 121-ft. combination Howe-truss flanking spans and two 70-ft. combination pony Howe-truss end spans, both sets of timber, with 392 ft. of trestle at the southern approach and 28 ft. at the northern approach, making a total length of 1322 ft. It is located 150 miles north of Anchorage, the ocean port of the line, and 264 miles north of the terminus at Seward. Thus crossing presented many interesting problems both on account of the foundations and the difficulty of shipping material to the site. The solution reached was in view of the local conditions and the work represented the longest bridge in the Alaskan Government Railway.

OHIO RIVER BRIDGE AT CAIRO TO BE RECONSTRUCTED. On Nov. 2, 1921, the Secretary of War granted to the Illinois Central Railroad authority for the replacement of the single-track bridge of the Illinois Central R. R. over the Ohio river at Cairo, Ill., by a double-track bridge. The new bridge would be erected on the existing stone piers and would cost about \$8,500,000. The original bridge, built in 1887-88, consisted of two through-truss spans of 523½ ft., seven of 405 ft., and three deck-truss spans of 250 ft. In 1914-15 the superstructure was strengthened to carry the heavier loading but this was a temporary measure as greater capacity was required. The new bridge was to have the same headroom under the channel spans at high water as the older structure.

The river piers were to be increased in dimensions from 43 ft. to 52 ft. length and from 14 ft. to 17.75 ft. width at the top by rebuilding the upper portion, the work to begin at the starling or middle belt course and the increased size to be obtained by a reduction in the batter. On the Kentucky approaches there were 21 deck truss spans of 150 feet and one 106-ft deck girder span all on steel cylinder piers filled. The new plans represented a recession of the government from a previous attitude that any new construction should involve a channel span of 800 to 1000 feet for navigation inasmuch as the large tows or fleets of coal barges were no longer operated and the river conditions in 1921 did not justify the claims for such long spans as were demanded when the former request was made, the conditions were modified. On the basis of 1919-20 prices the cost was estimated at \$8,482,000, as against \$10,752,000 for a new bridge with a 700-ft. channel span.

FAIRMONT, W. VA., CONCRETE ARCH BRIDGE. Crossing the Monongahela river at Fairmont, W. Va., there was completed during the summer of 1921 a high level concrete arch bridge with three 250-foot spans. This bridge was notable in that it combined architectural treatment of consider-

able merit with certain features of design construction required by the site. There was required a channel clearance height of 50 feet on a 200-ft. width which resulted in a 250-ft. arch with a 52-ft. rise from springing line elevation 33 feet above pool level. All three piers are founded on rock. The three 250-ft. spans had two 14-ft. wide ribs spaced 14 feet apart in the clear.

COLUMBUS, OHIO, BRIDGES. During the summer of 1921 at Columbus, Ohio, there were opened to traffic three concrete arch structures built to replace bridges destroyed in the great flood of 1913. The first of these the Mound St. bridge across the Scioto river, was opened to traffic on July 2, 1921. This is a concrete arch bridge 1050 ft. long, of nine spans, which cost about \$6,000,000.

Later in the summer the Broad St. and Town St. bridges, also across the Scioto river, were opened to traffic. They carry foot, street-car and vehicle traffic. They were built by Franklin County, and cost about \$600,000 each.

JACKSONVILLE, FLORIDA. A new bridge over the St. Johns river at Jacksonville, Fla., was opened to traffic. This was a steel structure with nineteen spans, the longest of which was a 188-ft. vertical lift span. The entire bridge, including approaches, was 3800 ft. long, and cost nearly \$2,000,000.

RONDOUT CREEK SUSPENSION BRIDGE. During 1921 there was under construction by the State of New York, the Rondout Creek bridge 1100 ft. long over all with a channel span of 705 ft. This bridge was to carry the main highway along the west bank of the Hudson river, and would replace an ancient chain ferry.

Two 9-in. parallel-wire cables were the main supporting members, from which would be suspended a deck 22 feet wide formed by a reinforced-concrete slab on steel framing, designed for carrying the heaviest trunk-line highway traffic.

The bridge was estimated to cost about \$700,000.

BELL ISLE BRIDGE, DETROIT. During 1921 six of the piers for the Belle Isle bridge at Detroit were practically completed and work progressed satisfactorily, the engineers reporting very little trouble experienced in leakage through the cofferdams, and no indication of any trouble in sealing the bottom against the cofferdam walls, with 4½-ft. concrete base on top of the piles. This bridge was referred to in the YEAR BOOK for 1920.

SUSPENSION BRIDGE ACROSS THE GRAND CANYON. On May 15, 1921, there was completed and opened for travel a small but interesting suspension bridge across the Grand Canyon nearly 5000 feet below the rim at El Tovar for the use of mule trains and foot passengers. A new trail has also been made along the rock side of the bluff to reach the bridge. The bridge is a wire cable suspension bridge of approximately 500 ft. span from centre to centre of bearings, and about 420 ft. along the roadway. There are two main 7/8-in. plow-steel cables, placed approximately 10 ft. apart, anchored about 80 ft. above the floor level on the sides of the rock canyon. These cables carry the wood floor by 3/8-in. galvanized-steel cables spaced 6 ft. centre to centre, through the medium of spread iron rods 4 ft. deep. The floor of the bridge is located at a height about 13 ft. above the highest known water and 60 ft. above normal water.

G. LINDENTHAL
Architect

PROPOSED HUDSON RIVER BRIDGE

The main difficulty in construction was the transport of material to the site and the main cable was divided between two mules each carrying coils of 200 lbs and 15 men spaced at intervals of 20 feet who carried each 35 lbs. The cost of this interesting little bridge built at this all but inaccessible point was \$17,000.

HUDSON RIVER BRIDGE AT CASTLETON, N. Y. This new bridge for the New York Central and Hudson River railroad cut off line to enable through traffic to avoid the track congestion and heavy grades through Albany was put under way during the latter part of the year and work was started on building six piers for its east approach. These piers are to carry a plate-girder superstructure. While the main structure will cross the navigable channel of the Hudson by a 600-ft. span with a 400-ft. flanking span.

PROPOSED PONTOON BRIDGE ACROSS THE HUDSON RIVER. As a means of relief for the great motor traffic that congested the ferries across the Hudson river from New York City to Newburgh there was suggested and for a while actively advocated a bridge of boats from Yonkers to Alpine or between similar points on the New York and New Jersey shores. The plan involved the use of the hulls of the discarded wooden vessels of the U. S. Shipping Board and anchoring them across the river with a superstructure for traffic and a draw, lift or other device to permit the free passage of river craft. This plan was first suggested by Mayor W. A. Welch, Chief Engineer of the Interstate Park Commission, and was taken up for a while by some of these concerned in the development of the Hudson Bridge scheme. There were negotiations with the Shipping Board and tentative plans were made for the bridge deck construction, but the scheme later was abandoned. It was opposed by Hudson River Navigation interests which looked upon such a device as a serious menace to the free passage of the river. On the other hand, the scheme was approved by many motorists who had experienced difficulty and delay in making the ferry crossings.

PROPOSED SEATTLE PONTOON BRIDGE. The pontoon bridge idea was also considered at Seattle, Wash., where two local engineers, R. R. Montell and J. H. Dirkes, proposed to the county engineers of King County to build two pontoon bridges across Lake Washington in place of ferries. They also had in mind to use fifteen of the wooden vessels of the Shipping Board some of which were moored in Lake Union, and they estimated the total cost at \$235,000 if the vessels were furnished without cost. There was proposed a wood superstructure, to have 18-ft. roadways and 4-ft. sidewalks. For the 3000-ft. crossing from Seward Park to Mercer Island there would be trestle approaches and ten spans on nine pontoons, while the crossing from the east shore to Mercer Island, 1000 ft. long, would require three boats. Both bridges would require draws and would facilitate traffic which the ferries were carrying at a loss. In support of the plan it is stated that the present ferries are operating at a loss and that traffic would be facilitated.

SAN FRANCISCO HARBOR CROSSING. In many of the projects proposed for a crossing of San Francisco Harbor some form of bridge figured as well as tunnels. Naturally such a construction would present a more difficult problem than

any yet essayed in this field and it is interesting to note the conditions laid down by the War Department for the construction of a crossing across San Francisco Bay it may approve. The Chief of Engineers has announced the broad policy which must govern this construction, as follows:

1. No bridge of any kind will be approved north of Hunters Point.

2. No low bridge will be approved north of San Mateo.

3. A tunnel crossing the bay will be approved in any location provided the highest part of the structure is placed at least 50 ft. below mean low water and proper compensation is made for obstruction of cross-section as affecting tidal flow.

4. A combined bridge and tunnel will be approved at a location south of the proposed Alameda river base site, provided the tunnel is so placed as to leave the channel along the San Francisco side unobstructed to a depth of 50 ft. at mean low water for a width of one mile (the width of the unobstructed 50-ft. channel immediately outside the pierhead line may be reduced to 3000 ft.) measured from the lowest point of the pierhead line, and provided proper compensation is made for obstruction of the cross-section as affecting tidal flow.

5. Not more than one crossing will be approved at present in any location north of San Mateo.

CHICAGO BRIDGES. It was reported in 1921 that the City of Chicago maintained fifty movable highway bridges divided by types as follows: 24 trunnion bascule bridges, 12 centre bearing swing bridges, 12 rolling lift bascule bridges, one vertical lift bridge and one pontoon bridge. The city had developed and erected 22 trunnion bascule bridges, while the others were of the Strauss and Page & Schnable types. The pontoon bridge was across the Calumet river at Torrence Ave.

The latest and most important of the trunnion bascule type was the 268-ft. double-deck double-leaf bascule bridge over the Chicago river at Wells Street which was put in service for the elevated railway on December 4. This traffic was to be stopped from Saturday morning to Monday morning, but in view of the heavy Monday morning traffic it was decided to advance the time and have the bridge ready on Sunday evening. With the old bridge swung to the open position and blocked up on the rest pier, it was cut apart by torches and the members of the middle portion removed by cranes, leaving a gap into which the leaves of the bascule were lowered. Owing to the grade of the new bridge being above that of the old swing structure which it supplanted, necessitating street alterations at the south end, traffic on the lower or roadway deck was not opened until about the end of the year.

The new trunnion bascule bridge has a span of 268 ft. centre to centre of trunnions, giving a clear channel 200 ft. wide. There are two lines of trusses spaced 41 ft. centre to centre, the lower deck having a 38-ft. roadway and outside two 13-ft. walks. On the upper deck are two tracks for the elevated railway. The total weight of each leaf complete was about 2460 tons, including 1300 tons of counterweight. The old Wells Street swing bridge, 220 ft. in length, was built in 1888 as a street bridge, and was reinforced in 1896 to carry the elevated railway.

SOUTHWARK BRIDGE, LONDON. The new Southwark bridge over the Thames, at London, whose

reconstruction was discussed in the YEAR BOOK for 1920 was completed during the year. The new structure replacing what was the largest and one of the earliest cast-iron arch bridges to be built was opened formally on June 6, 1921, in the new structure. Steel arches with spans varying from 123 to 140½ feet in length clear replaced the cast-iron work. The bridge was 55 ft. wide. Sir William Arrol & Co., Glasgow, were contractors. Traffic was handled on temporary foot-bridges during the reconstruction.

SYDNEY, AUSTRALIA, BRIDGES. During the year elaborate specifications were prepared and bids invited for the construction of a cantilever bridge across Sydney harbor, Australia, from Dawes Point to Milsons Point.

The contract involved a bridge with a total length of 3816 ft. whose main span was to consist of two 500-ft. cantilever arms and a central section, 600 ft. long, suspended from the ends of the arms. This would make a total length of main span of 1600 ft. between pier centres. The height of the trusses over the main piers was to be 270 ft. and the height of the central suspended section 100 ft. As the clearance above high water level was to be 170 ft. movable spans were not required.

BIBLIOGRAPHY. Among the important contributions to bridge engineering literature brought out during the year are the following: Dr. J. A. L. Waddell published his *Economics of Bridge-work*, a sequel to his *Bridge Engineering*. The report to the British Ministry of Transport by the Advisory Committee for the Revision of the Board of Trade Requirements, 1914, in regard to the opening of railways was published at London and contained the results of valuable tests and experiments.

BRIGHT'S DISEASE. See NEPHRITIS.

BRITISH COLUMBIA. A province of Canada on the Pacific ocean, lying between Alberta and Alaska, with an area, at the census of 1911, of 355,865 square miles; estimated 1919 at 395,610 square miles; and with a population at the census of 1911 of 392,480; at the census of 1921, 523,369. The chief cities with their population at the census of 1921 are: Victoria, the capital, 38,682; Vancouver, the largest city, 116,700; New Westminster, 14,440. Executive power is in a lieutenant-governor appointed by the Governor-General of Canada, who acts through a responsible ministry or executive council of eight members; and legislative power in a legislative assembly of 47 members elected for four years by universal, including female, suffrage. Lieutenant-Governor at the beginning of 1921, W. C. Nichol; Prime Minister, John Oliver. See CANADA.

BRITISH EAST AFRICA. A territory on the mainland of Africa belonging to Great Britain, comprising the EAST AFRICAN PROTECTORATE, the UGANDA PROTECTORATE, and ZANZIBAR. See these articles.

BRITISH GUIANA. A British colony on the northeastern coast of South America, comprising the settlements of Demerara, Essequibo, and Berbice; bounded on the east by Dutch Guiana, on the south by Brazil, on the west by Venezuela, and on the north by the Atlantic ocean. Area, 89,480 square miles; population, 1911, 296,000; estimated Dec. 31, 1919, 305,991. The leading products are rice, sugar cane, and cocoanuts; the chief exports, sugar, rum, and rice; the chief

imports, flour, machinery, textiles, and fertilizers. Statistics for commerce, finance, and shipping follow:

	1918	1919
	£	£
Imports.....	3,835,826	3,590,812
Exports.....	3,524,798	4,240,832
Revenue.....	863,625	862,491
Expenditure.....	774,481	886,568
Shipping.....	598,187	711,518

The principal imports in the year of 1920 were in respect to value, lumber, onions, bricks, and butter. The exports to the United States in 1920 amounted to \$4,223,110, which was nearly five times the value of the exports to the United States in 1919, the increase being chiefly in sugar.

BRITISH INDIA. See INDIA, BRITISH.

BRITISH NEW GUINEA. See PAPUA.

BRITISH NORTH BORNEO. A British colony occupying the northern part of the island of Borneo under the jurisdiction of the British North Borneo company and administered by a governor in Borneo and a board of directors in London. Area, about 31,106 square miles; population, 1911, 208,183. In 1911 Europeans numbered 355 and Chinese 26,002. The most numerous racial element among the natives, are the Dusuns numbering about 88,000. Only a small part of the land is cultivated and the chief sources are mahogany and other forest products and various native fruits, spices, gums, and vegetables. Among the minerals, iron, coal, gold, and mineral oil occur. Trade is with Great Britain and with the colonies and is for the most part through the ports of Hongkong and Singapore. There is a railway 127 miles long from Jesselton on the coast to Melalap and there is cable communication with other countries. Statistics for 1918 and 1919 follow:

	1918	1919
	£	£
Revenue.....	303,063	334,184
Expenditure.....	191,895	230,317
Imports.....	761,358	925,235
Exports.....	1,019,094	1,453,990

Governor at the beginning of 1921, A. C. Pearson.

BRITISH SOMALILAND. See SOMALILAND, BRITISH.

BRITISH SOUTH AFRICA. See SOUTH AFRICA, UNION OF.

BRITISH WEST AFRICA. The following colonies of Great Britain in West Africa: NIGERIA (colony and protectorate), GOLD COAST (comprising the Gold Coast colony, Ashanti, and the Northern Territories), SIERRA LEONE (colony and protectorate), GAMBIA (colony and protectorate). See these separate articles.

BRITTON, EDWARD ELMO. Volunteer army officer, died at New Brighton, L. I., October 22. His treatise on militia reorganization and other writings gave him authority as a writer on military tactics. He was born in 1859. He organized and commanded the 14th Regiment of Militia in the Spanish-American War, and was afterwards adjutant-general of the 2nd brigade. In 1909 he was convicted of larceny and sentenced to Sing Sing.

BROCKHAUS, ALBERT. See NECROLOGY.

BROOKE, FLAVIUS LIONEL. Judge, died at Port Huron, Mich., January 21. He was born at Simcoe, Ont., Oct. 7, 1858, and was admitted to the bar of Ontario in 1884. The following year he removed to Detroit, Mich., where he practiced law. In 1900 he was made judge of the circuit court and after 1908 was justice of the supreme court of Michigan.

BROOKLYN INSTITUTE OF ARTS AND SCIENCE. Educational institution founded in 1824 and reincorporated in 1890. It comprises four departments: The Department of Education, Charles D. Atkins, Director; the Department of Museums, William H. Fox, Director; Department of Botanic Garden, C. Stuart Gager, Director; and Department of Biological Laboratory, Charles B. Davenport, Director. The educational department arranges addresses, lectures, courses of instruction, and concerts throughout the year by important men and eminent artists. Only small fees are charged for these opportunities. The School of Pedagogy is one of the well-known features of the Institute. There were 992 students in attendance under 27 instructors during the year. The Brooklyn Museum conducts departments in art, ethnology, and natural science which are among the finest in the world. There were 25,000 volumes and many pamphlets in its library. The Botanic Gardens rank with the best in the United States. In the four departments there was an enrollment of 10,850 toward the close of 1921, and students at the summer session of the Biological Laboratory numbered 82. Permanent funds of the Institute for the year amounted to \$1,106,581.87. Receipts available for current expenses were \$530,323.76. There were many bequests during 1921. By the will of Mrs. Georgietta Proctor, the Department of Education received \$50,000 for the work of its Department of Physics, and \$10,000 by the will of its former president, A. Augustus Healy. The Museum and Botanic Garden also received substantial gifts through Mr. Healy's will and that of Mr. Alfred T. White, both members of the Board of Trustees and already benefactors of the Institute. There is a branch of the Institute at Jamaica, L. I. During the year the branch at Huntington, L. I., was discontinued. The president of the Institute and the Board of Trustees is Mr. Frank L. Babbott. The headquarters are care of the Brooklyn Academy of Music, Lafayette Ave., Brooklyn, N. Y.

BROOKS, WILLIAM ROBERT. Astronomer, died, May 3. He was especially noted for his discoveries of comets and as a pioneer in the application of photography in astronomy. He was born in Kent, England, June 11, 1844, but came to the United States in his boyhood and was educated in the schools of Marion, N. Y. He became an expert draughtsman, and discovered a comet with a telescope of his own make in 1881. He established an observatory at Phelps, N. Y., 1874, where he continued his astronomical researches until he was called to take charge of the Smith Observatory at Geneva, N. Y. He was later appointed professor of astronomy at Hobart College. For his discoveries he was awarded numerous prizes. The discovery of twenty-six comets has been credited to him.

BROWER, GEORGE VANDERHOOF. Lawyer and city official died in Brooklyn N. Y., October

14. He was born at Paterson, N. J., Oct. 17, 1839, served in the Civil War and studied law in Pennsylvania where he was admitted to the bar in 1866. He went to Brooklyn in the following year and was in practice there, making a specialty of commercial and real estate cases. From 1885 to 1889 he was General Appraiser of the Port of New York and in the latter year was appointed one of the Park Commissioners of Brooklyn. After the Park Department was placed under a single headed commission he was commissioner until 1894. In 1898 he was appointed commissioner for the Boroughs of Brooklyn and Queens for the term of four years.

BROWN, JAMES F. Lawyer, died December 5. He was born in Kanawha, Va., March 7, 1852, and graduated at the University of West Virginia in 1873. He was admitted to the bar in 1875 and was from that time afterwards in active practice becoming one of the leading lawyers of West Virginia. He was a member of the Board of Regents of the State University, 1890-1901 and took a prominent part in developing the resources of the Kanawha Valley. He was an officer of various commercial concerns and had extensive oil, gas, mining, and lumber interests.

BROWN, MAURICE. See *MUSIC, Artists, Instrumentalists*

BROWNLOW, ADELBERT WELLINGTON, EARL. English landed proprietor, died at Grantham, England, March 17. He was born in 1844 and succeeded to the great estates of the earldom in 1867. The property contained more than 53,400 acres. Throughout the war he loaned to the government his large property in Lincolnshire for use as an army training centre.

BROWN UNIVERSITY. An institution of the higher learning at Providence, R. I.; founded in 1764. The enrollment for the fall of 1921 was as follows: Undergraduate men 1172; separate women's college, 363; graduate department, 111. The faculty contained 85 members. The productive funds (1920-21) were \$6,452,979 and the income \$683,000. The library contained 258,000 volumes. President, W. H. P. Faunce, LL.D.

BRUCE, ALEXANDER H. See *BALFOUR OF BURLEIGH*.

BRUCE, WILLIAM SPIERS. Scotland explorer, died at Edinburgh, Oct. 28, 1921. He was born August 1, 1867. Although a physician by training and profession, his spirit of adventure soon turned him to Polar research. At the age of twenty-five he sailed in the Antarctic whaler *Balena*. His scientific observations to the northeast of Graham Land awakened interest in South Polar exploration, influenced the renewal of Antarctic whaling, and indirectly led to the establishment by Great Britain of the Falkland Island Dependencies. Later he collaborated in the zoological studies of the *Challenger* collections. Between 1895 and 1899 his personal Arctic researches covered Franz Josef Land, Hope Island, Kolguev Island, and Spitzbergen. His most important enterprise was the initiation and prosecution of the Scottish National Antarctic Expedition, in the *Scotia*, carried on without governmental aid. Under his leadership it discovered, 1904, Coats Land, 74° S., and made an extended hydrographical survey of Weddell sea. The discussions of the collections of the *Scotia* expedition fill six volumes, with much text unpublished for lack of funds. Bruce gave a year to whaling in the Seychelles, Indian ocean.

Between 1908 and 1920 he made six scientific voyages to Spitzbergen, on which region he was an acknowledged authority. His will directed that his remains be cremated, and the dust scattered over the ocean.

BRUSA, ARCHBISHOP. Metropolitan of Brusa, died in London, March 18. At the time of his death he was representative of the patriarchate of Constantinople. He was born in 1860 and was elected *locum tenens* after the retirement of the patriarch. In 1919 he went to Paris where he upheld the policy and aims of M. Venizelos and at the beginning of March, 1921, he went to London at the head of a delegation representing the Greek element that had not won its independence of the Turkish government. This was the first time England was visited by the head of the Eastern Orthodox Church.

BRYANT, FRANK AUGUSTUS. Physician and surgeon, died in April. He was born in North Jackson, Penn., Oct. 18, 1851, received an academic education and took his medical degree at Bellevue Hospital Medical College, New York City, 1895, after which he practiced in New York City. He was resident physician of the Burke Foundation for Convalescents. He wrote: *Causes and Treatment of Stammering* (1907); *Speech Disorders and Their Treatment* (1914).

BRYN MAWR COLLEGE. An institution of the higher education for women in Bryn Mawr, Pa., founded in 1880. The student enrollment in the fall was 457 of whom 92 were graduates, and there were 77 members of the faculty of whom 4 were added in the course of the year. Productive funds were \$4,802,782 and the income was \$216,966. The library contained 99,600 volumes. A new summer school for women workers in industry was opened and a new department of music was established. President, Miss M. Carey Thomas, Ph.D., LL.D.

BUBONIC PLAGUE. As is well known this infectious disease attacks certain rodents, notably the rat, and the animal then serves to spread the infection among man through certain kinds of rat flea. It must be remembered that the common rat is practically a domestic animal and in general the rodents who spread the infection among mankind must all be semi-domesticated, including some of the squirrels. A subject but little understood but conceivably of much significance is the susceptibility of wild rodents to this disease. As is known trappers have been infected in Siberia from handling a small fur-bearing rodent. The wild rats recently tested in the plague laboratory at Pensacola were of the same species as those which are domesticated. It does not appear, however, that by "wild rat" anything more is meant than a rat not bred in a laboratory. The animals were trapped in Mobile and since they were in more or less close contact with man could be classed at least as half domesticated. The experimenters evidently regard such rats as practically wild. It was found that even with active inoculation tests about a third of these rats are immune. Similar results have been obtained in earlier experiments. During the year 1921 some ten new cases of this affection were reported by Dr. Joltrain, the plague expert, in the city of Paris. It was evident that no case had been imported and there was likewise no evidence that infected rats had reached the city from a plague focus. In no

instance did the infection extend from the plague stricken subjects to others. Several of the patients if not all had lived in rat infested communities and had been flea-bitten. It is therefore evident that there are plague rats in Paris, and it is known that these animals may suffer from a chronic type of the malady not deadly to themselves but able to cause virulent disease in mankind. Several of the patients were stricken so suddenly that buboes had no time for development. For a short time, therefore, the nature of the affection passed unrecognized. But eventually blood from the finger tips and puncture fluid from enlarged glands were found to contain the plague bacillus in abundance. The infection was so virulent that plague serum was unable to influence favorably the course of the disease. The number of deaths is not given. The health authorities are somewhat apprehensive of fresh cases next summer. See *Public Health Reports*, November, 1921.

BUCKNELL UNIVERSITY. An institution of the higher education at Lewisburg, Pa.; founded in 1846. The enrollment for the fall of 1921 was 855 and for the music school 124. The faculty contained 47 members. The endowment was given at \$582,271. The library contained 47,000 volumes. In the course of the year the chemical laboratory was enlarged and a new engineering building completed. President, Emory W. Hunt, D.D.

BUCKWHEAT. The world's buckwheat production is limited practically to the temperate zone of the northern hemisphere. The leading producing countries are the United States, Canada, France, Germany, Japan, and the present reestablished portions of European Russia.

The 1921 production of the United States, according to estimates published by the Department of Agriculture, was 14,079,000 bu. grown on an area of 671,000 acres, the average yield per acre being 21 bu. While the area was 30,000 acres less than that of 1920 the yield was greater by 937,000 bu. The farm value of the crop on Dec. 1, 1921, was 81.2 cts. per bushel as compared with 128.3 cts. and 146.4 cts. on the corresponding dates in 1920 and 1919 respectively. The total farm value of the crop, on the basis of 81.2 cts. per bushel, was \$11,438,000. The distribution of the culture of the crop was the same as in recent years.

Canada produced approximately 10,000,000 bu., which was over 1,000,000 bu. above the yield of 1920. France in 1920 produced 16,668,000 bu. as compared with about 25,000,000 bu. in prewar years. Japan reported a yield of 5,000,000 bu. in 1920. The former Russian Empire led all countries in the production of this crop and at times recorded an annual yield of 50,000,000 bu. The buckwheat yield of Finland in 1920 was about 6,000,000 bu. and that of Poland 3,300,000 bu. Austria, within its present limits, produces over a half million bushels annually.

BUDWORTH, CHARLES EDWARD DUTTON. British major-general, died at Simla, India, in July. He was born in 1870, joined the Royal Artillery in 1899 and was in active service during the South African War. In the late war he became a brigadier-general in July, 1915, and was artillery adviser to Lord Rawlinson. He was credited with a large part of the preparations for the battle of the Somme and for the work done by the artillery

of the 4th Army during the last few years of the war. He was many times mentioned in dispatches and won military honors including foreign decorations.

BUFFALO, N. Y. See GARBAGE AND REFUSE DISPOSAL, and MUNICIPAL GOVERNMENT.

BUFFALO SYMPHONY ORCHESTRA. See MUSIC, Orchestra.

BUILDING. See ARCHITECTURE.

BUKOWINA. Formerly a crownland in the kingdom of Austria; annexed to Roumania on the downfall of the Austro-Hungarian monarchy in 1918. Its area when it formed part of the Austrian kingdom was 4033 square miles, with a population in 1913 of 818,328.

BULGARIA. One of the Balkan states, a constitutional monarchy lying to the south of Roumania and the east of Serbia. Capital, Sofia.

AREA AND POPULATION. The area before the war was 114,077 square kilometres but after the war treaties, was only 103,224 square kilometres. The population in 1917 was estimated at 5,517,700; and according to the census completed Dec. 31, 1920, it was about 4,800,000. According to the census of 1910 the race elements were as follows: Bulgarian, 3,518,756; Turks, 465,641; Roumanians, 79,429; Greeks, 43,275; Gypsies, 122,296; Jews, 40,133; Germans, 3402; Russians, 2505; other nationalities, 62,076. The religion is the Greek Orthodox to which in 1910 3,643,918 belonged, while the Mohammedans at that time numbered 602,084. Education is free and compulsory between the ages of seven and fourteen and is supported by the state and local authorities. In 1918-19 the elementary schools numbered 3592 with 10,068 teachers and 474,242 pupils. Secondary and higher education is supplied by progymnasias, normal schools, professional schools, training colleges for teachers, and a university at Sofia.

PRODUCTION. Agriculture which is the chief occupation engages about five-sevenths of the people and the principal food crops grown are wheat, corn, barley, oats, rye, and other grains and tobacco. About 44 per cent of the surface is agricultural land. The area under cultivation in 1919 was given officially at 2,008,632 hectares, the hectare being equal to 2.471 acres, and the production in that year amounted to 2,527,655 tons, of which the principal items were corn, 985,296 tons and wheat, 926,112. There is an abundant growth of fruit and a considerable silk worm culture. There are mineral resources including especially coal and iron and also gold, silver, lead, copper, manganese, and marble; but mining development has been backward. The total coal production of Bulgaria in 1920 exceeded that of any previous years, except 1917, according to Consul Graham H. Kemper at Sofia. The State mine at Pernik furnished 670,342 tons of the total of 748,085 metric tons mined during the year.

COMMERCE. Foreign trade in 1920 showed a considerable increase over that of 1919. Grain exports were valued at 504,361,161 leva. The chief export, however, was tobacco. In almost every item of exports there was an increase over the preceding year. The exports in 1919 were 552,253,452 leva and in 1920 1,642,998,900 leva. The imports in 1919 were 963,941,235 leva and in 1920 2,213,830,249 leva. The tables on page 108 show the destination of the exports of 1919 and

1920 and the sources of imports for those two years.

FINANCE. The budget for 1920-21 was as follows: Revenue, 2,613,530,000 levas; Expenditure, 2,954,687,440, the leva being equivalent to a franc. A synopsis of the Bulgarian budget for the fiscal year beginning April 1, 1921, as published in the *Official Gazette* for March 31, 1921, is as follows: Estimated receipts, totaling 2,152,720,000 leva, consist of the following: Direct taxes, 240,000,000 leva; indirect taxes, 717,000,000 leva; government monopolies, 244,000,000 leva; revenue and custom charges, 101,030,000 leva; fines and confiscations, 14,700,000 leva; receipts from railroads, ports, posts, telegraphs, and telephones, 372,000,000 leva; revenues from public lands, capital, and development of natural resources, 242,790,000 leva; contributions of the Communes and Departments for the reception of school-teachers, 45,500,000 leva; miscellaneous receipts, 175,700,000 leva. Estimated expenditures, totaling 2,684,699,803 leva, are listed under the following appropriations: Civil list and Sobranje, 15,342,880 leva; public debt, 647,197,063 leva; auditing department, 5,159,040 leva; Ministry of Foreign Affairs, 57,416,925 leva; Ministry of Interior, (a) administration and police, 56,597,810 leva; (b) sanitary department, 74,153,220 leva; Ministry of Public Instruction, 229,895,750 leva; Ministry of Finance, 116,548,710 leva; Ministry of Justice, 62,061,040 leva; Ministry of War, 535,632,240 leva; Ministry of Commerce, Industry, and Labor, 224,800,505 leva; Ministry of Agriculture and Public Domains, 76,872,620 leva; Ministry of Public Works, (a) ministry, 91,190,460 leva; (b) department of obligatory labor, 113,980,100 leva; Ministry of Railroads, Posts, and Telegraphs, (a) department of railroads and posts, 295,186,840 leva; (b) posts, telegraphs, and telephones, 82,664,600 leva. Resulting deficit, 531,979,803 leva. Further expenditures amounting to 1,062,085,000 leva were authorized in an extraordinary budget. The Bulgarian currency was much more stable than that of the other Balkan States. There was a considerable degree of stagnation in industry and commerce, but the agricultural situation was more satisfactory.

COMMUNICATIONS. The railway mileage in 1919 totaled 1563, all of this belonged and was worked by, the state. Vessels entering the ports of Bulgaria in 1919 numbered 202 with 153,089 tons.

DEFENSE. Before the war the strength was about 59,900 officers and men and during the war the army numbered about 500,000 men. The Treaty of Neuilly Oct. 27, 1919, limited the military forces in the future to 20,000 and prohibited all measures of mobilization but permitted a frontier guard of 3000 volunteers and a force of gendarmes, police, customs officers, etc., which should not exceed 10,000. The possession of military or naval aircraft was prohibited. The government was required to surrender all warships and submarines but permitted to retain on the Danube and on the coast, four torpedo boats and six motor boats.

GOVERNMENT. The executive power is in the king and a council of ministers nominated by him; the legislative power is in a single national assembly, the Sobranje, elected by universal manhood suffrage for four years though subject to dissolution at any time by the king, whose consent is

necessary to the passage of all measures voted by it. There is also a special large assembly known as the Grand Sobranje with twice as many representatives as the above who are chosen in the same manner. This has to do with questions involving changes in the constitution, vacancies to the throne, accession of territory, etc. The king in 1921 was Boris III, eldest son of Ferdinand, who succeeded on the latter's abdication, Oct. 4, 1918. The ministry at the beginning of 1921 as constituted in April, 1920, was as follows:

Premier, Minister for Foreign Affairs, and Minister of War, M. Stambuliski; Interior, M. Dimitroff; Justice, H. Radoloff; Commerce, R. Daskaloff; Finance, M. Torlakoff; Public Works, Tz. Bakaloff; Posts and Railways, N. Athanasoff; Education, M. Omarthevsky; Agriculture, M. Oboff.

EXECUTION OF THE TREATY. It was decreed on August 6 by the Commission of Control that the military clauses of the treaty of Neuilly should go into effect by October 1. But this did not appear practicable even to the Commission itself. The treaty required the abolition of compulsory military training, the reduction of the army to 20,000, and the keeping of the police force within the limit of 10,000 and of the frontier guards within the limit of 3000. As volunteers did not present themselves these forces were not created. The work of disbanding the former army was going on under the direction of the Control Commission and by the autumn none of it was left under arms.

The reports of these conditions, however, were denied in certain quarters where a propaganda was carried on for the purpose of getting Bulgaria into difficulty with the Allies. It was said for example that the Bulgarian government had concealed great quantities of war material and that by means of this they could easily equip an army of 856,000 veterans. This and many other rumors were in circulation for the purpose of discrediting the Bulgarian government. The Bulgarian Minister of War declared that if the decree in respect to carrying out the military clauses were executed Bulgaria would be left at the mercy of the Greeks, Serbians, and Roumanians on her frontiers.

THE MINISTRY. The Prime Minister, M. Stambuliski, a representative of the peasant party, answered the attacks of foreigners upon the government in a speech before parliament on the eve of his departure for the Assembly of the League of Nations at Geneva. He said that it was not true that the government was persecuting capitalists; on the contrary it desired foreign capital for the aid of Bulgarian industry, but the government was fighting speculation and would continue to do so. It favored by all possible means the encouragement of coöperation. In a speech made on the following day he discussed the alleged purposes of the Bolsheviks saying that the Moscow government was evidently intending to bring about a revolution in the Balkan states with the aid of the extreme radical parties in those states; that it first expected a revolution in Jugo-Slavia and that

later it would be followed by one in Roumania, Austria, and Bulgaria. He declared that the Bolshevik forces were already gathering on the northeastern Roumanian frontier and were mining the Black sea. It was the duty of Bulgaria to be on her guard, and he went on to make a suggestion that provoked much ridicule among the former enemies of Bulgaria, saying that it might be an effective means of combating the Bolsheviks if Bulgaria in the future became a part of the Jugo-Slavia state. A Soviet minister from the Ukraine was arrested, October 11, at Sofia, and the government demanded of Moscow that measures be taken to prevent Bolshevik propaganda in Bulgaria.

Spokesmen for the Stambuliski government pointed to its success in solving economic and financial problems but especially to the vigor with which it had put down disorders arising either from the reactionary or the extremely radical elements. These disorders had practically ceased in 1921, the only affair of the kind at all serious being a riot on St. Cyril's Day when disturbers, said to be Bolsheviks, threw a bomb in Sofia. This angered the people and they made an attack upon certain Communist groups and one of the newspapers, destroying the buildings and the printing press.

OTHER EVENTS. In January M. Stambuliski attempted to secure the support of Poland and Czecho-Slovakia to an international agricultural league which should serve as a protection against the two extremes, the reactionaries on the one hand, the Reds on the other, and which was known under the name of the "Green" International. In March the Bulgarian government informed the Supreme Council that, while it approved of a modification of the treaty of Sévres, it demanded Bulgarian possession of the Aegean coast in accordance with the treaty of Bucharest of 1913. On July 20 the Prime Minister denied the charges that were made against the government violating the treaty's requirements in respect to disarmament and for tending toward Bolshevism. On August 21 the government issued a further statement in respect to inability to carry out the orders of the Interallied Commission for disarmament and for the establishment of a volunteer militia by August 1. On October 11 the state trials of the members of the Radoslavoff war ministry were begun at Sofia. Alexander Dimitroff, Minister of War, was assassinated, October 22.

BÜLOW, KARL VON. See NECROLOGY.

BURDETT-COUTTS, WILLIAM LEHMAN ASHMEAD-BARTLETT. British member of Parliament, died July 28. He was born in the United States in 1851 the son of Ellis Bartlett of Plymouth, Mass., educated at Oxford, and was special commissioner in the Russo-Turkish war. In 1881 he married the Baroness Burdett-Coutts and aided her in the development of the various philanthropic schemes to which a large part of her vast wealth was applied. He was one of the founders of the British East African possessions and during the Boer war he was correspondent of the *London Times* in regard to the treatment of the sick and wounded and his reports led to the appointment of a commission of inquiry and to reforms of the army medical service. He was also prominent in the reform of railway administration. He was member of Parliament for thirty-six years, being elected first in 1885. He wrote a volume on the

Russo-Turkish war and contributed largely to the magazines.

BURGOYNE, Sir JOHN MONTAGU. British military officer (retired), died in Bedfordshire, England, March 19. His name was largely known through his having taken part in effecting the escape of the Empress Eugénie in France in 1870. He was born, Oct. 23, 1832, and served in the Grenadier Guards. He retired in 1861, with the rank of colonel. He was aboard his yacht the *Gaselle* off Deauville, September 6, when the Empress, under the care of the American dentist, Dr. Evans, reached the coast, and he took the fugitives across to Ryde Harbor.

BURLIN, NATALIE CURTIS. Writer, died in France October 23. She was born in New York City and was a niece of George William Curtis. After studying music in France and Germany she applied herself to the collection of folk-songs of Indian tribes, traveling widely among them for that purpose; and she made similar studies among the Zulu and other tribes of South Africa, and among the American negroes. In 1917 she married the artist, Paul Burlin. Among her books may be mentioned *Songs of Ancient America*, and *The Indian's Book*.

BURMA. The largest and most easterly province of British India. Area about 231,000 square miles; population in 1911, 12,115,217. The movement of population in 1919 was: Birth rate, 29.89; death rate 31.09. The population comprises nine racial groups of which the Burman is the chief, Burmese being the language spoken by about 8,000,000 of the inhabitants. Agriculture is the chief occupation and rice one of the main products and the principal export. Other exports include: Petroleum products, cabinet woods, and cotton. The capital of Lower Burma is Rangoon with a population of 293,316; of Upper Burma, Mandalay with 138,299. Lieutenant-Governor at the beginning of 1921 was Sir Reginald Henry Craddock.

BURNAM, JOHN MILLER. Classical scholar and university professor, died November 21. He was born at Irvine, Ky., April 9, 1864; studied at Washington University and at Yale, graduating at the latter in 1884. Also studied abroad and spent much time there during vacations in research. He taught Latin in Georgetown (Ky.) College and the University of Missouri till 1899. After September, 1900, he was professor of Latin in the University of Cincinnati. He wrote a number of monographs on Latin subjects and philological subjects besides contributing to the *Journal of Archaeology*. One of his latest works was *Technologia Lucensis* (1919).

BURNHAM, SHERBURNE WESLEY. Astronomer, died, March 11. From 1893 until his death he was professor of practical astronomy and astronomer of the Yerkes Observatory at the University of Chicago. He was born at Thetford, Vt., Dec. 12, 1838, and devoted himself to the study of astronomy while pursuing his profession as a stenographer. He soon made important discoveries of double stars, and in 1877 was called to the Chicago Observatory. After that he worked at the Lick Observatory, and later (1893) was appointed to the professorship above mentioned. He is reported to have discovered 1274 new double stars. The Lalande Prize in astronomy was awarded to him by the Paris Academy of Sciences in 1904. Among his works may be mentioned: *A General Catalogue of Double Stars Within*

121° of the North Pole (1906); and *Measures of Proper Motion Stars* (1912).

BURR, WILLIE OLCOTT. Connecticut journalist, died at Hartford, Conn., November 27. He was for many years editor of the *Hartford Times* and known as the dean of Connecticut journalists. He was born at Hartford, Sept. 27, 1843, descendant of one of the founders of the city, and the son of A. E. Burr who founded the *Hartford Times*. He entered his father's office in 1861 and was continuously engaged on the paper thereafter. Like his father he was prominent in Democratic political circles in the State. He was one of the Directors of the Connecticut State Prison.

BURROUGHS, JOHN. Essayist and naturalist, died, March 29. The literary quality of his many books and papers on animal life and other natural subjects placed him in the front rank of American writers of his time. He was born at Roxbury, N. Y., April 3, 1837, the son of a farmer. He received an academic education and taught school for eight years. He began the writing of essays in his boyhood, deriving suggestion from reading the works of Samuel Johnson, Emerson, and others, and especially influenced by Emerson, Walt Whitman and Matthew Arnold. He worked as a treasury clerk from 1864 to 1873 and as a national bank examiner from 1873 to 1884, but meanwhile contrived to pass occasional intervals on a farm in the country. From his youth he made frequent contributions to periodicals, chiefly on outdoor subjects. The chief quality of his work is the closeness of his observations, although his style shows the effect of his readings in English literature. The tendency of his literary judgments was toward the unconventional and indicated a dislike of the dogmatizing spirit of many of his contemporaries. The list of his writings is too long for inclusion, but among the principal ones the following may be mentioned:

Notes on Walt Whitman as Poet and Person (1867); *Wake Robin* (1871); *Winter Sunshine* (1875); *Birds and Poets* (1877); *Locusts and Wild Honey* (1879); *Pepacton* (1881); *Fresh Fields* (1884); *Signs and Seasons* (1886); *Indoor Studies* (1889); *Riverby* (1894); *Whitman, a Study* (1896); *The Light of Day* (1900); *Squirrels and other Fur*

Bearers (1900); *Literary Values* (1904); *Far and Near* (1904); *Ways of Nature* (1905); *Bird and Bough* (poems 1906); *Camping and Tramping with Roosevelt* (1907); *Leaf and Tendril* (1908); *Time and Change* (1912); *The Summit of the Years* (1913); *The Breath of Life* (1915); *Under the Apple Trees* (1916); *Field and Study* (1919).

BUTLER, GEORGE FRANK. Physician and author, died, June 22. He was born at Moravia, N. Y., March 15, 1857, and after an academic education went into the drug business in Massachusetts. He took his medical degree at Rush Medical College in 1889, and became a lecturer there from 1889 to 1892. He afterwards taught successively in the faculties of several other medical schools in the West, and in 1906 became professor of clinical and preventive medicine at the Chicago College of Medicine and Surgery. After 1915 he was professor emeritus. He was a member of many important medical bodies in Chicago. Among his writings may be mentioned: *Treatises on materia medica*; theapeutics and pharmacology, and a number of literary and poetical works, including: *The Isle of Content* (1902); *The Exploits of a Physician Detective* (1907); *Sonnets of the Heart* (1909); *Songs of the Heart* (1910); *Every Boys' Book* (1912); *Every Girls' Book* (1912); *The Travail of a Soul* (1914). He also published in 1913-14, *The Treatment of Disease*.

BUTTER. See DAIRYING.

BYNG, JULIAN, BARON OF VIMY AND THORPE LE SOKEN, GENERAL. British general distinguished in the war, was appointed in 1921 Governor-General of Canada. He was born, Sept. 11, 1862, and joined the 10th Royal Hussars in 1883. He served in the Sudan expedition in the following year, winning military honors, and in the South African war, 1899-1902, where he was mentioned in dispatches and received both the Queen's and the King's medals. During the European war he attracted attention from the first, and while engaged in the Dardanelles expedition, was promoted, lieutenant-general. He was in command respectively of the 3rd Cavalry Division, the Cavalry Corps, the 9th Army Corps, the 17th Army Corps, the Canadian Corps, and the 3rd Army.

CALDER, FREDERICK M. See NECROLOGY.

CALIFORNIA. POPULATION. According to the report of the census of 1920, there were 3,428,861 residents in the State, Jan. 1, 1920, as compared with 2,377,549 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn	1921	116,000	4,060,000	\$ 3,126,000
	1920	130,000	4,587,000	5,504,000
Oats	1921	140,000	3,780,000	1,928,000
	1920	155,000	4,650,000	3,720,000
Wheat	1921	557,000	8,355,000	8,940,000
	1920	714,000	9,996,000	17,993,000
Barley	1921	1,188,000	29,700,000	16,632,000
	1920	1,250,000	28,750,000	28,750,000
Hay	1921	2,296,000	¹ 5,187,000	56,321,000

IRRIGATION AND DRAINAGE. The accompanying table presents the statistics of irrigation for the State of California collected at the census of 1920. Statistics of acreage irrigated, of acreage, yield, and value of crops grown on irrigated land, and of cost of operation and maintenance relate to the year 1919; other items relate to the year 1920. Figures for the census of 1910 are given for purposes of comparison.

Item	Census of—		Increase, per cent
	1920	1910	
Number of all farms	117,670	88,197	33.4
Approximate land area of the state	99,617,280	99,617,280	
All land in farms	29,365,667	27,931,444	5.1
Improved land in farms	11,878,339	11,389,894	4.3
Number of farms irrigated	67,391	39,352	71.3
Area irrigated	4,219,040	2,664,104	58.4
Area enterprises were capable of irrigating	5,894,466	3,619,378	62.9
Area included in enterprises	7,805,207	5,490,360	42.2
Per cent irrigated:			
Number of all farms	57.3	44.6	
Approximate land area of state	4.2	2.7	
Land in farms	14.4	9.5	
Improved land in farms	35.5	23.4	
Excess of area enterprises were capable of irrigating over area irrigated	1,675,426	955,274	75.4
Excess of area included in enterprises over area irrigated	3,586,167	2,826,256	26.9
Area of irrigated land reported as available for settlement	533,981	(¹)	
Capital invested	\$194,886,388	\$72,580,030	168.5
Average per acre enterprises were capable of irrigating	\$33.06	\$20.05	64.9
Estimated final cost of existing enterprises	\$225,799,123	\$84,392,344	167.6
Average per acre included in enterprises	\$28.93	\$15.37	88.2
Average cost of operation and maintenance per acre	\$4.40	\$1.54	185.7

¹ Not reported in 1910.

The following statistics of the drainage of the State in 1920 were published by the United States Bureau of the Census:

Item	Amount	Per cent of total
DRAINAGE ON FARMS		
Number of all farms in the state	117,670	100.0
Farms reporting land having drainage	5,078	4.3
Farms reporting land needing drainage	3,187	2.7
All land in farms	29,365,667	100.0
Improved land in farms	11,878,339	40.4
Farm land reported as provided with drainage	813,960	2.8
Farm land reported as needing drainage	286,320	1.0
DRAINAGE ENTERPRISES		
Approximate land area of the state	99,617,280	100.0
All land in operating drainage enterprises	1,108,319	1.1
Improved land	1,038,835	1.0
Timber and cut-over land	12,263	(¹)
Other unimproved land	57,221	0.1
Total capital invested in and required for completion of operating enterprises	\$54,021,627	100.0
Capital invested in these enterprises to Dec. 31, 1919	\$47,687,153	88.2
Additional capital required to complete these enterprises	\$6,334,474	11.7

¹ Less than one-tenth of 1 per cent.

The total works completed by drainage enterprises to Dec. 31, 1919, comprised 3009.8 miles of open ditches, 85.6 miles of tile drains, and 1131.1 miles of levees; the additional lengths under construction were 204.4 miles of open ditches, 23.0 miles of tile drains, and 120.4 miles of levees. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the drainage enterprises, nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. There were 96 pumping districts among the operating enterprises, equipped with 191 centrifugal pumps and 1 water wheel. The principal crops grown on the drained land in drainage enterprises were reported as small grains, potatoes, alfalfa, and corn.

MINERAL PRODUCTION. According to estimates of the United States Geological Survey, the metal output of California in 1921 was approximately 761,660 ounces of gold, valued at \$15,744,910; 3,514,276 ounces of silver, which under the Pittman law was worth nearly the same number of dollars; 11,681,705 pounds of copper; 779,298 pounds of lead; and 842,400 pounds of zinc. The production of these metals in 1920 was gold, 692,297 ounces, valued at \$14,311,043; silver, 1,706,327 ounces; copper, 12,626,272 pounds; lead, 4,813,510 pounds; zinc, 1,165,509 pounds. The above figures reflect exactly the trend of mining during 1921. The market for copper, lead, and zinc was so poor that very few mines which make these metals their major product were in operation. A little lead ore rich in silver was mined, as well as some zinc ore, which was converted into zinc oxide. On the other hand, the mines that produce mainly gold or silver were active throughout 1921, and numerous mines were reopened during the year. The signs of revival were evident in the spring, and by midsummer there were almost daily rumors of gold mines either being reopened or under development. The greater part of the silver produced can be credited directly to the mines near Handsburg that are grouped about the famous Kelly mine. For a time in July it looked as if the mines along the Mother Lode, particularly those near Nevada City and Grass Valley, which are among the largest-producing deep mines in the State, might be forced to close because of labor troubles. These troubles, however, were finally adjusted, and a wage scale was established to hold until June 30, 1922. This scale, \$4.25 a day for machine men and \$3.75 for shovelers, was more or less generally adopted throughout the State. In the northern counties the old copper-smelting town of Keswick had about disappeared and was replaced by Matheson, 3 miles farther north, where the tram from the Hornet mine of the Mountain Copper Co. has its terminal.

FINANCE. According to the report of the State Comptroller, total receipts during the fiscal year 1920-21 were \$68,525,160.17 and disbursements for the same period were \$65,598,516.32. The assessed value of taxable property on July 1, 1921, was \$4,921,786,485. The net bonded indebtedness on the same date was \$95,579,460. The revenue under the new rates on corporations for the two-year period beginning July 1, 1921, was estimated at about \$68,000,000. The total receipts during the fiscal year 1919-20 were, as noted in the preceding YEAR BOOK, \$58,742,199

and the disbursements for the same period, \$61,908,140.

CHARITIES AND CORRECTIONS. The total number of inmates in State institutions on Nov. 30, 1921, was 17,080. This was distributed as follows: Industrial Home for Adult Blind, 137; State Correctional Schools, 877; State Hospitals for the Insane, 11,062; State Homes for Feeble-Minded, 1591; State Prisons, 3413. The state institutions under the Department of Institutions created by the act of July 30, 1921, included the following: State hospitals at Agnew; Talmage, Mendocino County; the Napa hospital at Imola; Norwalk, Los Angeles County; Southern California State Hospital, Patton, San Bernadino County; Stockton State hospital; California School for Girls at Ventura; California Industrial Farm for Women near Sonoma; Industrial Home of Mechanical Trades for the Adult Blind; Preston School of Industry, near Iona; Pacific Colony at Walnut; Sonoma State Home at Eldridge; Whittier State School at Whittier.

LEGISLATION. At the 1921 session of the legislature, important laws passed included the following: Soldier aid measures providing for financial assistance in house-building, land settlement, and education; reorganization of numerous state boards and offices into six administrative departments under the Governor; small claims courts; county public defender; State prohibition enforcement act; citizenship classes for applicants for citizenship; licensing of aircraft. In spite of the opposition of the utility companies taxes on the gross income of public service corporations were increased about 25 per cent.

OFFICERS. Governor, William D. Stephens; Lieutenant-Governor, C. C. Young; Secretary of State, Frank C. Jordan; Comptroller, Ray L. Riley; Treasurer, Friend W. Richardson; Attorney-General, U. S. Webb; Surveyor-General, W. S. Kingsbury; Adjutant-General, J. J. Boree; Superintendent of Public Instruction, Will C. Wood; Commissioner of Corporations, E. E. Daugherty; Librarian, Milton J. Ferguson; Legislative Counsel, George B. Bush; President Railroad Commission, Harley W. Brundige; Chairman Industrial Accident Commission, Will J. French.

JUDICIARY. Supreme Court: Chief Justice, Lucien Shaw; Associate Justices, Curtis D. Wilbur, Thomas J. Lennon, W. A. Sloane, Charles A. Shurtleff, William H. Waste, William P. Lawlor.

CALIFORNIA, UNIVERSITY OF. A co-educational institution of the higher learning at Berkeley, Calif., founded in 1860. The number of students registered down to Nov. 1, 1921, for the year 1921-22 was given as approximately 11,945 excluding duplicates, 211. The women numbered 4965. These were in the degree-giving departments alone. In other departments including university extension and the summer sessions there were 30,118 of whom 20,337 were in the university extension courses. Grand total deducting duplicates, 41,852. The summer session of 1921 had an enrollment of 7864. The degree-giving departments were as follows: Colleges of Letters and Science, Commerce, Agriculture, Mechanics, Mining, Civil Engineering and Chemistry; the schools of Architecture and Jurisprudence; the Medical School; the Hastings College of the Law; College of Dentistry; California College of Pharmacy; Junior College Department (Southern Branch, Los Angeles); Hooper Founda-

tion for Medical Research; Nonprofessional graduate school. The other departments were as follows: Teachers' Curricula, Los Angeles; Los Angeles Medical Dept.; Summer Sessions; University Farm School, Davis, Calif.; University Extension; Agriculture Extension. The teaching staff for the year 1921-22 numbered 979 and the administrative 69. The library contained 427,525 volumes. Productive funds, about \$6,500,000; income (1920-21) \$6,800,000. In 1921 a Students' Union building was under construction, the sum of \$300,000 having been subscribed for the purpose. President, David Prescott Barrows, Ph.D.

CALVÉ, EMMA. See *MUSIC, Artists, Vocalists.*

CAMBODIA. A French protectorate in the Far East, forming part of French Indo-China, bounded on the south by Cochinchina and on the north and northwest by Laos and Siam. Area, 45,000 square miles; population estimated in 1919, 2,000,000; capital, Pnom-Penh, with a population of about 85,000. The chief products are: Rice, pepper, cotton, tobacco, saltfish, betel, cattle, hides, etc. It is a native kingdom under French protection. The king in 1921 was Sisowath who came to the throne in 1904. See *FRENCH INDO-CHINA.*

CAMERON, Sir CHARLES ALEXANDER. British physician and health officer, died at Dublin, Ireland, February 27. He was born at Dublin, July 16, 1830, and educated at the university there and in Germany. He was chief medical officer at Dublin and the author of works on the chemistry of agriculture and public health and hygiene and wrote *History of Irish Medical Institutions*. He published a volume of reminiscences in 1913.

CAMEROON. See *KAMERUN.*

CAMPBELL, RALPH EMERSON. Judge, died, January 9. He was born in Butler County, Pa., May 9, 1867; graduated at the Indiana Normal University in 1891, and having studied law at the University of Kansas, practiced in Indian Territory, afterwards Oklahoma. He became United States district judge for the eastern district of Oklahoma, Nov. 16, 1907. He resigned, Sept. 1, 1918, and from that time until his death was in practice in Tulsa, Okla.

CAMPBELL-TIPTON, LOUIS. American composer, died in Paris, May 1. Born in Chicago, Nov. 21, 1877, he studied in the United States and Germany. From 1900 to 1905 he lived in Chicago, after that in Paris. He wrote chiefly for piano, but also left in manuscript several works for orchestra and two operas.

CAMPFIRE GIRLS. An organization founded in 1912 by Dr. and Mrs. Luther Gulick for the general purpose of promoting good health by outdoor life, encouraging economy and effecting social improvement. It is an organized effort to find romance, beauty, and adventure in everyday life. It seeks to make the homely task contribute to the joy of everyday living. A regular feature of the programme each year is camping out. Groups of from six to twenty girls with a Guardian comprise a Campfire. The Guardian must be at least eighteen. Membership dues are one dollar and go toward the support of the National Headquarters at 31 East 17th Street, New York City. Workers are maintained in the field and monthly bulletins of instruction are supplied the Guardians. Each Campfire and Campfire Girl has a name

and a symbol. Ceremonial meetings are held once a month. The Campfire Law requires the following: Seek beauty, give service, pursue knowledge, be trustworthy, hold on to health, glorify work, and be happy. They consider their personal health a sacred thing. During 1921 more than 100,000 Campfire Girls carried out this point of the law by camping in the open for one or more weeks. The Campfire programme emphasizes as significant in every girl's life, a knowledge and love of nature, handicrafts of all sorts, service, which is citizenship and patriotism, and ability to earn money and keep accounts. The programme has been found especially adaptable for girls' work in schools and churches, and it is now being followed by various denominations as the official programme for the "between-Sunday" activities of the girls. In their reconstructive programme followed in 1921, the girls pledge themselves to conserve health and become sturdy and rugged, to create wealth for self and country by saving and to reestablish the old-fashioned womanhood by making the home more beautiful and happy. Courses in Campfire work are conducted in the Michigan Normal College at Ypsilanti, and the Colorado Teachers' College. The New York University Summer School also offers a thorough course in Campfire training.

The membership of the movement is approximately 150,000 girls, divided into 7849 groups in every State in the Union and in foreign countries as follows: Alaska, Canada, Mexico, Argentina, Brazil, Bolivia, Canal Zone, Scotland, India, Japan, Spain, Porto Rico, England, Holland, Turkey, China, Cuba, Hawaii, and the Philippine Islands.

The Honorary officers in 1921 were Hon. Warren G. Harding, president; Woodrow Wilson and William H. Taft, vice-presidents. Mrs. Warren G. Harding is Honorary Chairman of the National Supervisory Council. Mrs. Oliver Harman is president, Miss Florence Hughes, 1st vice-president, Dr. Myron T. Scudder, treasurer, and Mr. Lester F. Scott, secretary and national executive. The official organ of the movement is *Everygirl's Magazine*, which is published monthly at the National Headquarters, 31 East 17th Street, New York. The annual meeting was held in Cleveland, Ohio, February 23-28. William Estabrook Chancellor delivered an address on the "Symbolism of Camp Fire and its relation to the Psychology of the Adolescent Girl."

CANADA. A British dominion of North America, with the United States on the south, and the Arctic ocean on the north, and extending from the Atlantic to the Pacific ocean. Capital, Ottawa.

AREA AND POPULATION. The total area is 3,729,665 square miles of which 125,755 are under water; divided into nine provinces and two territories; total population, June 1, 1911, 7,206,643; at the census of 1921, 8,772,631. In 1917 the Indians numbered 105,998 and the Eskimo, 3296. In 1911 the urban population was 3,280,964. During the year ending March 31, 1920, the immigrants numbered 117,336, of whom 49,656 came from the United States; 45,855 were English and Welsh; 10,997, Scotch; 2751, Irish. The cities of over 100,000 in 1911 were: Montreal, 470,480; Toronto, 376,538; Winnipeg, 136,035; Vancouver, 100,401. Ottawa in 1911 had a population of 87,062; Quebec, 78,190. Preliminary

figures of the 1921 census gave the city of Montreal 607,063; Winnipeg, 178,364; Ottawa, 107,137; Quebec, 94,058. The census of 1921 was not complete at the close of the year, but the preliminary figures for the province of Quebec were 2,349,067, an increase or 343,291 over the census of 1911; for Prince Edward Island, 88,536; Nova Scotia, 524,579; New Brunswick, 388,092; Manitoba, 613,008; and Alberta, 581,995.

EDUCATION. Instruction is directly under the provincial governments. Complete figures for the Dominion were not available for 1921. The following table taken from the *Statesman's Year Book* of 1921, shows the statistics by provinces for 1918 and 1919:

Provinces	Year	Schools	Teachers	Pupils
Ontario.....	1918	6,995	14,357	564,655
Quebec.....	1918	7,244	16,995	475,219
Nova Scotia.....	1919	1,797	3,012	106,982
New Brunswick.....	1919	1,299	2,107	71,029
Manitoba.....	1919	2,017	3,215	114,662
British Columbia.....	1919	582	2,332	72,006
P. E. Island.....	1919	475	606	17,865
Alberta.....	1918	2,966	5,652	111,109
Saskatchewan.....	1918	4,145	6,223	151,326
Total.....		27,520	54,499	1,684,853

The universities numbered 22 with 2616 teachers and 20,535 students in 1918-19, and there are several colleges in each province. The provincial universities supported by the government include those of: New Brunswick, Toronto, Saskatchewan, Alberta, and British Columbia. The universities supported by private funds are those of: McGill, Dalhousie, Western University, University of London, University of Ontario, and Queen's University, the last-named receiving state aid. There are also various denominational universities and colleges, numbering 43 with 12,671 pupils in attendance in 1918-19.

PRODUCTION. The total value of field crops in 1920 was placed at \$1,445,000,000. The following table taken from the *Statesman's Year Book* of 1921 gives the details for the principal crops in 1920.

1920	Wheat		Barley		Oats

Other products in 1920: Peas, beans, buckwheat, rye, mixed grains, corn, sugar beets, turnips and other roots, alfalfa.

Livestock, June 15, 1920, was as follows: Horses, 3,400,000; milk cows, 3,530,000; other cattle, 5,947,000; sheep, 3,721,000; pigs, 3,517,000. In 1919 the wool clip was estimated at 15,000,000 pounds; the production of creamery butter at \$55,182,000, and factory cheese, \$44,806,000. No later figures for forest products were available than those contained in the preceding YEAR BOOK.

The total production of pig iron in Canada during the calendar year 1917 was 1,044,000 long tons; in 1918, 1,067,000 tons; in 1919, 819,000 tons; in 1920, 974,000 tons; and for the first two months of 1921 the production was 99,000 long tons. Steel ingots and castings produced in Canada aggregated, for the year 1917, 1,558,000 long tons; 1918, 1,681,000 tons; 1919, 924,000 tons; 1920, 1,109,000 tons; and for the first two months of 1921, 99,000 tons.

FISHERIES. In 1920 the value of the catch was placed at \$49,321,217, a decrease of \$7,187,262 from 1919. The shares of the provinces were as follows: British Columbia, \$22,329,161; Nova Scotia, \$12,742,659; New Brunswick, \$4,423,745; Ontario, \$3,410,750; Quebec, \$2,591,982; Prince Edward Island, \$1,714,663; Manitoba, \$1,249,607; Alberta, \$529,078; Saskatchewan, \$296,472; Yukon, \$33,100. Salmon made up more than a third of the value of the catch and next in importance were in their order: Lobsters, cod, halibut, herring.

COMMERCE. For the twelve months ending June 30, 1921, the imports were \$1,085,311,676 and the exports \$1,113,336,822. About nine-tenths of the imports came from the United States and Great Britain, the former supplying 70 per cent and the latter 16 per cent. Over 72 per cent of the exports went to the same two countries, the United States taking 45 per cent and Great Britain, 27 per cent. The tables on page 115 show the chief articles imported and exported respectively in the years ending June 30, 1920 and 1921.

Wheat was the chief export and in 1921 more than doubled in quantity and nearly doubled in value the exports in year ending June 30, 1920.

No figures for the entire year were available, but the following information for the twelve months ending in September, 1921, and in September, 1920, respectively, was supplied by the Dominion Bureau of Statistics:

means clear that the arrangement would be permanent or that it was generally acceptable. The platform of the Progressives or Farmers' party favored it, while both the Conservatives and the Liberals were divided on the subject. The roads had been taken over when they were approaching bankruptcy and there was a considerable Conservative element that favored public ownership

VALUE OF CANADIAN IMPORTS AND EXPORTS DURING THE 12 MONTHS ENDED SEPTEMBER, 1920, AND 1921

TRADE WITH UNITED KINGDOM AND UNITED STATES. During the year ended Sept. 30, 1921, 71 per cent of the Canadian imports came from the United States and 15 per cent from Great Britain. These percentages compare with 69 per cent from the United States for the same period in 1920 and 16 per cent from Great Britain.

The Canadian exports to the United States during the 12 months' period ended September, 1921, were 43 per cent, and to Great Britain 29 per cent. Exports for the corresponding period in 1920 were 42 per cent to the United States and 31 per cent to Great Britain.

The following table shows the value of Canadian imports from and exports to the United Kingdom and United States during the 12 months' period ended September, 1921:

but the majority of the Conservatives appeared to be against it. The financial interests on the whole were opposed to it and were waiting for the general conviction to spread that the experiment was a failure.

In Canada during 1921 ten railway companies built 151.26 miles of first track and 6.57 miles of second track or a total of 157.85 as compared with construction in 1920 by seven companies of 305.39 miles of first track and 31.60 miles of second track or a total of 336.99 miles. The 1921 record was the next lowest to that of 1918 and reflected the uncertainties of the Canadian railway problem. A summary of the more important construction is presented herewith based on the annual review in the *Railway Age* (New York).

In Alberta the Alberta and Great Waterways

VALUE OF CANADIAN TRADE WITH THE UNITED KINGDOM AND UNITED STATES DURING 12 MONTHS ENDED SEPTEMBER, 1921

FINANCE. The annual budget was presented, May 9, as follows: Receipts, \$435,360,971; expenditures, \$591,437,697. To provide for this deficit, there were taxes on playing cards, and liquors, and it was anticipated that there would be an increase on the sales tax. The debt at that time amounted to \$2,350,236,700.

RAILWAYS. As noted in previous YEAR BOOK the policy of government ownership had already been begun, the administration having taken over the Grand Trunk and Canadian Northern systems which included virtually all the roads with the exception of the Canadian Pacific. It was by no

had under construction 10.7 miles of first track. There was also in progress: Reconditioning of track, right-of-way, and drainage; new water supplies, etc., \$2,000,000, 90 per cent completed.

The British Columbia Electric built in Vancouver, B. C., 0.55 mile of first track.

The Canadian National Railways built first track as follows: In Manitoba, Amaranth north, 17.7 miles. In Saskatchewan, Thunderhill extension, 13.9 miles; Milfort northeast, 23.7 miles; Luck Lake, 15.02 miles; Jackfish Lake, 15.06 miles. In Alberta, Onoway branch, 11.9 miles and in British Columbia, Vancouver Island, 3.1 miles.

There were also under construction 6.57 miles of second track: In Alberta, between Munson and Wayne, 6.57 miles.

Important terminal, bridge, and other construction was in progress as follows: Canadian Northern: New terminal facilities and buildings at Nutana, Saskatchewan, \$411,050, completed; steel bridge at Saskatoon, Saskatchewan, six 157-ft. spans, cost \$340,000, completed; steel bridge across Red Deer river, in Alberta on Medicine Hat branch, cost \$328,000, sub-structure, completed; steel bridge across Assiniboine river at Pleasant Point, Manitoba, cost \$160,000, 15 per cent completed. Grand Trunk Pacific: new reservoir, dam, and pipe line at Melville, Saskatchewan, cost \$320,000, completed; salmon wharf and warehouse at Prince Rupert, B. C., cost \$750,000, wharf completed, warehouse 15 per cent completed. The Canadian Pacific had built first track as follows: Langdon, Alberta, north (Acme-Empress), 17.3 miles; Weyburn, Alberta (Altawan West), 17 miles. The following new or extended track work was under construction: From Russell, Manitoba, northerly, 5.5 miles; Lanigan, Saskatchewan, northeasterly, 0.5 miles; Bassano, easterly, 56 miles, of which 35 miles were graded; Rosetown, southeasterly, 45 miles, of which 41 miles were graded; Archive-Weymark, 25 miles, of which 21 miles were graded; Moose Jaw, southwest (Consul East), 60 miles, of which 31 miles were graded; Leader, southeasterly, 29.5 miles. The Central Canada laid 23 miles of first track in Alberta. The Dominion Atlantic built near Weymouth Mills, Nova Scotia, 2.5 miles of first track. The Esquimalt and Nanaimo built 4 miles of first track in Province of British Columbia, and had in progress the survey of a new line from Courtenay to Campbell river, a distance of 30 miles. There was under way the renewal of railway and highway bridge at Victoria, B. C., while for a joint bridge with the city of Victoria, to cost \$750,000, the foundations were about completed.

Grand Trunk, lines east, had in progress the renewal and widening of overhead bridge at Main Street, Toronto, at a cost of \$120,000, which was 80 per cent completed. The Kettle Valley built 2.4 miles of first track from South Penticton, B. C., to Dog Lake, 2.4 miles, and had under construction 16.7 miles, from Dog Lake to government experimental farm, 16.7 miles. The Pacific Great Eastern in British Columbia, built from Australian creek to Cottonwood river, 35 miles, and from Ft. George to Red Rock creek, 18 miles. It was also building new road from Red Rock creek to Cottonwood river, 46 miles. This line had projected new lines from Ft. George to Provincial boundary, Peach river district, 428 miles. While main line was under operation from Squamish to Quesset, 348 miles, with steel laid to mile post 364, and line graded to mile post 428. Steel had also been laid for 18 miles south of Ft. George, cost of all work, \$40,000,000, 90 per cent completed. The Quebec Central from Scott Junction, in Province of Quebec, to Diamond Junction, had built 19.33 miles of first track. The Reid-Newfoundland had built from Irvine, N. F., to Topsail, 1.5 miles of first track. The Temiskaming and Northern Ontario was building a new line from Cochrane to Abitibi Cañon, 70 miles.

GOVERNMENT. The executive power is normally vested in the King, but is exercised in his

name by the Governor-General who acts through a responsible ministry. The legislative power is vested in a Parliament of two houses, the Senate and the House of Commons. The Senators are nominated for life and the members of the House of Commons are elected by direct suffrage for five years. The Senate has 96 members and the House of Commons had at the beginning of 1920, 234 members as follows: 82 for Ontario, 65 for Quebec, 16 for Nova Scotia, 11 for New Brunswick, 15 for Manitoba, 13 for British Columbia, 3 for Prince Edward Island, 16 for Saskatchewan, 12 for Alberta, and 1 for the Yukon Territory. As the result of the election of December, 1917, the Unionists in the House of Commons numbered 151 and the opposition 81. Governor-General in 1921, the Duke of Devonshire; succeeded by Lord Byng of Vimy. The ministry formed after the fall of the Borden cabinet lasted till the election of December, 1921. It was constituted as follows: Secretary of State for External Affairs (First Minister), Arthur Meighen; Minister of Trade and Commerce, Sir George E. Foster; Minister of Finance, Sir Henry L. Drayton; Minister of Justice, C. J. Doherty; Minister of Labor, Gideon Robertson; Minister of Railways and Canals, J. D. Reid; Minister of Soldiers' Civil Reestablishment, Sir James A. Loughheed; Secretary of State of Canada (acting), Arthur L. Sifton; Postmaster-General, P. E. Blondin; Minister of the Interior and Minister of Mines, Sir James A. Loughheed; Minister of Marine and Fisheries and Minister of the Naval Service, C. C. Ballantyne; Minister of Customs and Inland Revenue, R. W. Wignmore; Minister of Immigration, Colonization, and Health, and President of the Privy Council, J. A. Calder; Minister of Militia and Defense, Hugh Guthrie; Minister of Agriculture, Simon F. Tolmie; Minister of Public Works, F. B. McCurdy; Member of Privy Council without portfolio, Edgar K. Spinney. On the eve of the elections several changes were made, which are noted below under *History*. For new ministry after the December elections see also below.

HISTORY

RELATIONS TO THE EMPIRE. Of late years the movement of self-government has greatly advanced and come to embrace all parties including the Conservatives. It does not aim in any sense at separation but only the retention of the complete control of domestic administration acquired during the war, and the gaining of a voice in the foreign affairs of the Empire. The war carried Canada far along in these respects. The last outward sign of imperial authority in Canada, with the exception of the Governor-General, disappeared when the imperial troops were recalled during the war. An illustration of the change in spirit was the new attitude toward conferring of titles. In accordance with the wishes of Parliament titles are no longer conferred. Another illustration was the movement for making the appointment of Governor-General depend on the recommendation of the Canadian government and not on that of the British government, and the requirement that he should be, if possible, a Canadian. Still other examples were the controversies over the question of jurisdiction over the Canadian army in France as between the Canadian Ministry of Militia and the British

War Office; and the demand of the Canadian government that it should be independent of the British Colonial Office. The discussion of the question of a Canadian Minister in Washington also had a bearing on the same tendency, Parliament having decided that a Canadian ambassador should be appointed at Washington. Again in 1921 the Canadian Prime Minister, Mr. Meighen, had illustrated Canada's purpose to take a direct part in foreign affairs by his protest against the renewal of the Anglo-Japanese treaty. Of the above matters the question of the ambassadorship at Washington brought on a long discussion. On the one hand it was criticized as implying that Canada was practically outside the British Empire since the naming of an ambassador was evidence of the separate standing of a nation. On the other hand it was advocated as a necessary and practical measure in view of the local matters that could be understood only by a Canadian representative, such as the questions of exportation of pulp wood from Canada to America; interchange between Canadian and American railways; the various fishery questions, etc.; in all of which it seemed unreasonable that a British ambassador should represent Canadian interests. That this tendency toward autonomy was not limited to radicals or separatists was shown by the fact that the spirit was shared by such men as Mr. N. W. Rowell, head of the Liberal-Unionist Party, Mr. Meighen, the Prime Minister, and Sir Robert Borden, former Prime Minister, the two latter having been always identified with the Conservative party. The supporters of this principle went even further than demanding a separate ambassador at Washington. They held that in imperial foreign questions where the interests of Canada were seriously involved Canada should not only be consulted, but her views should be acted upon. At present the only means of Dominion participation in imperial policies was the irregular and cumbersome meeting of the prime ministers in the Imperial Conference. The problem before Canada in 1921 as in recent years was to develop some better machinery for this purpose.

POLITICAL PARTIES. On the eve of the elections fixed for December 6, the situation in regard to political parties was as follows: For the first time in the history of Canada four political parties were prepared to enter the contest, namely, the party in power known officially as the National Liberal and Conservative party; the Liberal party; the National Progressives or Farmers' party; and the Labor group, which, however, had not yet developed a stable organization. The first of these, the National Liberal and Conservative party consisted of the old Conservatives in addition to those old Liberals who had joined it since 1911, being in harmony with the reciprocity issue of that year and the conscription issue during the war. It was in power throughout the war and successful in maintaining national unity, but the retention of war legislation after the war, various internal dissensions and its alleged subservience to the big interests made it extremely unpopular. Sir Robert Borden resigned in 1920 and was succeeded by Mr. Arthur Meighen. The Liberals of late years had been weakened by their defeat in 1911, by the split in the party in 1917 when they were divided on war issues, and the death of Sir Wilfrid Laurier. The withdrawal of the farm-

ers also decreased their strength. In the Parliament, 1917-21, they held 62 of the 65 seats from Quebec and nearly half of the seats from the three Atlantic provinces but only a few from Ontario and only two from the western provinces. They showed increased vigor after the drawing up of their new platform at the national convention of 1919 and their election of William Lyon McKenzie King as leader. The National Progressives or Farmers' party was composed largely of the farmers of the western or prairie provinces who had in recent years developed strong economic organizations and a spirit of solidarity. The Coöperative Farmers' movement was organized on a provincial scale throughout the West and spread also in the East. Strong coöperative marketing companies including the United Grain Growers and the Saskatchewan Elevator Company were extending their operations. In general the object of the Progressives or Farmers was to hold in check the power of the manufacturers, railroads and banks, but specifically there was their opposition to a protective tariff and their resentment of the rejection of reciprocity. They also bore a grudge against the party in power for certain war-time measures objectionable to the farmers. During the three years preceding the elections they had succeeded in getting the control of the governments of Alberta and Ontario, in becoming the chief political group in Saskatchewan and in making considerable progress in Manitoba. After recent by-elections they had formed a strong organization and they chose as their leader, Mr. T. A. Crerar who had been Minister of Agriculture in the Unionist government in 1917, resigning in 1919. The leading issue was the tariff. The farmers demanded a thorough cutting down of duties on the necessities of life, including foodstuffs, and on instruments of production, and in their platform they inserted a plank demanding free trade with England in five years though this afterwards seemed to the main body of them too radical a measure. The grounds of their objection to the high tariff were its tendency to depopulate the country districts and to lead to combinations and monopolies; and they pronounced the infant industry idea fallacious in view of the experience that protected industries always remained in their infancy. The Conservatives on the other hand argued in general that free trade endangered the unity and even the independence of the country, and they took advantage of the Fordney Emergency Tariff of the United States as a sign of the impossibility of friendly tariff relations with this country. The Liberals in respect to the tariff were on practically the same ground as the Farmers except for the free-trade-with-England plank; although the Liberal representatives of large business opposed any reduction of the tariff on account of the attitude of the United States. In general the Liberals looked to a tariff for revenue with incidental protection. A good deal was also made of the question of "class rule." The Conservatives accused the Farmers' movement of seeking class advantages and of aiming at a dictation over other classes without regard to justice, while the farmers on their side characterized their opponents as aiming at a class domination in their turn and of having ruled the country for a generation in the interests of lawyers and manufacturers. For the first time women were to vote in the coming election.

THE ELECTIONS. After the arrival of the new governor-general, Lord Byng of Vimy, Prime Minister Meighen reorganized the Unionist Ministry with a view to strengthening it on the eve of the general elections, the retiring members being, Sir George Foster, P. E. Blondin, J. D. Reid, J. A. Calder, R. W. Wignmore, and C. H. Doherty. Parliament was officially dissolved by the Governor-General, Lord Byng of Vimy, October 4. Thereupon the Prime Minister, Mr. Meighen, head of the Conservatives, issued the party declaration. In this he insisted that the tariff question was the chief subject before the people. The present protective tariff, he said, was vital to the industrial welfare of Canada and any revision downwards would involve the undoing of what had been accomplished toward making Canada self-sufficing in industries. The Liberal and Progressive parties on the other hand declared in favor of a tariff for revenue only, the latter favoring ultimate free trade. During the campaign the government speakers pointed to the present Emergency Tariff in the United States as an argument in favor of retaliation on the part of Canada. The Liberals demanded substantial reductions in order to diminish the high cost of living and reduce the cost of production in Canadian industries based on natural resources. They also favored a further reduction of the tariff on British goods to one-half of the general tariff by way of preference and demanded the placing on the free list of wheat, the main articles of food, farm machinery, and tools, fertilizers, and lumber, gasoline, oils, nets, and fishermen's supplies. The Progressives favored an immediate, substantial and all-round reduction of the tariff; a decrease of 50 per cent on British goods and a continued scaling down to the end that free trade between Great Britain and Canada should be insured in five years; reciprocity in natural products with the United States on the basis of the 1911 Taft-Fielding agreement.

In the elections the Prime Minister was defeated even in his own constituency, and ten members of the Cabinet lost their seats. Quebec voted solidly Liberal and fifteen seats went over to the Liberals in Nova Scotia and New Brunswick. The Liberals made heavy gains also in Ontario which was the stronghold of the government party. The election was the first one in which woman suffrage was fully employed. One woman was returned to the Canadian House of Commons for the first time, namely, Miss Agnes McPhaill, a Progressive, elected from Ontario. The elections indicated a complete change in popular sentiment, and, while the Liberals did not have a majority for their own party in the new Parliament, they were in agreement with the Progressives in the main features of their policy, and when united with them would command a large government majority for all important questions, especially that of the tariff. The main result was the complete collapse of the government party, known as National Liberals and Conservatives, who had succeeded the Unionist coalition, formed in 1917 under the pressure of war conditions. In 1917 Sir Robert Borden had secured 150 members, whereas, in the Parliament following the 1921 election his successor had only 51 seats out of a total of 235. In five of the nine provinces, namely, Quebec, Nova Scotia, Prince Edward Island, Manitoba, and Saskatchewan, not one government

supporter was elected, and in Alberta only one was elected. While the Liberals had apparently only 117 seats out of the 235, the other half was divided into two mutually hostile sections, namely, the Conservatives on the one hand and the radical Progressives on the other. The Liberal party occupied the middle ground between these two extremes. The reasons assigned for this defeat which was more complete than any other party had ever before suffered included the following: The disaffection of Quebec which for many years past had been spreading and which reached an acute phase during the crisis arising from the war; the appearance of a new and formidable group, that is to say, the Progressives who were still strong in the West where they carried everything before them; the indifference of the public to the alarm which the government attempted to arouse over the danger to the tariff; and the strong appeal made by the personality of the Liberal leader, William Lyon Mackenzie King. As a result of the elections: 117 Liberals; 65 Progressives; 51 Conservatives and 2 members of the Labor party, thus giving a strong Liberal majority. The distribution in the Parliament that had been dissolved in October was: Conservatives, 120; Liberals, 84; Progressives, 14; Independents, 4; Vacant seats, 13. The Liberal leader Mr. William Lyon Mackenzie King was chosen Prime Minister.

THE NEW MINISTRY. The new Prime Minister announced the Cabinet on December 29, as follows: Minister of Finance, William S. Fielding of Nova Scotia; Minister without portfolio and Solicitor General, Daniel D. Mackenzie of Nova Scotia; Secretary of State, A. B. Copp of New Brunswick; Minister without portfolio, John E. Sinclair of Prince Edward Island; Minister without portfolio, Raoul Dandurand of Quebec; Minister of Health and Soldiers' Reestablishment, Henri S. Beland of Quebec; Minister of Justice, Sir Lomer Gouin of Quebec; Minister of Customs and Excise, Jacques Bureau of Quebec; Minister of Marine and Fisheries, Ernest Lapointe of Quebec; Minister of Trade and Commerce, James A. Robb of Quebec; Minister of Militia and Defense and Minister of the Naval Service, George P. Graham of Ontario; Postmaster General, Charles Murphy of Ontario; Minister without portfolio, Thomas A. Low of Ontario; Minister of Railways and Canals, William C. Kennedy of Ontario; Minister of Labor, James Murdock of Ontario; Minister of Agriculture, William R. Motherwell of Saskatchewan; Minister of the Interior, Mines and Superintendent General of Indian Affairs, Charles Stewart of Alberta, and Minister of Public Works, Hewitt Bostock of British Columbia.

Mr. William Lyon Mackenzie King, who had made a special study of conditions in the United States and had pursued courses at the universities of Chicago and Harvard, was Minister of Labor for eight years in the Laurier government. See **EXPLORATION; NAVAL PROGRESS.**

CANADA, WILLIAM WESLEY. See **NECROLOGY.**

CANALS. In view of world wide economic conditions it was not reasonable to look for any projects of importance in the way of large artificial waterways in 1921. Even in the United States the work contemplated even of a minor character was drastically curtailed by the River and Harbor Bills of 1920 and 1921. In Europe

plans were discussed but without much positive action.

CAPE COD CANAL. This canal which from the time of the war had been operated by the Federal government was recommended for purchase during the year by Secretaries Weeks, Denby, and Hoover, who informed Congress that \$11,500,000 would be a reasonable price for the property. The three secretaries made a careful investigation of the acquisition of the Cape Cod canal which resulted in the conclusion that government control of it was desirable and the price of \$11,500,000 was reasonable.

Recommendation that the Federal government acquire the property was accordingly transmitted to Speaker Gillett together with an agreement to be ratified by Congress calling for the transfer of the canal property from the Boston, Cape Cod

& New York Canal Co. to the Federal government.

Of the \$11,500,000 purchase price, \$5,500,000 would be paid in cash while for the remainder the government would assume the outstanding bonds.

Canals at Sault Ste. Marie. At these important waterways there was a decrease of traffic during 1921. The United States Canal at Sault Ste. Marie, Mich., was opened April 7 and closed Dec. 24, 1921, thus making the navigation season 262 days. The Canadian Canal was opened April 9 and closed Dec. 16, 1921; giving a season of 252 days.

A statistical report of the lake commerce through the canals at Sault Ste. Marie, Michigan and Ontario for the season of 1921 is abstracted in the accompanying summaries:

In 1921 there was generally speaking decreased volume in most lines of freight passing through the canals as compared with 1920, as will appear in the comparative statement given herewith of

lake commerce through both canals of Sault Ste. Marie. Naturally the decrease in copper and iron ore stands out conspicuously.

NEW YORK BARGE CANAL. By virtue of an Act of Congress signed by President Wilson on Feb. 28, 1921, the United States Government relinquished operation of the fleet of barges on the New York State Barge Canal. The Inland and Coastwise Waterways Service of the War Department, which had control of the operations on the canal, then offered for sale most of the fleet built for the canal, which included fifteen self-propelled barges, thirty-eight steel cargo barges, sixteen concrete cargo barges, three wooden barges, three small tugs, and ten old wooden barges. The Government, however, retained about one-quarter of its fleet for operation on other waters still under its jurisdiction. A New York City syndicate purchased for \$1,000,000 a large part of the equipment, its bid also covering the purchase of the entire remaining equipment, on a deferred payment basis over a period of seven years. The initial payment was \$75,000 with subsequent payments of \$100,000 on Jan. 1, 1922, and \$75,000 on July 1, 1922, the balance to be paid in equal monthly installments over the remainder of the period of seven years, deferred payments bearing interest at 5 per cent.

Another evidence of the possible increased use of the barge was the completion and delivery in New York City of the first of five barges, each of 1500 gross tons cargo capacity and 10-ft. draft. This barge built in Duluth arrived at New York City, via the New York State Barge Canal, loaded with 83,000 bu. of oats. The five barges were to be 254 ft. long, with 36-ft. beam and 14-ft. depth, having a cargo capacity of 1500 gross tons at a 10-ft. draft and 1750 gross tons at 11-ft. draft. They were to be driven by Diesel oil engines. It was proposed to operate these and other barges in a regular service between New York and Buffalo, largely devoted to grain carrying. In addition a number of the large industrial companies were seriously considering the question of operating their own barges on the canal.

CHESAPEAKE AND DELAWARE CANAL ENLARGEMENT. During the year work was started on the first construction contract for the enlargement of the old Chesapeake and Delaware Canal between Delaware City on the Delaware river and Chesapeake City on Chesapeake Bay. This contract was for excavating 675,000 cubic yards of high land, but the entire project which contemplated making a sea level canal 90 feet in width would involve some 6,000,000 cubic yards of dry excavation and 10,000,000 cubic yards of dredging for which future appropriations would have to be made by Congress.

The original Chesapeake and Delaware canal, built 1824-29, was a lock canal of 12 feet depth and 24 feet lock width, while the new canal, to be known officially as the "Inland Waterway from Delaware River to Chesapeake Bay, Delaware and Maryland," was to have the same location but was to be a sea level canal, doing away with the three locks constructed in 1850 with a width of 24 ft. and a length of 220 ft. which had served to restrict navigation. The summit level of these locks was 15 ft. above mean low tide, while the mean ranges of tide at Delaware City on the east end of the canal and at Chesapeake City on the west end were respectively 6 ft. and 2 ft. The River and Harbor Act of March 2, 1919, carried an appropriation for the purchase of the canal company's property at the agreed price of \$2,514,-

289.70, and after condemnation and other proceedings the United States took possession of the canal and appurtenances Aug. 13, 1919. The Government upon taking charge straightway abolished all tolls, making the canal a free waterway. The project adopted provided for a lockless, tide level canal 12 ft. deep and 90 ft. wide on the bottom, estimated to cost \$12,000,000. No appropriations were made in the River and Harbor Acts of 1920 and 1921 for further work and the contract referred to was carried with the unexpended balance from 1919.

SUEZ CANAL. Naturally during the World War the Suez canal was as important a military consideration as it is a commercial highway in normal times. Accordingly then it was decided to deepen and enlarge the waterway and this was vigorously prosecuted so that by 1921 the depth of 39.4 feet aimed at was obtained for a distance of 80.8 miles leaving 18.6 miles which was 34.4 feet deep. The shallow portion was toward the Suez end, where there was a tide of 3.28 to 5.91 feet so that at certain stages of the tide there was full depth through the canal. There was practically no tide at the Mediterranean end.

The minimum width at bottom was 147.6 feet, while the ordinary width of 197 to 246 feet was increased to 325 to 360 feet at curves or special places. The improvements included lining much of the canal banks with stone wall to prevent washing, and this wall was set at the full standard width, so that in places dredging was still required to give the projected cross section of water at all points. The breakwater at Port Said was extended so as to prevent much of the silting up of the entrance. In 1921 the canal was in an efficient state and there was practically 40 feet of water available.

The traffic before the war was about 20 million tons annually. It fell during the war to 13 to 14 millions and in 1921 was about 17 millions.

CANARY ISLANDS. A group of islands off the northwest coast of Africa belonging to Spain. Area, estimated at from 2808 square miles to 3342 square miles. The population Dec. 31, 1910, was 444,016; estimated Dec. 31, 1918, 513,959. The capital, Santa Cruz de Tenerife, had a population in 1910 of 63,004; estimated Dec. 31, 1918, 72,871. The next largest city is Las Palmas with a population estimated, Dec. 31, 1918, at 69,270. There is an institution for higher education on the islands under the University of Seville. There is regular steamship communication with Spain and a wireless establishment. The chief exports are tomatoes, potatoes, bananas, and wheat.

CANCER. Despite the praiseworthy activities of the American Society for the Prevention of Cancer there is much pessimism as to the outcome both of laboratory research and sociological efforts in solving the problem of cancer as a racial evil. Dr. Jonathan Wright in the *Medical Record* for Nov. 26, 1921, page 964, states that it would be foolish to deny that ground has been gained since the spectacular opening of the cancer campaign a decade ago. No doubt many an individual has profited or will profit from its propaganda but no doubt the totality of lives thus saved will not more than equal the annual increment of increasing incidence. Our knowledge of the body cell has increased without illumination of the phenomenon of the cancer cell. If cancer were a

relatively new disease the crusade would doubtless prove more profitable and this would be the case if it were limited to the mammalia; but the disease may have existed for millions of years among the cold-blooded animals, for cancer-like growths are present even in fishes and frogs. Even in plants there are cancer-like growths, so that the mystery of the disease may be merged in the mystery of life itself.

During the past few years there is an increasing tendency among hard-headed surgeons—men who swear by the knife—to strive to modify the peculiar and little known predisposition to the disease through which one man contracts it while another under the same circumstances escapes. Dr. Hochenegg of Vienna, who has removed over a thousand cancers of the rectum, has carefully investigated the lives and surroundings of his patients both before and after operation, and goes so far as to alter the entire mode of life. He carries his precautions to such an extreme that he does not allow them to live under the same roof or come in personal contact with a cancer patient, yet he apparently does not believe that the disease can be communicated. There may be something in the soil, or drinking water, or food of the vicinity which influences the disease unfavorably.

Another extensive operator, Dr. Pauchet of Amiens, France, is firmly convinced that habitual intestinal obstruction is an important predisposing factor in the genesis of cancer, not only in the alimentary canal but in more remote localities as the breast. In his routine examinations including the use of the x-ray, he finds this condition common and advises people of the cancer age to keep the bowels open by the use of mineral oil. He claims that the low form of inflammation which usually precedes the development of cancer of the breast disappears after overcoming chronic intestinal stasis.

Despite the fact that pathologists deny the contagiousness or parasitic nature of cancer numerous clinicians continue to claim the contrary, and some claims have been made that arsenic and other drugs which destroy animal parasites in the blood can act favorably in cancer. Dr. L. Smith, the well-known gynecologist of Montreal, earnestly begs his colleagues to give their patients after operation drugs known to have an action against protozoan parasites such as arsenic, mercury, and iodine.

Occasional remarkable individual results from certain drugs, both inorganic and organic, the latter including a variety of albuminous substances, have been explained by the fact that all of these substances are in the so-called colloidal or noncrystalline form. It is realized that colloids have remarkable powers over many kinds of disease but admitted that such action is inconstant and far from dependable; while there is danger of causing shock as it usually is necessary to inject them into the veins. Dr. Bier, the well-known Berlin surgeon, injects pig's blood into the tissues while others inject extracts from the patient's own tumors after extirpation. It is to be hoped that at some future day we may be able to foretell by some cutaneous or other reaction, which form of colloid substance is best suited to a given case; also that some of these remedies may do good when associated with personal hygiene, radium, x-rays, etc.

According to certain insurance statistics there has been no increase of cancer mortality in the United States for a few years past which holds out a little encouragement, but we still have to learn of the incidence by decades. In 1921, 85,000 deaths were reported as against 82,000 in 1920. If we proceed by analogy the curve of cancer incidence instead of increasing steadily and moving in an inclined plane will represent a peculiar curve in which the rate of increase will eventually be very slight and ultimately attain equilibrium. It is possible that this period is already at hand. Whether there will ever be a spontaneous decline is very doubtful, but if the disease incidence is in equilibrium it will be a relatively simple matter to determine the fraction of decline due to the activities at work against individual and racial cancer. The present status of radiation in cancer is discussed under RADIUM.

CANDIA. See CRETE.

CANNING INDUSTRIES. See HORTICULTURE.

CANTOR, JACOB AARON. Lawyer and politician of New York State, died, July 2. He was born in New York City, Dec. 6, 1854. After a high school education, he graduated at the New York University Law School in 1875. After admission to the bar in 1876, he practiced law in New York City. He was a member of the State Assembly after 1885, and sat in the Senate from 1889 to 1890, being the democratic leader in that body in 1893-94. He was president of the State Senate and acting lieutenant-governor. From 1902 to 1904 he was president of the Borough of Manhattan, having been elected on a reform ticket. He was chairman or member of many important State commissions. In 1913 he was elected to Congress and served until 1915. He was appointed president of the department of taxes and assessments of Greater New York, Jan. 1, 1918.

CAPE COD CANAL. See CANALS.

CAPE COLONY. See CAPE OF GOOD HOPE PROVINCE.

CAPE OF GOOD HOPE PROVINCE. One of the four constituent provinces of the Union of South Africa, occupying the southern part of the country and formerly known as Cape Colony; area, 276,966 square miles with a population at the census of 1911 of 2,564,965 including 582,377 European and 1,982,588 colored. In 1918 the European population was placed at 618,825, of whom 311,312 were males and 307,513 were females. The movement of population in 1919 was as follows: Births, 47,770; deaths, 45,784; marriages, 14,227. The colony is divided as follows: Cape Colony proper, East Griqualand, Tembuland, Pondoland, Transkei, Walfish Bay, and Bechuanaland. Capital, Cape Town, with a white population in 1918 of 99,693. Other towns with the populations on that date are: Kimberley, 17,188; Port Elizabeth, 23,339; East London, 17,592. The native races are mainly Hottentots, Malays, Kaffirs, Fingoes, and Bechuanas, but the largest element is of mixed race and, according to the census of 1911 numbered 415,282. On June 30, 1918, the aided schools numbered 4794 with 9672 teachers, 121,910 European pupils, and 149,985 non-European pupils. The trade between the Cape of Good Hope and the United Kingdom, according to the provisional figures of 1920 was: Exports, to the United Kingdom, £12,649,000; imports, from the

United Kingdom to the Cape, £25,574,673. Of the latter £24,133,000 consisted of British products and manufactures, the rest being foreign and colonial goods. The colony was merged in the Union of South Africa, May 31, 1910. Executive power is vested in the governor and in an executive council of office-holders appointed by the crown.

On the fall of the old ministry a new cabinet under General Jan Smuts was announced early in March. His colleagues were: F. S. Malan, Mines and Industries; H. Burton, Finance; Sir T. Watt, Public Works, Telegraphs and Posts; Sir T. Smartt, Agriculture; Mr. Gagger, Railways and Harbors; Patrick Duncan, Interior, Public Health, and Education; Colonel Reitz, Lands. See SOUTH AFRICA, UNION OF.

CAPE VERDE ISLANDS. A group of 14 islands off the west African coast, belonging to Portugal, with a total area of 1516 square miles, or according to some authorities 1480 square miles, and a population at the census of 1912 of 149,793 of whom 4799 were white. The chief products are coffee, medicinal plants, hides, and millet. Imports in 1919, 8,493,802 escudos; exports in 1919, 749,709 escudos. Capital, Praia. For further statistics see preceding YEAR BOOK.

At the close of the year the residents were appealing to foreign countries for relief from famine conditions which had prevailed throughout the year. It was reported that in the summer people were dying in the town of Praia at the rate of two hundred a day and that the population of certain parts of the island had been reduced one-third. The famine was attributed to a severe drought which had lasted for three months. Efforts were being made to induce the Portuguese government to afford the means for the execution of a plan of irrigation which would improve conditions.

CARBONELL, LUIS GARCIA Y. See NECROLOGY.

CARINTHIA. Formerly a crownland of the kingdom of Austria in the Austro-Hungarian empire; after the collapse of the empire, a province of the new republic of Austria; bounded on the west by Tirol, on the east by Styria, on the north by Salzburg and Styria, and on the south by Venetia, Görz, and Carniola. Area, 3678 square miles including the district which decided for Austria in the plebiscite of Oct. 13, 1920; population, at the census of 1910, 396,200; at the census of 1920, 369,401. In 1910 the German-speaking element numbered 304,287. The majority are Catholics. The capital is Klagenfurt, with a population in 1910 of 28,911, and on Jan. 31, 1921, of 26,111. The crownland was formerly represented by 10 members in the Lower House of the Austrian parliament.

CARLISLE INDIAN SCHOOL. See INDIAN TRAINING AND INDUSTRIAL SCHOOL.

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE. See INTERNATIONAL PEACE AND ARBITRATION.

CARNEGIE FOUNDATION. See UNIVERSITIES AND COLLEGES.

CARNEGIE INSTITUTE OF TECHNOLOGY. A nonsectarian institution of technical education at Schenley Park, Pittsburgh, Pa.; founded in 1900. The enrollment for the fall of 1921 was 2451; and in the summer session of 1921 there were 588 students. The faculty numbered 296. The income for the year was \$1,320,000. The students have access to the Carnegie Library

which contained 450,000 volumes and there is also a branch library on the campus containing between 10,000 and 11,000 volumes. President, Arthur Arton Hamerschlag. See PAINTING AND SCULPTURE.

CARNEGIE INSTITUTION AT WASHINGTON. The year marked the completion of twenty years' existence of this organization, whose purpose has been to encourage in the broadest and most liberal manner investigation, research, and discovery, and the application of knowledge to the improvement of mankind. The work of the institution during the year touched upon nearly all of the principal fields of research. Important discoveries in astronomy were made by means of the 100-inch Hooker Telescope at Mount Wilson Observatory, Pasadena, Calif., and the unusual skill of Dr. A. A. Michelson of the University of Chicago. Measurement of the dimensions of other stars followed that of the star Betelgeuse and by the use of the interferometer, the way has been opened, it is said, for corresponding observations on a group of stars which seemed heretofore to be entirely out of range. The results already obtained, it is thought, furnish a new starting-point for further investigations concerning the nature of the universe.

In November the non-magnetic ship *Carnegie* completed its sixth cruise. Launched in 1909 the vessel has voyaged nearly 300,000 miles, covering the principal areas of the great oceans and securing previously unavailable data on magnetic conditions and variations. Begun in this year the Department of Experimental Evolution and the Eugenics Record Office have come to function as a separate unit known as the Department of Genetics. The change enables the biological studies of inheritance based upon investigation of many groups of plants and animals to bear more directly on studies of human genetics. During the year a chemical laboratory was erected for the Department of Botanical Research at Carmel, Calif. Its work has been devoted to investigation in the field of chemical and physical research, with view toward obtaining additional information concerning the basis of plant activities. Considerable valuable material has been secured by the expedition into the region of the ancient Maya civilization of Central America.

The annual report of President John C. Merriam shows receipts for the year amounting to \$1,513,924.63, and an aggregate total for the twenty years of its existence of \$20,486,013.89. Of the twenty-three authorized volumes, eighteen were published during the year, and twenty additional volumes are now in press. Record was made of the death of Edward Douglass White, Chief Justice of the Supreme Court of the United States. He was a member of the original Board of Trustees of the Institution and took a vigorous part in its affairs for several years.

CAROLINE ISLANDS. See GERMAN NEW GUINEA.

CARRASCO, JOSE. Former vice-president of Bolivia, died at La Paz, Bolivia, May 25. He was born at Totora, Bolivia, Nov. 4, 1862, and after an education in the national schools, studied law and was admitted to the bar in 1885. In 1893 he became the editor of a newspaper at Cochabamba, and in 1899 while continuing this work became a professor of law at the university. After serving as a governor of Oruro for two years

he was appointed minister of justice and of the interior in 1902 holding this office until November, 1903. He was again in the ministry in 1908 and in 1910 was elected president of the Chamber to which office he was four times reelected. He was elected vice-president of Bolivia May 4, 1913. Meanwhile in 1904 he had founded at La Paz the newspaper, *El Diario*.

CARTAILHAC, EMILE. French anthropologist, died, November 25. He was a leading authority on prehistoric life, especially in the palæolithic age. He was born at Marseilles, France, Feb. 15, 1845; studied at the lycée at Toulouse; pursued a law course, and was admitted to the bar in 1867, but soon abandoned the law for the study of human palæontology and classical or historical archaeology. At the age of twenty-five he purchased a periodical which regularly supplied data for the study of the primitive and natural history of man, and which was subsequently merged with other scientific periodicals. For forty years preceding his death he was professor at the university at Toulouse. His principal scientific publications were as follows:

Les Ages Préhistorique de l'Espagne et du Portugal (1886); *La France Préhistorique d'après les Sépultures et les Monuments* (1889); *Les Monuments Primitifs des Isles Baléares* (1892); and as collaborator on the excellent "Memoirs" issued by the Prince of Monaco under the auspices of the Institut de Paleontologie Humaine of Paris, *La Caverne d'Altamira* (1906); and *Les Grottes de Grimaldi* (1912). From 1889 to 1895 he was editor of *L'Anthropologie*.

CARUSO, ENRICO. Celebrated Italian dramatic tenor, died at Naples, August 2. He was born at Naples, Feb. 25, 1873, and began to sing at the age of eleven in various clubs of his native city. He attracted the public attention in 1896 on his appearance in *Traviata* at Naples and was engaged soon afterwards at foreign capitals, including St. Petersburg, Buenos Aires, London, Rome, and New York. In 1903 he came to the United States and was received with great applause on his appearance at the Metropolitan Opera House in New York, on November 23 of that year. His repertoires included over forty operas, chiefly Italian, but he also was successful in French operas. For many years he was the chief attraction on the operatic stage of New York and at the time of his death, he was plainly the most popular singer in the United States. In later years he made his home in Florence, Italy. See **MUSIC**.

CARUSO AMERICAN MEMORIAL FOUNDATION. See **MUSIC, General News**.

CARY, ANNIE LOUISE (Mrs. CHARLES M. RAYMOND). Singer, died at Norwalk, Conn., April 3. She was formerly one of the most admired prima donnas in her time, but for many years had been in retirement. She was born in Wayne, Maine, Oct. 22, 1841, and graduated at Gorham Female Seminary, 1862. She then studied in Boston and later in Milan. Her first appearance in Italian opera was at Copenhagen. This was followed by tours under Strakosch and Mapleson. She sang with great success in Stockholm, Paris, Brussels, and London. In 1870 she made her début in New York and immediately won a remarkable success with the public with whom for twelve years she was a favorite. In 1875-77 she made brilliantly successful tours in Russia. During her prime she was the leading singer of mezzo-soprano

and contralto rôles. In 1882 she married Charles M. Raymond of Brooklyn, and after that retired from public life, appearing only occasionally for charity.

CARYLL, IVAN. Composer of musical comedies, died in New York City, November 29. His real name was Felix Tilkin and he was born in Liège, Belgium, 1862. He wrote in 1886, *The Lily of Leonville*, his first production, and this was followed by a long succession of musical comedies, including: *Little Christopher Columbus*, *The Shop Girl*, *The Duchess of Dantzic*, *The Pink Lady*, *The Earl and the Girl*, *The Toreador*, *Our Miss Gibbs*, etc.

CASE, WILLIAM SCOVILLE. Judge, died, February 28. He was born at Tariffville, Conn., June 27, 1863; graduated at Yale, 1885; was admitted to the bar in 1887, and was a member of the Connecticut legislature, 1887-89. After serving as judge in the Connecticut court of common pleas, he was made judge of the superior court of Connecticut, Oct. 1, 1901. He held that office until 1919 when he was made associate justice of the supreme court of errors. His writings include works on local history and one entitled *Forward House* (1895).

CASELLA, ALFREDO. See **MUSIC, Artists, Instrumentalists**.

CASE SCHOOL OF APPLIED SCIENCE. A college of engineering at Cleveland, Ohio; founded in 1881. The enrollment for the year 1921 was 668 students, and for the summer session of 1921, 225. There were 69 members of the faculty. The productive funds amounted to \$2,678,138, and the income for the year \$295,219. The library contained 15,239 volumes. President, Charles S. Howe, Ph.D.

CASSEL, Sir ERNEST. See **NECROLOGY**.

CATALAN LANGUAGE. See **PHILOLOGY, MODERN**.

CATHOLIC UNIVERSITY OF AMERICA. A Catholic institution of the higher education at Washington, D. C.; founded in 1867. It includes schools of graduate sciences, law, philosophy, and science and also a summer school and with it are affiliated the St. Paul Seminary at St. Paul, Minn.; the Institute of Scientific Study in New York; Mount St. Mary's Seminary of the West at Cincinnati, Ohio; and the following institutions situated near the university: College of St. Paul the Apostle; Holy Cross College; Franciscan College; Apostolic Mission House; Trinity College; College of the Immaculate Conception; Catholic Sisters College; and Mount St. Augustine's College. The enrollment for the fall of 1921 was 1,333 and for the summer school 558. The faculty numbered 82. The productive funds amounted to \$2,670,441 and the income to \$344,549. There were 136,000 volumes in the library. Rector, Rt. Rev. Thomas Joseph Shahan.

CATRON, THOMAS BENTON. United States Senator, died, May 15. He was born in Lafayette County, Mo.; and began the practice of law in New Mexico in 1887. He served for several terms in the New Mexican legislature, and was delegate from the Territory to Congress, 1895-97. On March 27, 1912, he was elected to the United States Senate for the term expiring March 4, 1917. In politics he was a Republican.

CATTLE. See **LIVE STOCK; DAIRYING; VETERINARY MEDICINE, etc.**

CATTLE TICK ERADICATION. See **VETERINARY MEDICINE**.

CAUCASUS. The region comprising the isthmus separating the Black sea and the Sea of Azov from the Caspian sea in southeastern Europe; formerly a general government of the Russian empire divided into the two districts of Ciscaucasia and Transcaucasia, with an area of 181,173 square miles and an estimated population, Jan. 1, 1915, of 13,299,100. For further statistics see preceding YEAR BOOKS. Since the beginning of 1919 Transcaucasia has been divided into the three small republics of ARMENIA, AZERBAIJAN, and GEORGIA. See these titles.

CELEBRATIONS. In the United States the tercentenary celebration of the landing of the Pilgrims at Plymouth was continued on certain nights in July and August by a "wonderful, interesting and historic pageant" called "The Pilgrim Spirit," which was written and staged by Prof. George P. Baker of Harvard University. It consisted of five episodes and more than twenty scenes in which 1000 costumed actors and a trained chorus of 300 voices participated. The pageant presented not only the famous incidents in Pilgrim life in Plymouth but illustrated dramatically the growth, meaning, and influence of the ideas which inspired the Pilgrim Fathers. August 1 was designated as Plymouth day and in honor of the presence of President Harding, a civic, military, and naval parade was also held.

Other celebrations included:

That held in various cities in Florida, and notably in St. Augustine, of the 100th anniversary of the purchase of Florida from Spain by the United States. On July 10, 1821, the Spanish flag at Fort Marion in St. Augustine gave way to the Stars and Stripes and Don Jose Coppinger, the Spanish governor, transferred the title of the Spanish properties in Florida to Col. Robert Butler, U. S. A., designated by President Monroe to represent the United States.

An interesting event was the celebration during the week beginning with August 6 in the town of Penetanguishene, Ontario, of the coming of Samuel de Champlain, the first white man to visit the Indian tribes in Canada. Besides a series of pageants depicting the great events in the history of this land before and after the coming of white men, supreme chieftains of the Huron and Iroquois tribes, whose ancestors carried on a feud for centuries in what is now the Province of Ontario, with ancient symbolic ceremonies, buried the hatchet forever and smoked the pipe of peace.

On September 6, the more than 100 years of peace between Canada and the United States, a century without fortifications or armies along 3000 miles of border, was commemorated by the dedication of the Peace Portal, a huge arch of steel and cement on the international boundary line in Blaine, Washington. This Portal rests half on Canadian and half on American soil. It is in the Grecian Doric style. On the plinths on the south side are inscribed the words: "Children of a Common Mother"; on the north side the legend runs: "Brethren Dwelling Together in Unity." On the interior, below one of the doors, are inscribed the words: "Open For One Hundred Years"; below the other door are: "May These Doors Never be Closed." On either side of the Portal a park has been designed. The structure bears two flag poles, from one of which the flag of Great Britain will fly, and from the other, the

Stars and Stripes. More than 450 electric lights will be used to illumine the Portal at night.

The centenary of the admission of the State of Missouri into the Union was celebrated with appropriate ceremonies and conspicuously so in St. Louis on October 5 by the Veiled Prophet parade. A commemorative 50-cent piece was issued in honor of the event in accordance with an act of Congress. The obverse bears a bust of a trapper, facing to the left, in coonskin cap, and dividing the dates, 1821 and 1921, in the field. The reverse shows a settler, garbed in buckskin, and an Indian chief standing together in friendly attitude, the trapper holding his gun in his right hand. The chief holds the calumet of peace in his right hand.

The centenary anniversary of the independence of Peru was elaborately celebrated for a week in July, beginning on the 24th. Envoys from thirty nations participated in the event. The United States was represented by a special commission of seven delegates of which Albert Douglas was the chief, and a special naval squadron of three battleships was also sent from this country. An interesting feature was the commemorative offerings made by the foreign colonies in Lima. The French offering was a heroic bronze statue representing Liberty, to be erected in the Plaza de Armas. The Italian colony offered a museum of fine arts to be built on the Plaza de La Exposicion. The German colony presented a cement and granite clock tower to be placed in the centre of the Parque Universitario. The British and American colonies in Lima purchased Belavista Hospital at an initial cost of \$75,000, to be conducted by the Methodist Episcopal Mission in Peru.

The hundredth anniversaries of the independence of Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador were celebrated in these Central American Republics during September. In Costa Rica a statue to Juan Mora Fernandez, the founder of the Republic, was unveiled, and an exposition of Spanish products and of artistic and historic objects was held. In Guatemala a Pan American Students Congress and various expositions were held, and in Honduras a prominent feature was the publication of an Anthology of Central American Poets. A brilliant reception was held in Washington in honor of the Centenary in the Pan American Building on September 15.

Also in Mexico the centenary of its independence was celebrated during September. In Mexico City, September 27 was the important date, and on this occasion a military parade of 16,000 soldiers marched through the city over the same route taken by the conquering forces at the ending of the Spanish rule. Throughout the republic numerous celebrations commemorating the national independence were held until the middle of October. Many countries sent special envoys to Mexico in honor of the event. The United States was not officially represented at any of these ceremonies.

CELTIC LANGUAGE. See PHILOLOGY, MODERN.

CENSUS. The period defined by law for the Fourteenth Census comprised three years beginning June 30, 1919, and the close of the fiscal year on June 30, 1921, therefore marked the end of the second year of that period. The scope of the census according to the law covers population,

agriculture (including irrigation and drainage), manufactures, forestry and forest products, and mines and quarries; and the organization of the Bureau includes three main divisions which are engaged primarily in the work of taking the census and compiling its results, namely, the Divisions of Population, of Agriculture, and of Manufactures. The census of population is taken by the Division of Population; the censuses of agriculture, irrigation, and drainage by the Division of Agriculture; and the censuses of manufactures, forestry and forest products, and mines and quarries (including oil and gas wells) by the Division of Manufactures. Population returns by States were included in the preceding YEAR BOOK. Results of the census down to the close of 1921 will be found in the articles, UNITED STATES, VITAL STATISTICS, and AGRICULTURE.

CENSUS OF AGRICULTURE. See AGRICULTURE.

CENTRAL AMERICAN FEDERATION. A provisional Federal Council, representing the states of Honduras, Guatemala, and Salvador entered upon its functions, October 10. This new Federal state comprised the three republics above mentioned and was expected to include the others, in which the Unionist party had already developed considerable strength. The agreement of union was signed early in January at San José, Costa Rica, by these three states and by Costa Rica, but the last-named decided not to enter the union, the Costa Rican National Assembly having rejected the proposal by a vote of 20 to 19. The capital of the Federation was to be Tegucigalpa in Honduras. The territory within the Federation was placed at about 100,000 square miles and the population at about 4,000,000. This brought to a climax the aspirations of these three states for the last 80 years. The government provided for by the treaty of union was formed along the lines of the government of the United States, but in respect to the executive followed the Swiss model. The constitution was approved by the constituent assembly at Tegucigalpa in September. Under it each state governs itself in respect to local affairs, retaining those powers not specifically delegated to the Federation. The executive power is vested in a Federal Council consisting of one delegate popularly elected in each state for the term of five years. The same number of alternates are elected at the same time but they have no vote in the Council, performing only an advisory function. The Federal Council chooses from its own members one President and one Vice-President for the year. The legislative power is vested in two houses, namely, a Senate and a House of Deputies, the former consisting of three senators from each state elected for six years by the congress of that state, and the deputies consisting of representatives popularly elected at the ratio of one to every 100,000 inhabitants, the term of deputies being four years. Judicial power lies in a supreme court of seven members and in other courts created by the law. A flag had been adopted consisting of three broad lateral stripes, one white between two blue ones. Spanish was to be the common language of the Federation and education was to be free and compulsory. The Australian ballot was adopted for elections.

As to customs and the banking system the following programme was indicated:

"The Federation will establish a uniform customs tariff and manage the customhouses, although export taxes are reserved to the States. There will be free trade between the States. A uniform monetary and banking system will be established and the Federation will enact commercial codes, and patent, copyright, and trade-mark laws. The States will continue to observe the treaties at present in force between them and other countries until the Federal Government shall have secured the amendment, substitution, or abrogation of these treaties. The States will also continue the service of their present foreign debts under the supervision of the Federal Government, which obligates itself to see that the service of these debts is continued, and the revenues set aside for this service are applied thereto. New foreign loans can only be made by the States, with the approval of the Congress of the Federation, and Federal foreign loans will require to be ratified by two-thirds of the Federal House of Deputies and three-fourths of the Senate. Pending the inauguration of the proposed Customs Union, announced for Feb. 1, 1922, it is understood that the constituent States will continue to collect import duties on foreign goods according to the tariff schedules which have been in effect in each State hitherto."

On November 4 it was announced that the new federation of Salvador, Honduras, and Guatemala had begun to establish its government, councilors representing the respective states having been elected along with 15 deputies, and 15 substitutes for the legislative body of the new combination.

CEYLON. A large island in the Indian ocean off the southern end of Hindustan constituting a British colony. Area, 25,481 square miles; population, 1911, 4,110,367, estimated in 1919 at 4,757,596. The population in the latter year was distributed according to race as follows: Singhalese, 2,989,380; Tamils or Tamali, 1,414,649; non-malay Mohammedans, 276,631; Malays, 14,105. Other races include the Veddhahs or aborigines, 16,146. Marriages registered in 1919 numbered 18,870 (exclusive of Mohammedan marriages); births, 161,405; deaths, 168,323. The distribution according to religion in 1919 was: Buddhists, 2,866,560; Hindus, 1,087,063; Mohammedans, 328,613; Christians, 474,060. The urban population makes up about 14 per cent of the total. The chief towns with their 1911 populations are: Colombo, 211,274; Galle, 39,960; Jaffna, 40,441; Kandy, 29,451. The government schools in 1919 numbered 884 with an attendance of 97,819 boys and 32,570 girls; aided schools 1855 with 129,027 boys and 78,649 girls; unaided schools, 1363 with 28,649 pupils. The English and English vernacular schools numbered 265 with 36,376 boys and 10,512 girls. The acreage under the principal products in 1919 was approximately as follows: Cocoanuts, 1,012,000; rice, 710,000; other grain 160,000; tea, 450,000; rubber, 309,000; cacao, 31,000; cinnamon, 35,000. The exports in 1919 were £31,918,041; and the imports £21,106,060. The chief exports were cocoa, cinnamon, and coir, copra, cocoanut oil, tea, plumbago, dry cocoanuts, rubber, and areca nuts. The greater share in respect to value was that of rubber and tea. The chief imports in 1919 were cotton manufactures, rice, coal and coke, sugar and manures. The chief mineral interest is the mining of plumbago

which is the chief mineral export. Among other minerals which have been found but not in commercial quantities are coal, gold, and thorium. There are mines of monazite and many quarries of small gems. The native manufactures are of slight importance. The shipping entered and cleared in 1919 had a tonnage of 17,706,617 of which 13,131,162 was British, which amounted to nearly three times the tonnage of the preceding year. Railways open to traffic Sept. 30, 1919, had a mileage of 727. The Maldivé islands which lie 400 miles to the west are under a sultan who pays a yearly tribute to the Ceylon government. They are inhabited by about 70,000 Mohammedans. Ceylon is under a high commissioner appointed by the crown and an executive council. The legislative functions are administered by a body of 18 members. High commissioner at the beginning of 1921, M. Stevenson.

CHAD. See FRENCH EQUATORIAL AFRICA.

CHALIAPINE (SHALIAPIN), FEODOR. See MUSIC, Artists, Vocalists, Opera.

CHAMBER OF COMMERCE. See CITY PLANNING.

CHAMBERS, CHARLES HADDON. British playwright, died in England, March 28. He was born at Sydney, New South Wales, April 22, 1860, of Irish descent and educated in the public schools of Sydney. After a brief service as government employee, he became a stock-rider in the bush, but at the age of twenty-two went to England where he entered journalism and became a story-writer. This finally led him to the drama and he wrote two plays which met with little success, but while he was still under thirty, he wrote the highly successful drama, *Captain Swift*, produced in the autumn of 1888. Other plays of his were *The Idler*, produced in New York; *John-a-Dreams*, produced in 1891; *The Awakening*; *The Golden Silence*; *Passers-by*; *The Impossible Woman*; *The Saving Grace*. He is perhaps best known for the *Tyranny of Tears* which was produced by Wyndham in his last season at the Criterion in 1899.

CHARITIES. Work in the charitable field during 1921, aside from the aspects noted below, is discussed in the present volume under the following heads: RED CROSS; RELIEF FOR WAR VICTIMS; ROCKEFELLER PHILANTHROPIC BOARDS; SOCIAL WORK; YOUNG MEN'S CHRISTIAN ASSOCIATION; YOUNG WOMEN'S CHRISTIAN ASSOCIATION; and other articles on societies with charitable activities. See also CHILD LABOR.

STATE LEGISLATION. In Missouri an act was passed creating social welfare boards in cities of the second and third class at the option of the local government and providing for their administration. In Arizona child welfare boards were provided for and also allowances to widows, deserted mothers, and minor children in certain cases. Connecticut in a measure concerning county houses provided for better protection of uncared-for and neglected children between the ages of four and eighteen. Delaware created a child welfare commission. In South Dakota provision was made for child welfare boards in the counties to aid in the performance of the duties of the State child welfare commission. Wisconsin provided for a juvenile department under the State board of control for the care of dependent, neglected, mentally defective or delinquent children. Michigan authorized the counties to contract with institutions licensed

by the State board of charities and corrections for the care and relief of children.

HOME CARE FOR DEPENDENT CHILDREN. Conditions occasioning the removal of children from their homes and measures by which family care may be preserved are discussed in a report entitled "Children Deprived of Parental Care," issued by the U. S. Department of Labor through the Children's Bureau based on the experience of 513 children cared for by agencies in Delaware. It was found that in one case out of every five, delinquency on the part of parents or guardians was the cause of the child's removal. Inability of parents or guardians longer to care for the child occasioned the removal of almost one-fourth. Delinquency on the part of the child was given as the immediate cause for somewhat more than two-fifths of the removals. For 10 per cent of the children studied it appeared that the developmental advantages of normal home life might have been preserved had financial assistance in the home been available. Nowhere in the State, at the time of the survey, was suitable care to be had for subnormal children, who constituted 11 per cent of the group. A beginning toward such provision was subsequently made. Only 17 per cent of the children were placed in private families, the other 83 per cent being placed in institutions. This circumstance was especially surprising inasmuch as home-finding agencies of other States had placed large numbers of dependent children in Delaware. Such measures as a State probation system, mothers' pensions, and placing-out and boarding-out under proper supervision, were recommended in the report as means for correcting in part the social wastage originating in child neglect. Delaware began a carefully considered forward movement after the inquiry was made.

NATIONAL INFORMATION BUREAU. As a coöperative effort to protect the contributing public and to standardize the methods of national, social, civic, and philanthropic organizations, the National Information Bureau, 1 Madison Avenue, New York, Geddes Smith, Acting Director, carried on during the year the work begun by the National Investigation Bureau in 1918. Its Board of Directors, composed equally of representatives of both the contributing public and organized social work, had adopted standards which all social, civic, and philanthropic agencies seeking funds from the public on a national or interstate basis were invited to accept. These standards included an active and responsible board of directors, a legitimate purpose with no avoidable duplication, reasonable efficiency, no solicitations on commission or by the use of the remit or return method, no entertainments where expenses exceeded 30 per cent of the gross proceeds, ethical methods of publicity and promotion, agreement to consult and coöperate with the proper social agencies in local communities with reference to local programmes and budgets, complete annual accounts audited by a certified public accountant and the use of an annual budget. In the light of these standards, over 1700 agencies had been investigated by the Bureau up to the end of 1921. Eight bulletins, listing social agencies approved after investigation, had been issued and 8903 special confidential reports relating to particular organizations had been sent to inquirers. A number of unworthy agencies had been led to

terminate their work. The Bureau is financed by membership fees and contributions from individuals, corporations, philanthropic foundations, community chests, charity federations, and chambers of commerce. No fees are accepted from organizations whose work brings them within the Bureau's field of investigation. At the request of a conference of national social agencies desiring to improve their coöperative relations, the Bureau began in September a special study of the work of such agencies in a number of typical communities. This study, under the direction of Porter R. Lee, Director of the New York School of Social Work, was intended to secure the facts as to the relations of national social agencies operating in these selected communities with each other and with local organizations.

CHARLIER, MARCEL. Belgian orchestral conductor, died in Belgium, in June. He was born in Liège, in 1881. Having distinguished himself at La Monnaie, Brussels, and Covent Garden, he came to the United States in 1906 as conductor at Hammerstein's Manhattan Opera House. From 1910-20 he was one of the conductors of the Chicago Opera.

CHASE, EMORY ALBERT. Judge, died, June 25. At the time of his death he was judge of the court of appeals of New York. He was born at Hensonville, N. Y., August 31, 1854; and began the practice of law at Catskill. He was president of the board of education, 1891-96; and became justice of the supreme court in 1896. On Jan. 9, 1906, he was appointed to the court of appeals.

CHAUTAUQUA INSTITUTION. Founded in 1874 at Chautauqua, N. Y., by Methodists, this Institution soon became non-sectarian and furnished the meeting ground for members of all creeds and denominations. The movement began as a Sunday School with two purposes in view: (1) to conduct a summer school for Sunday School teachers, and (2) to arrange the presentation of a series of correlated lectures and entertainments during June, July, and August. The movement has grown extensively and its activities now consist of (1) A General Assembly with an educational though necessarily popular series of lectures and addresses, dramatic and other entertainments, concerts, etc., during eight weeks in the summer; (2) Summer Schools offering systematic classroom instruction in a great variety of subjects under 13 departments, for six weeks annually; and (3) the Home Reading work, provided in a set of four books and the news narrative appearing regularly in some weekly review. *The Independent* is at present the medium of this branch of the movement. A monthly bulletin is furnished the teaching element. This department operates throughout the year and has an enrollment of about 10,000, with a still greater number of readers. There is an annual attendance of 50,000 persons at the public Assemblies, and the enrollment at the Summer Schools reaches 3000 students.

The forty-eighth Assembly was held during the months of July and August in 1921 at Chautauqua, N. Y. It was regarded as highly successful. A great many lectures on various subjects were given by prominent men. A gratifying increase in the enrollment of the Summer Schools was noted. The year saw the opening of the Institution's new Club House, at Chautauqua the gift of

Mr. and Mrs. S. I. Munger. Efforts were made throughout the year to raise through private subscription the \$150,000 needed to complete the total of \$600,000, which was the goal of the Comprehensive Plan inaugurated in 1919. John D. Rockefeller has been a generous contributor to the Institution and its work. The Institution maintains the Chautauqua Press at Chautauqua, N. Y. Mr. Arthur E. Vestor is President of the movement.

CHEESE. See DAIRYING.

CHEMICAL INDUSTRIES. See CHEMISTRY, INDUSTRIAL.

CHEMICAL SOCIETY. See CHEMISTRY, INDUSTRIAL.

CHEMISTRY. The steady progress in the development of chemistry is the only feature of the year, for no announcement of any startling discovery appears in the literature as it has been received. Slowly the great universities of Central Europe are resuming their work and an interesting feature of the progress of the science is shown by reports published in the journals of investigations carried on in industrial establishments.

Two important lectures were delivered before the London Chemical Society during the year. The first was on Some Properties of Explosives (*Transactions*, pp. 1-28) and the second on Mass Spectra and Atomic Weights by F. W. Aston (*Ibid*, pp. 677-687). To these must be added the presidential address by Sir James J. Dobbie on The Study of the History of Chemistry; its Importance and Uses. The Emil Fischer Memorial lecture by M. O. Forster also deserves mention (*Ibid*, pp. 1157-1201).

The Longstaff Medal of the London Chemical Society, awarded every three years, was this year given to Prof. Jocelyn F. Thorpe for his "important and numerous contributions to organic chemistry."

NEW ELEMENTS AND ATOMIC WEIGHTS. Dr. Bourgerel in an article on The Mendeléev Series arranged and brought up to date in 1917, according to the latest published Atomic Weights, calls attention to the fact that there were still two unknown elements to appear in Mendeléev's series having atomic weights about 152 and 216 respectively, and then claims to have discovered two such metals in certain minerals, naming them Ekarhodium and Ekaerbium, respectively. Ekarhodium gives a non-volatile chloride, which is decomposed by heat, losing chlorine. Its oxide gives salts with the alkali hydroxides. Ekaerbium was obtained as its hydroxide, which, when calcined, gives an oxide insoluble in acids. Its hydroxide dissolves in hydrochloric acid and on diluting the solution with water a flocculent precipitate is obtained. From the hydrochloric acid solution a black precipitate is obtained on the addition of ammonium sulphide, and the precipitated sulphide, on ignition is converted into the oxide, which apparently has the formula Er_2O_3 .

Studies on the atomic weights of the elements still form a prominent part of the output of the chemical laboratories of Harvard University. T. W. Richards and H. Krepelka find 26.96 as the correct weight for aluminum. A. Classen and O. Ney report a new value of 208.99 for bismuth. After eleven determinations H. H. Willard and R. K. McAlpine conclude that 121.77 best represents the atomic weight of antimony. According to Mlle. Irene Curie the results of determinations

of the atomic weight of chlorine derived from three different minerals yielded a value of 35.60. P. Bruylant and G. Desmet report 127.8 as the means of twelve estimations in alkaline solutions for the atomic weight of Tellurium, while the mean of nine estimations in acid solutions was 127.65. The determination of the atomic weight of Lanthanum was undertaken by G. P. Baxter, M. Tani, and H. C. Chapin, who, using the chloride, found as the result of six determinations 138.914, and of seven determinations 138.912 as their value. Seven determinations for the atomic weight of germanium gave J. H. Muller a value of 72.418.

ANALYTICAL CHEMISTRY. According to E. Babe and T. Cabrera a new indicator for acids and alkalis is the dried, blue blossoms of the butterfly pea. It is used for the detection of the adulteration of milk by the addition of lye from wood ashes. In acid solution the color is a bluish-red, in neutral solution marine blue, and in alkaline solution sky blue. L. W. Winkler continues his classic studies on Gravimetric Analysis and in his fourteenth paper discusses the Estimation of Sulphuric Acid in the Presence of Calcium, Phosphoric Acid, and Chromium. He finds the estimation of sulphuric acid as barium sulphate too low in the presence of calcium owing to the precipitation of calcium sulphate. His fifteenth paper is devoted to the study of the Estimation of Barium as Barium Sulphate. R. W. Kinkaid finds that by the action of ethyl nitrate in magnesium phenyl bromide a deep blue solution is obtained which has the properties of an indicator, turning pink with acids and blue with alkalis. W. Dautwitz describes a New Micro-combustion Furnace for Carbon, Hydrogen, and Nitrogen Estimations which will find use in organic laboratories. F. Rabe under the title of Detection of Methyl Alcohol in Spirits writes that when the morphine-sulphuric acid reagent is used for the detection of formaldehyde, resulting from the oxidation of methyl alcohol, care should be taken to expel all hydrochloric acid from the reagent if this is prepared by mixing morphine hydrochloride and sulphuric acid; the reagent itself soon develops a red coloration in the presence of hydrochloric acid. A New Method for the Estimation of Histidine is announced by W. E. Thrum and P. F. Trowbridge. It is to be used in conjunction with the Van Slyke method and it depends on the absorption of bromine by histidine and cystine. A portion of the solution containing the bases of a coagulable protein is heated with bromide-bromate solution and hydrochloric acid, and after fifteen minutes, the excess is titrated. E. Oppenheimer has found a New Method for the Estimation of Bromine in very small quantities. He colors Schiff's reagent deep blue violet by bromine and finds that when chlorine water is added to such a solution that has been acidified with sulphuric acid it becomes intensively violet, grayish violet, and eventually when there is an excess of chlorine, golden yellow. G. Rodillon reports as a Characteristic Reaction of Phenol that when 10 cc. of a solution containing phenol are treated with a drop of 10 per cent sodium nitrate solution and this poured on the surface of concentrated sulphuric acid, a colored zone (red above, green below) appears at the junction of the two liquids. By dissolving vanadium pentoxide in a dilute phosphoric acid solution, J. Gruss finds a new Reagent for Wood and Vanillin that produces a reddish brown precipitate when vanillin is

added to the solution. When wood shaving is treated with vanadium pentoxide dissolved in dilute phosphoric acid solution, the cell walls are gradually colored yellowish brown. J. J. Morgan publishes a New Method for the Estimation of Potassium in Silicates. Essentially a potassium perchlorate is formed, washed, dried, and weighed in the usual manner. A New Method for the Detection and Estimation of Cobalt is announced by S. A. Braley and F. B. Hobart. It was found when testing for nickel with dimethyl-glyoxime that when cobalt was present a brown coloration resulted. This can also be used as a colorimetric estimation of cobalt and is a specially sensitive test for cobalt in the absence of copper and iron. G. G. Longniescu and G. Chaborski find that the characteristic odor of nitricbenzene is found when a nitrate is heated with a few drops of benzene and concentrated. This test is proposed for the Detection of Nitric Acid. W. Hieber describes A New Method for the Titration of Enols in Ketoenolic Mixtures which depends on the formation of complex copper salts which are freely soluble in chloroform and quantitatively retained by this solvent in the presence of water and in the quantitative retention of copper acetate by water in the presence of chloroform which may also contain alcohol. Later in the year L. W. Winkler added to his valuable studies on Gravimetric Analysis a paper on the Estimation of Zinc and two on the Determination of Chromium, all of which contain valuable information for those who make a specialty of analytical methods.

INORGANIC CHEMISTRY. Megh Nad Saha has been studying the Elements in the Sun. He reports that no evidence of the existence of the following elements in the sun has been obtained: Rubidium, cesium, nitrogen, phosphorus, boron, antimony, bismuth, arsenic, sulphur, selenium, thallium, praseodymium. Doubtful indications of the following have been obtained: radium, elements of the inert group, except helium, osmium, iridium, platinum, ruthenium, tantalum, thorium, tungsten, uranium. The following are represented by faint lines in the Fraunhofer spectrum: Potassium, copper, silver, cadmium, zinc, tin, lead, and germanium. Chlorine, bromine, iodine, fluorine, and tellurium have not been investigated. Another student from the Orient, Nil Ratan Dhar, has undertaken an elaborate series of investigations on Catalysis. His eighth paper deals with the effect of catalysts on the reaction between ferrous ammonium sulphate and silver nitrate and on the atmospheric oxidation of sodium sulphite solution, and with the hydrolysis of methyl acetate by oxalic and picric acids in the presence of potassium oxalate and sodium picrate respectively. In a ninth paper with the subtitle of Thermal and Photo-chemical Reactions he shows that many reactions having large temperature coefficients are sensitive to light, and hence it is considered that sensitiveness to temperature and to light influences, have a common cause. A tenth paper is devoted to the Explanation of some abnormally large and small Coefficients. Two American chemists, W. A. Hoyes and A. B. Haw, have given much attention to The Reaction between Chlorine and Ammonia. When anhydrous ammonia and anhydrous chlorine react, they form nitrogen trichloride and ammonium chloride. A considerable proportion of the trichloride always decomposes

into chlorine and nitrogen either directly or by interaction between the trichloride and ammonia. In a later paper the senior author discusses the Probable Formation of Trichloro-ammonium Chloride. In a paper on the Series Spectra of the Elements, N. Bohr contends that the application of the quantum hypothesis to the nuclear conception of the atom, combined with the assumption of a series of stationary conditions of the electronic orbits, has afforded a completely satisfactory explanation of the origin of the hydrogen spectrum. J. Franck and P. Knipping in a paper on The Potential of Excitation of Helium announce that the resonance and ionization potentials of pure helium have been determined and show that two resonance potentials exist at the values 0.8 volts removed from one another, a result which is demanded by the two series of spectra of helium. The Life Period and Content in Uranium Minerals, by O. Hahn and L. Meitner is of unusual interest. These authors find that one ton of uranium in any uranium mineral contains 72 mg. of protoactinium; the corresponding figure for radium being 330 mgm. The half life period of protoactinium being about 12,000 years. G. von Hevesy has devoted much attention to the Velocity of Migration of the Ions in Crystals. He finds in rock salt the migration constant at 20° is about 3×10^{-18} cm² a day, about $1-10^{20}$ of that of the ions in the fused salt. The migration velocity according to his experience increases rapidly with temperature. A. Landé has taken up the Size of Atoms and reports that values for the radii of the alkali and halogen ions deduced from the cubical structure of alkali-halogen salts are not in agreement with the more certain values deduced from the consideration of the x-ray and ordinary spectra series of lines of these elements. Under the title of The Electrical Resistance of Steels, A. Portevin presented to the French Academy a series of curves showing that the variation in resistance of nickel steels was in accordance with their carbon and nickel content. A curious innovation by W. F. Darke, J. W. McBain, and C. S. Salmon, is the study of the Ultramicroscopic Structure of Soaps and the rapid changes which occur. These are recorded and examined by the use of a cinematograph camera. After an examination of the preliminary stages they find that the stable condition of soaps at ordinary temperatures is, however, due to the formation of innumerable tiny lamellar crystals of hydrated soap. J. B. Firth has studied the Sorption of Iodine by Carbon over periods of time extending to five years and finds that the initial absorption velocity is greater the smaller the size of the carbon particles, while the presence of water in the carbon diminishes its activity. J. C. Thresh finds that water itself has no action on lead and merely acts as an inert medium by means of which foreign substances dissolved in it may act on the metal. F. Foester finds on restudying the properties of Sodium perborate that its composition is best represented by the formula $\text{NaBO}_2 \cdot \text{H}_2\text{O}_2 \cdot 3\text{H}_2\text{O}$.

MINERALOGICAL CHEMISTRY. In this branch of chemistry there was an interesting contribution on The Formation and Chemical Structure of Coal by F. Fisher and H. Schrader in which the authors contended that in the peatification of plant residues the cellulose is acted on by bacteria, disappearing in time, being converted into carbon

dioxide and water. This results in an increase in the relative amount of lignin. This course of events can be followed in peat. Later K. G. Jones attacked this theory as not being in accordance with all the known facts and preferred to claim that the origin of coal was not from lignin but rather from the cellulose portion of plants. In an important paper Henry S. Washington discusses The Chemistry of the Earth's Crust and divides the elements into groups: 1. petrogenic elements, characteristic of igneous rocks and of low atomic weight; 2. metallogenic elements, rare or absent in igneous but occurring in ores of high atomic weight. Beneath the silicate structure it is suggested that there is a zone essentially of nickel-iron, and below this a central core of metallogenic elements. The crystallography of minerals and their optical properties continues to be a favorite subject of study. Among the new minerals of the year are Flagstaffite which F. N. Guild found near Flagstaff, Ariz. It has the composition: $\text{C}_2\text{H}_2\text{O}$. F. Millosevich finds at Monte-Sambuco in Sicily a hydrated magnesium tetraborate (MgO , $4\text{B}_2\text{O}_3$, $4\text{H}_2\text{O}$), which he names Paternoite. From Langban, Sweden, came two new manganese minerals which are named by G. Flink, Trigonite (Pb , MnH [As_2O_5]₂) and Dixonite ($\text{MnSiO}_3 + 2[\text{MnOH}] \text{MnAsO}_3$). Armangite is the name given to a new arsenite also from Langban which according to G. Arminoff and R. Mauzelius is a manganese ortho-arsenite with the composition of $\text{Mn}_2(\text{As}_2\text{O}_5)_2$. W. F. Foshag announces from Crestmore, Calif., Plazolite with the composition 3CaO , Al_2O_3 , $2(\text{SiO}_2\text{CO}_2)$, $2\text{H}_2\text{O}$. Also from Crestmore there comes from Foshag and E. S. Larsen a new calcium, magnesium silicate which is named Merwinite and has the composition $\text{Ca}_2\text{Mg}(\text{SiO}_4)_2$. H. Buttgenbach and C. Gillet have obtained from Tunis a new mineral which they name Cesarolite and which has the following composition: PbO , 3MnO , H_2O . Further study of the silver Jamesonite by Earl V. Shannon leads him to now describe it as a new silver lead sulphantimonite with the formula $\text{Ag}_2\text{Pb}_2(\text{Sb}_2\text{S}_7)_2$, which he names Owyheeite from the locality in Idaho where it was originally found. This same author with C. Palache finds a new hydrated copper calcium arsenate with the composition $\text{CuCa}(\text{OH})\text{AsO}_4$ which they name Higgensite. Shannon with D. F. Hewett has described a new mineral from Orienta, Cuba, which they call Orientite. It has the composition $\text{H}_2\text{Ca}_4(\text{MnOH})_4(\text{SiO}_4)_4$. A. S. Eakle has recently reported on a new hydrated calcium, magnesium silicate from Crestmore, Calif., which he calls Gurupaite. The composition is $\text{H}_2(\text{CaMg})\text{SiO}_7$.

ORGANIC CHEMISTRY. As in 1920 (see preceding YEAR BOOK, page 129), there were a large number of partial reports of extensive studies on some important group or phase of an investigation. Some of the more extensive of these are again mentioned as showing progress and their general character is indicated by their titles.

M. Giua, an Italian chemist, has reached the fourteenth paper on the Aromatic Nitro-derivatives. It bears the sub-title A New Bromotrinitro benzene. The fourteenth study on the important subject of Keto-enolic Desmotropy by K. H. Mayer and his associates was read before the German Chemical Society, and was descriptive of the Preparation of the Enolic

Forms of Ethyl Acetoacetate and Acetylacetone. A. Smorodincev published in the Russian *Journal of Physiology* a paper on Carnosine and its Compounds, the twentieth in the series on Extractive Substances of Muscular Tissue. In the *Journal of the American Chemical Society* there appeared the 20th paper on Halogenation by R. L. Datta and J. S. Bhonmik with the sub-title "The Replacement of Sulphonic Acid Groups by Halogens." Before the London Chemical Society George G. Henderson and J. K. Marsh presented their 20th paper on the Chemistry of the Terpenes, with the sub-title of the Action of Hypochlorous Acid on Pinene. H. Staudinger and his associates completed the twentieth and twenty-first papers on the Aliphatic Diazo Compounds. The former was on the Reduction by Means of Hydrogen in Presence of Palladium and the latter on the Constitution of the Hydrazones, especially of Ethyl Mesoxalatehydrazone. Later, the 22nd and 23rd, on the Reduction of Ethyl Diazoacetate and Formulation of Ethyl Diazoacetate and of Diazo-anhydrides were published. In the *Berichte* of the German Chemical Society Paul Rabe and E. Jantzen published the 22nd paper on The Cinchona Alkaloids in which they described the Synthesis of 3-Acetyl-4-Methylpyridin and of B-Collidine. The synthesis of these substances from homo nicotinic acid is described. The Organic Derivatives of Silicon by F. S. Kipping has reached its 24th presentation in the *Transactions* of the London Chemical Society with the sub-title dl Derivatives of Silico Ethane. The 25th number in the series, with the title Saturated and Unsaturated Silicohydrocarbons, and the 26th, describing Piperidine as an Analytical Reagent, appeared in June. In the series on The Influence of Substitution in the Components on Equilibria in Binary Solutions, R. Kreemann and H. Hohl have reached their 29th paper on the Binary Systems of *m*-Aminophenol with Amines. The 30th paper is on The Binary Systems of Diphenylmethane with Phenols and Amines. In the *Berichte* was published the 31st of the series on Cholesterol with the sub-title The Differing Behaviour of certain Stereoisometric Derivatives of Cholesterol by A. Windaus and A. von Staden. The 39th of the studies on the Camphane Series by M. O. Forster and W. B. Saville on *p*-Amino-phenylaminocamphor appeared in the June issue of the *Journal* of the London Chemical Society. The 89th number of Studies on Pyrimidines by T. B. Johnson and L. A. Mikeska appeared in the *Journal* of the American Chemical Society under the heading of The Condensation of Benzamidine with Ethyl γ Diethoxyacetoacetate. An important series of papers on the Polysaccharides was begun in 1920 by P. Karrer and was continued during the present year by the publication of 2, Constitution of Diamylose, with C. Nageli; 3, Cellulose with F. Widmer; 4, Degradation of Potato Starch, with C. Nageli; 5, Methylation of Inulin, with L. Lang; 6, Constitution of Starch and Glycogen, with C. Nageli; 7, Constitution of Cellobiose, with F. Widmer; 8, Starch and the Amyloses, with C. Nageli, O. Hurwitz, and A. Walti, and 11, Compounds of Anhydro-sugars with alkali hydroxides.

Other important papers include the Synthesis of a Tetrasaccharide containing sulphur, by Fritz Wrede, who prepares tetradeca-acetate of dicelloyl sulphide by heating acetobromocellose

with alcoholic potassium sulphide. The tetrasaccharide, dicelloyl sulphide $C_{24}H_{40}O_{10}SK_4 \cdot 4H_2O$ was obtained from the acetyl derivative by saturating a methyl-alcoholic solution of it with ammonia and extracting with hot 90 per cent alcohol. The potassium compound of the tetrasaccharide was obtained by treating the acetyl derivative with aqueous-alcoholic potassium hydroxide in hot alcohol. C. E. Munroe and S. P. Howell have investigated the Products of Detonation of Trinitrotoluene. From ten experiments with charges increasing by 50 grams from 25 grams to 450 grams with loading densities of from 0.0016 to 0.003, the maximum and minimum percentages of the gases found were as follows: CO_2 , 6.4, 1.1; CO , 60.7, 53.2; H_2 , 27.6, 19.9; CH_4 , 2.3, 0.1; N_2 , 15.6, 13.3. The amount of the gases absorbed by the solid combustion products was found to be 6.11 cc. to the gram, the composition being CO_2 , 71.3; CH_4 , 1.0; N_2 , 27.7 per cent. A Synthetic Camphor is reported by A. Luttringer, who finds that certain pine needle oils, and also Siberian oil of turpentine contain 30 to 45 per cent of bornyl, the remainder being terpenes. About 75 per cent of the terpenes can be converted into bornyl formate by means of formic acid and a dehydrating agent. The mixture of bornyl esters can then be converted into a camphor which is free from compounds of chlorine. George Schiet has patented a process in Germany for the Preparation of Alcohols of High Molecular Weight. He finds that solid or liquid alcohols of high molecular weight may be prepared by the reduction of more complex alkyl derivatives by heating with aqueous alkali hydroxide solutions and alcohols. He notes that the alcohols prepared from the ketones of the resin acids are viscous liquids. Two Japanese chemists, M. Matsui and S. Shimizu, describe under the title of Electrolytic Reduction of Menthone, the experiments that tend to prove that menthone can only be reduced electrolytically in either sulphuric or hydrochloric acid solutions. P. A. Levene and J. Lopez-Suarez sustain by experimental work on the Chemical Structure of Chondridin the previous contention of Hebling that chondridin is a lactone of chondrosin and that it has probably the formula $C_{15}H_{15}O_{10}N \cdot 2\frac{1}{2} H_2O$, but with the position of the NH_2 group uncertain. It is a white crystalline powder. K. Kobayashi studied the Formation of Petroleum from Fish Oils, and finds that by the distillation of a mixture of herring oil and a finely powdered Japanese acid clay covered with a layer of the same clay gases, mainly carbon dioxide, crude oil and an aqueous liquid were obtained. The crude oil had a green fluorescence and a petroleum-like odor, and seemed identical with natural crude petroleum; hence he deduces the origin of Japanese petroleum to be from fish oil. The melting point of Diphenylamine has been redetermined by H. Rogers, W. C. Homes, and W. L. Lindsay, and found to be 53°, instead of 54°. J. von Braun and K. Moldanke have obtained Styrene from Ethylbenzene in good yield by direct bromination of the ethylbenzene to alpha beta-dibromoethylbenzene with a boiling point of 133° and treatment of the bromo-derivative with metallic magnesium. An interesting attempt to effect a Synthesis of Anthracene from Naphthalene by C. W. Colver and W. A. Noyes of the University of

Illinois after several failures finally culminated in success. The details are highly technical. H. Pohle has published a valuable contribution to the study of artificial rubber. Caoutchouc and Two Dimethylcauthorucs have been investigated in respect of their dispersion and swelling properties in various solvents. A similar investigation is one by W. Ostwald on the Swelling of Caoutchouc in Various Liquids. Mention may also be made of the later paper published in Rome, Italy, by G. Bruni and E. Romain on the Mechanism of the Action of certain Accelerants of the Vulcanization of Caoutchouc, as well as of one by H. P. Stevens on the Sols and Gels of Vulcanized Caoutchouc. Step by step is progress made towards an inexpensive synthetic rubber. E. Fournau in an interesting paper on Local Anæsthetics discusses the composition and properties of a number of these valuable aids to surgery, also their methods of preparation is outlined. From Japan comes the description of the Essential Oil of Dokudame and the Essential Oil of Kokusagi, forming two papers on the methods of preparation and properties of these oils by Y. Shinosaki. Organic compounds of inorganic elements have formed the subject of studies in Germany and conspicuous among such may be mentioned a series on the Organic compounds of Arsenic, by W. Steinhopf and G. Schwen. The long discussed Composition of Iodide of Starch has been taken up by A. Lottermoser, who agrees with Biltz and others that the so-called "iodide of starch" is an adsorption compound of starch and molecular iodine. Under the title of Mytilitol, a Naturally Occurring Cyclose, D. Ackermann describes his isolation of this substance from *Mytilus edulis* in detail and reports it as forming colorless, lustrous crystals with a melting point of 259° that are optically inactive and do not contain a methoxyl group. K. H. Meyer and L. Orthmer report the Synthesis of Formamide from Carbon Monoxide and Ammonia. This compound is obtained in small amount by heating carbon monoxide and ammonia in a steel tube in the presence of porous clay at 200° under a final pressure of 170 atmospheres. The Benzene Formula Problem is again discussed by A. von Weinburg, who finds that the introduction of a substituent into the benzene ring causes an alteration in the aromatic character, the extent of which depends on the nature, number, and position of the substituents. It is shown by a series of examples that the abnormal deviations can be considered mathematically in the cases of molecular refraction, absorption spectra, and energy content.

PHYSIOLOGICAL CHEMISTRY. The Physiological Action of Calcium, according to R. Hober shows that a deficiency of calcium as well as an excess of potassium produces relaxation in the condition of the cell colloids. Calcium deficiency is also responsible for the loosening of tissues of a different character at the place of contact, that is, nerves and muscles, etc. R. Feuglen, as the result of a quantitative investigation describes A Complex Nucleic Acid which he concludes that when guanylic acid and pancreas-nucleic acid previously established in the pancreas that they may be considered as artificial products of hydrolysis of this new complex acid. Estimations of formic acid in urine and blood indicate that this substance represents a definite stage in

the katabolism of many substances is the claim made by A. Slosser in a paper on the physiological Significance of Formic Acid. E. Oppenheimer in answer to the question: Is there a Specific Action of Bromine Salts? on the animal organism concludes that the combination of bromine is of a physico-chemical character. From the Pasteur Institute in Paris comes the announcement that P. Thomas finds two new proteins that may be separated from the aqueous extract of yeast, of which one is a true albumin and the other a phosphoprotein. The blood of the silk-worm has been studied in Japan by S. Kawase, K. Suda, and K. Saito, who find that the blood of the silk-worm larva is amphoteric to litmus paper, while that of the pupa is alkaline. Both fluids are elaborately analyzed. These same authorities also discuss in a later paper The Digestive Enzymes of the Silk-worm and find that the proteolytic enzyme present is trypsin. Lobinol is a poisonous substance that has been isolated by J. B. McNair in the form of an amber-red, oily liquid from the bark of *Rhus diversiloba*. Under the title of Calcium Metabolism W. P. Wheeler makes the interesting announcement that experiments with common fowls and ducks showed that magnesium does not replace calcium in the bones from which it is withdrawn for shell material, but when strontium salts are fed with rations of low calcium content strontium replaces calcium in the bones of the mature birds. A curious suggestion of the Production of Ammonia in Nerve is made by S. Tashiro, who finds that a basic, volatile substance giving the tests for ammonia is formed in addition to carbon dioxide during activity.

It is not formed in amount sufficient to neutralize the carbon dioxide, yet it may be a factor in the infatigability of nerve. C. L. Carter has undertaken the Chemical Investigation of Mutton-Bird Oil and in his first paper discusses the oil extracted from the stomach of an Australian petrel, *Estrelata lessoni*, which he finds resembles sperm oil very closely in its physical and chemical properties. The alcohols obtained by saponification of the oil consist chiefly of cetyl alcohol, and the greater portion of the mixed fatty acids consist of oleic acid. There is evidence of the presence of acids of the linolic or linolenic series. Among the more elaborate studies that have appeared during the year are a series on Alcoholic Fermentation by S. Kostyche and his associates, who contend in a tenth paper that Fermentation is Life without Oxygen. Mention may also be made of the many contributions by J. Zellner which have been published under the general title of Chemistry of the Higher Fungi, which has reached its fourteenth number. Similarly H. Molisch has contributed to vegetable physiology no less than fifteen papers on the Microchemistry of Plants.

CHEMISTRY, INDUSTRIAL. The meeting of the Society of Chemical Industry and the American Chemical Society—organizations with a joint membership of over 20,000 persons—in New York City on September 7, attended with a large public interest as shown by the attention given to it by the public press, was unquestionably the outstanding event of the year. Sir William J. Pope, retiring president of the Society of Chemical Industry, on his return to England in referring to the event, spoke of the ability of American chemists "to throw the whole weight of collected chemical opinion in the country

[United States] on to any particular question of general importance" and of exercising "an influence in the legislature which counts quite seriously in political affairs."

ORGANIZATIONS. The American Chemical Society held its spring meeting in Rochester, N. Y., during April 25-29. The annual meeting was held at Columbia University in New York City during September 6-10. The visiting members of the Society of Chemical Industry were guests at this meeting and unusual features of entertainment were provided including an International Meeting on September 7, at which the following addresses were delivered: Chemistry and Civilization: Dr. Edgar F. Smith, provost emeritus, University of Pennsylvania, in the chair. Science and Civilization; The Role of Chemistry: Dr. Charles Baskerville, director of the laboratories, College of the City of New York; chairman, International Committee. Energy; Its Sources and Future Possibilities: Dr. Arthur D. Little, chemical engineer and technologist, Boston. The Engineer; Human and Superior Direction of Power: Dr. Leo H. Baekeland, honorary professor of chemical engineering, Columbia University. Chemistry and Life: Sir William J. Pope, professor of chemistry, Cambridge University. Theories: Dr. Willis R. Whitney, head of research department, General Electric Company. Research Applied to the World's Work: Dr. C. E. K. Mees, head of research department, Eastman Kodak Company. Problem of Diffusion and Its Bearing on Civilization: Prof. Ernst Cohen, professor of chemistry, University of Utrecht. Catalysis: The New Economic Factor: Prof. Wilder D. Bancroft, professor of physical chemistry, Cornell University. These addresses were described as "more than remarkable—they were epoch-making. Nothing of late has served to open our eyes more to the possibilities of the immediate future in the field of chemistry than many of the remarks and predictions and hypotheses of the leading chemists gathered at the various sessions" of this meeting.* Sir William J. Pope and M. Paul Kestner were elected honorary members. The membership is 15,300. Dr. Edgar F. Smith of the University of Pennsylvania was president during the year.

The American Electro-chemical Society held its spring meeting in Atlantic City, N. J., during April 21-23, and its general meeting at Lake Placid, N. Y., during September 29-October 1. Its president during the year was Acheson Smith. The American Institute of Chemical Engineers held its summer meeting in Detroit, Mich., during June 20-21, and its winter meeting in Baltimore, Md., during December 6-9. The president during the year was David Wesson. The American Section of the Société de Chimie Industrielle held its regular sessions during the year with Dr. Marston T. Bogert as its president.

The Society of Chemical Industry held its fortieth annual meeting in the McDonald Chemistry Hall of McGill University in Montreal, Canada, during August 29-31 with Sir William J. Pope in the chair. The membership was increased during the year from 5612 to 5654. The treasurer reported that the strict economy practiced in recent years had brought about practical results and for the first time since 1917 he was

able to report a slight excess of income over expenditures. Dr. Robert F. Ruttan, "the most distinguished figure in chemical science in Canada" was elected president, and Glasgow, Scotland, was chosen as the meeting place for 1922. At the close of the meeting excursions to Ottawa, Toronto, and Niagara Falls were enjoyed by the visiting chemists through the courtesy of the Canadian Sections. On September 5, as the party crossed the border into the United States, the members were received by a delegation of the American Chemical Society led by its president, Dr. Edgar F. Smith, who read a message of welcome from President Harding in which he said of the materialistic sciences "none holds promise of so great contributions to human welfare in the coming generations" as chemistry. The visiting chemists then proceeded by way of Syracuse and Albany to New York City, where they became the guests of the American Chemical Society at its meeting there.

NATIONAL EXPOSITION OF CHEMICAL INDUSTRIES. The seventh National Exposition of Chemical Industries was held in the armory of the Eighth Coast Artillery in New York City during the week of September 12-17. The Exposition was formally opened with a brief address by Dr. Charles H. Herty, who was followed by a more formal address on "Chemical Progress and Our National Defense," by Senator Irvine L. Lenroot and one on "Preparedness and Chemical Disarmament," by Gen. Amos A. Fries of the Chemical Warfare Service of the United States Army. Throughout the week there were daily addresses or symposiums on technical subjects. The addresses included one by Congressman Fred S. Purnell of Indiana, who said: "America has taken the lead in the world's chemical industry. That position must be sustained not only as a potential element of preparedness but as a peace measure. The coal tar industry and the science of chemical warfare are so closely allied that it becomes our paramount duty to protect the dye manufacturer. The military strength of a nation will in the future depend almost entirely upon its dye plants." Later, Dr. Thomas W. Page, Chairman of the U. S. Tariff Commission, spoke on "The Chemical Industries and the Tariff." He said: "That one of the most important features of the new bill was the American valuation proposal and stated that studies were now under way to determine how this feature of the proposed law should be worked out." The symposiums included one on "Crushing, Grinding, and Pulverizing," led by Harry J. Wolf; one on "Evaporating and Drying," led by Wallace Savage; one on "Paint and Varnish," led by Ernest T. Trigg; the meeting of the American Ceramic Society under the direction of R. C. Purdy, a symposium on the "Power Plant in the Chemical Industries," led by R. C. Beadle; and one on "American Dyes and Colors." American manufacturers of dyestuffs now supply more than 80 per cent of the needs for this product in the United States. The American chemical and dyestuff industry is still in its infancy, and to have been able in the few years it has been in existence to supply dyes that were made by concerns of more than forty years of experience is a great achievement. The exhibits were fully equal to those of previous Expositions and there were 424 exhibitors. The total attendance was 120,081

* See "The Role of Chemistry: Visions of Future Progress of the Human Race through Chemistry," in the *Scientific American* for Oct. 1, 1921.

visitors which included the members of the various chemical organizations in sessions in New York at the time, especially the American Chemical Society and the Society of Chemical Industry. Owing to the great distance from the centre of the city it was decided to return to the Grand Central Palace for the Exposition to be held in 1922.

VISIT OF MME. CURIE. The visit to the United States of Madame Marie Sklodovska Curie, described as the "high priestess of science," and certainly "the greatest living women in the scientific world," deserves mention. Madame Curie arrived in New York on May 11 and sailed for home on June 25. During this period of time she received at the hands of the President of the United States a gram of radium valued at \$100,000 together with mesothorium valued at \$22,000 placed in a costly mahogany box from the Madam Curie Radium Fund Committee which raised by popular subscription the money required to purchase this rare element, so as to enable her to continue her experiments with the material which she and her husband first gave to the world. She received honorary doctorates from Smith, Woman's Medical College, Pittsburg, Yale, Columbia, Chicago, Northwestern, Wellesley, and Pennsylvania. She also received a gold medal from the American Philosophical Society which carried with it a money award of \$800; the Naples Table award of \$2000, and the Willard Gibbs gold medal as well as that of the National Institute of Social Science.* It was reported that Mme. Curie had received a total of sixty-four honorary degrees, including nine from American colleges and universities. Mme. Curie's visit to the United States did much to increase the interest in the use of radium for the cure of cancer and other diseases of abnormal growth. Articles both in favor and against its use have been published, but the present opinion seems to lean towards its efficacy provided the case is taken in time. Better technique will probably sustain this opinion.

CHEMISTRY IN WAR. By an interesting coincidence the retiring president of the Society of Chemical Industry, Sir William J. Pope, and the retiring president of the British Association for the Advancement of Science, Sir T. Edward Thorpe, were both distinguished chemists, and both in their addresses referred to the use of poisonous gas in warfare. The first-named said that when the armistice was declared the Allies had sufficient supplies of mustard gas to "have enveloped the Germans knee deep, and had discovered a new vapor against which respirators would be of no avail, so strong that it would stop a man if it were present in the atmosphere in the proportion of one part in five millions," and he claimed that from the humanitarian point of view gas was more merciful than high explosives, and expressed the belief that chemical agencies would be the sole deciding factor in future wars. On the other hand Sir Edward Thorpe said that the Germans had met no fewer than eighteen different forms of poisons—gases, liquids, and solids—in their military operations. Reprisals were inevitable and for the greater part of three years the leading nations of the world were flinging the

most deadly products at one another that chemical knowledge could suggest and technical skill contrive. Also he deplored in passionate words the prospect on the part of science and of humanity, and hoped that by some form of international agreement the use of these products might be averted. The London *Times* in commenting on this condition of affairs said: "The world must face and prepare for the future, or it must prohibit chemical warfare by an international agreement supported by effective international sanctions."

MEDALS. On January 24, the Perkin Medal of the Society of Chemical Industry for the highest achievement in applied chemistry was presented to Dr. Willis R. Whitney, director of the Research Laboratory of the General Electric Company in Schenectady, N. Y. The William H. Nichols medal of the American Chemical Society was on May 8 presented to Dr. Gilbert N. Lewis, dean of Chemistry in the University of California in Berkeley, for his "The Third Law of Thermodynamics and the Entropy of Solutions and of Liquids," being in the opinion of the judges the best paper published during the year. To Mme. Marie S. Curie the Willard Gibbs Medal of the Chicago Section of the American Chemical Society was awarded on the occasion of her visit to Chicago. It was the first time an award of this medal was ever made to a woman. The National Institute of Social Science also presented to Madame Curie one of its gold medals at its annual dinner in New York City on May 19. Prof. Charles F. Chandler, one of the founders of the American Chemical Society and distinguished for his services in the field of chemistry, likewise received one of the gold medals of the National Institute. To Dr. Frederick B. Power, Research Chemist of the U. S. Department of Agriculture, there was presented on May 9 a gold medal "in recognition of his distinguished services to science during eighteen and a half years as director of the Wellcome Chemical Research Laboratories, London," by its founder, Henry S. Wellcome. Mention must be made of the award of the Nobel prize in chemistry to Prof. Walter Nernst of the University of Berlin for his work in electrochemistry. Professor Nernst's greatest claim to fame is the discovery of the third law of thermodynamics or the heat theorem. It is interesting to add that Nernst was the inventor of the Nernst lamp which appeared to be about to enter universal use when it was superseded by the tungsten lamp. Also he was the head of the scientific staff that produced poison gas for Germany during the World War.

METALS. The depression in the production of metals due not only to the lack of demand owing to the cessation of war conditions but also because of the bad state of business, has naturally led to the neglect of deposits of various ores formerly worked and the closing of plants.

Harry Pauling of Berlin, Germany, has invented a new simple, rapid, and effective method of separating alloys into their metal components and extracting metals from mineral ores. According to this process, metals treated with the catalytic agent go into solution in a short time, the treatment of big blocks of metal being effected in less than 30 minutes. Out of the solution thus obtained the various metals are separated by the employment of simple methods of chemical reaction, which permit the retaining of the metals

* See for an illustrated account of the presentation of the radium to Mme. Curie the *Bulletin of the Pan American Union* for July, 1921, pp. 25-48.

one by one. The product first obtained is in the form of a muddy sediment which, after being dried, yields a metal powder ready to be used or melted in crucibles, or to be treated by electrolytic process. Metals and concentrated ores can be treated in the same way, although they require one or two more operations than pure metal alloys. It is said that the catalyst employed can be bought in any quantity required, the greater part of it being recuperated in the process and used again. The general expenses involved are declared to be relatively small. The elimination of the melting process does away with the outlay for coal for that purpose. The process is susceptible of being employed on a large scale, quite a number of charges being treated at a time. The apparatus can furthermore be constructed to work continuously, being served in series by the same gang of workmen. It is asserted that the process is effective with any number of metal components, every metal being recuperated separately, and in the case of concentrated mineral ore every component metal part, be it silver, antimony, tin, lead, nickel, or copper, being retained one by one in the purest form. It further appears that Mr. Pauling has developed a new process for the electrolytic treatment of metals, which enables one to procure copper wire directly out of the electrolytic bath, thereby eliminating the melting down of the electro blocks obtained under the old process, the rolling of the blocks into plate, and drawing into wire. It is claimed that this process accomplishes an immense saving in coal, wages, and time.

STEEL. Lucien Basset announces from Paris, France, a new method of manufacturing cast iron and steel, which is already in operation and which materially reduces the cost of steel. He reduces the iron oxide by using exactly the amount of carbon needed. This operation takes place—and this is the original idea of Basset—in a chamber having a high temperature into which is blown powdered carbon and air already raised to a temperature between 700 and 1000 degrees Centigrade. This powdered carbon is admitted in quantity to produce in burning in the heated air only carbon monoxide, but the heat thus emitted, the air being previously at a high temperature, is nevertheless very high and sufficient to assure the rapid and almost complete reduction of the mineral and the production of steel direct. If in place of the atmosphere of carbon monoxide in which thus takes place the reduction there is the atmosphere of carbon dioxide, this carbon dioxide reoxidizes a great part of the iron and scarcely half the mineral is transformed. Prior heating of the air, in which the inblown carbon burns and produces a very high atmosphere, is realized in this way: carbon monoxide is created in the reducing chamber both by the reduction of mineral and by combustion; the powdered carbon burns at its escape from the chamber and the heat thus emitted serves to heat the brick chambers through which passes the air on its way to the chamber. By this system there is realized in five hours' operations what takes six times as long in a blast furnace and its result is that there may be obtained from the chamber direct a stream of steel formed without an appreciable loss of mineral. The carbon chamber is made of coal that France possesses, and therefore there would be no further need of importing coke.

From Japan comes the announcement of a new process by which magnetic sand may be converted

into pig-iron and thence into steel, that has been discovered by Coro Matsukata and Asebu Naito. The new process is carried out by means of combining the sand with coke, using hot gas flames and making ferro-coke, from which iron can easily be taken. The discovery, it is claimed, will not only revolutionize the steel industry in Japan, but of the world.

The fact discovered some years ago (see *YEAR BOOK* for 1915, page 131) that the introduction of approximately 13 per cent of chromium to ordinary carbon steel rendered it impervious to oxidation by air, water, or such acids as are usually met with in household use, including strong vinegar.

The application of this steel to cutlery was only made possible after a great deal of experimenting and study, because, in consequence of the hardening properties of chromium, the steel resulting upset all established rules and practices of the cutlers in the matter of hardening and tempering temperatures. There was also the greatly increased difficulties of forging, as this steel must be forged under a power hammer; so in the introductory period of this material the cutlery manufacturers experienced heavy losses. At first efforts were confined almost exclusively to cutlery, then certain cast household articles, such as stair rods, fire irons, and stove grates were made. Later, various automobile parts made of stainless steel were put on the market. There has long been a demand for a rustless metal in certain engineering parts which come in contact with water and gases, and these are now in the market. The latest development is an entirely new line in stainless steel of table, soup, dessert, and tea spoons and table and dessert forks and the result appears to be eminently satisfactory. The finish, which is produced by machine burnishing, is excellent, and the makers claim that these spoons and forks will wear bright to the end without polishing and that they are immune from the risk of stain or tarnish.

RADIUM. In addition to the very full description of the metallurgy of radium in the United States by Hamilton Foley* the following mention of the Bohemian deposits is given:

Although the radium production in the United States is greater as to quantity, the ores of Jachymov in Bohemia, near the frontiers of Saxony, are richer in quality. It is estimated that the known supply of radium in the Jachymov district will last for twenty years, at the present rate of production. As there are three large mines which are not yet prospected as to depth, and in which the veins of ore widen as they are followed deeper, it is certain that the mining of radium will continue for a much longer period. The Jachymov mines passed in 1912 into the possession of the Austro-Hungarian Government, but they have now become the property of the Czecho-Slovak Republic. The annual quantity of radium produced amounts to about two grams. The net profits to the Government in 1913 were about 1,000,000 crowns. The net profit anticipated for 1921 is about 3,500,000 crowns, which has less foreign exchange value than the pre-war profits. The price of one gram of radium in the home market in 1913 was 588,000 crowns. To-day the price of one gram is about 10,000,000 crowns. As the earnings from the radium mines of the Republic are looked upon as a

* "The Source of Radium," *Bulletin of the Pan American Union*, July, 1921, pages 29-48.

possible source of much profit to the Government, projects are under way for electrifying the shafts and millhouses, as well as enlarging and modernizing the entire plant. There are several by-products of considerable importance. Uranium dyes are produced, also a radio-active watering place is being built in the vicinity of the mines.

POTASSIUM. Samples of salts sent from western Texas early in the year to the laboratories of the United States Geological Survey in Washington contained percentages of potash that suggested the richness of the potash deposits of Alsace and Germany. The samples were obtained from two borings about eighty miles apart, sunk by oil companies in the "Red Beds" regions of Texas, where salt beds, red shales, gypsum, and other materials are associated in strata of nearly the same geologic age and general character as the potash-bearing beds of western Europe. The thickness of the potash-bearing beds in Texas represented by these samples is unknown, and the question remains to be determined whether the deposit is thick enough to furnish potash in as great amount and of as high a grade as those in Europe.

The Secretary of Agriculture in his annual report announces that the experimental kelp plant at Summerland, Calif., the purpose of which is to demonstrate the practicability of extracting potash and useful by-products from the giant kelps, is in active operation and valuable results are being secured. It will be possible when the best methods have been worked out to develop a potash industry on the Pacific coast capable of supplying a considerable part of the nation's need. Two processes for the recovery of potash from certain rocks have recently been developed by the Bureau of Soils, and both are being utilized in commercial practice. The 87,000 tons of potash annually lost from flues and stacks of cement plants are still, in the main, going to waste. Only about 1 per cent was recovered in 1919. A similar situation exists with reference to the collection of potash from blast furnaces. The department is now making a survey of this situation and preliminary results show that the dust from blast furnaces is higher in potash content than the cement dust and that it can probably be recovered more economically. The potash that escapes from these two sources would, if collected in marketable form, go a long way toward meeting the normal potash requirements of the country. There is ample justification, therefore, for the appropriation of sufficient funds adequately to study those phases of the problem which properly come within the scope of the department's activities.

A report describing the processes used in the extraction of potassium salts from the Alsatian potash mines is of interest. The veins of salt are composed of alternating layers of sylvanite of varying richness and of sodium chloride and schist. The deposit is in general fairly regular, except for a few faults, and the inclinations are moderate, running from 0° to 10° and 20° and rarely exceeding 30°. The method of mining consists in the use of electric or air drills, after which explosive charges are placed in the holes. From 500 to 600 grams of explosive are required to the ton of crude salt. The mine cars are drawn by horses, but it is planned to introduce electricity. When the salt arrives above ground it is crushed to a fineness of four millimetres or under, and a large part is

shipped or sold in this form to be spread directly upon the fields. There are two qualities, the sylvanite containing twelve to sixteen per cent potash, and the rich sylvanite containing twenty to twenty-two per cent of potash. Whole shiploads of sylvanite are being sent to Australia. If the salt were refined much less tonnage would be required. The following refining plants are in operation: (1) Amelie, producing 120 tons a day of 80 per cent potassium chloride; (2) Reichslands, 120 tons a day of 80 per cent potassium chloride; (3) Theodore, 90 tons a day of potassium chloride. A very small quantity of potassium chloride of 98 per cent is manufactured for use in chemical works. Roughly, 3 tons of crude salt are required for 1 ton of refined chloride. Between 250 and 300 kilos of coal are required for each ton of refined chloride. The power employed in the mines is almost exclusively electric, and there are only two shafts equipped with steam engines. The electric power is received at Mulhouse. The salts of Stassfurth are less rich in potash on the average than the Alsatian. Moreover, they contain a heavy percentage of magnesium chloride, which is very harmful to plant development and must therefore be eliminated. This elimination complicates the refinement process. Owing to its magnesium chloride content, the German potash salt cannot be used directly on the fields like the potash of Alsace.

From Germany the following has been received:

The summer season of 1921 finds the potash monopoly beset by a business stagnation so aggravated by lack of both foreign and domestic orders that some plants are being forced to close down, while the Potash Syndicate, at its June meeting announced that sales during January-May were 150,000 metric tons short of those in 1920. The chief factors generally viewed as contributing to the situation are: 1, lack of orders from Germany's best customer, the United States; 2, loss of the potash deposits of Alsace and resulting competition in foreign markets; 3, continued prohibition of export to Poland and through Poland to the east; and 4, curtailment of domestic consumption. Stocks of German potash in warehouses in the United States are considered adequate for the time being, and the American Industry developed by the war is regarded as independent, to some extent, of German production. Figures published by the Federal Statistical Bureau point out that while North America imported 248,295 metric tons of pure potash in 1912, imports in 1919 were but 70,129 metric tons.

SODIUM. The condition of chemical industries stimulated by the war, especially outside of the United States, is explained by the following item which was published in August:

The chemical trade in Japan, which flourished exceedingly during the war, has been compelled to undergo extensive readjustment since the armistice, and all companies have suffered a sharp decline in prosperity. As an illustration of this, the soda industry, which increased more than fourfold during the war, may be mentioned. Before the war as much as 80 per cent of the domestic consumption was supplied with overseas goods, and the demand for soda ash is still almost wholly met by imports, but the local production of caustic soda has been increasing yearly since the Russo-Japanese War. The output of 5,000,000 pounds in 1906 increased to

© U. & U.

MME. CURIE

Discoverer of Radium who visited the United States in 1921.

9,500,000 pounds in 1913; on the other hand, imports increased from 19,400,000 pounds to 23,000,000 pounds in the same period. The position of the industry now is that there is an excess of supplies, cost of production is high while foreign goods come in at prices that prevent either the profitable sale of stocks or continuance of manufacture. The situation is such, therefore, that as European and American industrial circles approach their prewar conditions quotations on caustic soda show signs of returning to prewar figures, so that the Japanese trade must come to an end.

NITROGEN. As has already been indicated, the World War emphasized the fact that no effort should be spared to establish national independence in the production of fertilizer materials. This is especially true in the case of nitrogen, which is not only a valuable fertilizer ingredient, but also an essential element in the manufacture of munitions. Of all the nations involved in the war Germany alone had a sufficient nitrate supply within her borders, but England, France, and Italy are now rapidly perfecting plans to make themselves equally secure in this respect. A recent report issued by the department of Scientific and Industrial Research in London shows that there are 50 plants in the world producing nitrogen with a total capacity of 671,300 metric tons. Of these 12 use the arc process, 35 cyanamide process, and 3 the synthetic ammonia process, but of these the United States has only one plant producing fixed nitrogen in each of these classes, with outputs as follows: arc process 300; cyanamide process, 40,000; and synthetic ammonia process, 8000 metric tons as compared with 4000, 120,000, and 300,000 metric tons by the same processes for Germany. The Secretary of Agriculture in his annual report says that increased interest has been manifested in the United States also in the study of methods of fixing atmospheric nitrogen, and the department, through the Bureau of Soils, has actively coöperated with the War Department in this important field. The production of ammonium sulphate from by-product coke ovens and gas plants has greatly increased, but not sufficiently to meet the demand for fixed nitrogen.

FUEL. Concerning peat, especially that obtained in Ireland, a full account from preliminary reports was given in the YEAR BOOK for 1920. (See page 134.) In April a formal report issued under the auspices of the British Department of Scientific and Industrial Research was published and from it the following information concerning by-products is obtained:

Account must be taken of the value of the ammonium sulphate obtained as a by-product, and it will then be seen that when the fuel is used in this way peat for power purposes is in a much stronger position to compete with coal than would appear from thermal considerations alone. Since 1 per cent of nitrogen equals 22.4 pounds of nitrogen a ton of anhydrous peat equals 16.3 pounds of nitrogen, a ton of air-dried peat (25 per cent water) and also 1 pound of nitrogen yields theoretically 4.714 pounds of ammonium sulphate, it follows that 1 ton of air-dried peat (25 per cent water) containing 1 per cent nitrogen on anhydrous value would give theoretically 79.2 pounds of ammonium sulphate. If the recovery of the maximum amount of ammonium sulphate to the ton of

peat is the aim rather than the production of the maximum amount of power, an efficiency of 70 per cent is said to be regularly attained in practice. From the conclusions arrived at by the Fuel Research Board it is estimated that from the one peat area to be exploited in Ireland 100,000 tons of air-dried peat can be obtained each year, and can be sold at 5s. to 6s. a ton at a factory not more than three miles from the bog site. The board recommends the establishment of electric power stations at the bogs and the ultimate reclamation of the peat-denuded area.

Encouraging reports continue to be received showing the satisfactory results obtained in the use of peat as a fuel on Swedish railways, and in evidence of that fact a recent report from the Railway Board of Sweden says that it has taken over the specially constructed plant at Hästlagen bog near Vislanda, with a capacity of 30,000 tons a year and which cost 975,000 crowns. An entirely new method of treating peat on a large scale has been adopted. All the machinery in use, invented and constructed by the engineer in charge, appears to be so well adapted for the purpose that the conversion of peat into a cheap and effective fuel requires only a small working force. The peat is dried in the open air as far as possible. Only the hardest and driest lumps are used for ordinary fuel, the remainder being converted into powder or briquets. The plant was originally intended for the manufacture of peat powder only, but it was found that briquets were so well adapted for fuel that both are now being made. The discovery has also been made that powdered peat becomes a dangerous explosive when subjected to high temperature.

MOTOR FUEL. Search for an inexpensive motor fuel continues in Great Britain and in an official report issued in January, 1921, it was said of gasoline that supplies are being outstripped by the demand; that control is concentrated in the hands of two worldwide combines; and, further, that there is urgent necessity for action to meet the present crisis. The combinations mentioned are alleged to own the bulk of the distributive machinery, so that nothing less than governmental action can affect the situation. Concerning other fuels or sources of power to be substituted, the report says:

Benzol.—In view of the recent abandonment of the gas standard, there should be a statutory obligation on all gas companies, above a certain size, completely to extract the benzol from their gases. **Shale oil.**—The development of existing shale-oil fields should be encouraged by the Government. **Power alcohol.**—It is not suggested that it will be commercially possible to manufacture power alcohol in Great Britain. It can, however, and should be made on a very large scale in the tropical and subtropical parts of the Empire. **Electricity.**—This form of power offers some advantages for town use, but cannot be counted on as an immediate factor in materially reducing the demand for gasoline. **Gas.**—There are types of portable "gas producers" for vehicles which have already passed beyond the experimental stage. Their use should be extended, more particularly for transport lorries, agricultural machinery, and omnibuses. This form of power would appear to be immediately available and opens up the most hopeful avenue of speedy relief. **Steam vehicles.**—There are

several efficient types of steam-propelled vehicles burning coke with a small admixture of coal. These are capable of being usefully employed for long-distance journeys and their extended use is to be desired. When considering alternative fuels, such as benzol and power alcohol, it must be realized that any such substitution will necessarily fail to reduce the price of liquid fuels, unless it includes transport and distribution under some effective form of government control.

With regard to industrial alcohol, a report presented at the meeting of the British Association said with regard to the enormous quantities of waste cellulose material which are produced annually all over the world, certain difficulties have to be overcome. It has to be borne in mind that these sources of alcohol are generally found in inaccessible regions and it was intimated that the initial difficulty of transport has not hitherto received sufficient consideration. Work is proceeding in other directions. In England attempts are being made to utilize the cellulose present in artichoke stalks. In France, experiments are in progress in connection with a tuberous plant which grows in the Andes at an altitude of 6000 feet and has a sugar content comparing favorably with mangolds. The possibility of dealing with cellulose on lines parallel to the Borland process is also being considered.

A series of experiments begun in 1914, but interrupted by the war, have been resumed in Brussels, Belgium, on the use of palm oil in internal combustion motors. The question of motor fuel in the Belgian Kongo is a serious one, since a ton of crude oil delivered at Kainhasa has an estimated price of 2000 francs, as against 1050 francs in Brussels. Palm oil, on the other hand, costs on the native market an average of 25 centimes a kilo, but varies in price between 8 and 40 centimes. The calorific power of palm oil is from 20 to 25 per cent less than that of crude oil, so that a relatively larger consumption of palm oil must be reckoned with, while the comparatively high temperature at which palm oil fuses (37°C) indicates the possibility of rapidly clogging the motor. According to engineers closely connected with the experiments, without constructing a special palm-oil motor, it was necessary to find a machine in which complete combustion is assured by a complete vaporization of the fuel, which should be introduced in a quantity strictly proportionate to the load. It was further essential that the gaseous mixture should be constant, and capable of regulation by a supply of water, varying according to the load and the amount of oil being fed in. Thorough clearing of the exhaust gases was also a requisite. The Belgian colonial company found a two-cycle semi-Diesel motor of Swedish manufacture, developing 10 horsepower at 500 revolutions a minute, that satisfied these conditions, and motors of larger and smaller sizes of the same character have been run on palm oil with good results without special changes for the use of the new fuel. According to analyses by Belgian chemists, palm oil is a mixture of glycerin palmitate and oleate, with some variable quantities of palmitic and oleic acid. It contains about 95 per cent of fatty acids and appears as a pasty substance of yellowish or salmon color. Its calorific power is estimated at 9228 calories and it is inflammable at 210°C . It thus possesses the ad-

vantage of being widely grown and easily obtainable, of large calorific power in small volume, of safety in handling, and of having no damaging effects on machinery in which it is used.

From Brazil comes the information that the current high price of gasoline has led very largely to the consideration of replacing it by alcohol, which is readily obtained as a by-product on the various plantations. It is reported that in Pernambuco there are approximately 80 modern cane-sugar factories, which have about 800 miles of railway, of from .75 to 1 metre gauge, operated by wood-burning locomotives. The fuel problem is becoming a serious one and as a result the sugar-mill operators are turning their attention to the matter of reducing wood consumption and finding substitutes. Consequently great interest is being shown in the substitution of alcohol, which is produced in large quantities on the sugar plantations from the molasses finals. Pernambuco has recently adopted the use of alcohol to which 5 per cent gasoline has been added as an automobile fuel. The manufacturers are interested in using their own inexpensive product for their railways. The current price of alcohol is about \$0.22 a gallon, but the cost to the producer is much less. Some of the planters who have been using the alcohol made on their plantations for automobile fuel have found that pure alcohol of from 41 to 42 degrees satisfactorily answers the requirements of automobile motors, but that it is advisable to make a slight alteration in the carburetor. Alcohol destroys the varnish on cork floaters, and it has been found necessary to substitute metal ones. Users of alcohol fuel have reported that they note no diminution in the power of the motor or its hill-climbing capacity, and that the amount of alcohol consumed is practically the same as the amount of gasoline.

A strong movement is taking place in Cuba to replace gasoline with alcohol as the motive power for self-propelled vehicles. This has assumed such proportions that the drivers of alcohol-propelled light automobiles for hire have petitioned the authorities in Havana to lower the standard rate, as they find that they can reduce existing charges one-third and still make a profit. The alcohol is produced from the waste of sugar and is a Cuban product. While the average cost of gasoline at present in Havana is 50 cents a gallon, that of alcohol varies between 30 and 35 cents.

In South Africa Natalite and Acetol alcohol mixtures continue to be used. The manufacture of another alcohol mixture, "Penrol," will be begun shortly. Alcohol will be derived from maize or mealies (corn), which is one of the largest crops in the country. It is intended to put up a plant with a yearly capacity of 1,000,000 gallons. Among the drawbacks to the development of these alcohol fuels is that the price of alcohol in Europe is so high that it is more profitable to sell the product there than to denature it for motor spirit for sale in South Africa.

Prof. G. Schroeter of Berlin, Germany, announces his discovery of a process to transform naphthalin into tetralin for use as a fuel for automobiles.

DYESTUFFS. Only one item of interest can be presented under this heading. There has developed during the year a widespread complaint against the lack of fastness of dyes in piece goods. A committee of experts was named in September

to carry on an investigation designed to fix responsibility for the complaints. Goods valued at hundreds of thousands of dollars have been turned back because the colors lacked fastness. Complaints have come from all parts of the United States. Statements have been issued defending the American industry, it being contended that the dyes made here were second to no foreign dyes, and that the fault was with the dyers. It was said that the "manufacturer receives merchandise returned by the retailer who complains about the non-fastness of the colors. The dyer says that there is no such thing as fastness of color. On the other hand, the piece goods man says he will give you fast colors if you pay him 15 cents a yard more." The question is how to reconcile the two statements. The general opinion seems to be that American dyes are now as good as the dyes made anywhere, but the cause of the widespread complaint cannot be established. It has been hinted that German propaganda is at work striving to create dissatisfaction with the goods dyed with American dyes. Dr. Charles H. Herty, known as an authority on dyes, quoted from an address delivered in 1912 in New York City by an eminent German chemist in which he said there is no fastness in dyes. Dr. Herty quoted this statement to show that two years before the war the Germans were confronted with the same problem in colors that now disturbs American manufacturers.

RUBBER. The invention of an artificial rubber was reported early in the year from Barcelona, Spain. The inventor was said to be Washington Rossi, an Italian chemist in the Barcelona laboratories. Details of the invention were to be kept secret until the product was subjected to a test in public. The new product was described as possessing all the qualities of natural rubber and could be produced at one-twentieth of the cost of that substance.

UTILIZATION OF RICE WASTE. Hans Wiedemann, of Berlin, Germany, is credited with an invention by which it is expected to derive certain useful products from the hulls of rice. As a result of a simple chemical reaction, involving the application of high temperature after washing and boiling the raw material, there can be obtained cellulose for the manufacture of paper, linoleum, and other products; coke filter material, such as is used in sugar manufacturing; and paraffin, phenolin, carbon dioxide, carbon monoxide, hydrogen, and acetic acid in sufficient quantities to be of commercial use. The recovery of these materials calls for a relatively cheap installation. By steam application it is said that 1000 kilos of waste rice hulls can be made to produce 750 kilos of cellulose. By dry distillation 1000 kilos of rice waste can be made to produce about 400 kilos of coke filter material, and subsequently other products mentioned above. When it is considered that almost one-third, by weight, of a rice crop consists of rice hulls or waste, it will be seen that these processes are capable of attaining a commercial value.

NEW EXPLOSIVE. The Atlas Powder Company of Wilmington, Del., announce a new explosive that cannot be affected by any temperature, according to extensive laboratory and field tests. Heat causes no deterioration. It has a high degree of safety because its qualities of stability prevent it from exploding prematurely, no ordinary blow or shake-up causing it to explode. The new explosive also eliminates the throbbing headaches

induced in the workmen handling ordinary dynamite.

LEATHER FROM CORDITE. It is reported that cordite, considered the most powerful and expensive explosive known, is now being made into artificial leather by a new process developed at the Ford company's engineering laboratories in Detroit, Mich. This process halves the cost of the leather, according to the engineers. The new artificial leather process, using cordite, has been developed after more than a year of experimentation. More than 25,000 square yards of artificial leather for Ford cars is being made daily at the Highland Park plant. It is said that the new process will release more than 1,000,000 gallons of benzol a year for other purposes.

SUBSTITUTE FOR BONE CHAR. Discovery of a satisfactory substitute for bone black, or bone char, the standard material used in decolorizing and refining sugar and various liquids, syrups, and oils, was announced in April by the Atlas Powder Company at Wilmington, Del. After extensive commercial tests with sugar, maltose, and oil the substitute has been proved from twenty-five to thirty times as efficient as bone char. It will even permit the making of white granulated sugar directly at the raw sugar mill, it is said. The substitute is manufactured from cheap carbonaceous raw material such as lignite, which is uniformly carbonized under conditions preventing the pores of the raw material being clogged by deposit of secondary carbon.

SUBSTITUTE FOR CORK. A chemical works at Bruenn-Koenigsfeld has found that turf treated by a special patented process furnishes a material for insulation and building purposes that is said to be, in most respects, not inferior, and in some superior, to cork. The product is reported to be equally light, firm, and sound proof, to possess great insulating properties, and to be damp proof.

SYNTHETIC CAMPHOR. Prof. P. Giraudet of Loyola University, New Orleans, La., announced in September the discovery of a process for the manufacture of synthetic camphor from turpentine. Application has been filed for a patent which will relieve the present Japanese monopoly, it is claimed.

ARTIFICIAL PEARLS. In a report to the French Academy of Sciences M. Bontan shows that the process of formation is the same in the Japanese cultivated pearls as in those found in oysters, except that in the Japanese pearl the core is larger. The method followed by the Japanese is as follows: The process involves the most delicate and skillful manipulation, and it should be carried out only by trained workers. The shell is removed from one pearl oyster and a bead of nacre or other suitable nucleus is laid on the outer shell-secreting epidermis. This epidermis, which is composed of a single layer of cells of microscopic size, is then dissected off the oyster and made to envelop the nucleus as a sac, the neck of which is ligatured. The sac is then transplanted to an oyster and imbedded in its sub-epidermal tissues, the ligature is removed, certain astringents or other reagents are applied to the wound, and the second oyster with its grafted pearl sac, containing the mother-of-pearl bead, is returned to the sea, where it has to remain for several years before a coating of pearl of sufficient thickness is secreted around the introduced bead. In other words the Japanese pearls cannot be held to be artificial but are essentially identical with the

normal pearl. Experts in the United States contend, however, that the cultivated pearl lacks the lustre and pinkish color of the high-class oyster pearl. Under any circumstances an exact diagnosis can be made by an x-ray examination. It is claimed that in the United States the Japanese pearl competes only with imitation pearls and is not handled by the better dealers.

LITERATURE. In the series of volumes forming the Industrial Chemistry Series, there was published in 1921 *Organic Medicinal Chemicals*, by M. Barrowcliff and F. H. Carr. Also a new, revised, and enlarged edition of Comey's *A Dictionary of Chemical Solubilities*, which for 25 years has been the research guide on solubility of inorganic substances. The world of industrial chemists greets with pleasure the first volume of a new, and also revised and enlarged edition of *A Dictionary of Applied Chemistry*, by Sir Edward Thorpe. The new volume runs from "A to Calcium" and the work will be completed in from six to seven volumes.

CHESAPEAKE-DELAWARE CANAL. See CANALS.

CHESS. The feature chess event of 1921 was the victory of Jose R. Capablanca of Cuba, over Dr. Emanuel Lasker of Berlin, who had held the world's championship for twenty-seven years. The match took place at Havana, Capablanca winning four games and drawing ten out of the fourteen played. The eighth American Chess Congress was held at Atlantic City in July, David Janowski of New York City capturing first place with N. T. Whitaker of Washington, second. Jacob Bernstein retained the New York state title in a tournament at Syracuse after a close struggle with H. T. Thomas of Rochester, Edward Lasker won the western championship. The Metropolitan Chess League title went to the I. L. Rice Progressive Club, with the Brooklyn C. C. second. In an international masters' tournament at Budapest, A. Aljeclin, Russia, was victorious over E. Gruenfeld, Austria.

CHICAGO, UNIVERSITY OF. An institution of the higher learning at Chicago, Ill.; founded in 1891, largely through gifts of John D. Rockefeller, who has continued to aid the university. The enrollment for the fall of 1921 was 6222, of whom 3331 were men and 2891 women. Of this total 1364 were in the university college, 859 in the graduate schools of art, literature, and science, 179 in the divinity school, 246 in medicine, 317 in the law school, 227 in the college of education and 651 in the school of commerce and administration. In the summer quarter of 1921 the enrollment was 6455 of whom 3011 were men and 3044 were women. The faculty numbered 355. The productive funds amounted to \$29,503,076 and the total income for 1920-21 \$3,232,643. President, Harry Pratt Judson, LL.D.

CHILD LABOR. UNITED STATES. In 1920, according to figures made public by the United States Department of Labor, through its Children's Bureau, 76,194 children took out permits to go to work in twelve representative American cities.

In 1913 the number of children receiving permits in the same cities was only 67,169, indicating an increase of over 13 per cent between 1913 and 1920, while the increase in population of these cities was estimated to be 14 per cent. These cities are Baltimore, Bridgeport, Buffalo, Manchester, Minneapolis, New Haven, New Orleans, New York, Rochester, St. Louis, Toledo, and Waterbury. More children received permits in 1920 than in any other year since 1913, except 1918 when war production was at its height. The year 1918 was the peak year in the steady rise of child employment which began in 1915 as soon as the effect of foreign orders for war goods made itself felt in this country. Of 23 cities for which figures were available for both years, all except one showed an increase in 1916 over 1915, ranging from 14 per cent in the case of Baltimore to 167 per cent in the case of Toledo. In 1917, 19, and in 1918, 24 out of 23 cities furnishing information, reported increases over the preceding year in the number of children taking out employment certificates. In 1919 a decrease occurred in 25 out of 29 cities. In 1920, however, increases were again recorded in 18 out of 29 cities. The increase in 1920, said to be due to the increased cost of living and to labor shortage, was confined to the first half or three-quarters of the year. During the last half of the year, only 9 cities out of the 26 for which figures could be secured showed an increase in the number of children receiving work permits. In some cities better enforcement of the law requiring employment certificates accounts for increases in the number of permits issued, and while, in the twelve cities for which figures were available for the period 1913-20, the number of children taking out certificates increased in proportion to the increase in population, it could not be stated positively, any more than it could be denied, that the number of children actually going to work in 1920 increased in like proportion over the number going to work in 1913.

STANDARDS IN THE SEVERAL STATES. The legal standards adopted by the various States to protect children from the hazards of too early employment are summarized by the Children's Bureau as follows: In all except 4 States the minimum age for work at least in factories and often in many other employments is placed as high as 14 years, and 7 States have an age minimum of 15 or 16 years. Exemptions exist in most of these States, but they apply in many cases to children employed outside school hours or during vacations. Twenty-nine States have recognized the 8-hour day standard for children under 16 by prohibiting them from working longer hours in certain occupations, or by extending this prohibition to all gainful employments, usually, however, exempting housework and work on farms. Of the other States, nearly half limit the working hours in the regulated occupations to 54 or less a week. The 11-hour day still exists in 2 States, with a weekly maximum of 60 hours. Forty-one States have some prohibition of night work applying to children under 16, and of these 17 prohibit such work without exemptions, except in some cases for agricultural pursuits and domestic service. Eighteen States, including some of the principal industrial States, require a child under 16 to have a physician's certificate of physical fitness before he can obtain an employment certificate, and 10 others permit the certificate-

issuing officer to impose this requirement in his discretion. For work in mines the general minimum age standard is 16, but 10 States still permit the employment of boys 14 years of age, and 6 have no minimum age for such work.

Special studies of the Texas cotton belt brought out the fact that young children were engaged in hoeing and chopping the cotton, and even in heavier kinds of field work, such as plowing, harrowing, and cultivating. Practically every child ten years of age or over in the sections studied was employed in the fields at some time during the year; ten hours or more was the average working day, during the season, reported for more than half the children, and many reported an average working day of 12 hours or even longer. Although most of the children worked only a few months, much of the work falls at a time when school is in session. Teachers reported that a half or third of the children who should have been in school by September did not register until November or later. Illiteracy on the part of father or mother or both was reported from 7 to 9 per cent of the white families and about a third of the colored families visited. Many of the coming generation will be likewise handicapped if field work continues to keep them out of school.

STATE LEGISLATION. Wisconsin passed laws making it unlawful to advertise for the labor of any child during school hours in an employment for which a labor permit is required, without specifically stating the minimum age of the child, which age must be above that requiring labor permits. The violation of the law carried a penalty of from \$10 to \$100 per day. A law also provided that no permit should be issued unless a child had a certificate from the superintendent of schools or principal of the school last attended showing that the child had successfully passed the eighth grade or had attended school for nine years above kindergarten grade. Missouri passed a law prohibiting the employment of children in certain occupations, providing for the issue of labor permits in certain cases, and prescribing the powers and duties of the board of education and State industrial inspectors. New Mexico passed an act regulating the employment and hours of labor of children and imposing a penalty for violation. In Texas the act of 1920 pertaining to the employment of women and minors and establishing an industrial welfare commission in charge of such employment was repealed on account of defects in the law that rendered its execution impossible. Measures amending or amplifying existing legislation respecting child labor and child welfare were passed in California, Connecticut, Massachusetts, and New York. Indiana passed an act concerning school attendance and the employment of minors, fixing penalties for the violation and repealing conflicting laws. In Minnesota a measure was passed regulating certain occupations of children in streets and public places. In Ohio an act was passed relating to the duties of boards of education, compulsory education, the employment of minors, the establishment of part time schools, the school census, and penalties for violation, and amending existing laws on these subjects. In Hawaii an act was passed regulating the hours of labor of children.

CHILD WELFARE IN BELGIUM. Through the second International Conference on the Protection of Childhood, held at Brussels from July 18

to July 21, the attention of the world was called to the programme Belgium is working out for the conservation of childhood. Even during the years of occupation, when the government had left the Belgian soil and the only central co-ordinating agency was the voluntary "Comité National," public-health activities were started on a hitherto unknown scale, and for the first two years there was an actual decline in infant mortality. The Children's Welfare League, which had begun to function to a limited extent before the war, developed in the midst of the most difficult circumstances until even the smallest village was reached. In spite of these efforts, the average child was, at the time of the armistice, one full year backward in normal development; the weight of the average Brussels school boy was three pounds below normal, and of the average school girl, seven pounds. The first step in the medical reconstruction of industry was the establishment of an independent Labor Medical Service, which includes in its functions the protection of expectant and nursing working women and the care of the health of working children. The service immediately formulated a constructive programme which enlisted the coöperation of all agencies concerned in the promotion of public health, including the health of working mothers and their children. In the United States, 18 States provide for the physical examination of every child entering industry, but no State has provided for examinations of working children at regular intervals. Belgium has adopted the advanced programme of a medical examination for every juvenile not later than a month after he has entered an industrial occupation, to be repeated once a year until the child reaches 18, and oftener in case of disease.

Belgium has realized that health protection in the community must go hand in hand with health protection in industry. This involves general public health work; child welfare; housing; the restriction of alcohol consumption; and education and recreation, both for adults and children. A national children's board has been established, which is maintained by public and private funds, and which supervises and supports child welfare organizations meeting certain conditions. The child welfare programme includes the periodical free examination of children under three years of age brought by their mothers for examination; the establishment of free medical dispensaries for expectant mothers; the diffusion of knowledge relating to infant health and maternal nursing; and the supervision of boarded-out children under seven years of age. The cost of child welfare work will be borne one-half by the state, one-fourth by the province, and one-fourth by the municipality. Provincial and municipal boards are appointed by the national boards, and advisory committees are provided for.

CHILD WELFARE. See CHILD LABOR.

CHILDREN'S COURTS. See JUVENILE COURTS.

CHILE. A South American republic on the western coast of the continent extending along the Pacific to its southern extremity from Peru. Capital, Santiago.

AREA AND POPULATION. The length from the Bolivian border to the southern limit of South America is 2628 miles and the average width from the crest of the Andes to the ocean is 177

miles. Area, 289,829 square miles. In the census taken in Chile on Dec. 15, 1920, the population was given as 3,754,723—an increase of 505,444 over the census of 1907. This denoted an annual increase of 1.20 per cent during a lapse of 13 years, which was consistent with the uniform and constant growth which the Republic has experienced during the past 50 years. Statistics showed that in the period from 1875 to 1885 an annual gain in population was made of 1.18 per cent and from 1885 to 1907 a gain of 1.21 per cent. Classified as urban and rural the population was shown by the census to be 46.60 per cent urban—that is, there are 1,749,562 persons living in cities and towns of over 1000 inhabitants and 2,005,161 persons in rural districts. This proportion of urban population showed a marked increase from census to census, and reflected the tendency toward concentration in the cities. The percentage of urban population as recorded in 1885 was 34.30 per cent; in 1895, 38.60 per cent; in 1907, 43.30 per cent; and in 1920 as noted above, 46.60 per cent. In the following table the urban and rural population is given by Provinces:

Provinces	Urban population			Rural population		
	Males	Females	Total	Males	Females	Total
Tacna.....	14,478	10,591	25,069	8,279	5,564	13,843
Tarapaca.....	23,455	22,377	45,832	33,483	21,238	54,721

Total.....	814,917	934,645	1,749,562	1,051,834	953,327	2,005,161

The total number of foreigners included in the census of 1920 was 115,763 as against 134,524 in 1907, a decrease of 18,761. The greatest decline during the period 1907-20 was among the Peruvians, 15,088 of them having emigrated; they were followed by Bolivians, numbering 6011. The movement of population in 1919 was as follows: Births, 144,980; illegitimate births, 55,706; deaths, 137,538; marriages, 21,471. The populations of the principal cities as estimated in 1919 were as follows: Santiago, 424,993; Valparaiso, 218,465; Concepcion, 74,808; Antofagasta, 69,175; Iquique, 47,677.

EDUCATION. Education is free and was made compulsory, August 26, 1920. In 1919 there were: 3061 public primary schools with 320,898 pupils and 7038 teachers; 293 private primary schools with 1012 teachers and 41,143 pupils; 90 public secondary schools with 32,598 pupils; 136 private secondary schools with 22,295 pupils; 15 public rural schools with 1955 pupils and 409 teachers; 11 commercial schools with 179 teachers and 2974 pupils. Besides these there

were various special schools including agricultural and professional schools and schools of mines. For higher education there are: The state university, known as the University of Chile; the Catholic University, the National Institute of Santiago; and the lyceums and colleges in the provinces. The government made special efforts in 1921 to promote agricultural education. Among its measures to this end was the recommendation that school children should immediately begin agricultural or stock raising work at their own homes or in the vacant lots of the neighborhood. The number of children enrolled in the schools was placed by the government at about 500,000. Teachers were called upon to promote the teaching of gardening and to obtain the coöperation of the children.

PRODUCTION. The agricultural zone is in the centre of the country and contains 42,183,663 acres, the number of farms in 1919 being 96,794. The leading crops in respect to acreage in 1918-19 were, in the order of their importance: Wheat, barley, beans, corn, oats, potatoes, and peas. By far the most important of these is

wheat, the production in 1918-19 being 11,459,500 cwt; in 1919-20 the wheat production was 552,652 tons, and the next crop in order of production was barley with 88,825 tons. The wine production in 1918-19 was 36,573,252 gallons. The livestock, Jan. 1, 1920, was: Cattle, 2,163,141; sheep, 4,500,196; goats, 459,606; horses, 319,718; pigs, 292,431. The grain crop for 1921 was estimated as follows: Wheat, 6,257,062 quintals (Chilean quintal equals 101.43 pounds); barley, 1,172,388; oats, 394,114. Projects were being carried out for important works of irrigation. By far the most important mineral production commercially is sodium of nitrate which has been the mainstay of Chile's prosperity, being the chief export and the chief source of government revenue. It is found chiefly in the desert of Atacama, extending a distance of about five hundred miles and lying at an altitude from two thousand to six thousand feet above sea level. (See below under *History*.) The production in 1920 was 2,606,571 metric tons, and the exports in that year amounted to 2,870,809. The

exports in 1921, were only 1,100,000 metric tons. New nitrate resources were reported toward the close of 1921, a region having been found in the province of Tarapaca which was said to contain rich nitrate beds. Chile has made more progress in manufacturing than any other country on the western coast of South America. Santiago is the chief industrial centre. A feature that drew much attention in 1920 and 1921 was the development of German interests in the south particularly at Concepcion, Penco, and Valdivia where woolen mills, flour mills, and railway shops were established and appeared to be rapidly developing.

COMMERCE. Total trade in 1920 was 1,246,600,307 gold pesos including exports, 791,521,373, and imports, 455,078,934—an increase in exports over 1919 of 474,517,318 and of imports of 53,754,939. Reduced to United States values at the rate of one peso equal to 36.5 cents, the trade in 1920 and 1921 was as follows:

	Imports	Exports	Total
1920.....	\$166,103,811	\$288,805,301	\$454,909,112
1919.....	146,483,331	115,706,480	262,189,811
Increase....	19,620,480	173,098,821	192,719,301

The following tables give imports and exports by leading articles in 1919 and 1920:

	1919 Pesos, gold	1920 Pesos, gold	Gain or loss Pesos, gold
Coal and mineral fuels.....	14,550,021	25,519,121	+ 10,969,100
Live animals.....	4,566,585	11,412,305	+ 6,845,720
Cereals.....	5,116,383	9,109,716	+ 3,993,333
Coffee, tea, etc.....	12,825,098	17,423,788	+ 4,598,690
Sugar.....	25,055,034	28,687,817	+ 3,632,783
Wines and liquors.....	3,676,565	5,087,464	+ 1,410,899
Wearing apparel.....	15,708,794	17,773,746	+ 2,064,952
Piece goods.....	64,696,513	61,162,853	- 3,533,660
Bags and bagging.....	23,526,987	19,087,100	- 4,439,887
Yarns and thread.....	10,284,716	10,207,977	- 76,739
Drugs and medicines.....	8,186,664	8,527,191	+ 340,527
Industrial oils.....	15,884,696	20,558,539	+ 4,713,843
Paints, dyes, and colors.....	4,824,117	6,484,928	+ 1,660,811
Explosives.....	2,923,276	4,509,152	+ 1,585,876

Automobiles and carriages.....	9,782,239	10,136,938	+ 354,699
Pottery and glassware.....	7,042,429	9,037,966	+ 1,995,537
Leather manufactures.....	3,903,598	2,933,230	- 970,368
Paper and cardboard.....	8,363,851	16,030,617	+ 7,666,766
Metals, copper, etc.....	50,639,302	100,601,750	+ 49,962,448
Nonmetals, borate of lime, etc.....	6,224,292	19,196,736	+ 12,972,444
Nitrate.....	127,103,954	535,602,880	+ 408,498,926
Wool.....	21,924,754	31,030,219	+ 9,105,465
Hides, horns, etc.....	13,383,302	13,543,855	+ 160,553
Plants, horns, etc.....	4,001,819	2,093,575	- 1,908,244
Cereals.....	18,622,899	15,159,495	- 3,463,404
Legumes.....	10,663,465	6,606,256	- 4,057,209
Fruits.....	4,275,266	3,872,310	- 402,956
Forage.....	2,319,041	3,395,531	+ 1,076,490
Flour.....	7,326,525	5,325,904	- 2,000,621
Preserved foods.....	6,335,993	4,445,546	- 1,890,447

The leading countries of import in 1920 were as follows: United States, 140,270,665 pesos; Great Britain, 116,166,298 pesos; Peru, 33,968,124 pesos; France, 28,272,712 pesos; India, 24,148,285 pesos; Germany, 21,074,388 pesos, and Argentina, 17,053,117 pesos. The leading countries of export in 1920 were as follows: United States, 345,684,712 pesos; Great Britain, 164,424,175; France, 31,712,886; the Netherlands, 20,848,423;

Argentina, 17,454,000; Spain, 16,938,294; Japan, 14,973,701.

FINANCE. The Chilean budget for 1922 as sent to the Congress by the executive amounted to 320,924,350 paper pesos and 65,458,054 gold pesos of 18d. From these amounts there should be deducted 1,684,650 paper pesos and 14,033,326 gold pesos, which the Departments of Finance and Industry and Public Works expected to receive from special sources. The combined revenue for the year 1922 was estimated at 182,531,115 paper pesos and 57,507,000 gold pesos, which would leave a deficit of 121,502,900 pesos. The foreign debt, Jan. 1, 1921, was 29,675,080 pesos, and the internal debt, 59,794,092.

RAILWAYS. The total railway mileage in 1918 was 5607, including 2445 of private owned line, the rest being owned by the Government. The post offices in 1919 numbered 953. In 1921 the Chilean Government sanctioned the consolidation of the Chilean and Argentine sections of the Transandine Railway, from Los Andes on the western slope of the Cordilleras, by way of Caracoles on the Chilean frontier, to Mendoza on the eastern or Argentine side, under a single management.

Financial as well as operating and political conditions also were involved and the new law

provided for replacing Chilean Transandine Railway bonds with Chilean Government bonds to the value of some \$4,000,000, with guaranteed interest at the rate of 8 per cent. As a consequence the state will receive 70 per cent of the stock of the company and will take an active part in the administration of the road. The Chilean Transandine proposed to issue new bonds to the extent of about \$2,500,000, to be used in making the

necessary improvements in connection with the consolidation.

The financial arrangements made by the two governments will permit of many needed improvements. Tunnels were to be lengthened and more adequate protection against avalanches constructed; new and modern rolling stock and equipment was to be purchased, the railway shops were to be modernized, and electrification of the line was to be undertaken. Furthermore new and liberal tariff laws and regulations will encourage the free interchange of traffic between the two nations, hitherto hampered by protective tariffs, and will permit the natural flow of international trade between the territories served by the lines. All material used for construction, as well as rolling stock and equipment imported into Chile, was to be exempt from custom duties. Late in the year it was announced that an American company had obtained a contract from the Chilean Government to electrify 233 track miles of the State lines between Santiago and Valparaiso and Llay Llay and Los Andes. This project which had been under consideration for over 10 years involved an expenditure of \$6,500,000, and called for completion of the work within two years.

The Santiago-Valparaiso division was the most important in the State railway system, and it was estimated that electrification would result in an annual saving of more than 100,000 tons of coal, and would probably permit the handling of a greater volume of traffic over the line connecting the capital and the country's chief port.

It was proposed to supply electrical energy from five sub-stations between Santiago and Valparaiso, having a total capacity of about 60,000 horsepower. The 3000-volt direct current system will be employed with overhead trolley wires to furnish power to the locomotives, of which there will be 59, ranging from 39 to 112 tons each. A concession was granted by ministerial decree on June 30 to the Nitrate Railways, a British company serving the nitrate oficinas in northern Chile, for 50 more years of operation together with a 35 per cent increase in rates. This concession later was suspended pending the determination of its legality. At the close of the year the Antofagasta-Bolivia railway was laying a double track in certain of its sections, and in other sections a third rail in order to admit of wide gauge traffic.

DEFENSE. There is compulsory military service from the eighteenth to the forty-fifth year, inclusive. The total strength of the Chilean army in 1920 was 1996 officers and 21,180 men. The principal vessels of the Chilean fleet were: The *Almirante Latorre*, a dreadnought with a displacement of 28,000 tons; the *Capitan Prat*, a pre-dreadnought; and the two armoured cruisers, the *Esmeralda* and the *O'Higgins*. See NAVAL PROGRESS.

GOVERNMENT. The executive power is in the president assisted by a council of state and a ministry divided into six departments; the legislative power in a congress consisting of a senate of 37 members elected by popular vote by provinces for six years, and a chamber of deputies of 118 members elected directly by departments for three years. President in 1921, Senor Don Arturo Alessandri, who assumed office, Dec. 23, 1920.

HISTORY. Congress opened, June 1. President

Alessandri in his address referred especially to the long-standing boundary dispute between Chile and Peru in respect to Tacna and Arica and proposed that a plebiscite should determine whether these districts should remain Chilean or become Peruvian. In respect to boundary questions affecting any of the nations on the west coast, he proposed a conference of representatives from Chile, Colombia, Ecuador, and Peru. Of domestic measures the following were proposed by him: The creation of the office of vice-president; separation of church and state; woman suffrage; state control of the nitrate industry; reorganization of the foreign office.

DISPUTE WITH PERU. On June 1 the question of Tacna-Arica was again raised in connection with the plebiscite, and the subject was still under debate at the close of the year. It was referred to the League of Nations and the Geneva Assembly took up its discussion in September. Bolivia whose interests were involved on account of her desire to secure a portion of the sea coast was inclined on the side of Peru. The subject was referred to a committee of neutrals. On December 20 Chile requested Peru to consent to a plebiscite. On December 26 the Chilean Government accepted Peru's proposal that the two countries should send ministers to the United States to confer with the State Department with a view to an arrangement for the settlement of the dispute between Chile and Peru. On December 30 it was learned that the Chilean Government had concluded that a further exchange of views between Chile and Peru was useless. Several notes had passed between the two governments, and the response of the Peruvian Government to Chile's last note having been unsatisfactory, the negotiations were broken off. According to the Chilean point of view responsibility for this rested on Peru. It was charged that Peru stood in the way of the only means of settling the dispute, namely, a plebiscite. Chilean authorities said the Government would not accept a revision of the treaty of Ancon, but that it was ready to arbitrate differences of opinion in respect to the conditions of the plebiscite. The Peruvian Government according to Chile was unwilling to stand by the article of the treaty which provided for the plebiscite under certain conditions, but hoped to revise the treaty itself. For thirty years Chile had been endeavoring to agree on a basis for the plebiscite with Peru. Peru was proposing to submit the dispute to arbitration. Chile was willing to submit the basis of the plebiscite to arbitration, but the Government of Peru wished the entire treaty to be submitted and the entire Pacific question to be raised. The Bolivian Government had also taken a hand in the affair on the ground that the matter to be arbitrated was the Pacific question. Bolivia hoped to secure a port on the Pacific as the result of the arbitration. Bolivia had no concern in the matter according to the Chilean point of view, since the provinces were almost exclusively occupied by Chileans and Peruvians. The Chilean Government claimed 30,000 Chileans as against only 7000 Peruvians in the disputed provinces. For the antecedents of this question, see preceding YEAR BOOKS.

ECONOMIC CONDITIONS. The nitrate and copper industries suffered as a result of lack of labor; while there were sales abroad of foreign stocks of nitrate, sales in Chile had not been

resumed. The Government policy of road-building met with a check, the funds having been exhausted and the Government declared that it had no intention of beginning any new public works. Measures of economy in the Government's finances were being carried in view of the increasing deficit and taxation and a loan were under discussion toward the close of the year. The electrification of the central section of the Chilean state railway was provided for by a contract with an American company, amounting to some seven million dollars. Reports of extensive deals in nitrates with Germany were published in 1921.

CHINA. A Far Eastern state under a republican form of government, since Feb. 12, 1912, situated in the eastern part of Asia on the Pacific ocean. Capital, Peking.

AREA AND POPULATION. China proper contains eighteen provinces. Besides this the territory also includes the so-called New Dominion of Sinkiang or Hsinchiang, Manchuria, Mongolia, and Tibet; but over Tibet and Inner Mongolia only loose authority is exercised, while Outer Mongolia was recognized as self-governing in October, 1912. See these titles and see also the *YEAR BOOK* of 1917 for a summary of changes after 1897. No later figures were available than those are given in the preceding *YEAR BOOK*. The area including all the divisions above named is estimated at 3,913,560 square miles. The estimates of total population vary from 300,000,000 to 430,000,000, the estimate commonly taken being that of the former American Minister at Peking, Mr. Rockhill, who placed the population exclusive of Tibet and Mongolia, at 325,000,000. British estimates place it at a lower figure, namely, at 320,650,000, while one of the higher estimates is that of the Chinese Maritime Customs which place it at 439,405,000 including Manchuria, which has been placed at 19,290,000. Peking has a population of more than 1,000,000 including about 2000 foreigners. The principal ports with a population of over 500,000 in 1918 are: Hankow, 1,443,950; Shanghai, 1,000,000; Canton, 900,000; Tientsin, 800,000; Hangchow, 684,137; Ninpo, 670,000; Foochow, 624,000; Changsha, 535,800; Soochow, 500,000.

SHANTUNG. The province of Shantung which early in the war was occupied by the Japanese who drove out the Germans has an area of about 55,970 square miles, with a native population of about 25,810,000. The railway system has a mileage of only 245. According to Japanese assertions, the Japanese numbered only 22,000 which would be reduced by about 4000 when the Japanese troops were withdrawn from the railway. Shantung has been ever since the opening of the Peace Conference the subject of acrimonious discussion, owing to the conflicting claims of China and Japan, and it was prominently before the public all through the year, and one of the leading questions before the Disarmament Conference at Washington. See preceding *YEAR BOOK* and article on *WAR OF THE NATIONS* in the present volume.

RELIGION AND EDUCATION. There are three forms of native religion: Confucianism, Taoism, and Buddhism, but Mohammedans are found in all the provinces, being most numerous in Kansu, Chihli, Singkiang, and Yunnan. The total number of Mohammedans has been estimated at from 5,000,000 to 10,000,000. The

majority of the people are Buddhists. No complete figures for education were available but the number of schools and scholars has been reported latterly as increasing. In 1918-19 the number of schools was placed at 134,000 with 5,500,000 pupils, these representing only the schools in which modern education is adopted. There is a university at Peking, established in 1898 by the government and reorganized in 1917.

PRODUCTION. The main interests are agricultural and the holdings are for the most part small. Methods of farming are primitive and tend to intensive rather than extensive culture. The leading crops are wheat, barley, corn, millet, and other cereals, peas and beans, rice, cotton, sugar, and silk. Fruit-growing is extensively carried on and a great variety of fruit is raised. Of late years cotton and woolen mills have increased and silk-weaving has developed. Coal abounds in most of the provinces as well as in Manchuria and the resources of China in that respect are considered the most important in the world. Iron ore is also abundant, the annual production being about 469,000 tons. The deposits at Tayeh near Hankow are classed among the richest in the world. Petroleum is worked on the Upper Yangtse and in the province of Chensi. Copper is plentiful, Yunnan being reputed among the richest copper fields in the world. There is an extensive mining of tin which is the chief mineral export. Other mineral products produced in considerable quantities are antimony, gold, silver, and lead. The annual consumption and production of coal was placed at 23,000,000 net tons in 1919 and the exports and imports each at 1,500,000. In the north, coal is exported and in the south imported. Over half of the total output comes from native mines worked by native methods and is used for domestic purposes. Nearly all of the coal used for industrial purposes is produced from a small number of mines worked by modern methods. The annual production of tobacco in China, including Manchuria, is estimated between 300,000,000 and 500,000,000 pounds, with an average yield of 1000 pounds per acre.

COMMERCE. In 1919 the foreign trade was as follows: Imports, 679,529,544 Haikwan taels; exports, 663,341,274 Haikwan taels; total, 1,342,870,818 Haikwan taels. Complete figures for 1920 were not available but the following information was supplied by the United States Bureau of Foreign and Domestic Commerce: In 1920, Chinese imports amounted to 762,250,230 Haikwan taels, as compared with 646,997,681 in 1919 and America's share in 1920 was 143,199,000 as compared with 110,237,000 in 1919. The increase was significant in view of the disturbances in internal affairs and the commercial depression throughout the world. The chief commodities among the 1920 imports were cottons and cotton manufactures. In metals the largest imports were iron and steel bars, tin plates, and iron and steel sheets and plates. Other imports of importance were kerosene, sugar, machinery, cigarettes, raw cotton, indigo, dyes, fish and fish products, paper, and tobacco. No complete figures for the trade of 1920 were available. But the following information in respect to the commerce of the treaty ports in that year was supplied by the United States Bureau of Foreign and Domestic Commerce:

The total value of foreign goods imported into Shanghai in 1920 reached 390,154,115 Haikwan taels, of which amount 383,917,526 Haikwan taels worth was imported from foreign countries and 6,236,589 Haikwan taels worth was imported from Chinese ports. About 15,234,376 Haikwan taels worth of goods were reexported to foreign countries and Hongkong, and 150,367,051 taels worth to Chinese ports (chiefly to northern and Yangtze ports), so that the net total of foreign imports were 224,552,688 Haikwan taels. The net foreign imports were over 100,000,000 Haikwan taels in advance of 1919 and over 135,000,000 more than 1917. The total exports of local origin in 1920 amounted to 232,664,201 Haikwan taels as compared with 140,119,734 Haikwan taels in 1917, 175,089,475 Haikwan taels in 1918, and 237,721,719 in 1919. The net value of the trade of the port (i. e., foreign and Chinese imports less reexports, and Chinese exports of local origin) for the past four years has been as follows: 1917, 276,411,418 Haikwan taels; 1918, 323,998,501 Haikwan taels; 1919, 410,748,767 Haikwan taels; and 1920, 511,915,033 Haikwan taels. These figures showed a remarkable return of Shanghai's trade, for during 1920 the markets were surfeited as a result of injudicious and speculative buying abroad, and Shanghai was also suffering from the world depression. There were, moreover, the disastrous fall in silver and the famine.

According to the Commissioner of Customs at Newchang the net value of the trade of that port passing through the Maritime Customs in 1920 was 46,129,768 Haikwan taels, exceeding that of the previous year by 4,788,482 Haikwan taels. The revenue collection for 1920 amounted to 729,945 Haikwan taels, a decrease of 17,582 taels compared with 1919. The net value of foreign imports was 15,635,628 Haikwan taels, a gain of 4,315,270 Haikwan taels as compared with 1919. The value of Chinese products exported abroad declined by 7,253,000 Haikwan taels, compared with the figures for 1919. Native exports coastwise, however, increased in value by about 3,000,000 Haikwan taels, owing to the brisk demand for Chinese ginseng, beans, and bean cake from the southern ports. The value of Chinese imports advanced from 11,795,479 Haikwan taels in 1919 to 16,499,596 Haikwan taels. The value of transit trade inward, which totaled 3,000,000 Haikwan taels, shows an increase of some 50 per cent over the figures for 1919, and the transit dues collected during the year advanced by about 1472 Haikwan taels.

In 1920 the net value of trade of Antung was 63,071,523 Haikwan taels. The entrances and clearances of steamers and launches aggregated 359,862 tons, and of sailing vessels, 11,692 tons, showing a grand aggregate of 371,554 tons. This was the highest tonnage yet recorded, although the actual number of vessels was the smallest since 1917. The gross value of imports of foreign goods during 1920 was 35,111,440 Haikwan taels compared with 32,780,273 in 1919. Of these imports 26,255,905 were destined for the interior, leaving 8,855,535 Haikwan taels to represent local consumption. The value of foreign goods reexported amounted to 945,506 Haikwan taels, making the net importation 34,165,934 Haikwan taels. All except 20,477 of the reexports were to foreign countries. Native products exported amounted to 25,118,566 Haikwan taels, a reduction of 317,870

Haikwan taels from the 1919 figures. The value of shipments from the interior passing through Antung by rail for Chosen and Japan was 5,644,205 Haikwan taels, leaving a balance of 19,474,361 Haikwan taels to represent the value of local exports. Chinese goods, chiefly from Chefoo and Shanghai, arrived valued at 3,876,932 Haikwan taels, of which 89,909 Haikwan taels were reexported; the net import was accordingly 3,787,023 Haikwan taels in comparison with 3,952,950 Haikwan taels during 1919.

The net value of the trade of Nanking for 1920 reached 53,323,696 Haikwan taels, which exceeds the total of the previous record year, 1919, by 9,176,605 and that of 1918 by 30,327,930 Haikwan taels. In the revenue branch, duty was paid under seven flags, the largest portion falling to the British, amounting to 454,682 Haikwan taels; Chinese, 156,773; Japanese, 21,243; American, 67,286; and others, 678 Haikwan taels. The total tonnage exceeded the record tonnage of the previous year by 300,722 tons, while 434 ocean-going steamers of 610,312 tons, entered and cleared, against 326, of 290,766 tons, in 1919. Imports were: Foreign, 4,411,399 Haikwan taels; Chinese, 17,452,783 Haikwan taels, a total advance of 4,500,000 over 1919 and almost twice the total of 1918. Exports showed similar increases, the total value being 25,022,045 Haikwan taels.

With a total revenue of 174,364,164 Haikwan taels Hangchow continues the steady decline in the amount collected in dues and duties since 1911, when revenue amounted to 553,984,672 Haikwan taels, though this does not reflect any decrease in the volume of trade of the port, which has remained remarkably steady. The total shipping entered and cleared in 1920 amounted to 4628 craft of all kinds, totaling 228,027 tons. The value of foreign imports arriving direct at Hangchow was 78,173 Haikwan taels, which was less than half of the 1919 total, while the amount imported from Chinese ports rose by 1,080,000 Haikwan taels to 5,590,000 Haikwan taels. Chinese exports amounted to about 10,252,000 Haikwan taels.

The record year of 1919 for Kiukiang was surpassed by a trade of a net value of 48,416,293 Haikwan taels in 1920. The rise in sterling exchange placed Japanese lower priced goods in a better position than those from Great Britain and America, and the boycott, which at the beginning of the year was slackening, died out entirely. The total Maritime Customs collection for 1920 was 670,792 Haikwan taels. The value of foreign goods imported showed an increase of 3,592,536 Haikwan taels or a ratio of over 35 per cent. The total value of exports showed a slight decrease as compared with 1919, the 1920 figures being 24,205,785 Haikwan taels.

SHIPPING. During 1919, 209,754 vessels of 95,725,935 tons entered and cleared Chinese ports. Of these 4333 of 2,569,887 tons were American; 36,074 of 36,284,312, British; 471 of 414,161, French; 298 of 53,142, Italian; 27,182 of 27,532,449, Japanese; 2803 of 708,474, Russian; 128,575, of 27,089,762, Chinese. During the year 1920 the vessels entering and clearing from Chinese ports numbered 210,609 of 104,266,695 tons. The following were the percentages of tonnage under the various flags: British, 38.67; Japanese, 27.04; Chinese, 26.52; United States, 4.52; all other countries, 3.25.

RAILWAYS. According to the latest available

from J Greenw. 110° K 115° L 120° M 125° N 130°

figures there were open for traffic at the beginning of 1921 about 6800 miles in China including 1875 miles in Manchuria and there were at that time about 2000 miles under construction. The following information in respect to railways is taken from the *Statesman's Year Book* of 1921: Principal railways in China, beginning with the north: (1) South Manchurian Railway, from Changchun to Dairen, 814 miles; (2) Peking-Mukden line, from Mukden to Peking, 632 miles; (3) Peking-Suiyuan Railway, from Peking to Kalgan, Tatung Fu, and Fengchen; (4) Peking-Hankow Railway, Peking to Hankow, 755 miles; (5) Bien-Loh Railway (in Honan province), from Kai-fung Fu to Loh Yang, 125 miles; (6) Shanghai-Nanking Railway, from Shanghai to Nanking, 200 miles; (7) Tientsin-Pukow Railway, from Tientsin to Pukow, on the Yangtse river, opposite Nanking, 627 miles; (8) Shanghai-Hangchow-Ningpo Railway, from Shanghai to Hangchow, 150 miles; (9) Canton-Hankow Railway, from Hankow to Canton, 700 miles; and (10) the Chinese Eastern Railway, also known as the Siberian Railway.

Railway construction work in China in 1921 was more active than at any time since it was broken off by the war in 1916. A notable accomplishment was the completion of the section from Fengchen to Suiyuan, on the Mongolian border, and the beginning of a further extension to Paotow, on the Yellow river. Another important undertaking begun was a branch line of 80 miles extending from Chinchow on the Peking-Mukden to Chaoyang, a coal mining region.

The Japanese were engaged in extending the Seupinkai-Chenchiatun to Taonan. The Ministry of Communications constructed the earthwork of a line from Shihchiachuang, the junction of the Cheng-tai and the Peking-Hankow railways, to Tsangchow on the Tientsin-Pukow Railway, together with the earthwork and culverts of a branch to the Shantung Railway, extending from Weihsien to Cheefoo via Lungkow using famine sufferers for laborers, and charging their effort to various railway revenues.

One important development of the year was the announcement that the Chinese Standardization Commission, appointed to fix permanent standards for rolling stock and materials throughout the whole government railway system of China, had agreed on the standards for rails and fastenings; sleepers or ties, both ordinary and for bridges; cuts and fills; formation and ballasting; tunnels; clearance and minimum structure gauges. Specifications for bridge steel were also accepted. In rolling stock, standard designs were adopted for heavy locomotives—the Pacific type for passenger and the "Mikado" for freight service—with certain alterations to conform to the views of the locomotive superintendents of the various Chinese government railways. For freight and passenger cars agreement was also reached on standard designs for wheels, axles, trucks, bodies, frames, couplers, and so forth. Standards were also fixed for freight cars of a capacity of 40-ton, 30-ton and 20-ton and of both steel and wood construction.

DEFENSE. According to the conscription law of Jan. 1, 1916, there were to be about 250,000 men but the number did not exceed 180,000. In the disorganization of the central power after the death of Yuan Shih-kai, the military governors of the province made themselves practically independent and recruited troops on their own account. This

greatly increased the military forces which were estimated in 1920 at a total of 1,500,000. There was agitation against this condition and a certain reduction of these forces was reported in 1920. The largest vessel at the beginning of 1921 was a protected cruiser of about 4300 tons. The navy of China is inconsiderable and the other vessels are of comparatively small tonnage.

GOVERNMENT. The executive authority under the republican constitution is vested in a president and vice-president and the legislative authority in two houses, namely, the Senate of 264 members and the House of Representatives with 596. President, at the beginning of 1921, Hsu-Shih-chang. Ministry after August 11, 1920:

Premier, Chin Yun Peng; Interior, Chang Chih-t'an; Foreign Affairs, W. W. Yen; War, Chin Yun-P'eng; Navy, Sa Chen Ping; Finance, Chow Tse-ch'i; Education, Fan Yuan-lien; Justice, Tung K'ang; Communications, Yeh Kung-cho; Agriculture and Commerce, Wang Nai-ping.

The southern province refused to recognize the Peking government and was constituted under a separate administration with Dr. Sun Yat-sen as president, whose headquarters were at Canton. See following paragraphs on *History*.

HISTORY

FINANCIAL RELATIONS. The new consortium loan described in the preceding *YEAR BOOK* was not acceptable to the Peking government in spite of its financial embarrassment. This was manifest when the details were made known to the government on February 1. Among the people it was believed that the acceptance of the consortium would be followed by the interference of foreign Powers in China's affairs, and among the Nationalists it was believed that acceptance of its terms would involve a foreign supervision of Chinese expenditures, incompatible with the dignity of China. Among the bankers there was opposition from the point of view of their own interests, and in South China the party of Dr. Sun Yat-sen strongly opposed foreign financial interference and said that funds supplied by foreign Powers to aid the Peking government would be used to inflict further oppression on the people.

TREATY WITH GERMANY. On May 21 the government signed a treaty of amity and commerce with Germany whereby the latter gave up its extra-territorial jurisdiction in China and certain principles of equality and reciprocity were agreed upon by each. The following points may be mentioned: Chinese property in Germany was to be returned upon the ratification of the agreement; the German government agreed to assist Chinese students in Germany; the Chinese government promised full protection to German residents and the trial of cases involving Germans in modern courts and according to modern codes.

THE CANTON REPUBLIC. The new republic in the south continued hostile to the Peking authorities throughout the year as was illustrated in a manifesto issued by the president, Dr. Sun Yat-sen, September 5, in which he accused the Peking government of subservience to Japanese influence and blamed it for consenting to the twenty-one demands of Japan, saying that this concession and the secret agreements between the two governments would prevent any settle-

ment of the Far Eastern questions. On October 12 the Canton government declared war on the militarists of Peking, and it was reported that the president, himself, was in command of the offensive which would strike at Peking through the province of Kwangsi.

CHINA AND JAPAN. Friction with Japan continued early in the year, the Chinese government endeavoring to make Japan withdraw the troops that had been sent to Huchun for the alleged purpose of protecting Japanese interests, and in the latter part of March the Japanese government agreed that the troops should be withdrawn on April 1. No arrangement was reached in respect to Shantung and the Chinese government refused to treat with Japan on the subject. Among the people the boycott of Japanese goods continued. There was fighting in February in Outer Mongolia, where in February a force made up of Mongolians, Japanese, and White Russians, under General Ungern, an associate of General Semenov drove out the Chinese garrison at the Mongolian capital, Urga, and on February 25, Ungern was crowned king of the independent state of Mongolia. For account of the issues between China and Japan, see **WAR OF THE NATIONS**.

GOVERNMENT CRISIS. On December 19 it was learned at Washington that the entire Chinese cabinet had resigned and that important changes were likely to result. The military governor of Manchuria, General Chang Tso-lin, returning to Peking set out to enforce a programme involving, first, the resignation of the present President and the selection of a new one. This was to be followed by the choice of a Prime Minister, who possessed the confidence of the native and foreign elements, and by the developments of a plan for uniting the country. The programme involved the acceptance of the consortium with Chinese participation. The Manchurian general who had been in command of the three Manchurian provinces with headquarters at Mukden, arrived in Peking, December 13. For some time past it had been believed that the present government had merely the form of authority without any real power. The success of the new programme was dependent on the support of certain of the great military authorities who were in actual control of all northern China. A new cabinet was announced comprising representatives from the different groups. The Prime Minister was Liang Saish-yi who was one of the best known financiers of the country and was believed to have the controlling influence over the Chinese banking policy. His new cabinet assumed office, December 25. Its other members were as follows: Foreign Affairs, W. W. Yen; Finance, Chang Hu Vice; War, Pao Kwoi-Ching; Navy, Li Ting-Hsing; Communications, Leh Kung-hui; Commerce, Chi Yao-shan; Interior, Kao Ling-wei; Education, Huang Yen-pei. Of these, the ministers of foreign affairs and the navy had been members of the former cabinet. The Prime Minister was regarded as one of the wealthiest and most influential financiers in China, and his appointment was approved as likely to improve the chaotic financial situation. He had already served in the government as chief of the department of communications in 1907. He had also been director of railways, and acting director of the Chinese Imperial Posts.

During the late war he was for a time director-general of the customs administration, and director-general of the bureau of taxes.

CHOSEN. See **KOREA**.

CHRISTIAN ENDEAVOR, UNITED SOCIETY OF. Founded in 1881. This is an interdenominational society of young people whose purpose is the training of converts for church membership and church work. Its activities are divided into four classes: Junior, Intermediate, Senior societies, and Alumni Councils. In 1921 there were 67,099 societies, of which 9238 were organized in the past two years. Of the total, 40,408 are in the United States, 4090 in Canada, 22,507 in foreign countries, 65 are so-called floating societies, and 29 army societies. Statistics show the following enrollment in the various groups: Comrades of the Quiet Hour, who devote a definite time to prayer and meditation each day, numbered 199,828; the Tenth Legion, whose members give one tenth of their incomes to religious work, had a membership of 59,481; Life Work Recruits, or young people who are ready to give themselves to full-time Christian service, 6080; and Christian Endeavor Experts, who have successfully passed an examination in Christian Endeavor principles and methods, 31,641.

The Sixth World's and Twenty-eighth International Convention of the society was held in New York City, July 6 to 11. Sixteen thousand delegates were present from all parts of the United States as well as from Burma, Canada, China, South Africa, Czecho-Slovakia, Poland, Armenia, Australia, and Finland. The president, Francis E. Clark, in his annual message, outlined the Christian Endeavor Foursquare Campaign which was to be the programme for the society in 1921-22. It aimed first toward increased membership and graded endeavor work among the Junior, Intermediate, and Senior societies. The second aim was increased service to the pastor and the church. The third related to the four spheres of action and urged the principle of religion in the church, the home, the community, and the world. The fourth referred to the methods followed by Christian Endeavor meetings, committees, unions, and personal stewardship of time, personality and thought. During the convention addresses were delivered by prominent leaders of the movement and several denominational rallies held. In a citizenship demonstration, the delegates marched in New York in a long, impressive parade.

Steady progress was reported to have been made by the society in foreign lands. Christian Endeavor in England, like other countries, suffered greatly during the war; since then, however, there has been a marked revival of interest and activity. Progress in Germany has been gratifying; societies there now number 1020, with about 32,000 members. The war and Bolshevism had caused serious setbacks to the work in Hungary; in 1921 the work was going forward rapidly. Under the direction of field secretaries from Finland nineteen societies were established in Esthonia. In Finland also the work has been flourishing. A firm foothold has been gained in Africa. There are more than 2000 societies in India and more than 1200 in China. In 110 societies in Brazil there are 3673 members. Twenty employed field secretaries conduct the work in the United States through the State unions.

The treasurer's report showed 1921 to have been the best financially since the founding of the society. Receipts from all sources totaled \$66,119.19. The increase is attributed chiefly to the financial crusade of 1920 and the increase of business in the publishing department. The assets of the corporation amount to \$455,383.45 and liabilities, \$222,840.41.

The Alumni Fellowship in 1921 numbered 234. *The Christian Endeavor World* is the official organ. The officers in 1921 were: Rev. Francis E. Clark, LL.D., president; Daniel A. Poling, LL.D., associate vice-president; Edward P. Gates, general secretary; Alvin J. Shartle, treasurer and publication manager; Rev. Robert P. Anderson, editorial secretary; and Ira Landrith, LL.D., extension secretary. Headquarters are maintained at Mt. Vernon and Joy Streets, Boston, Mass.

CHRISTIAN SCIENCE. The most important event in 1921 for this denomination was the decision of the Supreme Judicial Court of Massachusetts, handed down on November 23, which established the legal validity of the unique organization given by Mrs. Eddy to the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, and restored to the Church its control of the Christian Science Publishing Society, the control of which had been contested by its trustees. The controversy was one of long standing and centred around the question of whether the Christian Science Board of Directors, which has supervision over the affairs of the Church, or the Board of Trustees of the Publishing Society should have final say as to the policies of the publications. In 1918 the trustees began to insist on conducting the Publishing Society as an independent institution separate from the Church. In 1919 they began a suit for the purpose of maintaining that position. Previously the Publishing Society had been regarded as an auxiliary to the Church and subject to the control of its executive board. Such a controversy was of peculiar importance to the denomination by reason of the extent to which it relies on the writings of Mrs. Eddy and on periodical publications for supplying the teachings of Christian Science to its adherents and other people interested. On final appeal the court handed down a decision favorable in all respects to the Church. The decision had its immediate reaction in the field. There was a reorganization of the Publishing Society; *The Christian Science Monitor*, the international daily newspaper issued by the Christian Scientists, became an evening instead of a morning newspaper and reported a large falling off in its circulation. The old Board of Trustees of the Christian Science Publishing Society resigned and a new board was appointed as follows: Fred M. Lamson, James E. Patton, and William P. McKenzie, all of Boston and vicinity.

The denomination holds an annual meeting, usually in Boston in June. Progress is reported to have been made in the movement in Stockholm, Geneva, Amsterdam, and Copenhagen, and the growth of the denomination has been gratifying in Australia, England, Holland, Sweden, Norway, and Italy. Since the removal of the ban by the German government, Christian Science under the new régime has become well established in Germany. A Board of Lectureship arranges the delivery of lectures on the denomination throughout the year: a great number of these lectures were

delivered in 1921; the attendance is reported to have been unusually large.

In addition to publishing the *Christian Science Monitor*, the Publishing Society in Boston, issues the *Christian Science Sentinel*, *Christian Science Journal*, *Christian Science Quarterly*, and many other pamphlets on various phases of Christian Science.

CHRISTIANS. This denomination holds a convention every four years; the last was in 1919. Statistics for 1921 showed 98,075 communicants, 1094 churches and 987 ministers. Figures for the Sunday Schools and pupils in 1921 were not available; in 1919, however, there were 963 Sunday Schools with 76,055 pupils. The headquarters of the denomination are at the Christian Publishing Association, Dayton, Ohio. The church is now divided into five territorial conventions: New England, Southern, Metropolitan, Midwestern, and Western Conventions. Each State has its State association and the territory within each State has its several district conferences. There were no unusual or spectacular accomplishments during 1921, yet it was marked by a quiet, sturdy growth, which has added to its strength at many points.

By a system of institutes throughout the country in connection with the Forward Movement of the denomination the life of the church has been greatly stimulated and brought into a closer unity the various sections. Toward the goal of \$1,000,000, \$800,000 have already been pledged, of which \$80,000 has been turned into the channels of the church during the year. The work of the Home Mission Department was gratifying; several centres became self-supporting and special assistance by loans for parsonage erection were given to important points. Its programme was two fold: The Americanization work in New England and the Logging-Camp Evangelism of the Pacific coast. The year in Foreign Missions witnessed the completion of plans and funds and the purchasing of lots for buildings of the Night School and Mission Home in Tokyo, Japan. Sites were also purchased for erection of church edifices at several other points. New fields were opened and statistics of the Japan work showed creditable increases for the year. An enlarged programme covering a 15-year period was inaugurated for the Porto Rican work. Enrollments in the colleges of the church were larger than ever before, also men in pursuit of seminary and university education. There were 241 enrolled in the Life Recruit Volunteers of the church in 1921. The net increase of membership in the year amounted to 9.91 per cent. There was increased interest in Sunday School work also; the membership is now about 100,000 pupils. The volume of tract literature issued by the church exceeded all previous years in quantity and quality. Summer schools of Religious Education were held at Craigville, Mass.; Virginia Beach, Va.; Defiance, Ohio, Winona Lake, Ind.; Meron, Ill.; and Albany, Mo. The year marked the dedication of a Christian Temple at Winona Lake, Ind., which was to be a rallying point for the Midwestern constituency of the denomination. During the year four general workers were added to the staff of field representatives: One for the Forward Movement; one for the Sunday School Department; one for the Home Mission Board; and

one for Religious Education and Young People's work in the South. Church building had begun to revive and plans were under way at several points for the erection of new church buildings. Notwithstanding a general financial depression the Convention Secretary's office received a larger number of remittances than in the preceding year, and receipts increased 46 per cent over 1920. The general receipts for the Home Mission Department were also larger than last year.

The official organ of the denomination is the *Herald of Gospel Liberty*. The Department of Missions issues the *Christian Missionary*.

CHRISTMAS ISLAND. An island in the Indian ocean annexed to the settlement of Singapore in 1900, lying two hundred miles to the southwest of Java; area, about 43 square miles; population in 1918, 2281. It is known for its extensive deposits of phosphate of lime, in the working of which most of the inhabitants are engaged, and which constitutes almost the sole source of the island's wealth. The exports of phosphate of lime in 1919 were 68,621 tons. The tonnage of ships entered and cleared in that year was 81,197.

CHURCHILL, LADY RANDOLPH. Widow of Lord Randolph Churchill, died suddenly as the result of a fall in London, June 29. She was an American by birth, being the daughter of Leonard Jerome of New York, born in 1854. Many years of her girlhood were passed abroad and she was in Paris on the approach of the siege of 1870 but escaped in the last train. She served with her husband, Lord Randolph Churchill, whom she married in 1874, in his many political and social interests, but was especially known as a social leader. She aided Lord Randolph by her activities in the Primrose League and she exerted a strong influence on her son, Winston Churchill. During the Boer War she raised money in the United States for the equipment of the *Maine* as a hospital ship and was the head of the executive that directed its operations. Her literary interests were extensive and she founded, owned, and edited the *Anglo Saxon Review*. She wrote a volume of *Reminiscences* (1908) and of essays, *Small Talks on Great Subjects* (1916), and she tried her hand at the drama. Five years after the death of Lord Randolph Churchill she married Mr. George Cornwallis West from whom she was divorced in 1913. In 1918 she married Mr. Montague Porch. By Lord Randolph Churchill she had two sons, Mr. Winston Leonard Spencer Churchill and Mr. John Spencer Churchill.

CINCINNATI, UNIVERSITY OF. A co-educational and municipal institution situated in Cincinnati; founded in 1871. In the autumn regular session there were enrolled 3956 students of whom 1832 were in the Liberal Arts College; 971 in the Engineering College; 359 in Teacher's College; 228 in the Medical College; and 145 in the Graduate School. In the summer session of 1921 the enrollment was 934 students. The faculty numbered 383. Besides the departments

above mentioned there are an evening Commerce College, a College of Law, and a nursing and health department. The endowment was given at \$4,120,352 and the income (1920) at \$1,300,590. The library contained 96,607 volumes. In the course of the year a department of leather research was added. Among the gifts received were included a gift to create a professorship in surgical anatomy and a gift to establish a scholarship. President, Frederick Charles Hicks.

CITY MANAGER PLAN. See MUNICIPAL GOVERNMENT.

CITY PLANNING. Both interest and achievement continued active in this field as is witnessed by additional state legislation authorizing city planning and zoning, the creation of additional city plan commissions and of commissions whose powers are confined to zoning alone; progress in formulating new city plans and in execution of those already adopted; publicity and educational work directed both to the general public and to specialists; and most notably of all in the large number of zoning plans and ordinances adopted or got under way. In England unemployment relief work was coupled with improvement in the city plan with special reference to bettering major street plans by opening up dead ends and widening streets in order to afford both radial and circumferential or ring thoroughfares. Joint undertakings that were inter-municipal or interstate in scope were initiated or carried forward. Notable among these were popular votes creating Metropolitan or joint park districts, a continuation of studies of the Port of New York Authority under a treaty entered into by the States of New York and New Jersey; the beginning of the construction of a vehicular tunnel between New York City and Jersey City by commissions created by each of the two States concerned under the same general scheme of interstate cooperation as has been followed for years by the Interstate Palisades Park Commission of the same two States; and the bringing to the contract stage of a part of the construction of the Philadelphia-Camden bridge over the Delaware river—another example of interstate cooperation.

Using as a basis a bulletin entitled "Municipal Accomplishment in City Planning," edited by Miss Theodora Kimball, librarian of the Harvard School of Landscape Architecture, Jacob L. Crane, Jr., summarized various phases of city planning activity in *Engineering News Record*, Sept. 29, 1921. It thus appears that the 15 largest cities in the United States and 57 out of the 100 largest had done something in the city planning line up to the close of 1920. Of 113 cities where some city planning had been done, 62 had municipal plan commissions or something of that nature; but in many instances the work had been carried on by citizens' committees or civic organizations. Massachusetts, Pennsylvania, and California lead in the number of city plan commissions established and in the amount of planning work actually undertaken; but it should be noted that Massachusetts has a state law compelling all cities and all "towns" of considerable size to establish plan commissions, while Pennsylvania some years ago enacted legislation that favored city planning.

Massachusetts now has a Division of Housing and Town Planning in the State Department of Public Welfare and Pennsylvania has a Division of City Planning and Municipal Engineering in its Department of Internal Affairs. These appear to be the only two American States that have themselves taken up city planning work, although many have now authorized their municipalities to do so. In Canada nearly, if not quite, all the provinces have established bureaus or divisions of city planning and the Dominion Government has also carried on work of the sort through its Conservation Commission. Mr. Crane's summary of Miss Kimball's data shows further that of the cities in which some city planning work has been done, a landscape architect has been employed either alone or in conjunction with some other expert in 45 instances and an engineer in 32 cases and an architect in 18, while in 22 instances the title given has been "civic expert," which generally means a specialist in city planning studies. In 20 of the instances where engineers were employed, these were taken from the city's own department. Supplementing Miss Kimball's data it may be stated that it is becoming more and more common for cities to train members of their engineering staffs to city planning work, or to engage an engineering specialist for that purpose where one is not already available within some city department. A later survey of city planning in the United States, also by Miss Kimball, appears in the *National Municipal Review* for January, 1922, where there was so much to chronicle for 1920-21 that the author was unable to do more than to give references to various published reports. Miss Kimball states that more than 30 American commonwealths now have laws relating to some phase of city planning; and that within the last year or two laws on city planning and zoning were enacted in Rhode Island, Connecticut, Tennessee, Ohio, Indiana, Michigan, Illinois, Minnesota, Kansas, Missouri, and Texas.

COMPOSITION OF CITY PLANNING AND ZONING COMMISSIONS. In the New Municipal Programme of the National Municipal League it was recommended that city planning commissions should be composed of city officials and citizens, the former being in the majority. The City Planning Commission at Indianapolis, created in 1921, consists of nine members, of which five are citizens and four are city officials, the latter being the president of the Board of Park Commissioners and Public Works, a member of the City Council and the City Engineer. The new City Planning Commission of Columbus, Ohio, has the City Engineer and the Director of Public Service among its members and also as citizen members a professor of municipal engineering at the University of Ohio, the president of the Columbus Real Estate Board, an architect and a newspaper publisher. At Baltimore the new Zoning Commission consists of the chief engineer of the city, the chief engineer of the Baltimore Topographical Survey Commission, the city building inspector and the president of the Roland Park Company and three other citizens. The Roland Park Company has done notable planning work in connection with an extensive real estate development. The Topographical Survey Commission has been in existence for many years and its work has been largely of the city planning order. When the mayor appointed the Baltimore Zoning Commission he

announced that he expected later on to ask the Engineers Club of Baltimore, the Baltimore chapter of the American Institute of Architects and other organizations particularly interested in zoning and city planning to serve as members of an Advisory Zoning Commission. The Chicago Zoning Commission, appointed July 28 under an ordinance passed a year or so earlier, has 22 members. It is headed by the City Commissioner of Buildings. Other city officials on the commission are the Chairman of the Board of Local Improvements, the Commissioner of Health, the Chairman of the Chicago City Plan Commission, the corporation counsel and eight aldermen. Among the citizen members of the commission are two engineers and one architect. A zoning specialist was chosen before the end of the year and several field parties set to work. As noted elsewhere in this article and in earlier ones in the *INTERNATIONAL YEAR BOOK*, city planning has been taken up nationally in various countries of the world. Not until 1921 was it recognized in the United States—except in connection with the government housing operations during the war. In 1921 the United States Department of Commerce established a Division of Building and Housing with John M. Dries as chief, and created a zoning commission to act in conjunction with Mr. Dries as follows: Louis A. Moses, National Association of Real Estate Boards; J. Horace MacFarland, American Civic Association; Nelson P. Lewis, National City Planning Conference of the National Municipal League, and formerly chief engineer of the Board of Estimates in New York City; Lawrence Veiller, National Housing Association; and Morris Knowles, consulting engineer, Pittsburg, formerly connected with Federal housing work; Edward M. Bassett, chairman of the late zoning commission of New York City and now counsel of the New York Zoning Committee, a private organization to aid in the enforcement of the zoning ordinance; Frederick Law Olmstead, president, Society of Landscape Architects; and John Ihlder, manager, Civic Development Department of the Chamber of Commerce of the United States. This committee had already held two meetings by the end of November and was engaged in the preparation of a digest of state and city legislation on zoning as a basis for suggestions on the subject to be sent out by Secretary Hoover.

CITIES THAT HAVE ADOPTED OR ARE WORKING ON ZONING: A list of 44 cities that have already passed zoning ordinances and 75 more that were working on zoning, compiled by Charles B. Ball, chief sanitary inspector, Department of Health, Chicago, appeared in the *National Real Estate Journal* of Nov. 7, 1921, and is reprinted herewith. Other cities have started work since that date and very likely some are quite unintentionally omitted from the list. Of the 44 adoptions, Neenah, Wis., is credited with having been first, in 1915; New York City second, July 25, 1916, followed in October of the same year by Racine, Wis. There were only two adoptions in 1916, one in 1917, three in 1918, seven in 1919, while in 1920 the number rose to fifteen and for the first ten months of 1921 there were already fourteen adoptions. The date of adoption for one city is not given, but it was probably 1921. In point of influence, both because of the ever-growing character of the study and the size and importance

of the city, New York City has led in zoning. By States California and New Jersey lead in number of cities that have adopted zoning ordinances, each having twelve cities, and are followed by New York State with six adoptions. By zoning projects pending in 1921, Massachusetts, New Jersey, and Ohio lead with 15, 11, and 7 cities, respectively. By total action (ordinances adopted or pending in 1921) New Jersey leads with 23 cities and is followed by Massachusetts with 16 and California with 14. Beside the cities in the list of pending projects it is known that Worcester, Mass., took up zoning studies late in 1921.

WHAT CITY ZONING IS. Zoning is that part of city planning that prescribes by city ordinance supplemented by maps or plans the uses to which land and buildings may be put in various parts of a city, the height to which buildings may be carried and the percentage of the area of the lot which may be built upon. Practice shows that districting would be a better term than zoning and sometimes the terms use, height, and area districts are employed. There is a considerable tendency for some of the districts to have a geographical relation to each other that might be properly put under the term "zone" since the business section, for instance, is likely to be at the centre of the city and the residence district further out along radial lines, and there may be the same general relationship between the industrial and the residence districts. In large cities there may be main and minor business and industrial districts, each with its outlying residence districts. Resident districts are generally subdivided, at least to the extent of single or single and two family and apartment or tenement house districts. Under "use" manufacturing is generally excluded from business districts and it is common to divide the industrial or manufacturing districts into light and heavy, or in accordance with the degree of noise and nuisance that may be created by the industries permitted. In the early days of zoning there were separate maps for at least three main classes of use, height, and area districts, but later, and particularly in the last year or two, it has become common to make one map serve to show all three classes and even the sub-classes of districts by a skillful use of different symbols or shadings, combined where necessary with textual definitions. The use of a single map is a great convenience, although when the city is large in area or the district classification is complex several maps on a larger scale may be necessary. The use of the term "police power" as applied to zoning means the surrender of individual rights for the benefit of the general health and welfare of the community, without compensation, differing in this latter respect from the exercise of eminent domain or condemnation, in which compensation is paid to the owner for property taken. The exercise of the police or community welfare power rather than the right of eminent domain has the advantage of great flexibility and is far more practicable in various ways. Taking of property by condemnation or eminent domain has a very strong tendency to crystallization or fixedness of use since by this means the use of property in a given district could not be changed to meet changing conditions without all the delay incident to condemnation proceedings and compensation to the property owners every time the use in a given district was changed. The same would also apply to changes in height or area

districts. There is, however, a Minnesota statute that provides for a limited application of zoning by means of condemnation procedure. Zoning ordinances often provide for boards of appeal to settle disputed points and provision is usually made for changes in zoning or districting by the amendment of the ordinance, on petition of interested parties and after public notice and hearings. In December, 1921, a session of the New York City Section of the American Society of Civil Engineers was given up to addresses and discussions on the benefits that have followed the adoption of the New York City zoning ordinance. The meeting will be reported in the 1922 *Proceedings of the Society*.

SOME RECENT ZONING ORDINANCE PROVISIONS.

The zoning ordinance for Cleveland Heights, Ohio, described in the ordinance as "a residential suburb of the city of Cleveland having no steam railroads within its corporate limits and no industrial plants therein," certified to the City Council by the City Planning and Zoning Commission June 6, 1921, and adopted by the City Council August 2, 1921, provides for five use, three height, and four area districts, as follows: Single family, two family, apartment house, local retail and commercial use district; two and a half stories, four stories, and 100-foot height districts; and area districts having respectively an allowance of 5000 sq. ft., 2500, 1250, and 625 sq. ft. per family—this being a variation from the more usual provision establishing the percentage of the area of the lot that may be built upon in these area districts. The abbreviations U, H, and A are used on the map for use, height, and area districts respectively with sub-numerals 1, 2, etc., for the various subdivisions in each class. Unless otherwise specified, the A₁ area districts and H₁ height districts are in U₁ use districts, and so on through the several subdivisions. The detail into which zoning ordinances sometimes go is illustrated by the fact that for even so small a suburban residence district as Cleveland Heights the ordinance fills a pamphlet of 16 pages and is supplemented by a folding map. For a second illustration of a zoning ordinance for a suburban town, adopted in 1921, Montclair, N. J., may be taken. Here the provisions of the ordinance centre on the definitions and descriptions placed upon use districts, and such height and area restrictions as are made are laid down under the provisions of each use district instead of under separate provisions for these two classes of districts. Eight use zones are established. Of these six are for residences, one for business, and one is an industrial zone. The six residence zones are classified as (1) villa, (2) suburban, (3) two-family detached houses, (4) two-family semi-detached, (5) apartment house No. 1, (6) apartment house No. 2. In all six residence zones "no building shall be used and no building shall be erected which is arranged, intended or designed to be used," except the following: dwellings or tenements (in these the occupants may have offices for the practice of medicine or surgery, arts and music); boarding houses; hotels; churches; schools, libraries or public museums; hospitals and sanitariums; private clubs; philanthropic or eleemosynary uses or institutions, other than correctional; railroad passenger stations; farming, truck gardening, nurseries, or greenhouses, and certain restricted accessory uses to the above, including garage or group of garages for three motor vehicles or less.

The mass after conforming the set-backs to the steel grillage

Drawings by Hugh Ferriss based on diagrams of Helmle & Corbett, Architects

"THE NEW YORK ZONING LAW"
THE EVOLUTION OF AN 'ENVELOPE' ON A CITY BLOCK IN A TWO-TIMES DISTRICT

Besides the restrictions of use common to all six residence zones, there are further restrictions designed to govern the number of families housed per acre in each zone, this number ranging from eight in the villa zone and ten in the suburban zone to 105 and 140 in apartment house zones Nos. 1 and 2, respectively. These limitations to the number of houses per acre are also controlled in part by prescriptions as to the height of buildings, the percentage of the areas of the lots built upon, the depth of front and rear yards, the width of side yards, and the dimensions of courts. Thus in the Montclair villa zone no building shall be erected to a height in excess of 35 ft., nor occupy more than 25 per cent of the area of the lot at the curb level, nor have a rear yard less than 25 per cent of the depth of the lot (but need not exceed 25 ft. at this level), or have side yards less than 6 ft. wide on one side and 10 ft. wide on the other. There are also further detailed restrictions, including those for setback from the street. The height area, yard dimensions and associated restrictions decrease in severity with the different classes until for apartment house No. 2 districts the height is held to not in excess of 50 ft., the percentage of the lot built upon must not be over 70 per cent of the area for an interior nor more than 90 per cent for a corner lot; the rear yard must not be less than 15 per cent of the depth of the lot, no front yard whatever shall be required and under certain conditions no side yards. The use regulations controlling business zones in Montclair permit any use that is permitted in any of the residence zones and prohibit practically all trade and industries except those for the manufacture of products sold at retail on the premises to the ultimate consumer, together with newspaper establishments and other peculiarly local industries already in existence in the business zone. In the industrial zone 34 classes of manufacturing and industrial plants are specifically prohibited and in addition "any other trade, industry or use, that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise." In neither the business or industrial zone may a building be erected to a height in excess of 60 ft., but there are exceptions as regards spires and similar features.

A zoning ordinance for Paterson, N. J., adopted late in the year, provides for four residence and two business zones, a light and a heavy industrial zone. The proposed Philadelphia zoning ordinance, approved by the Zoning Commission Oct. 13, 1921, but not acted upon by the City Council prior to the end of the year, provides for residential, commercial, industrial, and least restricted use districts; five height districts in which the height of buildings may be 1, 1½, 2, 2½, and 3 times the width of the street in which the building abuts, with maximum heights of 45, 65, 85, 125, and 150 ft., corresponding to each of the height districts named, but with permissible additional heights depending upon the front and the rear setbacks from the building line. There are also five area districts in which 30, 50, 70, 90, and 95 per cent of the area of the lot may be built upon but these limitations are accompanied by a detailed tabulation as to required unincumbered area, yard depth, etc. *The Law of Zoning*, a review of constitutional phases with a list of legal decisions, prepared by Herbert S. Swan, was published as a supplement to the *National Municipal Review* for October, 1921.

CITY PLANNING PROJECTS. An illustrated summary of a comprehensive scheme of municipal improvement proposed by the City Planning Board in St. Paul, Minn., appeared in *Engineering News-Record* for Nov. 3, 1921. The proposed improvements are designed to give better routing of traffic across and around the city so as to relieve congestion in the business districts. To this end sidewalk arcades at some points, various street widening and cutting through new streets to make continuous main thoroughfares are proposed. The project also includes a civic centre, railway grade crossing elimination, bridges at some street intersections and parks and parkways. Some of the elements of the project have already been approved by the city authorities for execution. Early in the year the City Planning Commission of Portland, Ore., issued as its bulletin No. 7 a pamphlet entitled "Major Traffic Street Plan, Boulevard and Park System for Portland, Oregon," prepared by Charles H. Cheney, consultant to the Commission. A system of major traffic streets and boulevards has been adopted by the Commission for its guidance in passing upon new subdivisions, parks, and various street matters referred to it. Under this project various streets would be opened, widened, or extended and new boulevards and parks provided. Late in the year the Citizens' Committee on city planning of Pittsburg submitted a report entitled "Major Street Plan for Pittsburg," calling it "a part of the Pittsburg Plan." At Cincinnati, after four months of preliminary survey made in behalf of the City Planning Commission, the Technical Advisory Corporation submitted a voluminous report outlining some of the city planning needs of Cincinnati and recommending an appropriation of \$105,000 for making exhaustive city planning studies by members of the engineering staff of the city and outside consulting engineers. The investigation would require some three years. This, together with the many details of the report, illustrates the vast amount of study considered necessary to work out a thoroughgoing city plan for a large municipality.

EDUCATIONAL AND PUBLICITY WORK. Among the educational and publicity work for city planning carried on during the year may be mentioned.

MAIN THOROUGHFARE CONSTRUCTION. In line with the widening and extension of streets to provide more spacious main thoroughfares or traffic ways reported in earlier issues of this *YEAR BOOK*, Boston began the widening and extension of Stuart Street late in 1921. This improvement is designed to give a more direct route than now exists between (1) the retail shopping and business districts and the South Terminal Station and (2) the southwestern part of Boston and the cities and towns beyond. Construction work has been authorized for a distance of somewhat less than a mile, extending easterly from Huntington Avenue to Washington Street and providing a means of relieving the traffic on Beacon, Tremont, and Washington streets. About 600 ft. of the improvement will be the opening of a new street through private land. Except for a short stretch of Stuart Street already 80 ft. wide, the new thoroughfare will have a width of 70 ft. Some of the existing street lengths utilized are only 50 ft. wide. The estimated cost of the improvement is \$2,741,000, but most of this is for the acquisition of land and buildings,

the estimated cost of the actual construction work being only \$350,000. It is estimated that benefits to be assessed against and collected from private property will total \$2,360,000, making the total cost to the city less than \$400,000. At Detroit there was a large majority vote at the November election for a street widening and opening project to provide an east and west thoroughfare known as the Dix-High-Waterloo paralleling Jefferson Avenue. This improvement was proposed some time ago by the City Plan Commission and approved by the City Council, but shortly before the November election the Council rescinded its action. The mayor vetoed the rescinding resolution but the Council passed it over his veto. The project was then brought to popular vote by initiative referendum petitions. Other noteworthy popular votes at the November election were those favoring the creation of the Akron metropolitan park district to include all of Summit County, Ohio, except one township. This project originated with the City Planning Commission of Akron. Statutory authority for the creation of this park district, as also for the Cleveland metropolitan park district, formed some two years earlier, is found in the Ohio State Conservancy Act. In New Jersey, Union County, in November, adopted the county park act of 1895 under which the notable Essex County park system has been developed. In England a considerable number of municipalities entered upon arterial road construction to give unemployment relief. Some of these enterprises are described in the July and December, 1921, *Town Planning Review* (Department of Civic Design, School of Architecture, University of Liverpool), including projects at Norwich, Bristol, Dundee, Glasgow, Portsmouth, Bradford, Liverpool, Leeds, Birmingham, and other places. The journal named points out that while road improvement for unemployment relief is not new, such work heretofore has been regarded merely as unemployment relief and "not as opportunities for improving or correcting the plan of a town." It adds that through not working to a well-conceived plan some of the money heretofore spent on unemployment relief in England has been wasted. The *Town Planning Review* for July has also an article entitled "Arterial Roads of Greater London in Course of Construction," these including radial and circumferential and by-pass roads. Most of these London road improvements seem to follow a plan formulated by the London Society, which, for some years past, has been carrying on large scale city planning and related studies for London and vicinity. These studies were summarized under various heads by a large

number of specialists in a handsome volume published late in the year under the title *The Future of London*. The *Town Planning Review* for December also outlines briefly the progress of town planning in British Malaya since legislation enacted in 1917 under a government town planning department and an advisory town planning committee. Noteworthy also in the December *Review* just mentioned is an article describing operations under a town planning act applicable to Salonika after the transfer of that city from British to Greek control. A unique town planning opportunity was afforded Salonika by the almost complete destruction of the city by fire in August, 1917. The remaining buildings were considered to be of such little importance that it was decided to ignore them in making new plans for the city. To facilitate the abandonment of the old street system and the adoption of a new one which made it necessary to ignore the old property lines, a law was passed constituting all the owners of property situated in the burned area of the town a Property Owners Association in which each property owner became a shareholder in the company to the extent of the value of his original individual holdings. A survey and estimate of the value of these individual holdings were made by a commission created for the purpose. The new lots established by the Town Planning Commission were also valued and transfers of these new lots were made to the original holders to satisfy their rights under the valuation of the old lots. Canton, China, acted upon city planning investigations during the year in order to take advantage of an opportunity to remodel the city along modern lines afforded by the recent demolition of the old city wall of Canton (see letter from Sun Fo, mayor of Canton, China, in *The National Municipal Review* for October).

EDUCATIONAL AND PUBLICITY WORK: Among the educational and publicity work for city planning carried on during the year may be mentioned Friday and Saturday evening lectures on city planning continued through a period of six weeks in Sacramento under the auspices of the University of California Extension Division and the California Real Estate Association. Other short courses were given in San Francisco and Los Angeles during the year. Instruction in city planning was given in the public schools in Los Angeles, at the University of California, at the University of Southern California, and universities in other States offered extension lectures on city planning topics. The year's review may be worthily closed by mentioning the publication of two handsome illustrated volumes entitled *Daniel Burnham, Architect, Planner of Cities* (Boston).

THE STATUS OF ZONING LATE IN 1921

CIVIC FEDERATION, NATIONAL. See NATIONAL CIVIC FEDERATION.

CIVIL SERVICE REFORM LEAGUE, NATIONAL. Founded in 1881, this organization has as its object to establish and promote a system of appointment, promotion, and removal in the civil service throughout the United States with view toward obtaining governmental administrative efficiency. It constitutes a federation of local associations and auxiliaries throughout the country. Two meetings of the League were held in 1921: April 14 at Baltimore, and November 16 at Detroit. The programme for the year as outlined by Richard Henry Dana, its president, in his address at the April meeting included an extension of competitive tests of fitness, the employment of business organizers and efficiency specialists in government departments, and the securing of capable management by professional and scientific experts with permanent tenure and independent of political partisanship. He pointed out the tremendous burden of national and State taxation as result of waste and inefficiency resulting from the spoils system, and maintained the League's programme would stop by extension of competitive tests, the patronage of public places, simplify and perfect the public service, and secure permanent expert management. Henry Lane Wilson delivered an address on "Our Foreign Policy and Administration," in which he traced the development of our foreign service and emphasized the need for a permanent diplomatic service based solely on merit. W. W. Nichols offered a plan of reorganization of our foreign service looking toward stability in organization, special government training, and coordination of all classes of foreign service. Resolutions were adopted, in substance, as follows: the League recorded its satisfaction with the application of the merit system in the appointment of postmasters of the 1st, 2nd, and 3rd classes; it urged the practice be secured by statute and extended to include other offices. It urged Congress to take immediate action to place the federal civil service on a sound business basis with promotion based on efficient performance of duty. To this end, a bill had been prepared based on recommendations of the Congressional Joint Commission on Reclassification of Salaries. It called attention to the necessity for application of the merit system to all branches of the foreign service and voiced its apprehension at the enactment of veteran preference statutes throughout the country.

At the November meeting considerable discussion was had concerning the "Rule of One"

and the "Rule of Three." The League through its president, urged the appointment of the person at the head of the list, instead of one from the first three. Addresses were delivered on each practice by Hon. Robert Catherwood and Hon. William Gorham Rice, respectively. The exemption from the civil service law of prohibition enforcement agents was disparaged. Statistics showing the undesirable effects of veteran preference legislation in the States were furnished. Specific resolutions were adopted at this meeting, advocating the following: legislation requiring application of the civil service law to postmasters and appointment of the one with the highest standing; extension of the law to include other officials, such as internal revenue officers, U. S. marshals, under-secretaries, etc., and thousands of other positions exempted by acts of Congress; an appropriation for the National Civil Service Commission to do away with the inefficiency and duplication in many government departments and bureaus; abrogation of legislation which gave veteran preference; and reorganization of the foreign service on merit system.

The officers of 1921 are Richard Henry Dana, president; A. S. Frissell, treasurer; H. W. Marsh, secretary; and Arthur R. Kimball, chairman of the League Council. Headquarters are 8 West 40th Street, New York City.

CLARK, CHAMP. Democratic leader, Speaker of the House of Representatives, died at Washington, D. C., March 3. He was a representative from Missouri for twenty-four years, and served as Speaker for eight years preceding his death. He was born in Anderson County, Ky., March 7, 1850, and educated at Kentucky University, Bethany College, and the Cincinnati Law School. He was president of Marshall College, West Virginia, 1873-74. In 1893 he was elected to Congress from Missouri and after 1897 he was reelected to the three succeeding Congresses. He showed a great ability as a minority leader and was chosen Speaker of the House in the Sixty-second Congress in which office he was successful in perfecting organization and establishing discipline. At the National Democratic Convention at Baltimore in 1912, he was one of the leading candidates for the presidential nomination and it was only after the forty-sixth ballot that his chief competitor, Woodrow Wilson, obtained the nomination. He continued to be Speaker of the House down to 1919 and he was the Democratic minority leader in the Sixty-sixth Congress.

CLARK, JESSE REDMAN. Life insurance president, died at Petosky, Mich., September 25.

He was born at Cincinnati, Ohio, Oct. 31, 1854, and educated at the Ohio Wesleyan University. He was made cashier of the Union Central Life Insurance company in 1878, treasurer 1886-1906, and after that president.

CLARK, JOHN EMORY. Mathematician and educator, died, January 30. He was born at Northampton, N. Y., August 8, 1832; graduated at the University of Michigan, 1856, and in the same year was appointed to the professorship of mathematics in the Michigan State Normal School. After serving as assistant-professor of mathematics at the University of Michigan, 1857-90, he studied at universities in Germany, and then went into surveying work in Dakota and Colorado. During the Civil War he served in the Michigan cavalry reaching the rank of brevet lieutenant-colonel in 1865. He was professor of mathematics at Sheffield Scientific School, Yale, 1873-1901, after which he was professor emeritus.

CLARK UNIVERSITY. A non-sectarian institution for graduate study only, situated at Worcester, Mass.; founded in 1889. The enrollment for the fall of 1921 was 337 of whom 140 were in the graduate department. The enrollment for the summer session was 191. The faculty numbered 31. The productive funds amounted to \$4,239,350 and the income was \$191,620. There were 96,000 volumes in the library. President, Wallace W. Atwood.

CLARKE, ELIOT CHANNING. Engineer, died, May 4. His work had a wide range, including bridge, sewerage, and water works construction; and he was the author of reports and other writings on the subject of drainage. He was born at Boston, Mass., May 6, 1844; graduated at Harvard in 1867, and studied civil engineering at the Massachusetts Institute of Technology. He then practiced civil engineering in various parts of the country from 1868 to 1886 in connection with the building of railways, bridges, tunnels, water works, and sewerage systems, and from 1885 to 1904 he was the treasurer of a cotton mill. He wrote a volume on the drainage works of Boston (1885), and in the following year was the author of a report on a system of drainage for the valley of the Charles, Blackstone, and Mystic rivers. He also wrote *Astronomy from a Dipper* (1909).

CLARKE, RICHARD FLOYD. Lawyer, died September 16. He was born at Columbia, S. C., Oct. 14, 1859, and graduated at the College of the City of New York in 1880. From 1885 to 1903 he was senior member of the firm of Clarke and Culver and was counsel for many large corporations and in cases involving international litigation.

CLASSICAL LITERATURE AND SCHOLARSHIP. See PHILOLOGY, CLASSICAL.

CLAY PRODUCTS. The quantity and value of the domestic raw clay marketed by miners in the United States in 1920—estimated at 3,159,000 tons, valued at \$12,094,000, or \$3.83 per ton—showed a large increase, as compared with 1919, according to the United States Geological Survey.

Practically every kind of clay showed a large increase in output and value. Fire clay, the kind showing the largest output and value, made the largest increase, 685,000 tons, or 40 per cent. The output of this clay was estimated to have been 2,400,000 tons, or 76 per cent of all clay marketed. It was valued at \$7,720,000, or

\$3.22 per ton, at the mine, an increase in value of 86 per cent compared with 1919. The average price per ton increased 33 per cent. The output of kaolin and paper clay, the purest form of clay, which is used chiefly in making paper, high-grade pottery, tile, oil cloth, paint, etc., amounted to 264,000 tons, valued at \$2,385,000, an increase of 41 per cent in quantity and of 45 per cent in value. The average price per ton, however, \$9.03, increased only 2.5 per cent, as compared with 1919.

The output of ball clay, also used largely for high-grade pottery and refractories, increased from 93,000 tons in 1919 to 145,000 tons in 1920. The value of this output increased from \$637,000 to \$1,340,000. The average value per ton was \$9.24, an increase of 33 per cent, as compared with 1919.

The imports of clay in 1920—403,580 short tons, valued at \$4,008,669 at the principal markets of the countries from which the clay was exported—increased 97 per cent in quantity and 86 per cent in value, as compared with 1919. There was an increase in both the quantity and the value of every kind of clay imported. Kaolin or china clay rose from 180,592 tons, valued at \$1,965,393, in 1919, to 361,800 tons, valued at \$3,568,677 in 1920. The imports of kaolin in 1920 were 10 per cent greater than those in 1914, the year of largest imports prior to 1920. The average price per ton was \$9.86, as compared with \$10.88 in 1919. This price, however, which was the price abroad, was only a fraction of the price of foreign clay in New York, where, in 1920, imported kaolin was quoted as high as \$25 a ton. Only 4 tons of common blue and Gross Almerode clays, valued at \$133, were imported in 1919, but in 1920 the imports of these clays increased to 6837 tons, valued at \$157,201. This was only a little more than one-fourth of the imports of these clays in 1913, the year of maximum imports. The imports of unwrought or unmanufactured clay, which is thought to be chiefly English ball clay, were 34,252 tons, valued at \$272,524, an increase of about 45 per cent in quantity and value.

The total quantity of clay exported in 1920 was 120,160 tons, valued at \$1,168,399, an increase of 75 per cent in quantity and 128 per cent in value. Fire clay, the only kind designated, constituted 45 per cent of the clay exported.

CLINTON, GEORGE WYLIE. American negro bishop, died, May 12. He was born in Lancaster County, S. C., March 28, 1859, his father and mother being slaves; studied at the University of South Carolina; afterwards studied theology at Livingstone College, N. C.; and entered the ministry of the African Methodist Episcopal Zion Church in 1879. For twelve years he taught in the Lancaster high school and the Union graded schools in South Carolina; and for eight years, was president of the Atkinson Literary and Industrial College, Madisonville, Ky. He edited the *Zion Quarterly Review* and the *Star of Zion*; and was prominent in various publishing and other institutions of his church. He wrote: *The Three Alarm Cries* (1906); *Tuskegee Lectures* (1907); and

Christianity under a Searchlight (1909). In 1896 he was elected bishop.

COAL. According to the Geological Survey the year 1921 was one of prostration for the coal and coke industries and the depression had not been matched since 1893. Anthracite, however, was an exception to this statement, for until late in November the hard coal mines continued in active operation and the total output for 1921 was not far behind either of the two years just preceding.

BITUMINOUS COAL. The production in 1920 was 556,516,000 tons and in 1921 was 406,990,000. Bituminous production in the United States has normally increased with rapidity. For example, between 1891 and 1901 it nearly doubled and the same thing happened between 1901 and 1911. By 1920 the normal production was about 550,000,000 tons. Thus the record of 1921 seemed to mean more than a temporary setback to the tonnage of 1911 and indicated a prostration similar to that which had followed the panic of 1893. In connection with the low production of soft coal it should be noted that the movement of coal in the Great Lakes had virtually ceased toward the end of 1921; also that during October when a railroad strike was expected, consumers increased their stocks and millions of tons went into storage. The exports of bituminous coal including shipments to Canada and Mexico were 7 per cent greater in 1921 than in 1913, the figures being about 20,690,000 tons in 1921 against 17,987,000 in 1913.

ANTHRACITE. At the close of the year many anthracite collieries had shut down and thousands of miners were idle. The falling off of demand which was evident in late November had grown steadily as December advanced and in Christmas week the output dropped to about one-half of what it had been during the same week the year before. On the whole, however, the production of anthracite for 1921 compared not unfavorably with the years preceding excluding the war years. The exports of anthracite for 1921 were estimated at a figure slightly in excess of the prewar year 1913. The following information in respect to the labor cost was supplied at the close of the year: "In 1913 there were produced 71,046,816 tons of anthracite, at a labor cost of \$113,320,000, or about \$1.59 a ton. The production in 1920 was 65,458,673 tons and the labor cost was \$252,179,000, or \$3.85 a ton, an increase of 141 per cent. These figures are based on commercial fresh mined coal exclusively. The coal consumed at collieries and the washery or dredge product is not included. Anthracite producers believe that mine workers should receive liberal compensation, but they recognize the fact that the price of coal must be reduced in line with the downward movement in all other basic commodities. Labor now absorbs 70 per cent of the cost of producing anthracite.

"Until wages are lowered a reduction in the mine price of anthracite is impossible. It is not a question of the operators accepting a smaller profit. If those producers who are making any profit at present were to forego their entire net return the effect on the mine price of coal would be negligible. The present wage agreement, which is based on the award of the United States Anthracite Coal

Commission, does not expire until March 31, 1922. Leading officials of the miners' union have indicated opposition to any decrease in wages at the expiration of the contract. Anthracite producers, however, feel that the question of a readjustment of mine wages will be determined by the opinion of the public, which has a vital interest in the matter."

GREAT BRITAIN. In the last twelve months before the war Great Britain exported 73,000,000 tons of coal plus 20,000,000 tons of bunker coal for ships as against an exportation of about 32,000,000 tons by Great Britain's chief rival, Germany. The year 1921 began under government control and under state subsidies with the highest wages and the lowest output per operator ever recorded. The labor cost at the pits during the first quarter averaged 30s. per ton. Only about 57,000,000 tons were obtained from 1,200,000 miners in 13 weeks which was a rate of production of about 177 tons a year per person employed. In the second quarter the coal stoppage was the most serious that had ever been recorded. "Decontrol" was announced for the end of March and the owners and operatives were both entirely upset in their estimates and negotiations. Notice of reduction of wages was met by resistance and the result was the withdrawal of the working-men down even to the pump-men of the mines. Trade for the time being was paralyzed. During the last six months of the year wage reductions were enforced and there was extensive unemployment and part-time work, but the output per operative was greatly increased and the reduction in cost per ton amounted to 50 per cent. At the close of the year the exports of coal were regaining their former level. The following table shows coal production, exports, and prices after 1913:

BRITISH COAL PRODUCTION, EXPORTS, AND PRICES

	Tons	
	Output	Exports
1913.....	287,000,000	77,000,000
1914.....	265,000,000	62,000,000
1915.....	253,000,000	46,000,000
1916.....	255,000,000	41,000,000
1917.....	248,000,000	38,000,000
1918.....	226,000,000	34,000,000
1919.....	229,000,000	38,000,000
1920.....	229,000,000	27,000,000
1921.....	* 160,000,000	* 25,000,000

* About.

The average weekly output in 1920 and for the respective quarters of 1921 was as follows:

AVERAGE WEEKLY OUTPUT OF COAL IN TONS	
1920.....	4,409,000
1921 (first 13 weeks—last quarter before big stoppage).....	4,307,000
1921 (four weeks ended Oct. 29).....	4,243,000
1921 (four weeks ended Nov. 26).....	4,642,000
1921 (four weeks ended Dec. 24).....	4,850,000

Largely because of the non-profit prices of the British, their coal exports for the months of August, October, and November increased 32 per cent over corresponding months of 1920; whereas, United States exports decreased 44 per cent in the same period. Shipments of British coal were actually made to the West Indies, a market held exclusively by the United States for twenty years. During the period November 3 to December 30, eight cargoes, including two to Colon, were cleared

from South Wales ports for the United States Pacific coast and for Honolulu. The c. i. f. costs of British coal at West Italian ports, at the close of the year were from \$0.65 to \$2.35 lower than the c. i. f. costs of United States coal, the difference depending on grade and kind; at Rio the British c. i. f. costs were from \$0.21 higher to \$0.52 lower than for United States coal. British mine wages at the close of the year were at rock-bottom, since they were at the minimum fixed by the agreement of 1921. In the three chief coal fields, those of South Wales, Northumberland, and Durham, the average wage per week for coal hewers were reported to be 57s. 4d. or about \$12.04 (conversion into United States currency being made on the basis of £1=\$4.20). British wages in these fields had since March, 1921, been reduced on an average of about 46 per cent. American wages are still at wartime levels. British railway coal freight rates had been cut approximately 12½ per cent, the reduction being effective January 1.

British total production and the output for men employed increased after the strike, but the output per man was still at the close of the year far below that for the United States. The total British production for 1920 was 229,000,000 gross tons as against 287,000,000 in 1913; the output for 1921 was about 164,354,000. The use of mining machinery in British mines was not increasing rapidly; in 1920, the total machine mined coal was 12.8 per cent of the total production, as against 59 per cent in the United States in 1919. British costs of mine supplies are from 79 per cent for pit-wood to 235 per cent for material and stores over 1914 costs.

WORLD PRODUCTION. According to the United States Geological Survey the world's production of coal fell back to the level of 1909, the total output being estimated at about 1,000,000,000 metric tons. "In comparison with the feverish year 1920 the year just closed shows a decrease of more than 200,000,000 tons," its report declared. The chief factors in the decrease were the British miners' strike, which lasted from April to June, and, more important, a worldwide industrial depression. Prices collapsed early in the year and the seaborne coal trade of the world fell off sharply. The consequent reduction in the volume of business offered to the shipping of the world has been an important element in the decline in ocean freight rates, so keenly felt by the American merchant marine. Of the major coal-producing nations, France and Germany were the only ones to show an increase. Progress in restoring the ruined mines of France is indicated by the steady increase in output of the past three years. In 1919 22,000,000 tons were produced; in 1920, 25,000,000; in 1921, approximately 29,000,000. A further increase of 12,000,000 tons, however, would be necessary to bring French production up to the level of 1913. The estimated German output of 120,000,000 tons of lignite is an increase of 33,000,000 tons over the last year before the war. "The proportion contributed by the United States was 40.9 per cent, a larger share than in the years before the European war, but the smallest in any years since 1916."

COAL STRIKES. See **STRIKES AND LOCKOUTS.**

COAN, TITUS MUNSON. Author, died, May 8. He was born in the Hawaiian Islands in 1836 and educated at Williams College and at the College of Physicians and Surgeons of Columbia University.

He was engaged in hospital duty during the Civil War and from 1863 to 1865 was assistant-surgeon in Admiral Farragut's squadron. He founded in 1880 the New York Bureau of Revision and was its director. Among his writings may be mentioned: *Ounces of Prevention* (1885); *The Natives of Hawaii* (1901); *Climate of Hawaii* (1901).

COAPMAN, EUGENE H. Railway manager, died, January 5. He was born, August 15, 1865; and began his career as a messenger boy and telegrapher operator. In 1886 he became a train dispatcher on the Chicago, Minneapolis, and St. Paul railway. He rose to the rank of superintendent of division in 1902, and then held the office of manager successively on several southern lines. After January, 1910, he was made general manager of the entire Southern Railway system, and later became Federal manager.

COASTLAND (German *Küstenland*). A part of the former kingdom of Austria, comprising the crownland of Istria Görz, Gradisca, and Trieste. Area, 3078 square miles; population in 1918, 893,797. Trieste is the largest city with a population before the war of 246,500 including the district. Other cities are Pola, a former Austrian naval base, with 59,300, and Görz (Gorizia) 32,600.

COATES, ALBERT. See **MUSIC, Orchestras.**

COATS, EDWARD HORNER. Former president of the Pennsylvania Academy of Fine Arts, died at Philadelphia, December 23. He was born at Philadelphia, Nov. 12, 1846, and graduated at Haverford College in 1864. He was director of important insurance and saving institutions and president of the Pennsylvania Academy of Fine Arts, 1890-1906.

COCHIN-CHINA. The most southerly division of the French colonial possessions of Indo-China (q. v.). Area, estimated at 20,000 square miles, which is divided into seventeen provinces. The total population in 1919 was placed at 3,452,248 of whom 6301 were Europeans, excluding the military. The capital is Saigon with a population of 64,496 including 4161 Europeans and 2200 troops. The largest city is Cholon with a population of about 190,085 of whom about 97,211 are Chinese. The chief product is rice, but rubber production has been developed of late. Other crops include: Corn, beans, and other vegetables, oranges, bananas, and other fruits, tobacco, coffee, sugar cane, betel nuts, etc. Live stock and fisheries are important resources. In 1919, 589 steamships of 895,592 tons entered the port of Saigon. Total exports in 1919 were 980,777,780 francs; imports, 84,202,744 francs. The colony is under a resident governor and a colonial council of eighteen members, and is represented in the French parliament by one deputy.

COE COLLEGE. An institution of the higher education at Cedar Rapids, Iowa; founded in 1881. The enrollment in the fall of 1921 was 767 of whom 416 were women, and the enrollment at the summer school was 306. In the fall of 1921 there were 56 members of the faculty to whom there were afterwards added 6. The productive funds amounted to \$1,200,000 and the income was \$198,500. The library contained 18,000 volumes. President, Harry Morehouse Gage, LL.D.

COFFIN, OWEN VINCENT. Former governor of Connecticut, died January 3. He was born at Unionvale, N. Y., June 20, 1836; and was a resident of Middletown, Conn., where he became

an officer in its chief financial institutions, and of which he was mayor, 1872-73. He was a member of the State Senate, 1887-1891, and governor, 1895-97. In politics he was a Republican.

COGSWELL, WILLIAM BROWN. Manufacturer, died, June 7. He was born at Oswego, N. Y., Sept. 22, 1834; studied at Rensselaer Polytechnic Institute; and was made assistant-superintendent of the Marietta and Cincinnati railway in 1856. During the Civil War he served in the navy.

From 1869 to 1873 he was engaged in building and operating the blast furnaces of iron works in Oneida County, N. Y. He afterwards established the well-known plant for the manufacture of soda products, the Solvay Process company, of which he became managing director and vice-president.

COINS, VALUE OF FOREIGN. The estimates of the value of foreign coins for the beginning of 1922 shown in the accompanying table were issued by the United States Director of the Mint.

Country	Legal standard	Monetary unit	Value in terms of U. S. money	Remarks
Argentina Republic.....	Gold	Peso	\$0.9648	Currency: Paper, normally convertible at 44 per cent of face value; now inconvertible.
Austria-Hungary.....	Gold	Krone	.2026

COIT, JUDSON BOARDMAN. College professor, died, July 26. He was born in Oswego County, N. Y., June 5, 1849, and graduated at Syracuse University in 1875, becoming in the same year professor of mathematics at Dickinson Seminary, Williamsport, Pa. He was afterwards engaged at the observatory at Ann Arbor and taught school at Cleveland. In 1882 he became assistant-professor in Boston University, where he was professor of mathematics and astronomy 1884-1915, and professor of astronomy after 1915.

COKE. According to the *Iron Age* the figures indicated a coke production in the United States during the year of less than 3,400,000 net tons, or less than one-third of the output of the previous year, and the ton value of 1921 production was less than one-third of that of the previous year, calculating on the average price for the whole year. The average price of spot or prompt Connellsville furnace coke for 1921, based on the weekly prices of the *Iron Age* was \$3.32 per net ton at ovens. The highest price of the year, which was made early in January, was \$5.50. The 1920 average price of this grade was \$11.32, while the peak price was \$19. The descent in foundry coke prices in 1921 was in like ratio, although the demand for this grade relatively was better than that for furnace fuel, because the foundries averaged a slightly better relative operation than did the blast furnaces. The average price for spot or prompt Connellsville foundry coke for 1921, was \$4.63 per net ton at ovens, which compared with \$13.10, the 1920 average, while the top price in 1921 was \$7, as compared with \$20 in 1920.

There were several wage reductions during the year which materially reduced the costs of the Connellsville mine and oven operators, but they did not avail much in producing profits because never during the year was there very full mine or coke oven operations. The wage scale in effect at the close of the year was that posted by the H. C. Frick Company, effective August 1. This schedule was the same as that of Nov. 10, 1917, of the same company. Independent operators for a time were paying a lower scale, but the threat of a

strike and possible unionization of the district resulted in their adoption of the Frick scale, which, as compared with those unionized coal mining districts, gave the Connellsville operators a decided advantage as to costs. It is because of this advantage that the results for 1921 were not worse than they were, since it permitted the naming of prices on coal with which operators of union mines could not compete, and Connellsville coal moved to a number of markets not usually reached.

The coke market in 1921 reversed its 1920 course. Instead of a demand well in excess of supply, which carried prices to the highest levels attained since coke production began on a commercial scale, there was always a sufficient supply and prices descended to the most reasonable bases in several years. Not a factor which contributed to the 1920 conditions remained in 1921. Steel companies operating their own by-product coke plants were not forced in 1921, as they were in the previous year, to depend on the beehive ovens, for a goodly part of their coke requirements, owing to the Fuel Commission regulations, which made it difficult to secure coal for their by-products plants; nor in the year 1921 did the steel companies have transportation difficulties to defeat their coke-producing efforts, and export demands were lacking as an excuse for pushing up the price of coal.

COLGATE UNIVERSITY. A non-sectarian university of higher learning at Hamilton, N. Y.; founded in 1819. The enrollment for the fall, 1921, was 678 of whom 55 were in the seminary. The faculty numbered 50, of whom were appointed in the course of the year: A professor of economics, and an associate professor of Romanic languages; assistant professors of Latin and public speaking; two instructors; an assistant in music; and a librarian. The productive funds were \$3,140,880. The library contained 95,441 volumes. The acting president after the resignation of Dr. Elmer Burritt Bryan, was Dr. Melbourne S. Reid.

COLLEGES, AGRICULTURAL. See AGRICULTURAL EDUCATION.

COLLOIDS IN MEDICINE. Most of the drugs in use in medical practice at the present day are in the form of exact chemical compounds in crystalline state, which naturally conduce to solution. The tendency to pass from the old composite tinctures and extracts of crude drugs to active alkaloidal principles readily soluble in water has generally been regarded as marking an advance in the evolution of medicine. The creation of new crystalline drugs by synthesis has been considered the next logical step. But for several years past a counter movement has been in evidence. Attention has been called to the fact that these crystalline active principles and synthetics are all symptomatic remedies—they relieve symptoms and influence functions in every conceivable way, but show no power over the disease process. Attention was also called to the fact that substances in the colloidal or insoluble, nondialyzable form exert functions of a nature entirely distinct. Thus every alkaloid and synthetic exerts a special activity depending on its chemical composition. Now in the case of matter in the colloidal form the composition of the substance means little, but the colloidal state of matter means everything. Two substances wholly different in composition and physiological activity may in the colloid form exert the same type of action. In crystalline substances the dose is of the greatest significance and the action varies with the size of dose. In the case of colloids the dose like the composition is of secondary importance. The actual amount of the substance involved in the drug action is usually very minute.

Moreover, colloids often exhibit a remarkable power over diseases themselves, whether by antagonizing the living causes or because they stimulate the fighting force of the organism. While at present we cannot control their use to anything like the degree shown for crystalline substances, we continually see cases in which there is a phenomenal action exerted on the disease process itself and not merely on the symptoms.

The use of colloids is not directed against any particular class of diseases. Most of the affections which ordinarily seem beyond the direct influence of drugs such as continued fevers on the one hand and the degenerative and malignant affections in late life have in special cases shown some tendency to respond to this plan of treatment.

The use of colloidal remedies was precipitated by the practice of giving active substances by intravenous injection. The blood itself is a colloidal fluid and substances in the colloidal state are less foreign to it. Inorganic colloids in the form of suspensions of metallic particles in a state of very fine subdivision, while they have no proper physiological activity, are capable of causing violent chills and fever which sometimes exerts a curative action. It was noted that these reactions were of the same nature as those which are produced by the injections of organized fluids containing albumin. For a term of years these reactions were looked on as specific for the substance injected, but of late years it has become increasingly apparent that the reactions were due merely to the colloidal state of the albuminous or protein substances injected. It then became possible to understand why diphtheria antitoxin could sometimes favorably influence conditions which were quite distinct in nature from diph-

theria. At present we do not know to just what extent some of these serums and vaccines act specifically, and to what extent they act as simple colloids.

In a recent article in the *British Medical Journal* (November, 19) by Auld the latter announces his belief that in suspensions of inorganic (metallic) colloids the albuminous substances used in making the suspensions are the actual cause of the reactions. He wishes to term colloidal therapy, as far as it depends on these violent reactions, pyrogenic treatment, because it induces fever. The latter is a *sine qua non* of the treatment. He does not allude to the treatment of severe acute infections in this paper but quotes some favorable results in hastening resolution in recent pleuritis, pneumonias, and swollen joints. The treatment cannot be used in routine because the public does not welcome intravenous medication unless this seems necessary. The dose must be regulated by the degree of reaction desired. One good reaction is expected to clear up the condition. If mild reactions seem advisable the injections will probably have to be repeated. The character of the substance used is quite immaterial and the author likes typhoid vaccine (it must be borne in mind that the conditions treated have nothing in common with typhoid fever) and also the protein substance known as caseose. In the present paper he lauds colloidal treatment of the great family of affections attributable to chilling and exposure which respond to the application of external heat. The artificial fever set up appears to act on the same principle but more thoroughly.

COLOMBIA. A South American republic situated in the northwestern part of the continent. Capital, Bogotá.

AREA AND POPULATION. Boundary disputes caused the estimates of area to vary. According to a recent estimate the area was 440,846 square miles. An estimate made after the boundary agreement with Ecuador placed the area at 435,000 square miles. The population according to the census of March 5, 1918, was 5,847,491 of whom about 160,436 were Indians. The males numbered 2,745,748 and the females, 2,941,307. The country is divided into fourteen departments, three intendencias, and six commissionerships. The capital, Bogotá, had a population, July 15, 1918, of 143,994. Other cities are Barranquilla, 66,107; Cartagena, 51,382; Medellín, 79,146; Cali, 45,524; Manizales, 39,643.

EDUCATION. The republic has 5453 institutions of public instruction, attended by 350,241 pupils, as follows: Primary schools, 5317, with 337,315 pupils; secondary schools, 73, with 7305 pupils; professional schools, 28, with 2784 pupils; industrial schools, 35, with 1606 pupils; normal schools, 27, with 1231 pupils. Each department has a normal school for young men and another for young women, except Santander, which has three. In the 13 schools for young men there are 454 students and in the 14 for young women, 777, with 21 teachers in each school. In 1921 there were 195 normal-school graduates, 85 upper-grade teachers, and 110 primary teachers. Two normal schools, one for young men and the other for young women, are being constructed on the Avenida de Chile in Bogotá. Secondary instruction is given in the following schools: Colegio Nacional de San Bartolomé, which has 700 pupils; Colegio Mayor de Nuestra Señora del

Rosario and the School of Commerce of Bogotá, as well as in the Schools of Philosophy and Belles Lettres of the Universities of Antioquia, Cartagena, Nariño, and Popayán; in the municipal schools of Boyacá, San Simón de Ibagué, and Sta. Librada de Neiva, and in various private institutions. The principal school for industrial instruction is the Central Technical Institute, in which, besides theoretical studies in different branches of literature and mathematics, practical work is given in mechanics, textiles, carpentry, electricity, drawing, sculpture, and ornamentation. At the capital are the School of Fine Arts, with 87 students and 11 professors; the National Conservatory, with 220 students; the School of Philosophy and Belles Lettres of the Colegio Mayor de Nuestra Señora del Rosario; the advanced School of Agriculture and Veterinary Science; the School of Medicine, with 500 students; the Engineering School, with more than 200

asset in facing the new adverse situation. During the first half of the present year it was apparent that the Colombian market had already been stocked sufficiently to meet the demands for two years. Goods purchased lavishly at the peak of the world's price level met a poor reception in a region where the chief source of income lay in warehouses or even in the fields. American exporters were finding that credits extended indiscriminately to unknown firms were being repudiated, and large and responsible concerns in Colombia were complaining that as a result they were being unfairly judged, and that foreign importers were selling to their customers and thus conducting trade in the most unproductive way. It was stated in the early summer that over 75 per cent of the merchants in Colombia were in danger of bankruptcy if pushed by banks.

FINANCE. The budget estimates ending Dec. 31, 1920, were as follows:

<i>Revenues</i>	<i>Gold Pesos</i>	<i>Expenditures</i>	<i>Gold Pesos</i>
Salt Tax.....	1,655,000	Ministry of Interior.....	7,818,049
Railways.....	600,000	Ministry of Foreign Affairs.....	477,671
Telegraphs.....	900,000	Ministry of Finance.....	1,765,412
Customs.....	12,000,000	Ministry of War.....	3,879,950
Consular Dues.....	12,000,000	Public Instruction.....	2,869,861
Stamps.....	900,000	National Debt Service.....	5,111,810
Succession Duties.....	300,000	Public Works.....	5,590,574
		Agriculture and Commerce.....	279,254
Total (including all revenues).....	23,845,250	Total.....	27,792,581

students; and the Law School, with 250 students.

PRODUCTION. Only a small part of the country is under cultivation. Coffee is the chief product but of late years cotton cultivation has increased in importance. Other products are wheat, tobacco, cocoa, sugar, vegetable ivory, dyewoods, various fruits, rubber, etc. The Panama hat industry is of importance and has latterly made great advance. Efforts to develop petroleum drilling have recently been made. Other mineral products are gold, copper, lead, mercury, cinnabar, manganese, emeralds, and platinum. The mineral resources are rich but have not been fully developed.

FOREIGN TRADE. The following information was supplied by the Bureau of Foreign and Domestic Commerce toward the close of the year: In 1920 Colombia's imports for the first time exceeded \$100,000,000, when the imports jumped from 48,487,764 Colombian dollars in 1919 to 101,397,905 Colombian dollars in 1920. The exports, on the other hand, dropped from 79,029,255 Colombian dollars in 1919 to 71,017,729 Colombian dollars in 1920. These figures can be explained by the condition of the coffee industry, the economic barometer of Colombia. In 1919 there was a good coffee crop, which was exported chiefly to the United States to the value of 54,291,638 Colombian dollars—nearly three times the largest amount ever received from coffee exports in a single year. The unprecedented income from this source greatly increased for the time being the buying power of the people, and during the first part of 1920 large orders were placed, regardless of the prevailing high prices. On the other hand, the coffee crop of 1920 met a dull market, and the people found that their previous prosperity had brought them only an increased standard of living, which proved a poor

For the year ending Feb. 28, 1921, the expenditures were given at 16,000,000 pesos, making, with the deficit of 6,000,000 pesos for the preceding year, a total of 22,000,000 pesos. The foreign debt, Jan. 1, 1921, was £3,887,109. The internal debt, March 1, 1920, was 2,848,260 gold pesos, consolidated, and 10,840,654 pesos, floating.

GOVERNMENT. Panama declared its independence on Dec. 4, 1893, and was constituted a separate republic. Its independence was recognized by the Colombian government in a treaty with the United States signed April 6, 1914, and in return the United States agreed to pay \$25,000,000 and to guarantee certain rights in the Panama Canal Zone. This treaty was ratified by the United States Senate on April 20, 1921. (See below.) The executive power is vested in a president elected by direct vote of the people for four years and not eligible for the next succeeding term; and legislative power in a Congress of two houses, namely the Senate of 34 members elected indirectly and the House of Representatives of 92 members elected by the people. President in 1921, Don Marco Fidel Suarez.

HISTORY. The treaty with the United States followed the same lines as that presented to the United States Senate in 1914 in the Wilson administration except that it omitted the expression of regret at anything that should have lessened the cordial relations between the two countries. It provided for the payment to the Colombian government of \$25,000,000, of which \$5,000,000 was to be paid in six months and the rest in four equal annual installments. It further provided that no duties or taxes other than those paid by American citizens should be imposed on Colombian citizens or on their goods or mail matter in the Canal Zone. It was ratified by the United States Senate by a vote of 69 to 19 on

April 21, and ratified by the Colombian Senate on October 13. On November 5 it was announced that opposition in the Chamber of the Deputies had arisen to its ratification. At this time a controversy between the administration of President Suarez and the Chamber of Deputies was going on in spite of the resignation of the Ministry, which had taken place, September 4, in the hope of putting an end to the difficulty.

COLORADO. POPULATION. According to the report of the census of 1920, there were 939,629 residents in the State, Jan. 1, 1920, as compared with 799,024 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	1,102,000	15,979,000	\$ 4,953,000
	1920	1,182,000	24,231,000	16,962,000
Oats.....	1921	217,000	6,727,000	2,220,000
	1920	204,000	6,426,000	3,856,000
Wheat.....	1921	1,719,000	23,239,000	17,662,000
	1920	1,405,000	25,273,000	34,118,000
Barley.....	1921	202,000	4,444,000	1,644,000
	1920	216,000	5,292,000	3,969,000
Rye.....	1921	92,000	1,058,000	635,000
	1920	100,000	1,180,000	1,239,000
Hay.....	1921	1,601,000	2,914,000	19,740,000
	1920	1,675,000	3,140,000	38,560,000
Beans.....	1921	38,000	342,000	923,000
	1920	52,000	416,000	1,310,000
Potatoes.....	1921	90,000	11,070,000	8,081,000
	1920	73,000	9,490,000	7,592,000
Gr. Sorghums..	1921	237,000	3,910,000	2,033,000
	1920	282,000	4,794,000	4,027,000

¹ Tons.

IRRIGATION AND DRAINAGE. The accompanying table presents the statistics of irrigation for the State of Colorado collected at the census of 1920. Statistics of acreage irrigated, of acreage, yield, and value of crops grown on irrigated land, and of cost of operation and maintenance relate to the year 1919; other items relate to the year 1920. Figures for the census of 1910 are given for purposes of comparison.

Item	Census of—		Increase ¹ Per cent
	1880	1910	
Number of all farms.....	59,934	46,170	29.8
Approximate land area of the state.....	acres 66,341,120	66,341,120	
All land in farms.....	acres 24,462,014	13,532,113	80.8
Improved land in farms.....	acres 7,744,757	4,302,101	80.0
Number of farms irrigated.....	28,756	25,857	11.2
Area irrigated.....	acres 3,348,385	2,792,032	19.9

Capital invested in these enterprises to Dec. 31, 1919.....	1,081,870	84.2
Additional capital required to complete these enterprises.....	203,195	15.8

¹ No timber or cut-over land reported.

Barstow mines. Gilpin and Clear Creek Counties both showed decreases in production. Development work in Hinsdale County promised results for 1922. Custer County silver mines continued operation. Eagle County shipped a large quantity of silver-iron ores, but all zinc ore mined was stored. The production of silver in both Boulder and Mineral Counties was not equal to that of 1920.

TRANSPORTATION. There are 37 railroad companies represented in Colorado, operating an aggregate of 5406.15 miles of main line track. Every county in the State except Baca County has some railroad mileage, though the railroad facilities of some other counties, particularly in the northwestern and southwestern parts of the State, are inadequate. The total value of railroad property in the State, as returned by the State tax commission for the year 1920, was \$161,677,790. A considerable part of the mileage of the Colorado Midland railroad was not being operated.

EDUCATION. The schools numbered approximately 3125 with 7675 teachers and a total enrollment of 229,508 pupils. Average salaries paid teachers have increased substantially in the past few years. The average salary paid high school teachers for the school year ending June 30, 1920, was \$122.43 per month, compared with \$106.45 in 1918. In 1920 the average salary in one-teacher schools was \$81.57, in two-teacher schools \$93.29, and \$96.22 in schools employing three or more teachers. The averages in the same classes of schools for 1918 were \$68.84, \$76.20, and \$80.92. By act of the Colorado legislature, February 21, the following oath of allegiance was prescribed for all teachers in the State:

"I solemnly swear or affirm that I will support the constitution of the State of Colorado and of the United States of America and the laws of the State of Colorado and of the United States, and will teach, by precept and example, respect for the flags of the United States and of the State of Colorado, reverence for law and order and undivided allegiance to the government of one country, the United States of America." Another act passed in the same legislative session required the teaching of the history of Colorado in the public schools.

CHARITIES AND CORRECTIONS. The State institutions are as follows: State Industrial School for Girls, Morrison; State Reformatory, Buena Vista; State Home for Dependent and Neglected Children, Denver; State Home and

Training School for Mental Defectives, Ridge and Grand Junction; State Industrial School for Boys, Golden; State Penitentiary, Canon City; State Hospital (for Insane), Pueblo; Soldiers' and Sailors' Home, Monte Vista; Industrial Workshop for the Blind, Denver.

LEGISLATION. The 23rd session of the General Assembly of the State of Colorado was held, January 5 to April 5. The following are a few of the more important measures passed: The Assembly decided to refer to the electors at the next general election an amendment to the constitution empowering the Assembly to prohibit by law the right and power of aliens ineligible to American citizenship to acquire, inherit, possess, enjoy, and dispose of property real and personal. The other constitutional amendments to be referred to the electors pertained to the terms of office and salary of county officers; the placing of certain educational institutions directly under the control of the State; the limitation of the tax rate on property for State purposes to a maximum of 4 mills; the conditions under which State loans might be contracted; and the term of office of State officials. The other measures included: Various amendments of existing laws in respect to corporations; definition of the powers and duties of the institutions under the State board of corrections and provisions in respect to the management of such institutions and the government and discipline of their inmates; an act regulating the practice of professional engineering and land surveying and creating a State board of examiners for these professions; various amendments of the game and fish laws and acts creating the game refuges of Denver Mountain Parks, Pikes Peak Game Preserve, Spanish Peaks Game Preserve, and the Colorado Antelope Refuge; various measures pertaining to the improvement of existing highway regulations; an inheritance tax measure imposing a tax on transfers of property by inheritance, the rates being as follows: Estates not over \$50,000 passing to wife, husband or lineal heirs, 2 per cent; between \$50,000 and \$100,000, 3 per cent; between \$100,000 and \$150,000, 4 per cent; \$150,000-\$250,000, 5 per cent; \$250,000-\$500,000, 6 per cent; over \$500,000, 7 per cent; the rates increasing with distance of kinship to 16 per cent on estates over \$500,000; various amendments of insurance legislation; measures amending and amplifying existing legislation on the subjects of irrigation, mining the National Guard, public

lands, etc.; and the act in respect to the oath of allegiance for teachers as noted above.

OFFICERS. Governor, Oliver H. Shoup; Lieutenant-Governor, Earl Cooley; Secretary of State, Carl S. Milliken; Treasurer, Arthur M. Stong; Attorney-General, Victor E. Keyes; Auditor, Harry E. Mulnix; Superintendent of Public Instruction, Katherine L. Craig.

JUDICIARY. Supreme Court: Chief Justice, Tully Scott; Associate Justices: James H. Teller, Martin S. Bailey, Geo. W. Allen, Haslett P. Burke, Greeley W. Whitford, John H. Denison.

COLORADO, UNIVERSITY OF. A co-educational state institution of the higher education at Boulder, Colo.; founded in 1876. The enrollment for the fall of 1921 was 2459 and the faculty numbered about 250. The library contained 132,459 volumes. The income was about \$750,000. The Macky Auditorium was completed and work on the new Liberal Arts building and the gymnasium was begun. President, George Norlin, Ph.D.

COLORED METHODISTS. See **METHODISTS, COLORED.**

COLT, SAMUEL POMEROY. Lawyer, died, August 13. He was born at Paterson, N. J., Jan. 10, 1852; studied at the Massachusetts Institute of Technology; and afterwards studied law at Columbia; and was admitted to the New York bar in 1876. He practiced his profession in Rhode Island, 1877-87, and founded there the Industrial Trust company of which he was president, 1887-1908, becoming after the latter date chairman of the board. He was president of the National India Rubber company, and of the United States Rubber company, and an officer or director in about forty other corporations. After serving on the governor's staff and as a member of the State legislature, he became assistant-attorney-general, 1879-81, and attorney-general, 1882-85, of Rhode Island.

COLUMBIA, UNIVERSITY OF. A non-sectarian institution of learning, whose principal buildings are at Morningside Heights, New York City. It consists of Columbia College (undergraduate men's college of Liberal Arts); the College of Physicians and Surgeons; the Schools of Mines, Engineering and Chemistry; the School of Architecture; the School of Journalism; the School of Business; the School of Dentistry; a non-professional Graduate Faculties of Political Science, Philosophy, and Pure Science; Barnard College (an undergraduate college for women); Teacher's College, including the faculties of Education and Practical Arts; and the New York College of Pharmacy. There is also a numerously attended summer school which begins immediately after July 4 and there is a thorough system of extension teaching.

The total number of students receiving instruction from the University down to November, 1921, including those in the summer session of that year was 26,006 (allowing for duplicates). There were registered for the regular session of 1921-22, 2633 undergraduates and 7160 graduate and professional students. In the summer session there were 11,809 students and in the university extension courses there were 6845. The attendance at the larger graduate courses and special schools was as follows: Teacher's College, 1781; Graduate Faculties, 1301; Business School, 376; Law, 643; Medicine, 366; Pharmacy, 583; Mines, Engineering, and Chemistry, 201; Journalism, 138.

The university's officers of instruction numbered 950; the total including other instructors in Teacher's College, the College of Pharmacy, the university extension courses, and the summer session, was 1593. The library contained 761,000 bound volumes.

The total gifts to the several corporations included in the University from 1890 down to the autumn of 1921 were \$42,259,284. In the year 1920-21 the University received \$1,485,643; Barnard, \$529,416; Teacher's College, \$175,231. One of the most important features of the year was the progress made in the development of the Medical School. An agreement was formed with the Presbyterian Hospital, February 7, which was to go into effect as soon as the University had raised a fund of not less than \$3,000,000 for the construction of the new buildings of the Medical School. Provision was made for the acquisition of this amount by May 12 and a lot at Washington Heights was donated for the joint use of the Medical School and the Presbyterian Hospital. Thus the project which had been outlined in 1903 was in a fair way to completion. Institutes of educational research, cancer research, and public health were established. The following deaths of members of the faculty occurred in 1921: Frederick R. Keller, instructor in electrical engineering, aged 35 yrs., March 17; Edward R. Smith, former reference librarian of the Avery Library, aged 67 yrs., March 21; Dr. Arthur P. Coll, instructor in laryngology and otology, aged 57 yrs., August 10; Dr. Austin W. Hollis, professor of clinical medicine, aged 52 yrs., November 6.

The stadium site, on which the University had an option until Dec. 31, 1921, was saved to the University by the \$700,000 gift of Mr. George F. Baker, Chairman of the Board of Directors of the First National Bank of the City of New York. Ground was broken for the new Faculty Club building, to be constructed on the corner of Morningside Drive and 117th Street at the extreme easterly edge of the University campus. Its cost was placed at approximately \$250,000, and its completion was expected in the course of the college year, 1921-22. President, Nicholas Murray Butler, Ph.D., L.D.

COMBES, JUSTIN LOUIS EMILE. Former Prime Minister of France, died at Pons, May 24. He was born at Roquecourbe, France, in 1833 and studied medicine and began practice as a country doctor in the town of Pons. He was drawn into political life through his interest in public hygiene and was elected, first, mayor of Pons (1875), then a member of the General Council of the department (1879), and finally senator in 1885, holding the latter office till 1914. He was a leader of the Radical Republican party and succeeded Waldeck-Rousseau as Prime Minister taking also the portfolio of the Interior. His ministry is notable for the rigorous enforcement of the law against the religious orders. A hater of clericalism and a deadly opponent of the Roman Catholic Church he carried out as Prime Minister the policy of separation of Church and State with a relentlessness that aroused the intense hostility of the conservative element.

COMMISSION MANAGER PLAN. See **MUNICIPAL GOVERNMENT.**

COMMUNITY MUSIC. See *Music, Community Music*.

COMMUNITY SERVICE. An organization, established in 1918 to continue in peace times the work of the War Camp Community Service. Its purpose is to meet the demand for the opportunity of self-expression which leisure-time movement affords, to provide a central organization for propaganda purposes, to give proper emphasis to the needs of boys and girls, men and women in their free hours, to provide and train workers, to devise new methods, to publish literature and to make available information on what is being done along this line throughout the country. It has found and trained community organizers who help local communities to organize and develop their programmes and to raise funds for their work. For its "continuation service," it maintains a staff of district representatives whose entire time is given to visiting cities undertaking Community Service programmes, advising and helping in every way possible to strengthen the work. Through its National Headquarters it studies methods and devises means of aiding recreational work throughout the country. It makes available through handbooks and other pamphlets and circulars a fund of information on community effort. Among these may be mentioned: *Community Recreation; Comrades in Play; Layout and Equipment of Playgrounds; Community Music; Rural and Small Community Recreation; Summer Camps—Municipal and Industrial; Games and Play for School Morale*. During the year, with the help of a special supervisor of colored work and with trained colored workers, it made a special effort to aid the colored people in organizing their own programmes. In coöperation with the Red Cross, American Legion, and other organisations, entertainment was provided for service men stationed at government hospitals. Its efforts were also directed toward uniting both native and foreign-born through participation in recreation, for the building up of a better citizenship. National Headquarters of the movement are 1 Madison Avenue, New York City. Joseph Lee is president, Raymond B. Foedick, vice-president, Myron T. Herrick, treasurer, and H. S. Braucher, secretary.

CONFERENCE ON THE LIMITATION OF ARMAMENTS. See *NAVAL PROGRESS*.

CONGO, BELGIAN. A colony of Central Africa belonging to Belgium, formerly the Congo Free State. Area and population estimates vary. The area is placed at from 909,654 to 913,127 square miles. The population estimates vary from 9,000,000 to 15,500,000. An official estimate has placed the number at about 11,000,000. The chief racial element is Bantu. The European population was estimated in January, 1920, at 6971 of whom 3588 were Belgians and the rest divided among English, Portuguese, Italians, Americans, Dutch, French, Greeks, and a smaller number each of Russians, Swedes, Swiss, Danish, Norwegians, Spaniards, and Luxemburgers. The leading cities are Boma, the capital, Matadi, Banana, Leopoldville, Stanley Pool, and Elisabethville.

PRODUCTION. The chief products are rubber,

palm nuts, and palm oil, copal, cocoa, ivory, coffee, rice, cotton, and tobacco; and stock-raising flourishes in the regions that are not infested by the tsetse fly. The chief minerals are gold, diamonds, and copper, which are worked, and coal, iron, tin, and manganese which have not been exploited. In 1919 gold mines employed about 8000 natives and the output was placed at 3356 kilos. The copper output in 1919 was 22,130 tons. The exports of diamonds in that year were 215,532 carats.

COMMERCE. Total imports in general trade in 1918 amounted to £2,014,301 and in special trade to £504,190; exports in general trade, £4,934,461, in special trade, £4,478,754. Palm nut exports in 1919 amounted to 34,350,030 kilos; rubber, 3,797,440 kilos; copper, 23,028,000 kilos.

FINANCE. The budget for the fiscal year 1921 showed a deficit of 84,085,834 francs. The ordinary expenses had increased by 14,573,651 francs, chiefly on account of the increased salaries, wages, and pensions and the high cost of materials and products. The budget was as follows:

	Ordinary services, France	Extra- ordinary services, France	Total, France
Expenditures.....	82,118,525	86,577,869	168,696,394
Receipts.....	67,510,635	17,099,925	84,610,560
Excess of expenditures.	14,607,890	69,477,944	84,085,834

COMMUNICATIONS. The Congo is navigable for nearly a hundred miles above its mouth, that is to Matadi, and government steamships ply on it. It becomes navigable again above Stanley Pool for about 1068 miles, that is as far as Stanley Falls. Its large tributaries are also navigable. The railway mileage, Jan. 1, 1920, was 1267, the longest lines being those from Matadi to Leopoldville; from Bukama to the frontier of Rhodesia; and from Kindu to Kongolo. The Congo railway system includes two sections of the Cape-to-Cairo railway. In 1919 the post offices numbered 49, and the telegraph lines had a mileage of 2065.

GOVERNMENT. The colony is under the minister for the colonies who is appointed by the king of the Belgians, and who acts with a colonial council of fifteen members. In the colony the king is represented by a governor-general aided by several vice-governor-generals. Governor-general in 1921, M. Maurics Lippens.

CONGO, FRENCH. See *FRENCH EQUATORIAL AFRICA*.

CONGO FREE STATE. See *CONGO, BELGIAN*.

CONGREGATIONALISM. In 1921 this denomination had 5924 churches in the United States and a total membership of 819,225, as compared with 5959 churches and membership of 808,266 in the previous year. There were 5665 ministers, of whom 2220 were without charges. Sunday school pupils numbered 743,632. There were 2691 young people's organizations with membership of 107,522, and 1472 men's and boys' organizations with enrollment of 94,336. These figures show marked increases over those of the previous year. Contributions toward benevolence in 1920 amounted to \$6,188,728 or an increase of \$2,431,742 over 1919. Home expenses for 1919 were \$12,195,872, while in 1920 they were reported as being \$15,044,684. Salaries paid in 1920 amounted to \$6,490,691, or an average of \$1600 per pastor. Property of the

denomination was valued at \$112,020,676; invested funds were \$12,158,991, and debts, \$4,080,443. The national missionary societies of the denomination number eleven, as follows: American Board of Commissioners for Foreign Missions, the American Missionary Association, the Congregational Home Missionary Society, the Congregational Church Building Society, the Congregational Sunday School Extension Society, the Congregational Education Society, the Congregational Publishing Society, the Congregational Board of Ministerial Relief, the Annuity Fund for Congregational Ministers, the Woman's Boards of Missions, which has headquarters at Boston, Chicago, and San Francisco, and the Congregational Woman's Home Missionary Federation.

In 1920 the American Board of Commissioners had 19 missions in 9 great areas. Foreign workers numbered 724 and native workers 4832 in the 1244 schools of all types maintained; there were 58,620 pupils. Receipts of the board were the greatest in its history, and totaled \$1,650,000. Mission work was conducted under great hardship in Turkey. The progress made, particularly in India and China, was gratifying. The American Missionary Association carries on work similar to the American Board of Commissioners among the Negroes, Hawaiian Islands, Indians, Porto Ricans, and Asiatics and Latin Americans in America. It provides opportunity for normal, theological, college, academic, and grade teaching training at 6 chartered institutions, 6 theological seminaries, 6 colleges, and 26 secondary and elementary institutions. The pupils in 1920 numbered 11,317. It maintained 224 churches with membership of 15,736. Receipts for the year 1920 amounted to \$698,819.70. Work of the Home Missionary Society was carried on in 28 States by 1437 missionaries. They cared for 1846 churches, 19 of which were added in 1920. Services were conducted in 22 foreign languages by 300 of this total. Receipts for the year amounted to \$756,552.06. The Church Building Society reported receipts of \$501,144.81 in 1920, of which church grants and loans were made amounting to \$506,527. The Board of Ministerial Relief paid in grants \$105,265.68 to needy ministers and families of deceased ministers. Its receipts during the year were \$139,359.26. The three regional Woman's Boards of Missions employed a total of 244 missionaries and numerous native workers. Its educational work includes normal and kindergarten training and medical work. It supports numerous colleges, boarding and elementary schools and hospitals. Receipts in 1920 were \$518,553.

Through its National Council, the denomination assists in maintaining 12 theological seminaries, chief of which is the Hartford (Conn.) Theological Seminary; there are also 40 colleges which it assists. The Pilgrim Memorial Fund inaugurated in 1917 as a feature of the celebration of the Tercentenary of the landing of the Pilgrims, reported receipts in 1920 of \$28,775.85. The administration of the church is exercised by the National Council with headquarters at 289 Fourth Avenue, New York. Officers in 1921 were Rev. Henry C. King, moderator; Rev. Robert A. Hume, and Rev. William N. DeBerry, assistant moderators; Rev. Edward D. Eaton, secretary; and Frank F. Moore, treasurer.

International statistics show in Great Britain,

including Wales, Scotland, Ireland, and the Channel Islands, there were 4984 churches and 493,868 members in 1919; in Australia complete, 958 churches and 41,560 members; in Canada, 164 churches, and 13,210 members; in China, 4 churches and 676 members; in India, 5 churches, and 7494 members; in South Africa, 292 churches and 20,972 members; and in Japan, 157 churches, with 24,060 members.

CONGREGATIONAL METHODISTS. A group of ministers of the Methodist Episcopal Church, South, who had considerable objection to certain features of the episcopacy and itineracy of that church, founded this denomination in 1852 in Georgia. It was their purpose to obtain a more democratic form of church government. The doctrine of Methodism was adhered to strictly at its first conference. It was, however, modified by a certain degree of connectionalism. The movement extended in a few years to the neighboring States of Alabama, Florida, and Mississippi and, at the present time, churches are to be found in most of the southern States and some of the northern States. In 1887 nearly one-third of its churches joined the Congregationalists and apparently through disorganization the denomination has suffered heavy losses within the past decade. After 1906 it lost about 25 per cent of its members. Its missionary work has been confined to India, and many of the churches in this country have been aided financially. The latest statistics are of 1919; they show 198 churches with 220 ministers and 10,969 church members and probationers. Sunday schools numbered 182, with 1146 officers and teachers, and 8785 pupils. The *Messenger* is the only publication of the denominations, issued semi-monthly at Ellisville, Miss.

CONGRESS. See UNITED STATES, and LABOR LEGISLATION.

CONNECTICUT. POPULATION. According to the report of the census of 1920, there were 1,380,631 residents in the State, Jan. 1, 1920, as compared with 1,114,756 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	74,000	3,848,000	\$ 3,463,000
	1920	74,000	2,960,000	4,144,000
Oats.....	1921	11,000	330,000	198,000
	1920	11,000	330,000	248,000
Rye.....	1921	5,000	95,000	142,000
	1920	5,000	90,000	157,000
Tobacco.....	1921	31,000	45,074,000	18,480,000
	1920	30,000	44,400,000	15,540,000
Hay.....	1921	329,000	426,000	10,986,000
	1920	329,000	393,000	11,700,000
Potatoes.....	1921	23,000	2,369,000	3,554,000
	1920	24,000	2,760,000	4,140,000

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Connecticut showed a consistent increase at the census of 1919, as compared with that for 1914. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Value added by manufacture, 175.6 per cent; wages, 158 per cent; value of products, 155.7 per cent; salaries, 145.4 per cent;

cost of materials, 138.1 per cent; capital, 116.7 per cent; number of salaried employees, 67.3 per cent; primary horse-power, 41.8 per cent; number of wage earners, 29.6 per cent; proprietors and firm members, 25.6 per cent; and number of establishments, 18.9 per cent. The capital invested, as reported in 1919, showed a gain of \$723,706,000, or 116.7 per cent, over that in 1914. The average capital per establishment was approximately \$276,000 in 1919 and \$151,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$398,331,000, or 138.1 per cent. The average cost of materials per establishment in 1919 was approximately \$141,000, and in 1914 \$70,000. The value of products in 1919 showed an increase over that in 1914 of \$849,521,000, or 155.7 per cent. The average per establishment in 1919 was approximately \$286,000 and in 1914 \$133,000. The value added by manufacture in 1919 showed an increase over that in 1914 of \$451,190,000, or 175.6 per cent. The value added by manufacture in 1919 formed 50.8 per cent of the total value of products and in 1914, 47.1 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 16,908, or 67.3 per cent, while the average number of wage earners increased 66,938, or 29.6 per cent. A comparative summary for the State for 1914 and 1919 follows:

	Census—		Per cent of increase, 1914-19
	1919	1914	
Number of establishments.....	4,878	4,104	18.9
Persons engaged in manufactures.....	339,144	254,499	33.3
Proprietors and firm members.....	3,922	3,123	25.6
Salaried employees.....	42,020	25,112	67.3
Wage earners (average number).....	293,202	226,264	29.6
Primary horsepower.....	643,732	453,812	41.8
Capital.....	\$1,343,900,000	\$620,194,000	116.7
Services.....	410,188,000	160,731,000	155.2
Salaries.....	87,139,000	35,511,000	145.4
Wages.....	323,049,000	125,220,000	158.0
Materials.....	686,842,000	288,511,000	138.1
Value of products.....	1,394,993,000	545,482,000	155.7
Value added by manufacture (value of products less cost of materials).....	708,151,000	256,961,000	175.6

TRANSPORTATION. The mileage of steam railways remained unchanged in 1921, but there was a loss of 60 miles in the matter of the electric railways because of the abandonment of service on the Shore Line Electric Railway on that part of its line extending from New Haven to Chester. Late in 1921 the New York, New Haven & Hartford Railroad Co., began a trial of gasoline-driven, flanged-wheeled buses on one or more of its branch lines. The construction of trunk line highways continued through the year, the most noteworthy work being the completion of a military highway between Hartford and New London. This was completed on Dec. 1, 1921, and shortens the distance between the two cities for motor traffic by 44 miles.

FINANCE. The net debt of the State on June 30, 1921, was \$4,627,742.52 and its receipts for the fiscal year ending on that date amounted to \$15,090,167.85.

EDUCATION. According to the school census for 1920 there were in that year 345,382 children between the ages of 4 and 16 years. Figures for 1921 were not available on Jan. 1, 1922, though partial reports showed a growth in the smaller towns and a considerable decrease in the cities.

POLITICS AND GOVERNMENT. In the legislature of 1921 there were 32 Republicans and 3 Democrats in the Senate and, in the House, 248 Republicans, 13 Democrats, and 1 Independent. The Congressional delegation is solidly Republican, the senators being Frank B. Brandegee of New London and George P. McLean of Simsbury; the members of the House are, taking the districts in their numerical order, E. Hart Fenn of Wethersfield; Richard P. Freeman of New London; John Q. Tilson of New Haven; Schuyler Merritt of Stamford, and James P. Glynn of Winsted.

OFFICERS. Governor, Everett J. Lake; Lieutenant-Governor, Charles A. Templeton; Secretary of State, Donald J. Warner; Treasurer, G. Harold Gilpatrick; Comptroller, Harvey P. Bissell, Attorney-General, Frank E. Healy.

JUDICIARY. Supreme Court: Chief Justice, George W. Wheeler; associated justices, John K. Beach, Edwin B. Gager, Howard J. Curtis, Lucien F. Burpee.

CONNOLLY, MAURICE. Former Congressman from Iowa. He was born at Dubuque, Iowa, in 1877; graduated at Cornell in 1897; and studied afterwards in England and Germany. After 1904 he was vice-president of the Dubuque Fire and Marine Insurance company. In 1913-15 he was a member of the Sixty-third Congress. He was a delegate to the Democratic National Convention

at St. Louis, 1916, serving on the resolutions committee.

CONSTRUCTION COST INDEX. See MUNICIPAL GOVERNMENT.

CONVERSE, EDMUND COGSWELL. See NE-CROLOGY.

CO-OPERATION IN UNITED STATES. The following information as to the general movement in the United States was supplied by Mr. H. Rattaport of the Coöperative League of America: Four tendencies were at work in the development of Coöperation during 1921. (1) The local societies continued to federate into larger groups for purposes of educational work. District Leagues were formed in eight or nine States, and many more societies joined the Coöperative League of America, the national coöperative federation, which in 1921 now had a membership of 350 societies. (2) At the same time the policy of coöperative centralization came to grief. All but one of the coöperatives which were organized on the chain-store plan went out of business with heavy losses. The coöperatives abandoned the centralized chain-store idea, and looked to the strong independent local society as the basis for

the development of the movement in this country. (3) Half a dozen large spurious societies calling themselves cooperative, though in fact nothing but stock-selling schemes, became bankrupt, with losses of at least fifteen million dollars. This was partly the result of the educational work carried on by cooperatives, which has brought about a better understanding of the movement. (4) The labor movement drifted steadily towards coöperation. The Illinois miners during November and December supplied their striking fellow-workers in Kansas with \$200,000 worth of foodstuffs, through the Central States Coöperative Wholesale Society of East St. Louis, Ill. The dairy workers of Minneapolis and St. Paul helped to organize a consumers coöperative creamery in which the consuming public furnished most of the capital. This creamery did a business at the rate of \$1,200,000 a year. During the milk strike in Cleveland, in November and December, the dairy workers followed the example of the Minneapolis workers, and organized a similar coöperative.

Workers Colleges conducted by trades unions in nine of the principal cities were giving courses on coöperation. In spite of the general business depression, the coöperatives more than held their own. The membership and the amount of business done continued to grow.

STATE LEGISLATION. In Arizona an act was passed providing for coöperative marketing, organizations with or without capital stock, and for their regulation, and providing special remedies for breach of growers' contracts and penalties for false statements regarding such associations. In Arkansas an act was passed for the formation and carrying out of coöperative associations. Georgia passed a measure to promote intelligent marketing of agricultural products. In Idaho a coöperative marketing act was passed providing for the organization, management, and coöperation of agricultural non-profit coöperative associations, regulating market contracts, fixing

marketing of farm products. Texas provided for the organization of purely coöperative marketing associations. In Wisconsin the law regulating coöperative associations was amended and the organization of foreign coöperatives in the State was regulated. See **INTERNATIONAL COÖPERATION.**

COPPER. The smelter production of copper in 1921 from ore mined in the United States, as shown by the actual production for the first eleven months and by estimates made by smelting companies for December, was about 461,000,000 pounds, according to the United States Geological Survey. The refinery production as similarly shown was about 601,000,000 pounds from domestic material and about 320,000,000 pounds from foreign material. According to the records of the Department of Commerce the total imports of copper for the first eleven months of the year in ore, concentrates, matte, blister, and refined copper were about 318,000,000 pounds, of which about 68,000,000 pounds were refined copper and 157,000,000 pounds were blister copper. The exports for the first eleven months totaled about 587,000,000 pounds, of which about 538,000,000 pounds were new refined copper and 29,000,000 pounds were manufactured—wire, rods, pipes, tubes, sheets, etc. The total new supply of primary refined copper for the year was about 989,000,000 pounds, which includes refined copper produced from foreign and domestic material as well as imported refined copper. The stocks of refined copper in the hands of domestic refineries on Dec. 31, 1921, excluding those in transit, as estimated by the refining companies, were about 496,000,000 pounds. The stocks of blister copper on Dec. 31, 1921, including material in process, in the hands of smelters, in transit to refineries, and at refineries were estimated by refining and smelting companies at about 297,000,000 pounds.

The quantity of primary refined copper withdrawn on domestic account during the year was about 572,000,000 pounds, calculated as follows:

	1920	1921
Refinery production from domestic sources.....	1,182,000,000	601,000,000
Refinery production from foreign sources.....	344,000,000	320,000,000
Imports of refined copper.....	109,000,000	75,000,000
Stocks of new refined copper January 1.....	631,000,000	659,000,000
Total available supply.....	2,266,000,000	1,655,000,000
Exports (exclusive of manufactured copper).....	553,000,000	587,000,000
Stocks on hand December 31.....	659,000,000	496,000,000
	1,212,000,000	1,083,000,000
Total withdrawn on domestic account.....	1,054,000,000	572,000,000

license fees, etc. Iowa authorized the collective production and marketing of produce by coöperative associations. In Minnesota certain powers and duties were imposed upon the commissioner of agriculture in regard to assisting and advising coöperative associations organized under the law of the State, engaged in buying, selling, and marketing farm products, etc. In Missouri an act authorized and provided for the incorporation of commodity associations to be owned, operated, and managed by stockholders and members engaged in growing or producing agricultural commodities. Nebraska provided for the organization and incorporation of coöperative companies and associations. In North Carolina an act was passed to encourage the coöperative

The domestic imports and exports of primary refined copper in December, 1921, were assumed to be equivalent to the average monthly imports for the first eleven months. Disregarding the imports and exports for December the quantity of primary copper withdrawn on domestic account would amount to about 614,000,000 pounds. The tables on page 171 issued by the Geological Survey give statistics of recent years:

In 1921 the productive capacity of the copper mines of the United States was estimated at about 2,000,000,000 lbs. per annum, while the capacity of the refineries was approximately 2,500,000,000, the excess capacity being designed to handle copper from foreign mines. The maximum consumption of the United States would be in the

1919	1,805,300,000	574,000,000	1,286,000,000	429,000,000	516,000,000	914,000,000	.186	(*)
1920	1,634,900,000	(*)	1,209,000,000	486,000,000	623,000,000	1,054,000,000	.184	(*)

* Figures not available.

neighborhood of 1,400,000,000 lbs., so the surplus production must be absorbed by exportation. Considering the actual figures for 1921 it will appear that domestic smelters produced 461,000,000 tons, refineries, 601,000,000 tons from domestic and 320,000,000 tons from foreign ores, or a total of 921,000,000 tons of new copper; and there was exported approximately 650,000,000 tons.

A very natural division of the copper production of the United States would be into three epochs, namely, before the war, during the war, i. e., from 1914 to the end of 1918, and the postwar period. For the three years 1911-13 the mine production of copper was as follows:

Pounds	
1911..... 1,083,856,371	Average, 1,183,787,571 lbs.
1912..... 1,241,770,508	
1913..... 1,225,735,834	

During the war, worked to the utmost of capacity, the production was as follows:

Pounds	
1915..... 1,423,698,160	Average, 1,806,732,815 lbs.
1916..... 1,942,776,309	
1917..... 1,922,555,903	
1918..... 1,937,900,887	

Subsequent to the war, the production is given below, but in 1921 came the turn and for the last nine months of the year, production was discontinued by all but a few mines in the United States-

Pounds	
1919..... 1,209,614,818	Average, 985,152,163 lbs.
1920..... 1,270,841,670	
1921(approximately) 475,000,000	

In addition to mine production imports of copper into the United States, mainly in ore, matte, and crude metal, averaged about 400,000,000 lbs. per annum prior to the war. Since the war the importation has been as follows: 1919, 429,387,594 lbs.; 1920, 485,670,691 lbs.; 1921 (approximately), 347,500,000 lbs.

The production of American mines, plus imports, gives substantially the total supply. The disposition of this is shown by deliveries of copper, foreign and domestic, which during the four years previous to 1915 and the three years subsequent to 1918 is given below, these statistics along with others being from the annual review in the *Engineering and Mining Journal* (New York):

DELIVERIES OF FOREIGN AND DOMESTIC COPPER.

Year	Foreign, pounds	Domestic, pounds	Total, pounds
1911.....	778,902,233	726,700,981	1,505,603,214

The range of prices, monthly averages, and the averages for the years are given on page 172.

PRICE RANGE AND AVERAGE COPPER PRICE	PRICE		
	High, cents	Low, cents	Average cents
1911.....	13.552	11.989	12.376
1912.....	17.508	14.084	16.341
1913.....	16.488	14.192	15.269
1914.....	14.491	11.739	13.602
1919.....	22.319	14.856	18.691
1920.....	18.918	13.188	17.456
1921.....	13.555	11.634	12.502

In the early months of 1921 an increased surplus of copper was piled up which with the growing depression and the high costs of production led many of the big mines to suspend production entirely in March and April and others to operate, at half time. In short there was slack demand low selling price, and high operating costs so that a shut down was inevitable. Furthermore, there was a diminished export demand, not only on account of similar or worse depression in Europe but on account of the secondary copper that was being reclaimed from European battlefields and munition stores. The American companies resolutely forced the situation by shutting down mines and smelters and refineries and suspending dividends. At the end of the year conditions within the industry were good for the change whenever it might occur. In South America and Africa there were important developments under way which are discussed along with other practice under METALLURGY, section *Copper*.

The remainder, namely, 247, consisted of language books registered for ad interim copyright. The chief classes in their order of numerical importance of the remaining registrations were: Periodicals; musical compositions; prints and pictorial illustrations; dramatic or dramatico-musical compositions; photographs; works of art, models; or designs; maps; motion picture photoplays; drawings or plastic works of a scientific or technical character; motion pictures not photoplays; lectures, sermons, and addresses. The renewals numbered 2206 as compared with 2112 the year before. The fees paid during the year amounted to \$134,516. The total number of articles deposited during the period from July 1, 1897, to June 30, 1921, was 44,661,213.

The act of Dec. 18, 1919, became effective March 3, 1921. Under its terms works published abroad in the English language may be deposited in the copyright office for registration within 60 days after first publication to secure an ad interim copyright in the United States for four days from the date of receipt of the deposited copy and registration as provided by the act. On June 4, 1921, the act passed by the Canadian Parliament was approved, amending and consolidating the law relating to copyright. According to the Register's report its provisions would seriously embarrass publishers of books and periodicals in the United States and it was therefore recommended that steps be taken to secure more satisfactory

PRODUCTION, STOCKS, IMPORTS, EXPORTS, AND CONSUMPTION OF COPPER, 1919-21
Engineering and Mining Journal (New York)

	1919	In Pounds 1920	1921

New York quotations, cents per lb. London, pounds sterling per long ton.

COPYRIGHT. Registrations for the fiscal year 1920-21 according to the report of the Register of Copyrights were 135,280 as compared with 126,562 for the year before. Of these, 41,245 were classed as books but included pamphlets, leaflets, and contributions to periodicals. Of this number 39,864 were printed in the United States and 1134 printed abroad in a foreign language.

copyright relations between the two countries. The chief difficulty there has been the obligation to print in the United States books and periodicals and to manufacture here lithographs and photo-engravings. The first step toward improvement of the situation was the removal of this requirement. Measures were under consideration in the course of the year for submission to Congress.

A joint resolution was presented in Congress, February 24 providing that certain motion picture films and phonograph records registered under the copyright laws be sent to the Director of the National Museum for preservation. A bill for the protection of government documents was introduced April 13, 1921. A bill to amend section I (e) of the copyright law of 1909 was introduced June 21 and referred to the Committee of Patents. This added to the section a further provision to the effect that copyright control should not extend to public performances for profit of musical compositions where such performances were made from printed or written sheets or reproducing devices issued under the authority of the copyright owner. The bill to consolidate, codify, revise, and reenact the general and permanent laws had been introduced Sept. 20, 1919, and was under consideration from time to time after that date. It passed the

House, Dec. 20, 1920, and was presented to the Senate, Dec. 23, 1920. It was reintroduced in the House, April 11, 1921, and passed May 16. It was then presented to the Senate where it was referred to the Committees on the Revision of the Laws, June 27.

CORDITE. See **CHEMISTRY, INDUSTRIAL.**

CORN. As in previous years since the outbreak of the European war, data on the world's corn production in 1921 continued to be incomplete. The International Institute of Agriculture, Rome, published provisional estimates indicating for 12 countries in the northern hemisphere a small increase in acreage over the 5-year period 1915-19, and an increase of nearly 4 per cent over the preceding year. The production reported for these countries, 3,297,860,000 bu., was slightly under their aggregate yield in 1920, but 12.6 per cent above the average for the 5 years 1915-19. Since Russia, which prior to the war produced annually from 90 to 95 million bushels, was not included in the estimates and also since by far the larger proportion of the world's crop is produced in the United States and Argentina, this increase above the 5-year period was not due, to any great extent, to recovery from war conditions.

The world's production normally amounts to about 4,000,000,000 bu., and an approximate estimate by the above-mentioned authority placed the production in 1921 at 4,097,000,000 bu. The production of various countries was estimated as follows: Italy 94,483,000 bu., Bulgaria 34,386,000 bu., Spain 28,048,000 bu., Hungary within present limits 27,140,000 bu., and the Philippines 18,108,000 bu.

According to estimates by the Department of Agriculture, the United States in 1921 produced 3,081,251,000 bu. on an area of 103,850,000 acres, or a decrease in yield of 149,281,000 bu. and an increase in area of 2,151,000 acres, as compared with the results in 1920. The average yield per acre was 29.7 bu. while in 1920 it was 31.8 and in 1919 29 bu. The average farm value on December 1 of these three years was 42.4, 67.1 and 134.4 cts. per bu. respectively. Based on these prices the total value of crop in 1921 was \$1,305,624,000 in 1920 \$2,168,768,000, and in 1919 \$3,786,516,000. As the corn crop is one of the main sources of revenue of the American farmer, the rapid and extensive decline in price since 1918 and 1919 caused much financial embarrassment. The relative position in corn culture of the different States does not change much from one year to another. In 1920 Iowa ranked first with an area of 10,300,000 acres and a production of 473,000,000 bu., and Illinois second with 8,652,000 acres and 294,168,000 bu. Nebraska ranked third in production, Missouri fourth, Indiana fifth, Texas sixth, and Ohio seventh.

For the five years 1909-13 the average annual per capita consumption of corn, including corn meal, in the United States was 28 $\frac{1}{4}$ bu., leading all countries, Austria-Hungary ranking next, with only 4 $\frac{1}{2}$ bu. In corn exports Argentina for several years has ranked first and in 1921 that country had an exportable surplus of 156,600,000 bu. The United States, during the first 7 months of 1921 exported 72,722,000 bu., the largest volume of exports since 1906, as compared with 17,761,000 bu. for the entire calendar year of 1920. Owing to a short crop through drought last year Mexico, which ordinarily grows more than enough

for its own requirements, was a buyer of corn in the United States. The principal corn-importing countries, given in the decreasing order of average imports for the 5 years 1909-13, were the United Kingdom, Germany, the Netherlands, Belgium, and France. An average of 80 to 85 per cent of the annual production of the United States is of merchantable quality.

The disease known as corn root rots continued to receive attention by the Department of Agriculture and the agricultural experiment stations and the application of measures for its control was urged. It was estimated that in 1919 the production was decreased by over 125,000,000 bu. as the result of root rots, and it was pointed out that the only known method of control was the use of seed free from the disease. To assure the use of perfect seed it was advised that each seed ear be subjected to a germination test and that only those ears of which the tested kernels produce vigorous sprouts and healthy seedlings be retained for planting. It was reported that a corn-canning plant in Michigan installed a germinator for testing seed corn for the farmers supplying the canning material, in order to reduce the losses due to the use of diseased sweet corn seed.

The European corn borer appeared during the year in northern Ohio and it was believed that the infestation came from Canada where it has spread to a considerable extent in the Province of Ontario. The quarantine against this pest was extended November 15, and as revised covered the areas of infestation in Massachusetts and New Hampshire, in eastern and western New York, in Erie Co., Pennsylvania, a strip along Lake Erie in northern Ohio, and three townships bordering on this lake in Monroe Co., Michigan.

In view of the low price of corn and the high price of coal the advisability of using corn for fuel on farms in the principal corn-growing States of the Middle West was widely discussed during the fall of 1921. It was pointed out that ear corn at 20 cts. per bushel was equal in fuel value to a ton of a fair grade of soft coal at about \$10 per ton, and corn at 28 cts. per bushel to coal at \$14 per ton. In one county in Iowa the officials were authorized to purchase corn for heating the courthouse and other county buildings. In Argentina corn is sometimes used as fuel on farms and even in power plants.

CORN DISEASES. See **BOTANY.**

CORNELL UNIVERSITY. A non-sectarian co-educational State institution of higher learning at Ithaca, N. Y.; founded in 1865. For the fall session of 1921 the enrollment was 5242 and for the summer session, 2739. There were 757 members of the faculty. The productive funds amounted to \$19,261,011 and the income was \$4,421,385. There were 655,000 volumes in the library. Connected with the university is the Medical College in New York City which had 217 students in 1921. A new laboratory of chemistry was begun, the estimated cost being \$1,500,000, the gift of George F. Baker of New York, and a new building for the department of dairy industry of the New York State College of Agriculture was begun, for which the State appropriated about \$400,000. President (inaugurated Oct. 20, 1921), Livingston Farrand.

CORTEJARENA, JOSÉ E. See **NECROLOGY.**

CORY, CHARLES BARNEY. Ornithologist, died, July 29. He was born at Boston, Mass., Jan. 31,

1857; educated at the Lawrence Scientific School, Harvard. He was associated with the Boston Society of Natural History until 1905, and from 1906, was professor and honorary curator in the Department of Zoology in the Field of Natural History, Chicago. He was an officer or member of many of the leading learned societies within his field of interest, in the United States and abroad. Besides numerous scientific papers and volumes on the subject of hypnotism and mesmerism, he wrote many volumes describing birds over a wide area of the western continent, including among others the following: *Birds of the Bahama Islands* (1880); *The Beautiful and Curious Birds of the World* (1880); *Southern Rambles: Florida* (1881); *Montezuma's Castle* (1899); *The Birds of Illinois and Wisconsin* (1909); *Mammals of Illinois and Wisconsin* (1912); *Description of Twenty-eight New Species and Subspecies of Neotropical Birds* (1913).

COST INDEX. See MUNICIPAL GOVERNMENT.

COSTA RICA. A Central American republic, lying between Nicaragua and Panama, with the Caribbean sea on the east and the Pacific ocean on the west and south. Capital, San Jose.

AREA AND POPULATION. Estimates of area vary, the closest figure apparently being 18,691 square miles. Another estimate places it at 23,000 square miles. The population, Jan. 1, 1919, was 459,423 of which the greater part were in the two provinces of San Jose and Alajuela. The country is divided into seven provinces. The population of the largest cities, according to the latest available figures, were as follows: San Jose, 38,016 or including suburbs, 51,858; Cartago, 14,398; Heredia, 9328; Alajuela, 9177; Punta Arenas, 5283. Most of the people of European descent live at or near the capital and in the towns above mentioned. There is a considerable element of colored British West Indians, numbering about 18,000, who for the most part are engaged in banana culture.

PRODUCTION. The chief occupation is agriculture, and the principal products are coffee, bananas, and forest products. The coffee production in 1920-21 was estimated at 24,000,000 pounds. The chief mineral industry is that of gold and silver mining on the Pacific slope.

COMMERCE. The following information in respect to 1920 foreign trade was supplied by the United States Bureau of Foreign and Domestic Commerce.

As in most Central American countries the commercial situation in Costa Rica can be gauged by the condition of the coffee trade. The 1920 crop amounted to 30,430,700 pounds, which was only slightly smaller than the 1919 crop, but the dull market greatly reduced the export figure. The exports from Costa Rica, about two-thirds of which were destined for the United States, increased steadily (except for the slight slump of 1915) from 22,197,000 colones in 1913 to 38,170,000 in 1919. In 1920 they dropped from the high value of 1919 to 31,119,000 colones, which, however, was nearly 7,000,000 colones greater than the previous high record. The record figure in 1919 was caused principally by the coffee boom of that year, the exports from Costa Rica of this commodity amounting to 25,104,000 colones. Carao also jumped in 1920 to more than twice its previous high export value, with exports amounting to 1,158,000 colones. Bananas, exported in 1920 to the amount of 7,271,000, did not reach the

level of 1914 or 1916, when the exports were valued at more than 10,000,000 colones.

In Costa Rica's foreign trade from 1910 to 1920 the excess of exports over imports has ranged from 2,000,000 to 22,000,000 colones; in 1920 the imports were nearly 8,000,000 colones in excess of the exports. Since a decree was issued in November, 1914, prohibiting the export of gold and silver, except as a product of the mines, this unfavorable balance of trade had an adverse effect upon exchange. The colon, worth \$0.46536, U. S. currency, at par, fell until in July, 1921, it was worth \$0.214. In June, 1921, the removal of this restriction on the exportation of gold and silver was published. Exchange is now recovering slightly and, if the promised strengthening in the price of coffee takes place, it is likely to further improve.

FINANCE. Receipts in 1920 were 17,844,186 colones; expenditures, 18,679,159 colones, both receipts and expenditures having exceeded the budget estimates. The country went on a gold basis April 2, 1921, with the repeal of the moratorium against the redemption in gold of notes issued by the banks under provision of 1920 which permitted such issues up to 50 per cent of their paid up capital. The public debt in 1920 was 69,291,796 colones of which the external debt amounted to 30,366,966. The following information in regard to the budget for 1921 was supplied by the *Pan American Union*: Legislative power, 200,000 colones; judicial power, 537,480 colones; department of government and police, 1,480,299 colones; department of promotion, 1,805,765 colones; department of foreign affairs, 177,728 colones; department of justice, 54,072 colones; department of religion, 36,000 colones; department of charity, 205,017 colones; department of public instruction, 2,476,998 colones; department of war and military police, 1,555,070 colones; navy department, 37,728 colones; department of finance and commerce, 1,860,570 colones; public-debt service, 6,025,858 colones; total, 16,452,606 colones.

DEFENSE. The total military forces including reserve and national guard were, at the latest date for which figures were available, 52,208, including an active army of 38,946. The war strength of the militia is placed at about 50,000 men, all males between the ages of eighteen and fifty being liable to military service.

GOVERNMENT. The executive power is vested in a president chosen by an electoral college, consisting of senators and deputies; legislative power in a chamber of representatives elected for four years, one-half retiring every two years. Suffrage is universal. There are six secretaries of state, appointed by the president and responsible to him. The president at the beginning of 1921 was Don Julio Acosta.

HISTORY. On March 17 the Congress voted by 24 to 17 in support of the action of the president in refusing to recognize oil concessions granted to British interests by the Tinoco government and this course was approved by the United States in a note to Great Britain, April 19. The boundary dispute with Panama resulted in the invasion of that country by a small body of Costa Rican troops in the latter part of February. The United States government notified both parties of its disapproval of this resort to force, and Panama at once agreed to accept the mediations of the United States. On March 5 Secretary of State

Hughes gave it to be understood that the United States might enforce a peaceable settlement. On March 7 both countries consented to mediation. Secretary Hughes on March 14 pointed to the fact that Panama and Costa Rica in the treaty of 1915 had agreed to submit their disputes to American mediation. The United States government now decided in favor of Costa Rica, and when Panama showed unwillingness to allow this decision, issued an ultimatum requiring compliance by May 16. Panama then appealed to South American nations to interfere and to the United States to reconsider. On August 18 the United States Secretary of State, Mr. Hughes, replied to Panama's request for delay that the United States saw no reason why Costa Rica should not assume jurisdiction without further delay in the territory which was adjudged to Costa Rica by the terms of the Loubet decision. Meanwhile Costa Rica had sent troops to occupy the region and Panama had ordered the civil authorities to evacuate before the Costa Ricans arrived. On August 24, President Porras of Panama protested against Costa Rican occupation that Panama reserved the right to occupy the territory awarded to her by the Loubet decision. The United States government had refused the protest of Panama's Foreign Minister on August 23, saying that because of the treaty relations between Panama and the United States the latter could not permit Panama to renew hostilities against Costa Rica. A commission to limit the boundary was provided for, to consist of one engineer named by Costa Rica, one by Panama, and two by the United States. On August 24, the two American representatives were named by the Chief Justice of the Supreme Court but Panama refused to name her commissioner or to recognize those appointed. The Foreign Minister of Panama, Dr. Garay, left Washington August 24 after filing a protest to the effect that the course taken by the United States showed that the rights of peoples were estimated only in proportion to the force they could command in order to make them good, and denouncing the act of the United States as a gross injustice. On September 5 Panama evacuated the territory and on September 9 the United States State Department announced that Costa Rica was in peaceful possession.

COST OF LIVING. See PRICES.

COTTON. The 1921 cotton crop of the United States was estimated by the U. S. Department of Agriculture Crop Reporting Board on Dec. 12, 1921, at 8,340,000 bales of 500 pounds gross weight. The value of the crop, exclusive of the seed, based on quotations of December 1, was about \$675,000,000. The estimated value of the crop of 1920, excluding the seed, was \$1,067,240,000. The Crop Report of the International Institute of Agriculture at Rome gave in its issue of December, 1921, an estimate of 7,973,000 bales for the crop of the United States.

This is the smallest crop since 1899, when practically the same yield was reported. Several factors influenced the reduced production. The general financial situation and the known carry over of about 6,500,000 bales of the crop of 1920 brought about concerted action for a reduction of the area planted. Reports show a reduction of nearly 50 per cent in the amount of fertilizers sold in the spring of 1921, and unfavorable weather

prevailed in many regions resulting in the lowest crop condition reported for many years. The Bureau of the Census reported ginned to Jan. 1, 1922, 7,884,272 running bales. This estimate included 123,320 round bales which are counted as half bales, 30,093 of American grown Egyptian cotton, and 3106 bales of Sea Island cotton.

The world's production of commercial cotton was estimated at 15,593,000 bales, the smallest world's crop since 1900. The bearing of this low production on the textile trade of the world is a matter of much speculation as the visible supply does not seem equal to the anticipated demand. The 1921 crop in Egypt fell much below that grown in 1920, only 653,400 bales of 500 pounds each being estimated for the year. There was considerable reduction in the area planted to cotton in Egypt and much damage done by pests, the second picking being reported as damaged to the extent of 30 to 50 per cent. The crop of India for 1921 was estimated at 2,880,000 bales of 500 pounds gross weight. The crop produced in the Laguna district of Mexico, where there was much damage due to the pink bollworm, was about 75,000 bales. The estimated crop of Brazil is 584,600 bales.

Data are not available for 1921 for a number of cotton-producing countries, but their 1920 production was: Peru, 150,000; Colombia, 6000; British West Indies, 3048; China, 1,868,000; Russia, 180,000; and other countries, 600,000 bales. The commercial cotton crop of Africa, exclusive of Egypt, was 4500 bales. The final report of the Egyptian crop for 1920 was 1,231,000 bales.

The following table shows the cotton crop of the United States for 1920, the estimated crop for 1921 and the amount reported ginned to Jan. 1, 1922:

States	Crop, 1920 500 lb. bales	Estimated Crop, 1921 500 lb. bales	Reported ginned Jan. 1, 1922 Running bales
United States.....	13,439,603	8,340,000	7,884,272
Alabama.....	662,699	635,000	584,335

Virginia.....	21,337	16,000	16,078
All other states.....	13,239	13,000	8,547

¹ Includes some grown in Lower California.

In addition to the United States crop of 13,439,603 bales of lint in 1920, there were also produced 439,637 bales of linters. There were received at oil mills for the year ending July 31, 1921, cotton seed to the amount of 4,125,063 tons, and 4,060,604 tons of cottonseed were crushed during the same period. This quantity of seed yielded 1,305,864,069 pounds of crude oil, 1,780,476 tons of cake and meal, 1,255,644 tons of hulls, besides other products.

The exports of domestic cotton and linters for the year ended July 31, 1921, were 5,724,584 running bales, a decrease of 873,763 from the amount exported in 1920. The principal shipments were: To the United Kingdom, 1,736,686; Germany, 1,281,237; France, 592,286; Italy,

508,274; other European countries, 670,279; and Japan, 619,623 bales. The exports to Great Britain were 1,332,655 bales less than in 1920 and Germany took an increase of 838,058 bales. During the same period there were imported into the United States 226,321 bales of cotton as follows: Egypt, 87,167; Peru, 22,597; China, 14,723; Mexico, 88,155; other countries, 13,679 bales.

The world's production of commercial cotton grown in 1920 was approximately 18,810,000 bales of 500 pounds each. The consumption for the year ending July 31, 1921, was about 16,170,000 bales. The approximate number of spindles active and idle throughout the world is 153,000,000. Mills in the United States consumed 4,887,893 bales of cotton during the year, a reduction of 1,531,841 bales from the number used the previous year. In November there were 15,499,127 active spindles in the cotton-growing states and 17,033,980 in all other parts of the United States. Beginning August 1, 1921, the Bureau of the Census began the collection of data as to the number of spindle-hours for cotton-spinning mills. It is thought that these data will give a more accurate method of measuring the activity of the industry.

The British Government has made a grant of £1,000,000, to the Empire Cotton Growing Corporation which was recently granted a charter. The Corporation is the outgrowth of the Empire Cotton Growing Committee, established in 1917. Its functions are to assist Agricultural Departments, provide training facilities for men engaged in their work, disseminate information regarding cotton growing, and, where necessary, assist in marketing crops. It will work in coöperation with the British Cotton Growing Association, especially in marketing. In addition to the Government grant, a voluntary contribution of 6d. per bale on all cotton used in the spinning trade of England has been agreed upon. This fund is estimated at almost £100,000 annually. A number of scholarships, valued at £200 annually, have been provided for additional training in tropical agriculture.

Through the above organizations surveys are being made of all probable sources of cotton production within the British Empire and efforts are being made to develop cotton production under British auspices in other countries. A commission, headed by A. S. Pearse, visited Brazil with a view of encouraging greater production of cotton, and a recent account reports the acquisition by an English Syndicate of a large tract of land north of São Paulo for the growing under irrigation of long staple cotton. Some progress is noted in the increased production of British grown cotton. The production in new fields has increased from 54,900 bales in 1914 to 105,800 bales in 1920.

As a means of aiding in establishing ex-soldiers in Queensland, the British Cotton Growing Association has guaranteed for 5 years a price of 18 pence per pound for all good clean cotton of good quality forwarded to Liverpool from Queensland, the limit of loss for the period not to exceed £10,000.

In Egypt the Cotton Research Board, which was founded as an emergency measure in 1919, was definitely established under the Ministry of Agriculture on Jan. 27, 1921. It will carry on research work connected with all phases of cotton production. A survey of the cotton situation in

Egypt was made by H. M. Leake of the United Provinces, India, at the request of the Ministry of Agriculture, and he recommends more extensive planting of Sakellariadis, the now prevailing variety, development of better types, establishment of local seed farms, and licenses for seed production for planting and for the introduction of new varieties. Dudgeon attributes the decline in acre yield of cotton in Egypt, which has fallen from 500 pounds per acre in 1899 to 320 pounds in 1920, to excessive cultivation of cotton in short rotations, rise of water table through increased irrigation with lack of drainage, lack of fertilizers, insect ravages, and the planting of early but low yielding varieties to escape insect depredations. With a view to maintaining the purity of types of cotton the Ministry of Agriculture in Egypt has assumed control of all cottonseed intended for planting.

In India, cotton-breeding work in progress since 1912 is said to have resulted in the isolation of a strain of cotton that yields as well as the native varieties and has a much better lint. An Advisory Central Committee has been established in India under a decree of March 31, 1921. In the Belgian Congo 250,000 francs were devoted to experiments and demonstrations in cotton production in 1920 and 1921. At some of the cotton experiment stations certain varieties of American Upland Cotton have given the best results, lint grading with American middling having been produced. Average yields of 176 pounds lint cotton per acre are reported.

In order to prevent the introduction of destructive pests the government of South Africa requires a special permit for the introduction of cottonseed into the Union from any country other than British territory in South Africa. Restrictions on the importation of unmanufactured cotton are contemplated. The British Cotton Growing Association offered a series of prizes to be competed for in 1920 and 1921, in an attempt to stimulate the growing of that crop in Rhodesia. The Chinese Cotton Mill Owners' Association, which reported a crop of 1,868,000 bales in 1920, states that about the same acreage was planted in 1921, but the condition of the crop was very unfavorable. Under the auspices of this association, a central experiment station and 16 substations for investigations on cotton production have been established. The French High Commissioner has ordered the establishment of a cotton experiment station in Syria.

Of great importance to the cotton-growing industry of the United States was the announcement late in November of the presence of the pink bollworm in five fields near Ennis, Ellis County, Texas. This county, which is immediately south of Dallas, is one of the largest producers of cotton in the State and it also contains some of the most important cotton seed farms in the South. The infestation is believed to have come from Carlsbad, New Mexico, in seed shipped in 1920 before the presence of the pink bollworm was recognized in that locality. The infested area previously reported near Hearne, Texas, is now believed to be free from the pest. This was one of the original centres of infestation but through the maintenance of noncotton zones about the infested areas since 1917 the insect appears to have been eliminated. Other infested regions are those about Trinity Bay, Pecos Valley, Great Bend, and El Paso. The El

Paso and Pecos Valley areas extend into New Mexico.

In Louisiana, noncotton zones are maintained about all areas known to be infested and through the hearty coöperation of state and federal agencies it is hoped to clear Louisiana of this destructive cotton pest. The Texas legislature has corrected defects in the previous legislation that will make more effective control measures undertaken by state and federal governments. Recent legislation by Congress provided \$200,000 for the partial reimbursement of actual losses due to the maintenance of noncotton zones in connection with the attempt to eradicate the pink bollworm. A limit of \$5.00 per acre is established as the amount to be paid by the federal government.

The pink bollworm has made its appearance in the West Indies and it is known to occur quite generally from Monserrat north and west to Santo Domingo. Porto Rico, St. Croix, St. Kitts, and Santo Domingo are definitely known to be infested. On some of these islands attempts have been begun to control the pest by the destruction of all cotton plants and the abandoning of planting cotton for some time.

Early reports indicated a heavy infestation of the cotton boll weevil in 1921 in all infested portions of the cotton belt. The hot dry weather that prevailed later in the season held this pest in check to some extent. The boll weevil progressed in its march northward during the season, and is known to have covered about half the cotton area of North Carolina. The line of advance now extends through Chatham, Wake, and Beaufort counties. Practically all the eastern cotton belt is now infested by the boll weevil, except western Texas and Oklahoma, where it is controlled by climatic conditions, and Virginia and northeastern North Carolina, which have not yet been invaded.

Considerable progress has been made in combating the boll weevil through the adoption of improved culture methods and dusting the cotton plants with calcium arsenate. By early planting of early maturing varieties of cotton, late thinning so as to reduce vegetative growth, dusting with calcium arsenate three or four times at moderately short intervals during the season and destroying all the cotton plants at the end of the season, it should be possible to produce cotton in any of the boll weevil areas where economic conditions warrant the expense. Nearly all the agricultural experiment stations in the cotton-producing States are engaged in efforts to secure early varieties of cotton and systems of fertilizing the soil to secure early maturity, and some of them have found varieties and fertilizer treatments adapted to boll weevil conditions. In connection with dusting with calcium arsenate for boll weevil control, Stuckey of the Georgia Experiment Station found that the cotton plant, when in active growth, is very resistant to injury from spray materials. The U. S. Department of Agriculture is aiding in the introduction of Meade cotton, a long staple upland cotton, that has many of the desirable qualities of Sea Island and yields two or three times as much as Sea Island under boll weevil conditions.

The second World Cotton Conference was held in Liverpool and Manchester, England, June 13 to 22, 1921, with a large attendance from many countries.

COTTON BOLL WEEVIL. See **COTTON**.

COURLAND. Formerly one of the Baltic provinces of European Russia, but after the war included in the new state of Latvia. It lies to the north of the Russian province of Kovno, and is situated on the Baltic sea and the Gulf of Riga. Area, 10,435 square miles; population estimated, Jan. 1, 1915, 812,300; capital, Mitau or Mitava (46,800); largest city, Libau (90,700). See **LATVIA**.

COURT TENNIS. See **RACQUETS**.

COWANS, Sir JOHN STEVEN. British army officer, died, April 16. During the late war he was a member of the Army Council. He was born, March 11, 1862; entered the army in 1881, and had risen to the rank of brigadier-general in 1908. He was director-general of military education in the Indian army in 1906; and director of staff duties and training in the following year. He commanded a brigade in Calcutta from 1908 to 1910. He was quartermaster-general of the forces from 1912 to 1919, and a member of the Army Council throughout the late war.

COWS. See **DAIRYING**.

CRAVEN, WILLIAM GEORGE ROBERT, EARL OF. British landowner, drowned on falling from his yacht off Cowes, England, July 9. He was born Dec. 16, 1868, educated at Eton and inherited estates covering 40,000 acres. He was well known as a sportsman and social leader. During the war he served as King's Messenger, first between London and Headquarters in France and later in the Eastern service.

CRAWFORD, N. J. See **MUNICIPAL GOVERNMENT**.

CREDIT, RURAL. See **AGRICULTURE**.

CRETE. An island in the Mediterranean Sea, belonging to Greece after August 10, 1913, when its union with Greece was recognized by the Balkan Powers. Area, 3327 square miles; population, 1911, 344,001. Capital, Canea, with a population in 1915 of 24,399.

CRICKET. The Philadelphia Pilgrims made a successful tour of England in 1921, winning 5 games, losing 2, and drawing 5. In these matches C. C. Morris excelled in batting, while E. Hopkinson, Jr., carried off the laurels in bowling. The Halifax Cup was captured by the Merion Cricket Club. The New York and New Jersey Association tournament was won by the Bensonhurst Club and that of the Metropolitan District League by the Manhattan Club. The English County championship again went to the Middlesex players.

CRIMINOLOGY. See **PENOLOGY**.

CRITICISM, LITERARY. See **LITERATURE, ENGLISH AND AMERICAN**.

CROATIA AND SLAVONIA. Formerly a crownland of the old Austro-Hungarian Empire; after 1918 a part of the new state of Jugo-Slavia; extending from the Danube and Drave rivers westward to the Adriatic. Area according to the estimates of 1920, 17,405 square miles; population, 2,715,237. The capital is Agram or Zagreb which is the centre of the richest and most highly cultivated agricultural region of Jugo-Slavia, and since the war has increased in population, and developed important new industries. Its population in 1910 was 74,703; in January, 1921, 108,338. Its rapid development was an illustration of the changes following the war, which brought great progress to certain cities and

depression to others. In 1921 it was the chief economic centre of Jugo-Slavia. See JUGO-SLAVIA.

CROCKER, FRANCIS BACON. Electrical engineer, died in New York City, July 9. He was born in New York City, July 4, 1861; graduated at the School of Mines at Columbia, 1882, where he was instructor and then professor of electrical engineering until 1914. He was the founder and vice-president of an electrical company, and member of the most important societies in his field. He wrote among other works: *Management of Electrical Machinery* (8th edition, 1908); *Electric Lighting* (8th edition, 1908); *Electric Motors* (2nd edition, 1914).

CROOKS, WILLIAM. See NECROLOGY.

CROSS, CHARLES ROBERT. Physicist, died at Brookline, Mass., November 16. His part in the development of telephony and other improvements in applied science was important and he was also known among the pioneers in applied science education in the United States. He was born at Troy, N. Y., March 29, 1848, and graduated at the Massachusetts Institute of Technology in 1870, where he became a member of the faculty on graduation, remaining in it till his death. From 1877 to 1917 he was professor of physics and after that date, emeritus professor, and from 1885 to 1917 he was Director of the Rogers Laboratory. At his instance the first course in electrical engineering in the United States was established at the Institute in 1882. He was a prominent member of various scientific bodies in his field.

CROSS, HOWARD B. Bacteriologist, died at Vera Cruz, Mexico, December 27, as the result of yellow fever which he caught while opening a laboratory for the study of the disease under the Rockefeller Institute. He was born in 1889; and graduated at the University of Oklahoma. He studied afterwards at Johns Hopkins and the University of Chicago, and became an expert zoölogist and bacteriologist. He began the study of the microbe of yellow fever in April in consultation with the discoverer of that microbe, Dr. Noguchi.

CROSS COUNTRY RUNNING. R. E. Johnston of Pittsburg, Pa., proved the sensation of 1921 in cross country running by capturing the senior championship title together with the five- and ten-mile national titles. The point trophy in the senior championships which were held at Pittsburg was won by the New York A. C. for the second successive year. The Pittsburg A. C. runners finished second and the team of the Carnegie Institute of Technology third.

Cornell University once more scored a victory in the intercollegiate cross country with a point total of 18. Princeton was second with 87 and Syracuse third with 108. The individual winner was R. E. Brown of Cornell, who covered the six miles in 32 minutes, 20 1-2 seconds.

The American Marathon, distance 25 miles, was contested at Boston, the victor being Frank Zuna of the Paulist A. C., New York City. Zuna's time was 2 hours, 18 minutes, 57 3-5 seconds which established a new record for this event. C. Mellor of the Logan Square A. C., Chicago, finished second. Peter Trivoulidos of the Millrose A. A., New York, and winner of the 1920 race, took third place.

CROTHERS, THOMAS WILSON. Former cabinet minister in the Canadian government, died

at Ottawa, December 10. He was born at Northport, Jan. 1, 1850, and educated at Victoria College. After teaching school at Wardsville, Ontario, he ran for parliament in 1879 but without success. He was first elected in 1908 and again elected in 1911 and 1917. During the Borden administration he was minister of labor. From 1880 to 1911 he practiced law at St. Thomas, Ontario.

CROWELL, JOHN STEVENS. See NECROLOGY.

CROZIER, JOHN BEATTIE. British philosopher, died in London, England, January 8. He was born of a Scotch family in Canada, April 23, 1849, and studied in the local schools where he won a scholarship at Toronto University at the age of seventeen. He soon abandoned academic studies for medicine and graduated in medicine in May, 1872. Returning to England, he practiced as a physician but devoted a large part of his time to the study of philosophy. In this he championed the theory of evolution, tending at first to extreme materialistic conclusions. Later he studied the metaphysicians from Descartes to Hegel, but was not satisfied with their conclusions in respect to the true relation between the mind and the brain. Finding nothing conclusive either in the writings of Herbert Spencer or the metaphysicians, he worked out his own theory in an article on *God or Force* which was subsequently embodied in a book called *The Religion of the Future* (1880) which made little impression on the public. In 1897 he published a volume on *The History of Intellectual Development* which purported to show that the course of thought from early Greek philosophers to the present time followed laws admitting of definite statement and principles. This volume was well received. In 1906 appeared his *Wheel of Wealth* criticising sharply the existing systems of economics and this was followed in 1911 by *Sociology applied to Practical Politics*, in which he held that the new science was of positive practical value in solving problems of socialism, free trade, imperial preference, etc. Finally in 1917 appeared *The Last Words on Great Issues*, a survey of political and intellectual movements of the present time along with a summary of his own views.

CRUISERS. See BATTLESHIPS AND OTHER WAR VESSELS.

CRYER, MATTHEW HENRY. Surgeon, died at Philadelphia, Pa., August 12. He was born at Manchester, England, July 21, 1840. He came to the United States in 1851; graduated at the Philadelphia Dental College in 1876, and in medicine at the University of Pennsylvania in 1877. Meanwhile he had enlisted in the Civil War in the Ohio cavalry, and in 1865 was raised to the rank of major, having participated in many battles and receiving a wound in the battle at Deep Harbor, Va., July 28, 1864. He took part in the last fight between Grant and Lee, April 9, 1865. After 1877 he practiced in Philadelphia, and after 1893 he was professor of oral surgery in the University of Pennsylvania. He was also visiting surgeon of the Philadelphia General Hospital, consulting dental surgeon of the University Hospital, and a member of the important medical societies of his State. He wrote: *Regional Anatomy* (1876); *Studies of Internal Anatomy of the Face* (1901); and various works pertaining to dentistry.

CUBA. An island in the West Indies constituting a Latin American republic, comprising also

the Isle of Pines and small adjacent islands. Capital, Havana.

AREA AND POPULATION. The area is 44,215 square miles, and the population, November, 1919, 2,898,905, an increase of 261,369 over 1916; density, 65.34 per square mile. There are six provinces: namely, Havana, Oriente, Santa Clara, Pinar del Río, Matanzas, and Camagüey. The largest and most populous province is Oriente, and the next in population is Havana. The city of Havana had a population of 363,508. Other large towns are: Cienfuegos, 95,865; Camagüey, 98,193; Santiago de Cuba, 70,232; Guantánamo, 68,883; Santa Clara, 63,151; Matanzas, 62,638.

EDUCATION. The public school system was created under American supervision in 1900, but according to reports of 1921 it had not made the expected progress. Children of school age (6 to 14) according to the census of 1919 numbered 723,736. The number of schools available were 5700 which was insufficient for the purposes. Inasmuch as in 1900 when Cuba had a population of 1,500,000, there were 3600 schools, the number in 1921 was far too small in proportion. In 1919-20 the pupils in the public schools numbered 291,648 out of a possible total of 723,756, thus indicating that 432,108 children of school age were not in attendance.

PRODUCTION. The stable products are coffee and sugar, but cocoa, cereals, potatoes, and fruits are also raised, and there is a considerable mineral production. In 1919-20 the sugar crop amounted to 3,735,425 tons, valued at 1,005,451,080 dollars.

COMMERCE. The total foreign commerce of Cuba during the fiscal year 1919-20 exceeded \$1,290,000,000, which, compared with 1918-19, showed an increase of \$504,000,000, or 64 per cent. The unusual growth was largely owing to Cuban exports which surpassed those of the preceding year by \$385,000,000, while the value of the imports was only \$119,000,000 more than the year before. The increase of \$119,000,000 in importations was chiefly in the following items:

	Increase	Per cent of increase
Alimentary products.....	\$49,800,000	41.0
Textiles.....	25,800,000	21.6
Machinery.....	18,740,000	15.7
Stones, earthen, and ceramic products..	5,100,000	4.3
Animals and animal products.....	3,900,000	2.6
Chemical products and perfumery.....	2,300,000	1.8

This marked advance in the value of Cuban imports is accounted for in large measure by the phenomenal rise in prices of merchandise in the markets of origin. Exports of Cuban products during 1919-20 were valued at \$855,138,341 against \$470,259,162 in 1918-19, an increase of 82 per cent. The price of Cuban sugar was the chief cause of this gain, this article having been marketed at an average of \$0.08 per pound, the maximum cost during the year being \$0.235 and the minimum \$0.035, but the proportion of the sugar crop sold at the highest price was relatively small. The increase of 82 per cent in the exports represents \$376,000,000 worth of sugar and honey, \$13,500,000 worth of tobacco, and the remainder in lesser proportions distributed over other exports of enhanced value, with the exception of mineral products, which diminished by \$3,600,000. The balance of trade during the

fiscal year was in Cuba's favor, the exports having been greater in value than the imports by \$419,000,000, or 32½ per cent of the total foreign commerce. Of the total exports from Cuba in 1919-20, \$855,138,341, the share of the United States was \$642,148,034. The total imports of that year were \$435,257,727 and the share of the United States was \$321,627,449.

FINANCE. The budget estimates for the fiscal year, 1922-23, were: Revenue, \$72,000,000; expenditure, \$64,422,664. The largest item on the budget was that of the war and navy department which amounted to \$14,189,541; and the next was public instruction, \$9,529,717. In August proposals were made for a loan of \$50,000,000 to be negotiated in the United States and another for \$45,000,000 to be raised in Cuba. According to the Platt amendment no loan, foreign or internal, should be raised unless the revenues of the republic were sufficient to meet expenditures, including the amortization of and interest on the loan. Accordingly a tax bill was passed which would bring the revenue up to the required point. On August 30, the Cuban ministry protested in the name of the government against the Fordney Tariff bill as fatal to Cuba's trade, saying that it had already caused a loss of \$32,000,000 and that the proposed duties would impair American investments in Cuba and injure the export trade from the United States to a vast extent.

COMMUNICATIONS. Railway mileage in 1919 was placed at 3200. In foreign trade the vessels entered numbered 89,436 with 203,975,959 tons, and the vessels cleared, 88,789 with 203,436,406 tons.

GOVERNMENT. Executive power is vested in a president and cabinet; and the legislative power in a congress of two houses, namely, the senate of 24 members, and the house of representatives of 114 members. The president in 1921 was Alfredo Zayas.

HISTORY. The Liberals had charged fraud in the election of Nov. 1, 1920, and appealed to Washington on the subject. President Wilson sent General Crowder to the island to investigate the question, and certain of the charges of the Liberals having been substantiated, new elections were held in four provinces, March 15. These resulted definitely in confirming the election of Dr. Alfredo Zayas who was inaugurated May 20. The general situation was said to be improving under the administration of President Zayas and the advice of General Crowder who had been on the island since his appointment by President Wilson, having been continued under President Harding. As to the financial situation the government budget had been reduced from \$134,000,000 in the last year of Menocal's administration to \$64,000,000 for the ensuing year. A plan for an international loan had been given up and in place of it a loan for \$50,000,000 was sought from American bankers, which it was believed would suffice for the financing of the new sugar crop. Crop prospects were less promising than those for the present year. The crop for 1920 was estimated at a million tons in excess of that for 1919. The crop for 1921 was estimated at three million tons. In October a passenger aviation service was begun between New York and Havana. It was brought out in the summer of 1921 that the American Marines that had been sent to Camagüey at the beginning of the late

war were still there. For some time past the Havana press had attacked Major-General Crowder for prolonging his stay in Cuba but the United States State Department refused to act upon these criticisms and to recall him. The house of representatives of Cuba, December 7, adopted a measure, declaring that it would be a friendly act if the United States would withdraw troops situated in Cuban territory since the beginning of the war, and asking that measures be taken for the evacuation.

CULP, JULIA. See *MUSIC, Artists, Vocalists.*

CUMBERLAND PRESBYTERIAN CHURCH. This denomination was founded as a separate presbytery of the Presbyterian Church because of the refusal of the officers of the Synod in Kentucky to allow this group of churches to appoint the ministers it chose. The new church had an eventful career, grew rapidly and by 1829 there were four synods and a general assembly. The fact that the strength of the church was in the border States brought the slavery question to bear upon the denomination during the Civil War and it was barely saved from disunion. A mutual agreement was come to by the establishment of the Colored Cumberland Presbyterian Church, as affording to the negroes the opportunities they needed most for church development. In 1904 the General Assembly effected a union with the Presbyterian Church in the United States, but strong opposition in the Cumberland Presbyterian Church resulted in the formation of a new General Assembly and a legal fight to obtain possession of the church property with varying results.

The ninety-first meeting of the General Assembly was held at Greenfield, Mo. Statistics for 1921 show there were 1163 churches, with total membership of 72,052 members; church property was valued at \$1,935,072. Other statistics are for 1920 and show a total of 752 ministers; 750 Sunday Schools with about 5000 officers and teachers and 34,806 pupils. Missionary work was carried on in this country, especially among the Indians and abroad in China, where four churches are maintained with about 600 members. The educational interests of the denomination are represented by the Cumberland College, at Leonard, Texas, and the Cumberland Presbyterian Theological Seminary at McKenzie, Tenn. *The Cumberland Presbyterian* is published at Nashville, Tenn., and the *Cumberland Banner* at Tullahoma, Tenn.

The Cumberland Presbyterian Church (Colored) had, according to latest statistics (1921) 132 church buildings, with an enrollment of 13,077 members. Church property was valued at \$230,426. In 1916 there were 139 Sunday Schools, with 928 officers and teachers, and 7471 pupils. One school with 250 pupils is maintained, and missionary work is carried on in 8 States. No foreign missionary work is conducted. Total contributions for missionary and benevolent work in 1916 was \$11,995. *The Colored Cumberland*, a semi-monthly periodical, is published in Milan, Tenn.

CURAÇAO. A colony of the Dutch West Indies, comprising the islands of Curaçao, Aruba, St. Martin, Bonaire, St. Eustache, and Saba; area 436 square miles; population in January, 1920, 57,195, of which more than half were on the island of Curaçao itself. Seat of government, Willemstad on the island of Curaçao with

a population of 12,500, which has an excellent natural deep water harbor, regarded as one of the best in the West Indies. It produces and exports, aloe, divi-divi, and sisal; and it raises for home consumption, fruit, corn, cattle, salt, and sulphate of lime. Oil-refining is the chief industry, the crude oil coming from Venezuela and Mexico. The chief interest is commerce. The total imports in 1919 were \$2,826,657, and in 1920, \$6,294,200, of which the imports from the United States were respectively \$1,744,997 and \$2,595,000. The exports to the United States in 1919-20 were \$3,744,099 and \$4,122,197 respectively. During 1919, 580 steamers entered Curaçao with a total tonnage of 780,790; and 1066 sailing vessels, with a total tonnage of 92,328. Of these, 222 steamers with 243,330 tons and 37 sailing vessels with 10,206 tons were American.

CURIE, MADAME. See *CHEMISTRY, INDUSTRIAL.*
CURRENCY. See *BANKS AND BANKING, COINS, VALUE OF FOREIGN; FINANCIAL REVIEW; UNITED STATES.*

CURRIER, FRANK DUNKLEE. Former Congressman, died at Canaan, N. H., November 25. He was known as the author of the present Federal copyright law. He was born at Canaan, N. H., Oct. 30, 1853, and was admitted to the bar there in 1874, entering practice the following year. He was a member of the New Hampshire House of Representatives in 1879, a delegate to the Republican National Convention in 1884 and Speaker of the New Hampshire Senate and House at different periods. From 1901 to 1913 he was a member of Congress. Besides these representative offices he held the position of Naval Officer of Customs at the port of Boston, 1890-94.

CUSHING, HENRY PLATT. Geologist and college professor, died at Cleveland, O., April 14. He was born at Cleveland, O., Oct. 10, 1860; and graduated at Cornell University in 1882. He afterwards pursued graduate work there and in other universities, including the University of Munich. He was professor of geology at the Western Reserve University after 1892, and geologist on the New York State Geological Survey after 1893.

CUSHING, WILLIAM LEE. See *NECROLOGY.*

CYCLING. Frank L. Kramer, the veteran rider, regained the national sprint championship in 1921 by reason of the default of Ray Eaton. Both men secured a total of 30 points in the series of races, but, owing to some disagreement with the management of the track where the race was to have been held, Eaton refused to "ride off" the tie. The amateur sprint honors went to R. A. Walthour, Jr., with 3 first and 2 seconds.

Alfred Goulet of Australia and Maurice Brocco of France won the annual six-day race held at Madison Square Garden, New York. This team together with the Rut-Coburn and Lawrence-Thomas combinations covered a total of 2463 miles, 6 laps, but the victory was gained by Goulet and Brocco by reason of the larger number of points scored by them in the various sprints. Goulet has now succeeded in winning six six-day races.

CYPRUS. The third largest island in the Mediterranean sea, situated at a distance of forty miles from the coast of Asia Minor. Area, 3584 square miles; population, 1911, 274,108;

estimated, Jan. 1, 1921, 315,219, exclusive of the military. The chief towns with their populations are: Nicosia, the capital, 18,461; Limasol, 11,843; Larnaca, 10,652. In 1919-20 the elementary schools numbered 739 with 925 teachers and 42,059 pupils. Of the school enrollment 34,273 were Greek-Christians and 7554 were Moslems. The chief interest is agriculture, and the chief products in 1920 were: Wheat, barley, vetches, oats, olives, cotton, and grapes. Only about one-third of the land is under cultivation. Imports of merchandise in 1919 were £1,525,427; exports, £1,371,580. The shipping entered and cleared in that year had a tonnage of 329,474. The budget for 1921 provided for an expenditure of £535,679. This included £101,000 each for public works and police and prisons, £45,000 for land registry, £44,000 for forestry, £32,000 for medical uses, £25,000 for customs, £24,000 each for the treasury and education, £17,000 for agriculture, and £16,000 for post office. Down to Nov. 5, 1914, the island was administered by Great Britain under a convention with the Sultan of Turkey dating from June 4, 1874, but on the outbreak of the war with Turkey, it was annexed by Great Britain, and was afterwards placed under a high commissioner with an executive council and a legislature of 18 members of whom 12 are elected, the suffrage being limited to male British subjects or foreigners twenty-one years of age who have resided five years in the island and who pay certain taxes. High commissioner in 1921, M. Stevenson.

CZAPLICKA, M. A. See NECROLOGY.

CZECHO-SLOVAKIA. A new state with a republican form of government formed out of Slav regions in the old Austro-Hungarian empire; independence proclaimed, Oct. 21, 1918; government organized at Prague, Nov. 14, 1918. It comprises: Bohemia, Moravia, Silesia, Slovakia, Ruthenia, and other territories assigned by the Peace Treaty to the republic, including, particularly, the Teschen region which was divided between Poland and Czecho-Slovakia, July 28, 1920. See below under *History*. Capital, Prague.

AREA AND POPULATION. The area is estimated at 54,438 square miles and the population, based on the census of Dec. 31, 1910, 13,636,390. At the census of November, 1919, the population of Slovakia was 2,940,374 of whom 2,141,000 were Slovaks; 665,000, Magyars; 140,322, Germans. The largest cities in the respective states with their latest available figures for population are as follows: In Bohemia, Prague, 676,476 and Budweis, 43,961; in Moravia, Bruenn, 140,650; in Slovakia, Pressburg, 93,329; in Silesia, Toppau, 33,427; in Carpathian Russia, Munkacs, 20,794.

PRODUCTION. In natural resources it is one of the richest regions of Europe. The following information in regard to the natural resources of Slovakia which makes up about 25,000 square miles of the new state was supplied by the United States' Bureau of Foreign and Domestic Commerce in 1921:

Slovakia is a land of forests, mountains, and streams, about which little was known before the war. Every year timber is exported in large quantities. Connected with the lumber industry is the manufacture of toys. Toys of original designs and bright colors are a specialty of Slovakia, where they constitute one of the principal

home industries carried on by the peasants. The mineral resources of Slovakia have hardly been touched. During the war a new coal field with an estimated reserve of 124,000,000 tons was discovered in the neighborhood of Nitra, and is now turning out coal worth 8,000,000 crowns per annum. Iron to the value of 40,000,000 crowns is produced annually by the mines of Dobšina; and to the north of Bratislava petroleum has been discovered. Gold, silver, and other precious metals are also mined, in addition to large quantities of antimony, magnesium, copper, mercury, and salts. No list of the natural riches of Slovakia would be complete without special mention of the numerous springs of mineral water, which make the watering places of Slovakia the rivals of those in Bohemia. There are 30 thermal stations in Slovakia, the most famous of which are Tatranska Lomnice, Strbske Pleso, and Smokovec. The natural waters found at these places contain iron, sulphur, and iodine, in proportions which make them particularly effective for the treatment of nervous complaints, rheumatism, gout, anemia, etc. In addition to their health-giving qualities, the mineral waters of Slovakia may become one of the principal articles of export, if the necessary capital can be secured.

A flourishing sugar industry has arisen in Czecho-Slovakia based on the native sugar beet, with which 471,274 acres were sown in 1920. Other important productions are: Hops, beer, spirits, fruits, and various foodstuffs. Stock-raising is important but was reduced by the war. The mineral wealth includes: Soft and hard coal, gold, silver, copper, lead, and rock salt. In 1919 there were 366 coal mines, employing 110,233 persons, and the output was 16,980,000 tons of lignite and 10,405,000 tons of hard coal. The factories in 1920 numbered 8833 of which 2000 were textile mills; 1755, glassworks or factories for precious stones; and 1358, factories for the production of foodstuffs. The crop reports for 1921 showed a great improvement, not so much in area sown and crop harvested as in the production per hectare. On page 182 is a comparison of production in 1920 and 1921 given by the Czecho-Slovak Bureau of Statistics:

According to the enumeration of 1920 there were 581,257 horses, 4,213,454 bees, 2,015,211 pigs, 975,899 sheep, and 1,174,045 goats in Czecho-Slovakia (including sub-Carpathian Russia). Large productions of uranium ore were discovered in government mines at Jachymov and the radium contents were said to be enough to last for twenty years. Large coal seams also were reported to have been discovered in Slovakia. There were prospects of extensive radium production in the country owing to the large quantity of uranium ore found in Bohemia near the boundary of Saxony. It was estimated that the known supply of radium in this locality would last for twenty years at the present rate of production. The mines which had been acquired by the Austria-Hungarian government in 1912 passed over to the Czecho-Slovak government. The quantity produced amounted to about two grams, and the price of one gram in the autumn of 1921 was about 10,000,000 crowns.

ECONOMIC CONDITIONS. The depreciation of the Czecho-Slovak crown naturally caused a sharp rise in the cost of living, which culminated

COMPARISON OF CROP PRODUCTION, 1920 AND 1921

Crop	Area sown		Total production		Yield per hectare	
	1921 Hectares	1920 Hectares	1921 Quintals	1920 Quintals	1921 Quintals	1920 Quintals

There were in 1921 about 1,150,000 workingmen in Czecho-Slovakia who were members of trade-unions. The largest federation is the Czecho-Slovakian Federation of Trade Unions, with a membership of about 650,000. The next is the Bohemian Labor Committee, with about 250,000 members. With the enormous drop of the crown, followed by price advances, wages in Czecho-Slovakia have naturally increased. After January, 1921, wages decreased a little on account of the drop in prices and the cost of living, but accurate figures had not been compiled. The very great increase from 1914 to January, 1921, is shown below:

INCREASE IN WAGES, 1914 TO JANUARY, 1921

Trades	1914, crowns	January, 1921, crowns
Wages per day of work:		
Shoemakers.....	3.00–4.30	25.00–28.00
Papermakers.....	2.00–7.50	36.00–87.00
Breweries.....	2.05	56.00–80.80
Wages per hour of work:		
Smelters.....	.32–.40	5.45–6.13
Iron works.....	.50	3.79
Cabinetmakers.....	.40–.50	6.50–8.00
Building trades.....	.39	4.20–4.50

COMMERCE. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce:

Of the main imports of 1920, cotton, amounting to 3,213,964,000 crowns, was the largest item, while other important imports were foodstuffs, wood, chemicals, fur, hides, oils, and silk. Of the total imports in 1920, Germany furnished goods valued at 3,857,730,000 crowns, and the United States 3,042,209,000, followed by Austria, with 1,918,943,000 crowns. Of exports beet sugar amounting to 2,219,888,000 crowns and manufactures of wood to the amount of 3,333,216,000 crowns, followed by glass and glassware, valued at 2,643,615,000 crowns, were the chief items. Austria was Czecho-Slovakia's largest customer, taking 5,726,977,000 crowns of its total exports, and Germany the next, with 2,501,022,000 crowns.

FINANCE. The budget estimates for 1921 were as follows: Revenue, 14,129,919,000 crowns; expenditure, 13,841,738,000 crowns; surplus, 228,000,000 crowns. The budget estimates for 1921 were as follows: Revenue, 18,884,209,000 crowns; expenditures, 19,671,970,000 crowns; deficit, 788,000,000 crowns. The increased estimates of expenditure for 1920 were due to the proposed outlay under the departments of defense, railways, and education and also to the payments of interest on the national debt. The national debt was composed of the following six items: (1) The share of the country in the debt of the former Austro-Hungarian empire, estimated at about 6,500,000,000 crowns; (2) the share of responsibility for the Austro-Hungarian war bonds in possession of Czech-Slovaks at the time of the armistice, estimated at 5,225,000,000 crowns; (3) internal floating debt, estimated 4,964,000,000 gold crowns, Jan. 1, 1921; (4) debts incident to currency reform measures necessitated by the influx of paper money from Austria, estimated at 11,193,700,000; (5) Contributions to the reparation fund under the Peace Treaty amounting to 6,600,000,000 crowns. Total internal debt at the beginning of 1921, about 35,000,000,000 paper crowns; total external debt about 5,000,000,000 gold crowns. The Bureau of Foreign and Domestic Commerce supplied the following

information in regard to the budget for 1922. Including extraordinary expenditures, it amounted to more than 19,500,000,000 crowns. A deficit of nearly 800,000,000 crowns had to be covered by loans. Anticipated outlays exceeded the preceding year's by almost 6,000,000,000 crowns, owing principally to increased expenditures for defense, education, and transportation. A gain of approximately 5,000,000,000 crowns over the past year was estimated in revenues, chiefly in receipts from customs, excises, government monopolies, turnover, and luxury, and transportation taxes. The new budget also contained provisions for the issuance of long-term bonds to the amount of 3,000,000,000 crowns, to be used for public improvements. The total indebtedness, Jan. 1, 1921, was given as follows: Internal debt, 25,000,000,000; foreign debt, 3,500,000,000 francs.

COMMUNICATIONS. The total mileage of the railways, all State owned, amounted in 1921 to a little more than 8000. There was a shortage of cars and rolling stock, which hampered trade to a certain extent. The government allotted 6,481,050,000 crowns to cover the necessary improvements in the railway service. These included the reconstruction of machine shops, the replacement of rolling stock destroyed during the war, and new construction to meet the requirements of increased traffic. The expenditure of this sum was to be distributed over five years, beginning in 1921. Another important factor in the transportation system of Czecho-Slovakia is the Danube river. According to prewar statistics, nearly 2,000,000 tons of goods were annually carried on the Danube from the industrial centres to the great Balkan markets. A large company was formed in 1921 with a capital of 140,000,000 crowns, for the development of this traffic.

HISTORY. During the first part of the year the press was mainly concerned with reports of Bolshevik plots. Another subject of public interest was the plan of the foreign minister, M. Benés, for understandings with other Balkan Powers and Italy as to common measures of safety to be taken against the Hungarian government in view of the danger of reaction in that quarter. In May there were reports of disturbances in the non-Czech populations owing to their opposition to Czech supremacy, and movements were reported among the other Slavs and the Ruthenians for self-government. There was especial dissatisfaction with the union on the part of the Slovaks but data on the subject were conflicting. On the one hand prominent representatives of Slovakia protested against the attempt to give the impression that the province desired a separate existence and insisted that the people were loyal to the Czecho-Slovak state. On the other hand, there were continual reports generally from Hungarian sources that disaffection was rapidly spreading among them and one of these accounts declared that a Slovak national council had been elected for the purpose of bringing about secession from the Czech republic. There had been after the armistice a succession of disturbances arising from the anti-Catholic spirit of certain Czech groups who

cherished a traditional hatred of the Church on account of its coöperation in the past with the Hungarian government in attempts to Magyarize the Slovaks. The upper clergy in Slovakia were closely identified with the Hapsburg régime. It appeared, however, in the autumn of 1921 that these misunderstandings had been removed and assurances of good-will passed between the President and the leading spokesman of the Catholic clergy in the province.

The President made a tour of the country for the observation of these conditions in the autumn. Soon after his return to the capital the Cerny ministry fell from power. It had been appointed simply as a provisional ministry and consisted rather of technical experts than of party men. After conference with the various political groups the President charged M. Benés with the formation of a new ministry. The latter as Minister of Foreign Affairs had been prominent throughout all Europe as the mouthpiece of Czech-Slovak policy and especially as the advocate and defender of the Little Entente. He was one of the most influential men in the state and had frequently collaborated with the President. There were still serious divergencies of view and sharp party lines in the country. In certain localities Pan-Germanism was active and in others Communism was a menace. These tendencies caused anxiety and there was also the Magyar element which was constantly intriguing against the government.

France in accordance with her policy of protecting the newly created states of Central Europe had formed a military accord with Czecho-Slovakia. While this appeared to meet with the approval of the majority it was sharply attacked by the radical groups. A criticism of it in parliament toward the end of the year brought from Czecho-Slovakia's Minister of National Defense, a vindication of the arrangement. This elicited from the French Minister of War a congratulatory letter thanking the government for its defense of the French military mission in Czecho-Slovakia. On this occasion both governments referred to the friendship of the two armies. The Czecho-Slovak government emphasized the importance of the French military mission and the Czecho-Slovak press in general supported the government and attributed the criticism of the French military mission to the Germans, the Communists, and certain extreme members of the Socialist party. In August a military convention was signed with Jugo-Slavia providing for the execution and defense of their treaty of alliance. It placed at the disposal of the two states sufficient forces for this purpose and provided for unity of command and mutual organization. A commercial agreement was formed with Poland in the closing months of the year and it was followed by a political treaty which, according to the official accounts, was not directed against any third country but merely sanctioned the friendly relations between the two signatory powers. At the same time, however, it was announced that the agreement expressed the joint determination of the two countries to resist the restoration of the Hapsburgs in any circumstances.

D

DAHOMÉY. A French colony of West Africa on the coast extending from Togoland on the west and the British possessions of Lagos and Nigeria on the east, northwest to the French Military Territories; a part of the government-general of French West Africa (q. v.). The coast extends only about 70 miles. The area was estimated in 1920 at 42,460 square miles and the population at 860,590, including 590 Europeans. Seat of government, Porto Novo, with about 20,000 inhabitants. The natives are of pure negro blood and belong to the Ewe family. Along the coast they grow corn, yams, manioc, and potatoes. The chief forest products are palm oil and palm kernels, which are the chief exports. Besides the capital, which is the business centre of the country, other towns of importance are: Abomey (12,372); Whydah or Ouida (13,000); Grand Popo (2115); Kotonu (2456). The chief imports are cotton, machinery, liquors, and tobacco and the chief exports, palm kernels and palm oil, corn, and copra. In 1919 the exports of palm kernels amounted to 45,188,505 francs and of palm oil to 20,260,490 francs. In 1919 the United Kingdom and France participated to about the same extent in the foreign trade, each having about 30 per cent. There is a railway from Kotonu to Savé, whence there is a branch to Whydah a total distance of 176 miles. A prolongation to Chaoru, a distance of 400 miles, has been projected. In 1919, 114 vessels of 259,887 tons entered and 123 vessels of 277,003 tons cleared. The local budget for 1920 was given at £7,785,175.

DAIRYING, PRODUCTION AND PRICES. Although the prices of dairy products decreased considerably during the year, the production of some dairy products increased materially. During 1919 an accumulation of dairy products was brought on by a decrease in foreign trade with production maintained. The last of the year saw a reaction in the industry due largely to the cutting off of the outlet to Europe. Along with this condition, the general deflation in all directions had a tendency to lower the price of all dairy products, but the price of dairy products did not go down relatively so much as did feeds, so that the dairy cow furnished a better outlet for feeds than the general market.

In some sections of the country, corn and some other grains, and also hay, were at an exceedingly low price level. It was even difficult in some sections to sell some of these products at all. The effect of this was to stimulate feeding to animals, and also brought an increased demand for dairy cows. During the condition in previous years of high cost of feeds, it was the practice to give the cows only a limited quantity of grain; but during 1921 there was rather heavy feeding of grain, and, as a result, a material increase in production. This is especially true in the middle western part of the country where the largest part of the creamery butter is manufactured. The most noticeable increase, therefore, was in butter.

The outlet for evaporated and condensed milk, and also milk powder, had stimulated production of these products up to 1920, and when the trade for them was cut off, the price was reduced to a point that largely decreased production, and the manufacture of these products was considerably less than during 1920. A great many condenseries and milk-powder plants were closed during the year.

The decrease in the production of condensed and evaporated milk was partly responsible for the increased production of butter, because milk formerly made into these products was diverted to butter manufacture. The greater part of the increase, however, was brought about by increased feeding and the milking of more animals in some sections.

In spite of the fact that production of butter increased very materially, the price of the product did not go down in the same ratio as most other agricultural products. Consumption was increased sufficiently by the rather severe drop in price during the spring to bring up consumption to a point which utilized the entire manufacture at a relatively high price. Cheese and condensed milk, however, did not maintain their relative position in price, especially cheese, which has remained at an exceedingly low price during the year.

Indications are that the consumption of milk in the cities has increased in spite of the adverse financial and labor conditions in many centres. Here again it has been due partly to the decrease in price, but also campaigns to increase consumption have been factors in the increased consumption of whole milk, especially in the cities.

FOREIGN TRADE IN DAIRY PRODUCTS. During 1921 the swing from a net importing nation of dairy products, in 1914, to a rather large exporting nation during the war and immediately following, was again back to a point showing a net import of both butter and cheese, with, however, considerable quantities of evaporated and powdered milk going out.

When the increased tariff was imposed, beginning in the early summer, there was apparently a stopping of the imports of butter which had reached considerable quantities by that time.

The following table shows the foreign trade in dairy products for the fiscal years 1920 and 1921:

	<i>Imports</i>	<i>Exports</i>
Butter:		
1920 (fiscal year).....	20,770,959	27,129,834
1921 " ".....	34,343,653	7,829,255
Cheese:		
1920 (fiscal year).....	17,913,682	19,427,300
1921 " ".....	16,584,678	10,825,603
Condensed and evaporated milk:		
1920 (fiscal year).....	19,080,642	707,847,328
1921 " ".....	19,272,528	262,668,306

In spite of the increased tariff, both butter and cheese continued to come in increasing amounts,

during the last of the year. Canada, Denmark, and Australia contributed the largest quantities of butter, and because of the rather dull market in England, there was a tendency to divert butter formerly going to England to this country. Ireland and New Zealand therefore are offering butter in increasing quantities. Because of this situation, the dairy interests quite generally are asking for increased tariffs on dairy products.

Previous to the war, large quantities of foreign varieties of cheese were imported to this country, but on account of restrictions preventing exportations during the war, and because of the need for those products for home consumption, little was exported to the United States. This stimulated the interest in the manufacture of those products in this country, and up to the early part of 1921 much of the foreign varieties of cheese were being manufactured. During the summer and through to the last of the year, however, there was a tendency to return to the prewar condition, and considerable quantities of all the foreign varieties of cheese are now being imported.

DAIRY CATTLE. Although the prices of products were greatly decreased during the early part of the year, and there was a tendency to dispose of cows, the price of feeds was so low that dairy cows came into demand before midsummer; and for grade animals, kept primarily for milk production, there was considerable demand in the territory outside of the city-milk centres. Large numbers of cattle were shipped from such States as Wisconsin to States west of the Missouri river. On account of the financial situation, the demand for pure-bred animals was not so active, and prices for such animals prevailed at relatively low figures. During the latter part of the year, however, there was a tendency to pure-bred buying and the pure-bred breeders were somewhat encouraged.

The U. S. Census Bureau has reported during the year on the number of dairy cattle and the value of dairy products. On Jan. 1, 1920, there were 20,892,341 dairy cows of two years or over, compared with 21,795,770 cows and heifers of 15½ months old or over in 1910. On account of the difference in age classification in the two census years, the figures are not directly comparable, but the report believes that proper allowance for this and for the time of enumeration would leave a substantial increase in the number of dairy cows, rather than a decrease.

Dairy cattle had an estimated value of \$1,886,188,430 in 1920. The value of dairy products of farms in 1919 is stated at \$1,481,462,091, as compared with \$596,413,463 in 1909, an increase of 148.8 per cent, due in considerable extent to difference in prices. The dairy products consisted of milk, cream, and butter fat sold, and butter and cheese made on farms.

EXPERIMENTATION. The active interest in the discovery of certain substances contained in milk, sometimes called accessory products or vitamins, has turned a great many investigators to this subject. The importance of these heretofore unknown substances is so great, from the standpoint of health and growth, that physicians, food chemists, nutrition experts, and others have given the matter much attention. During the year, therefore, studies attacking this subject from various angles were of the greatest importance. The investigations included studies with respect to the effects of deficiency of these products in

rations, and this in turn led to studies to determine if possible the amounts of these substances contained in milk products, and whether or not they were partly or entirely destroyed by the action of heat or other treatment to which the products are submitted in the process of preparation for market or manufacture.

Still another angle to investigations growing out of the discoveries of vitamins and their effect in nutrition was the possible effect of supplying these accessory products to dairy cows.

In connection with the destruction of vitamins in the manufacture of products, the effects of heat and of oxidation have had the greatest attention.

A more rapid growth of the milk powder industry was partly prevented by a failure to produce a whole milk product that would not deteriorate when kept a considerable time. In the studies of this product, therefore, the attention has been turned to processes of manufacture and methods of storage that would preserve the quality of the whole milk powder. Some progress has been made in this direction.

PUBLICATIONS. The following are among the books on dairying that have been published during the year: M. Mortensen, *Management of Dairy Plants*; H. A. Whitaker et al., *Pasteurization of Milk*; H. E. Erdman, *The Marketing of Whole Milk*.

DALE, Sir ALFRED. British educator, died in London, August 15. He was born, Dec. 2, 1855; educated at Cambridge where he won prizes in English poetry; and was lecturer and tutor at Cambridge for twenty years, beginning in 1879. He was then appointed principal of University College, Liverpool, and was vice-chancellor of that institution from 1903 to 1919. He served on various educational councils, and edited works pertaining to the history of Trinity Hall, Cambridge, and of English Congregationalism. He also wrote: *The Life of R. W. Dale* (1898).

DALLAS, TEXAS. See GARBAGE AND REFUSE DISPOSAL.

DALMATIA. Before the breaking up of the Austro-Hungarian empire, a crownland of Austria; since November, 1918, a constituent part of the new state of Jugo-Slavia; bounded on the east by Boenia and Herzegovina; and on the west by the Adriatic sea; area, 5090 square miles; population, estimated, 1920, 621,503. While it was a part of the Austro-Hungarian area the Croat-speaking element was placed at 610,669 and the Catholics numbered 539,074 as against 105,338 Orthodox Greeks. Capital, Zara, with a population of about 14,000. Other important towns: Spalato, about 21,000; Ragusa, about 9000; Cattaro, about 3000 all of which are seaports. Certain of its territories were in dispute with Italy after the war but a decision was reached in regard to them by the treaty of Rapallo in 1920. See the article *War of the Nations* in the preceding YEAR BOOK.

DALTON, JOHN HENRY. See NECROLOGY.

DALTON LABORATORY PLAN. See EDUCATION IN THE UNITED STATES.

DAMS. The construction of dams to impound water for city water supply, power and irrigation, was active in 1921, and with power surveys and discussion it was believed that much more of this work as well as flood control (see FLOODS AND FLOOD PROTECTION) projects would be put under way in the near future, as certainly the need was manifest not only in America but throughout the inhabited world. Naturally many of the dams

planned or under construction were part of Irrigation, Power or Water Supply projects, and are discussed elsewhere under those heads, while the Muscle Shoals Development becoming as it did in 1921 a matter of national interest is described under **MUSCLE SHOALS**. Among the more interesting projects and construction of the year the following may be considered.

RIMROCK DAM. Early in 1921 the U. S. Reclamation Service resumed work on the \$2,500,000 Rimrock impounding dam near the headwaters of the Tieton river, in the State of Washington, 26 miles above Naches. The construction of this dam was in progress for five years, but was interrupted in 1917, when the United States entered the war. The work was being prosecuted in earnest during the year 1921 and it was planned to expend more than \$750,000 of the available appropriation of \$2,500,000.

The Rimrock dam was designed to create a deep artificial lake 7 miles long and 1 mile wide in certain stretches by flooding land adjacent to the river. This storage basin was to impound 185,000 acre-ft. of water to be used for the irrigation of the Yakima Valley lands making possible the reclamation of some 75,000 acres of land in addition to 360,000 already reclaimed. The dam will be of earth and rock fill type of construction, 900 ft. long and 222 ft. high, and will contain about 1,785,000 cu. yd. of material. The excavations into the bed of the stream made during the year were carried down to bed rock 95 feet below and on this the core wall was founded. A notable feature was that the core wall was a continuous barrier five feet in thickness and extending down 100 feet below the river bed. To build it shafts were sunk, a cross-tunnel run, and the wall built upward by stoping and concreting layer by layer. The entire design is fully discussed by F. T. Crowe of the U. S. Reclamation Service in the October *Reclamation Record*. About \$400,000 had been expended when the work was stopped by the war in 1917.

HETCH HETCHY DAM. After excavation that went down to a maximum depth of 146 feet below flood water level, work was so far advanced that the first concrete could be poured late in August, and on November 18 a total of 53,000 cu. yd. had been placed. The scale in which this is done can be appreciated from the fact that the record for 8 hours was 1239 cu. yd. of concrete poured and during the first 18 days of November six 8-hour shifts placed more than 1000 cu. yd. each. The contract on which work was in progress at the end of the year was for carrying the dam up to a height of 342 ft. above the lowest foundation. This would involve a total of 365,000 cu. yd. of concrete and was to be completed before Feb. 1, 1923, in time to store the 1923 summer runoff. The Hetch Hetchy Dam discussed at length in the *YEAR BOOK* for 1919, is a fundamental part of a new water supply project for the city of San Francisco, Calif., and was being built across the Tuolumne river.

CALAVERAS DAM. During the summer of 1921 in compliance with an order of the California Railroad Commission work on the Calaveras dam of the Spring Valley Water Co. in California was resumed. This dam at its temporary height of 85 ft. stored 8,000,000,000 gal.; but when raised to 175 feet as proposed it would impound 43,000,000,000 gal. and accordingly would increase the available daily supply of San Francisco by 24,000,000

gal. Preparatory work was begun in earnest: See *YEAR BOOKS* for 1914, 1915, and 1916.

DON PEDRO DAM. On March 23, 1921, a joint board representing the Turlock and Modesto irrigation districts in the San Joaquin Valley Calif., decided to have the high masonry Don Pedro Storage Dam on the Tuolumne River built by day labor instead of by contract.

The dam as designed was to be built on a simple curve with a radius of 675 ft. It was to be 280 ft. high, 975 ft. long on the crest, and contain 266,000 cu. yd. of concrete. It was thought that only about 10,000 cu. yd. of excavation would be necessary to expose solid rock underlying the site, but some 120,000 cu. yd. of excavation would be required in cutting a spillway channel in the canyon wall at the north end of the dam. There was also involved the construction of a narrow gauge railroad from the Southern Pacific line at Hickman to the dam site, a distance of 29 miles. On this line about 12 miles from the dam site there were gravel pits from which gravel for the concrete was to be taken. A total cost of approximately \$4,000,000 was estimated for the project which would require about two years for its accomplishment.

WICHITA RIVER DAM. During the year a project of large size was set on foot when on November 18, the Wichita Falls (Texas) Irrigation District awarded a contract for an earth storage dam across the Big Wichita river 50 miles above Wichita Falls, at an estimated cost of \$1,259,254. There was also to be a diversion dam of the gravity concrete spillway type with a movable crest, to cost \$726,150; and two canals, the South Side canal leading to Wichita Falls from the diversion dam, 30 miles below the storage dam, to Lake Wichita, the source of the city's water supply, to cost \$566,234; and the North Side main canal, to cost \$802,573.

SAN PABLO DAM. During the year there was completed the large dam of the San Pablo water supply project for the city of Oakland, Calif. This project was started in August, 1916, by the East Bay Water Co. and the dam was advanced far enough to be used for storage in 1920. It was an earth dam built by the hydraulic sluicing method, 110 ft. high, with a base width of 1300 ft., a crest length of 1250 ft. and contained about 2,200,000 cu. yd. of material.

The project also included a 115-ft. concrete intake control tower, a 14,000-ft. concrete-lined tunnel with a capacity of 100,000,000 gal. per day and a rapid sand filtration plant with a normal capacity of 12,000,000 gal. per day.

PROPOSED YELLOWSTONE DAM. The proposed plan to build a dam across Yellowstone River at a point not more than three miles below the outlet of Lake Yellowstone in order to regulate the waters of the lake for irrigation purposes, was adversely reported on by Secretary of the Interior Fall. He said in part in this connection:

"I cannot favor the enactment of the measure. I do not believe it would be advisable for Congress to permit private interests to develop irrigation or power sites within the limits of existing national parks. These parks were created by Congress for the preservation of the scenery, forests, and other objects of beauty and interest in their natural conditions and they are created and maintained for general and national purposes, as contradistinguished from local developments.

"If cases be found where it is necessary and advisable in the public interest to develop power and irrigation possibilities in national parks and it can be done without interference with

the purposes of their creation, I am of the opinion that it should only be permitted to be done, whether through the use of private or public funds on specific authorisation by Congress, the work to be constructed and controlled by the federal government."

KRISHNARASA SAGRA DAM. This large masonry dam which was under construction in 1921 across the Kaveri river in the state of Mysore, India, ranked among the world's large structures of this type. This dam was to provide both irrigation and power as it would afford an unfailing supply of water impounded in the monsoon season for the use of the farmers whose cultivable land would be increased in acre, while at the same time it would develop the increased power needed for the large hydro-electric station at Sivasumudrum lower down the river. The new dam was to afford a storage reservoir of 41,500 million cubic feet capacity which would cover nearly 30,000 acres. The dam was being built of rubble masonry with cut stone faces and ultimately would rise to a height of 120 feet, but the first stage provided merely for a height of 80 feet. The final construction would afford irrigation for over 500,000 acres of land and would meet all power requirements. The dam was built on sound rock, to reach which at points considerable excavation was required, and the foundation actually laid was 5150 feet in length. The completed dam was to contain nearly 30,000,000 cubic feet of masonry of which over two-thirds had been finished by 1921.

In this connection it is of interest to consider the other reservoirs and dams in India. Those already constructed were the Periyar in the Madras Presidency, the Marekanave in the Mysore State, Lake Whiting at Bhatgarh which supplies the Nira Canal in the Bombay Presidency, and the Tansa Reservoir, the principal source of water supply for Bombay and Lake Fife near Poona. Comparing the differing dams as to height it may be stated that the maximum height of the Kaveri Dam was to be 143 ft., the corresponding height of the Periyar Dam is 173 ft., of the Marekanave Dam 167 ft., of Tansa 118 ft. The total capacity of the Krishnaraja Sagara Reservoir 41,000 million cu. ft., may be compared with that of Marekanave, 30,145 million cu. ft., and that of Periyar 6185 million cu. ft. See **FLOODS AND FLOOD PROTECTION, IRRIGATION, WATER SUPPLY.**

DANFORTH, LOOMIS LE GRAND. Physician, died in New York City, November 8. Since 1886 he had been physician of obstetrics at the New York Homeopathic College. He was born in Monticello, N. Y., in 1849 and graduated at the College of Physicians and Surgeons in 1874 from which date he practiced in New York. He was also on the staff of the Flower Hospital after 1900. He contributed extensively to the medical periodicals.

DANISH LANGUAGE. See **PHILOLOGY, MODERN.**

DANISH LITERATURE. See **SCANDINAVIAN LITERATURE.**

DANZIG. A free state constituted by the Treaty of Versailles in 1919; formerly belonging to Germany. Area about 794 square miles; population, Oct. 8, 1919, 351,380 of whom about 7 per cent were Poles. Article 102 of the Treaty provided for the establishment of the city along with its surrounding territories as a free state

under the protection of the League of Nations. The League of Nations established its administration under a high commissioner. To this office Sir Reginald Tower was appointed in 1920 and was succeeded, Jan. 24, 1921, by General Sir Richard Haking. Danzig has for centuries been a great shipping point and grain centre. During the war the shipping was greatly reduced and did not recover during the two years following although it was beginning to show improvement in 1921. The complete figures for the year were not available. The following information in respect to shipping during the first nine months of the year was supplied by the Bureau of Foreign and Domestic Commerce. During this period vessels totaling 1,232,840 net tons entered the port, while during the same period of 1920 ships aggregating 713,621 net tons entered. This increase, amounting to 72 per cent, was due largely to German and Danish shipping, composed mainly of small freight and passenger vessels engaged in Baltic trade. American tonnage (207,690) constituted about 17 per cent of the total and reached its highest point in May, 1921, when 13 vessels, of 37,551 tons, entered the port. Two of these were passenger ships maintaining regular services between New York and Danzig. The other 11 were cargo vessels entering, for the most part, with partial cargoes for Danzig and other Baltic ports.

DARBY, WILLIAM JOHNSON. Clergyman, died, Newburg, Md., February 11. He was born in Lyon County, Ky., Nov. 17, 1848; graduated at the University of Michigan, 1869; and studied theology at Cumberland University, 1871. From the latter year until 1889 he held a pastorate at Evansville, Ind., which greatly increased under his administration. He was then for three years manager of the publishing work of the Cumberland Presbyterian Church, and after 1895 he was the secretary of the Cumberland Presbyterian Church. He was prominent in the organization of the Women's Board Missions, the Board of Ministerial Relief, the Christian Endeavor Society, and other important church bodies.

DARTMOUTH COLLEGE. A non-sectarian institution of higher learning at Hanover, N. H.; founded in 1869. In the fall session of 1921 the enrollment was 2011. The faculty numbered 160. The income for the year was \$550,000. The library contained about 170,000 bound volumes. President, Ernest Martin Hopkins, Litt.D., LL.D.

DAVIES, (SARAH) EMILY. British leader of the woman's movement, died at Hampstead in July. She was born April 22, 1830, and was prominent in educational reforms in the interest of girls in the 1860's. She was at first active in the movement for the secondary education of girls and later in that for the admission of women to universities. She was mistress of Girton during the first three or four years of its existence. She was also a leader in the movement for parliamentary votes for women.

DAVIS, CHARLES HENRY. American naval officer, died at Washington, D. C., December 27. He was born at Cambridge, Mass., Aug. 28, 1845; graduated at the Naval Academy in 1864; rose to the rank of lieutenant-commander in 1885; captain in 1898; and rear-admiral in 1904. He commanded the auxiliary cruiser *Dixie*, in 1898, and the second squadron of the Atlantic fleet in

1905. He retired, August 28, 1907. He served at various stations, and on expeditions for determining the differences in longitude by means of submarine telegraphic cables. Among the many posts that he held was that of superintendent of the Naval Observatory. He was in command of the *Alabama*, 1902; and division commander of the battleship squadron in 1904. In the latter year he was appointed representative on the international commission of inquiry into the North Sea incident in Paris. Public attention was drawn to him in 1907 in connection with the earthquake at Kingston, Jamaica. His offer to aid sailors in aid of the inhabitants was refused by Governor Swettenham on the ground that it was not proper to permit the landing of a foreign force. General opinion sustained Admiral Davis in this matter and condemned the governor for lack of tact.

DAVIS, WALTER JUAN. Editor and writer, died in New York City, December 4. He was born at Lexington, Mo., in 1860 and going to New Mexico entered the territorial legislature where he became democratic floor leader. In 1890 he went into newspaper work in Denver, Colo., where he was engaged in journalism for the most part until 1913 when he came to New York and joined the editorial staff of the *Morning Telegraph*.

DAY, ERASTUS SHELDON. See NECROLOGY.

DEATH RATE. See VITAL STATISTICS.

DEFREGGER, FRANZ VON. Austrian genre and historical painter, died during the year. He was born in Tirol, April 30, 1835; studied at Munich; and gained a great success with his painting of a wrestling match, 1870. Other well-known paintings are: "The Last Summons" (1874); "The Zither Players" (1876); "The Fashionable Tirolese" (1882); "The Fortune Teller" (1891); "Before the Dance" (1892). Albums of his work were published in Vienna (1889-92) and in Munich (1895).

DELAWARE. POPULATION. According to the report of the census of 1920, there were 223,003 residents in the State, Jan. 1, 1920, as compared with 202,322 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	177,000	6,549,000	\$2,947,000
	1920	173,000	6,488,000	4,866,000
Wheat.....	1921	113,000	1,300,000	1,274,000
	1920	116,000	1,972,000	3,372,000
Hay.....	1921	74,000	189,000	1,548,000
	1920	75,000	1106,000	2,266,000
Potatoes.....	1921	10,000	500,000	550,000
	1920	10,000	1,060,000	1,060,000
Sweet potatoes.....	1921	9,000	900,000	990,000
	1920	9,000	1,152,000	1,152,000

¹ Tons.

FINANCE. The total balance at the close of the fiscal year, Jan. 10, 1921, was \$1,785,115. The cash receipts for the general fund during 1920 were \$4,426,436 and the expenditures \$4,113,298. The total liabilities of the State, January 10, were \$3,056,785.

CHARITIES AND CORRECTIONS. The institutions owned and controlled by the State include the Delaware State Hospital for the Insane at Farnhurst, the Ferris Industrial School at Marshallton,

Edgewood Sanitarium (for colored tuberculous patients) at Marshallton, the Home for the Feeble Minded at Stockley, and the Blind Shop in Wilmington. The population, Jan. 1, 1919, of institutions in receipt of public funds was 1745.

LEGISLATION. The 98th session of the General Assembly of Delaware opened on January 4. Amendments to the constitution were proposed providing for the levying of and collecting of a capitation tax on every citizen 21 years of age or over and providing that no one should be disqualified to hold any office of public trust by reason of sex. The acts of the session included the imposition of an income tax for school purposes; amendment of the code of the State in respect to alien land ownership, the amendment providing that only such aliens as are eligible to citizenship might acquire, possess, inherit, or transfer real or personal properties, and that all other aliens were authorized to do so only in the manner and to the extent prescribed by any treaty between the United States and the country of origin; act providing for a tax on shares of banking corporations; act in relation to the use of a prophylactic against diseases of the eye in the new-born; creation of the budget system for all State departments, bureaus, etc.; regulation of buildings and loan associations; establishment of a child welfare commission for the State; act requiring local boards of education to provide part-time educational opportunities for children under 16 years not attending school, attendance at part-time classes to be compulsory; legislation carrying out the educational programme of 1920 for the establishment of a general and efficient system of free public schools; act to assist in the Americanization of the foreign born, non-English speaking residents of the State; improved sanitary regulations for the protection of females employed in the State, regulations of the weighing, testing, buying, and selling of milk and cream with a view to preventing fraud and protecting the public health; provision for the support and education of children in certain cases; act making it unlawful for a landlord to refuse to rent on account of children in tenant's families.

OFFICERS. Governor, William D. Denney; Lieutenant-Governor, J. Danforth Bush; Secretary of State, A. R. Benson; Attorney-General, Sylvester D. Townsend, Jr.; Treasurer, Geo. M. Fisher; Auditor Daniel Thompson.

JUDICIARY. Chancellor, Josiah O. Wolcott; Chief Justice, James Pennewill; Associate Justices, Herbert L. Rice; William Watson Harrington; Charles S. Richards; Associate Judge-at-Large, Thomas B. Heisel.

DELAWARE RIVER BRIDGE. See BRIDGES.

DENMARK. A Scandinavian kingdom in northern Europe comprising the peninsula of Jutland and the groups of islands to the east. By the plebiscite of 1919 under the terms of the Peace Treaty, a part of Schleswig was united to Denmark. Capital, Copenhagen.

AREA AND POPULATION. The total area according to the census of Feb. 1, 1921, is 16,566, including Schleswig, and the total population 3,268,807, as compared with a total population in 1916 of 2,940,979. The population in North Schleswig, Feb. 1, 1921, was 184,133. The movement of population in 1919 was as follows: Births, 68,714; deaths, 39,589; marriages, 25,073. The sex distribution in 1916 was: Males, 1,415,822 and females, 1,505,540. The population of

Copenhagen, the capital, in 1916 was 506,390, and with suburbs, 605,772. Other important cities with their populations: * Aarhus, 65,858; Odense, 45,303; Aalborg, 38,102; Horsens, 25,149; Randers, 24,428.

EDUCATION. Elementary education is free and compulsory between the ages of seven and fourteen. The schools are maintained by taxes on the communes. In 1919 there were 3474 public elementary schools of which 65 were in Copenhagen and 162 in other towns and 3247 in the country districts, with 406,000 pupils. The attendance at government schools and private schools in 1919 was about 63,000. For higher education there are various technical and professional schools and colleges and the University of Copenhagen, which had about 100 teachers and 3200 students.

PRODUCTION. Agriculture is the chief occupation. The holdings are for the most part small. The chief crops are wheat, barley, rye, oats, kohlrabi, potatoes, and hay. The following table from the *Statesman's Year Book* of 1921 gives the acreage and production of the chief crops for two years:

Crops	Area		Production	
	1919, acres	1920, acres	1919, tons	1920, tons
Wheat.....	124,496	156,405	161,200	189,000
Rye.....	518,965	525,512	378,700	319,700
Barley.....	568,766	596,292	533,900	512,700
Oats.....	966,813	1,012,787	690,700	684,100
Mixed grain.....	581,642		379,000	349,100
Potatoes.....	225,597		1,444,800	

Live stock reported in 1920 were as follows: Horses, 563,467; cattle, 2,286,408; sheep, 504,241;

Heavy depression in practically every industry continued to be the keynote of the Danish industrial situation, and while a slight improvement was noticeable in some lines the general tone was not encouraging. German competition still tended to aggravate the situation, as the currency differences between the two countries made it difficult for Danish industries to compete, and curtailment of production, or the entire closing down of some industries, resulted. Insistent demands were made upon the government for protective-tariff legislation, but inasmuch as the Agrarian Party (unfavorable to this policy) was in control of the government, success seemed doubtful.

Unemployment naturally followed the depressed industrial situation. Toward the end of the year reports, however, indicated a slight decrease in the number of unemployed, as the renewed activity in the clothing, leather, and shoe industries bettered the situation, especially in Copenhagen, where more than half of the unemployed workers were found. The number of unemployed toward the close of the year totaled about 300,000. During the first three-quarters of 1921 wages were reduced by 20 to 25 per cent, skilled labor suffering the greatest decrease.

COMMERCE. No later figures were available for commerce than those given in the preceding *YEAR BOOK*, which did not include totals for 1919. In 1918 the total imports of general produce was 945,747,000 kroner; special imports, 910,210,000 kroner; general exports, 758,446,000 kroner; special exports, 710,490,000 kroner. The following table shows the distribution of the foreign trade by countries:

Countries	Imports (general)		Exports (general)	
	1917, kroner	1918, kroner	1917, kroner	1918, kroner
Germany.....	237,181,000	316,109,000	488,415,000	307,632,000
United Kingdom.....	283,946,000	195,878,000	264,607,000	51,596,000
Sweden.....	137,160,000	235,381,000	113,145,000	186,700,000
Norway.....	30,687,000	47,345,000	78,705,000	127,722,000
United States.....	214,139,000	37,557,000	4,052,000	1,854,000
Rest of America.....	71,409,000	2,334,000	3,224,000	3,534,000
Holland.....	17,328,000	20,125,000	2,934,000	5,644,000
France.....	13,524,000	4,406,000	1,896,000	2,300,000
Danish Colonies.....	4,397,000	5,746,000	17,961,000	12,726,000

swine, 1,007,861; hens, 13,997,015. The industries in Denmark include distilleries, breweries, manufactures of sugar, margarine, etc. In 1919 there were 12 distilleries producing 4,490,000 litres. The fisheries are also an important industry. The catch in 1919 amounted to £3,006,222 and the fleet in that year had 15,422 boats.

ECONOMIC CONDITIONS. The cost of living was materially lowered during 1921, and during October and the first part of November wholesale price levels showed a continued decline. The index number compiled by *Finans Tidende*, for the wholesale prices, based on 100 in 1913, advanced to 403 in October, 1920. In January, 1921, it had declined to 290 and in October, 1921, it had been further reduced to 202. This continued downward movement was caused largely by extensive declines in wheat, rye, oats, potatoes, beef, and several other important staples; slight declines were also noted in building materials, while textiles, cotton, wool, and leather prices remained unchanged. Generally speaking, fuel oils and raw materials showed a slight increase in price, while foodstuff prices fell considerably.

According to press accounts the trade figures showed a favorable balance to Denmark at the close of the year. During the first six months of 1921 imports declined, while exports remained stationary, which showed a considerable improvement over the first six months of 1920.

FINANCE. The table on page 190 gives the details for the budget estimates of 1921-22.

The national accounts for the fiscal year of 1921 showed a deficit of more than 106,000,000 crowns, which was covered by drawing cash from the treasury, the funds of which were thus reduced from 352,000,000 to 246,000,000 crowns. The proposed budget for the next fiscal year also showed a deficit which was estimated at approximately 61,000,000. This, however, was likely to be considerably cut down by income from new taxes, designed to replace those extraordinary wartime taxes, which, on account of the prevailing stringent economic conditions, had ceased to yield. On August 1, 1921, Denmark's national debt amounted to 1,074,000,000 crowns, of which 670,000,000 was internal and 404,000,000 external debt. As compared with

<i>Current revenue</i>	<i>Kroner</i>	<i>Current expenditure</i>	<i>Kroner</i>
Balance of domain revenues.....	1,681,623	Civil list and appanages.....	1,222,000
Balance of State undertaking.....	893,120	Rigsdag.....	3,000,000
Interest on outstanding debt.....	6,102,410	Interest and expenses on State debt.....	39,936,400
Balance of funds, etc.....	631,898	Council of State.....	437,884
Direct and indirect taxes.....	304,878,255	Ministry of Foreign Affairs.....	3,075,005
Balance of lotteries.....	1,420,460	Ministry of Ecclesiastical Affairs.....	3,351,359
Separate revenues.....	4,545,557	Ministry of Public Instruction.....	64,751,346
		Ministry of Justice.....	38,594,094
		Ministry of Interior.....	43,623,650
		Ministry of Agriculture.....	10,619,583
		Ministry of War.....	45,142,788
		Ministry of Marine.....	28,200,000
		Ministry of Finance.....	23,616,790
		Ministry of Public Works.....	4,083,619
		Ministry of Commerce and Navigation.....	4,325,927
		Pensions.....	11,337,480
Total revenue.....	318,367,083 (17,687,060.)	Total expenditure.....	325,317,935 (18,073,218.)

March 31, 1920, this showed an increase of 48,-000,000 crowns, the total debt on that date amounting to 926,000,000 crowns, with 872,-000,000 and 254,000,000 representing the internal and external debt, respectively.

COMMUNICATIONS. Shipping is the most important phase of Danish transportation, and in bringing up the country's credit balance in world trade, the merchant marine plays a very important part. The Danish merchant fleet at the end of 1920 consisted of 761 ships, with a total of 868,426 tons, which, when compared with 1914 figures, shows a reduction in the number of ships of 4.3 per cent, but an increase in the actual tonnage of 10.7 per cent. The net increase during 1920 was 49 ships, with a total tonnage of 136,471 tons, of which Danish shipyards contributed 65,629 tons. During the first half of 1921 the Danish merchant marine showed a gross increase of 23 ships, with a total of 35,410 tons and a decrease of 17 ships, totaling 14,895 tons, leaving a net increase during this period of 20,515 tons. On July 1, 1921, 52 ships aggregating 102,175 tons were under construction in Danish shipyards. The shipping stagnation which began in 1920 and reached its extreme point in June, 1921, had a disastrous effect upon Danish shipping interests. The total idle tonnage, which on Jan. 1, 1921, amounted to 60,000 tons, in June, 1921, had increased to 350,000 tons, or about 40 per cent of the total tonnage. During July this was reduced to about 325,000 tons, and an agreement for reduction of wages arrived at in August tended to further cut down the amount of idle tonnage. Hopes based upon this slight revival of shipping were disappointed. Reduction in cost of operation and rigid economy in every phase of shipping was being resorted to in a determined effort to turn the tide. A fact worthy of notice in connection with the shipping stagnation was the continued operation of all Diesel motor-equipped vessels, which, on account of more economical operation, appeared to be able to successfully face the present situation.

The railway mileage in 1918 was 2635 of which 1283 belonged to the state. As compared with shipping, the railways play an insignificant part in Danish transportation. The principal railways are State owned and operated and are amply equipped to handle all traffic offered. Rolling stock, as well as roadbeds were reported as being in the very best condition. In spite of enormous rate increases put into effect during the past five years, the Danish railways were unable to balance their budgets. The railroad budget for the

financial year closing March 31, 1921, showed a deficit of 53,500,000 crowns. The estimated budget for the next fiscal year, however, was balanced, and slight rate increases were planned for the coming year.

Danish highways are on the whole excellent, and the mileage is remarkable when the size of the country is taken into consideration. There are about 30,000 miles of public roads in Denmark, of which about 66 per cent are partly graveled, 30 per cent macadamized, and 4 per cent paved. The constantly increasing automobile traffic is causing highway deterioration—unusual under the Danish road-repair system—which is doubtless aggravated by lack of attention during the war.

Although the geographical nature of the country makes unnecessary any extensive system of inland waterways, several canals were completed during the year, the most important being the Odense Ship Canal, which connects the third largest Danish city with the open sea. Other quite extensive projects were under consideration, including a canal which would eliminate the dangerous voyage around the northernmost point of Jutland.

DEFENSE. All males who have reached the age of 20 years are liable to military service for 16 years. The peace strength is placed at 78,000 men and war strength at 105,000. Denmark maintains a small fleet simply for coast defense.

GOVERNMENT. Executive power is vested in the king who acts through a ministry responsible to parliament and legislative power in the Rigsdag or diet consisting of the Folkething or lower house with 149 members and the Landsting or upper house with 75 members. The king in 1921 was Christian X (born Sept. 26, 1870). The ministry at the beginning of 1921 was as follows: Presidency of the Council and Minister of Finance, M. Neergaard; Foreign Affairs, Harald Scavenius; Interior, Sigurd Berg; Justice, Svenning Rytter; Defense, M. Berntsen; Public Instruction, Jacob Appel; Ecclesiastical Affairs, M. Christensen; Agriculture, Madsen Mygdal; Transport, M. Slesbager; Commerce and Navigation, Tyge Rothe.

HISTORY. German competition in the summer caused great disturbance in the Danish markets according to the Danish newspapers and the problem of unemployment was most serious, only a few industries remaining active and these employing only from three-fourths to one-sixth of their former working forces. German imports had practically destroyed the Danish tin-plate

industry. According to some authorities, however, the falling off of production was due generally to the tendency of the public to defer buying. A Danish trade delegation was sent to Stockholm in the middle of November for the purpose of negotiating a trade agreement between Denmark and the Soviet government but failed in consequence of the demands of the latter, which claimed the right to appoint representatives in Denmark other than Russian subjects. This was believed by the Danes to mean that Bolshevik leaders would be appointed from among them. There was also fear in Denmark of Soviet propaganda if a demand of the Russian government in respect to the free entry of Russian literature in Denmark was granted. President Harding appointed as minister to Denmark, Professor John Dyneley Prince, head of the department of Slavonic languages at Columbia University, known for many years as a linguist and especially as an Orientalist. He was prominent in New Jersey State politics where he had been president of the New Jersey State Civil Service Commission, Speaker of the New Jersey State Assembly, and President of the State Senate. The Arctic expedition of Rasmussen for the purpose of mapping the islands between Greenland and the American continent was going on during the year. See the article **POLAR RESEARCH**.

DENVER UNIVERSITY. An institution of higher learning at Denver, Colo.; founded in 1864. The enrollment in the university for 1921-22 was about 3500 and in the summer school of 1920 it was 562. The library contained about 50,000 volumes. Acting Chancellor, Wilber D. Engle.

DE PAUW UNIVERSITY. A co-educational institution of higher learning at Greencastle, Ind., under the auspices of the Methodist Episcopal Church; founded in 1837. In the autumn session of 1921 the students numbered 1126 and in the summer school 166. There were 24,000 volumes in the library and 11,754 in the department libraries. The net income for the year 1920 was \$294,748. A campaign for the collection of \$2,000,000 was begun in 1921. President, George Richmond Grose.

DESTROYERS. See **BATTLESHIPS AND OTHER WAR VESSELS**.

DETROIT, UNIVERSITY OF. An institution of the higher learning at Detroit, Mich., under the auspices of the Roman Catholic Church. In the fall session of 1921 the enrollment of students was 1305 of whom 679 were in Commerce and Finance; 275 in Law; and 236 in Engineering. The number of teachers on the staff was 165. The libraries contained 55,000 volumes. President, John P. McNichols, S. J., Ph.D.

DETROIT SYMPHONY ORCHESTRA. See **MUSIC, Orchestras**.

D'EU, COUNTESS. Daughter of the former emperor of Brazil, died in Paris, France, November 14. Before her marriage she was Princess Isabel de Braganza. She was born in 1846 and married the Count D'Eu, Oct. 15, 1864, having three sons by him. As regent of Brazil she signed the decree abolishing slavery.

DEUTSCH, GOTTHARD. Hebrew scholar, died at Cincinnati, Ohio, October 14. At the time of his death he was dean of the Hebrew Union College of Cincinnati. He was born at Kanitz,

Austria, in 1859, and took his doctor's degree at the Royal University of Vienna. Coming to the United States, he was made Professor of History in the Hebrew Union College, holding that chair for thirty years. One of his chief undertakings was an elaborate history of recent times from the Jewish point of view. For this purpose he made a vast collection of historical data which were preserved by means of a card index system, the material being made up of clippings from periodicals from 1850 down to the year of his death. The actual writing of the work was not completed. He wrote a number of treatises on history, religion, and language and also two novels. His linguistic talent was remarkable and it was said of him that he wrote equally well in English, Hebrew, French, and German. His name became prominent in 1905 owing to the refusal of the Russian government to grant him a passport because he was a Jew. Upon his appeal to President Roosevelt the Russian government was prevailed upon to grant him the passport. He interested himself in civic affairs, taking part in various public movements and serving on one occasion as a member of the Board of Education.

DIABETES. Under the fasting treatment so called of this disease it has been claimed that all but about six per cent of patients are capable of recovery, and that the disease has been robbed of its terrors. This seems far too roseate a view to take of so deep seated and chronic an affection, which has hitherto been looked on as almost surely fatal in time. There is indeed something sensational in the immediate results of the treatment, for not only does the sugar disappear from the urine, but the subject is seen to return to his daily vocation. But whatever the outcome of this management it is only necessary to glance at the census figures for 1920 which have recently been released for publication (Oct. 22, 1921) to note that as a social disease diabetes, so far from falling off in mortality, is actually increasing. In 1919 the total number of deaths from this cause in the registration area of continental United States was 12,683 while in 1920 the figure is 14,062. That this excess is not due to increase in population is shown by the ratio of deaths per 100,000 population; for while in 1919 this was 14.9, in the next year it had mounted to 16.1. The fasting treatment has now been in use for about seven or eight years although this is much too short an interval for it to become widespread. Many plain practitioners who have attempted to carry out the treatment in the patients' homes have made disappointing reports and it is evident that special sanitaria and hospitals are requisite to give the treatment a suitable tryout. Many diabetics die of so-called acidosis and the fasting treatment is especially suited to prevent this termination and consequently to extend the life of the individual patient. The failure of the benefits of the fasting treatment to show in the census figures may, in addition to reasons already alleged, be explained by the enormous multiplication of confectionery shops since the XVIII amendment went into effect. It had been predicted that extensive increased consumption of sugar would cause an increase of diabetes.

DIPHTHERIA. The use of the Schick test to determine which children are likely to develop diphtheria after exposure is regarded as a notable advance in the control of this affection. The children thus proved to be susceptible may be immunized against the disease. The only chance for a difference of opinion is in regard to immunization of the other children who are presumably insusceptible to the disease. Nothing is infallible in biology and in some cases the Schick law shows exceptional behavior. In some children's hospitals no attention is paid to preliminary Schick selection and the immunization is made universal. The immunizing substance is the combination of toxin and antitoxin with slight excess of free toxin. Rohmer and Levy, French pediatricists, advocate routine vaccination in this manner for all children somewhere between the 6th and 18th months. The disease has the greatest menace between the ages of 2 and 6 years. The authors recommend two prophylactic injections 10 days apart. It is of little use to immunize before the age of 6 months, for such young infants seldom contract the disease even on close exposure. After the age of two it is of course possible to immunize and so on through the entire period of susceptibility; it is in some ways of advantage to wait, for owing to the increased susceptibility between 2 and 6 years the dose need not be as powerful as that required before the age of 2 years. As a social problem it is of course best to immunize during the safe period, but if this has been exceeded and the child is in the unsafe period it is by no means too late, but quite the contrary. *La Presse Médicale*, Nov. 10, 1921.

DISCIPLES OF CHRIST. Founded in 1809, this denomination has had a rapid growth and is now the fifth largest Protestant body in the United States. Total membership for the world was 1,277,231 in 1921, or a gain of 34,568 over the previous year, and in the United States and Canada, 1,210,023 were enrolled. The Bible School enrollment for the world is shown as 1,063,890, a gain of 64,447. The churches throughout the world now number 9692. The total number of preachers in the United States and Canada was 6079, of which 304 are colored. The receipts, including gifts, permanent funds, etc., for a nine months' period, October, 1920, to June 30, 1921, were \$2,778,956.05, or an average of \$2.29 per member; of this amount, \$1,914,010.74 was applied strictly to missionary and educational work. The denomination is divided into four departments: the United Christian Missionary Society, Board of Education of the Disciples of Christ, Board of Temperance and Social Welfare, and the Association for the Promotion of Christian Unity. An International Convention has advisory relations with these departments in the administration of their various interests. Six departments, the American Missionary Society, Board of Church Extension, Board of Ministerial Relief, Christian Woman's Board of Missions, Foreign Christian Missionary Society, and the National Benevolent Association, comprise the United Christian Missionary Society, which has headquarters in St. Louis and carries on missionary and benevolent work at home and abroad. It is said

to be the most thoroughly representative religious organization in existence in that its 24 directors are divided equally between men and women. Foreign mission work is carried on in ten countries, Africa, China, India, Japan, Philippine Islands, Tibet, Mexico, Porto Rico, Jamaica, and South America, and missionaries numbered 275 in 1921. The work of the Department of Home Missions takes the form of church maintenance through states and provinces, Evangelism, Bible Chairs, French, Highlanders, Immigrant, Indian, Negro, Oriental, Regional, Rural, Spanish-American and Mexican, Recruitment and Training of Workers. Figures of the Board of Education of the denomination show that there were 7517 Disciple students, 80 in state universities, and 274 in 8 independent universities. In the 27 colleges and educational institutions maintained by the denomination alone there were 9561 students enrolled. The purpose of the Association for the Promotion of Christian Unity is to watch for every indication of and hasten the time of Christian unity. Numerous conferences were held throughout the year. The efforts of the Board of Temperance and Social Welfare have been directed toward strict enforcement of the Prohibition laws. Among the various publications of the denomination may be mentioned the *World Call*, *The Christian Evangelist*, *The Christian Century*, and the *Christian Standard*. Stephen E. Fisher, Champaign, Ill., is President of the International Convention; Graham Frank, Dallas, Texas, is general secretary. F. W. Burnham is President of the United Christian Missionary Society; H. O. Pritchard, is general secretary of the Board of Education; and Peter Ainslie is President of the Association for the Promotion of Christian Unity.

DOBRUJA. The name of the southeastern part of Roumania. Area about 8970 square miles; population (1912) 381,306 including Bulgarians, Roumanians, Turks, Tatars, Russians, Germans, and other races. Chief towns: Constantia (27,622); and Tulcha (22,186).

DOBSON, HENRY AUSTIN. British author, died, September 2. He was especially known as the author of light verse. He was born at Plymouth, England, Jan. 18, 1840, and educated at private schools in England and at the Gymnasium of Strasburg. For many years he held a government office being principal of the Board of Trade 1884-1901, when he retired and devoted himself exclusively to literature. Although his *Vignettes in Rhyme* (1873) and successive collections of poems and society verse gave him so extensive a vogue both in England and the United States that he was known especially as a verse writer, his work in literary criticism and literary history was perhaps a better title to permanent reputation. The other volumes of verse included *Proverbs in Porcelain* (1887); *Old World Idyls* (1883); *At the Sign of the Lyre* (1885). The publications of his collected poems began in 1897 and had passed through nine editions in 1913. His prose work included besides a great variety of articles for works of reference and magazines and many editions of classical and other writings, the following: *Thomas Bewick and his Pupils* (1884); *Lives of Fielding* (1883), *Steele* (1886), *Goldsmith* (1888), *Horace Walpole* (1890-1910), *William Hogarth* (1891, 1897, 1907), *Richardson* (1902), and *Fanny Burney* (1903); *Four Frenchwomen* (1890); *Eighteenth Century Vignettes* (three

series, 1892, 1894, 1896); *A Paladin of Philanthropy* (1899); *Side-Walk Studies* (1902); *De Libris* (1908); *Old Kensington Palace* (1910); *At Prior Park* (1912).

DOCA, R. C. See NECROLOGY.

DOCKS AND HARBORS. See PORTS AND HARBORS.

DODECANESIA or the DODECANESE. (Greek for 12 islands.) A group of islands off the southwest coast of Asia Minor acquired by Italy in the war with Turkey in 1912 and confirmed to her in the Treaty of Sèvres in 1920, but as that treaty was not ratified their status remained indeterminate in 1921.

DODGE, DAVID STUART. Presbyterian minister, former President of the Board of Home Missions, died in New York City, December 17. He was born in New York City, Sept. 22, 1836, graduated at Yale in 1857 and at the Union Theological Seminary in 1860. In 1864 he was ordained to the Presbyterian ministry and from 1899 to 1915 was President of the Board of Home Missions. He was also President of the board of trustees of the Syrian Protestant College.

DOHNÁNYI, ERNST. See MUSIC, Artists, Instrumentalists.

DOMINICA. See SEWARD ISLANDS.

DOMINICAN REPUBLIC or SANTO DOMINGO. A West Indian state occupying the eastern part of the island of Haiti or Santo Domingo, the larger portion being occupied by the republic of Haiti. Capital, Santo Domingo.

AREA AND POPULATION. The area is estimated at 19,332 square miles with a coast line of about 10,017 miles, and the population was estimated in 1919 at about 1,000,000. In 1918 the estimate was 955,159 but lower estimates are offered and in general the population is placed no higher than 600,000. The inhabitants are of mixed race, European, African, and Indian stocks prevailing, but there are some Creoles of pure Spanish blood. The language is Spanish but a Haitian dialect is spoken along the frontier and many of the American negro immigrants speak a corrupt English. The population of Santo Domingo according to the census of 1919 was 26,812. Other large cities with their recent population estimates are: Santiago de Los Caballeros, 14,744; San Pedro de Macoras, 10,000; La Vega about 8000; Puerta Plata, 7370.

EDUCATION. Primary instruction is free and compulsory. In 1920 the public schools numbered 972 with 1544 teachers and 105,000 pupils. In 1919-20 the expenditure on public instruction amounted to 943,880 dollars.

PRODUCTION. The chief source of wealth is agriculture, but stock-raising is important. Manufacturing is carried on only on a small scale. The chief crops are sugar, tobacco, and coconuts and their products. The chief industry is the raising of sugar cane. In 1920-21 the production amounted to 1,326,438 bags of 320 lbs. each as compared with 1,230,150 bags in 1919-20. In 1918 tobacco production amounted to 33,439,648 lbs. The average annual production of coconuts is about 1,500,000. The mineral resources are considerable and various including iron, coal, petroleum, silver, platinum, quicksilver, etc. The leading imports are cotton, iron, and steel manufactures, grain, bags, and sacks, etc., chemical products and soap. The chief exports are sugar, cacao, tobacco, coffee, and honey. Live stock,

May 15, 1921: Cattle, 647,158; horses, 162,800; goats, 655,571; hogs, 557,242.

COMMERCE. In 1919 the imports of merchandise were valued at \$22,019,127, and the exports, at \$39,601,892, a considerable gain over 1918, especially in respect to exports. The United States supplied 82 per cent of the imports and received over 61 per cent of the exports. The chief imports in that year were: Iron and steel manufactures; cotton and cotton manufactures; rice, and wheat flour; and the chief exports were: Raw sugar, cocoa, and tobacco.

FINANCE. The budget for 1919 was as follows: Revenue, 8,717,252 dollars; expenditures, 7,922,229 dollars. In 1920 the budget estimates were: Revenue, 12,000,000 dollars; expenditure, 8,160,000 dollars. The treaty with the United States of Feb. 8, 1907, authorized an issue of 20,000,000 dollars in five per cent bonds, secured on the customs revenue of the republic, and the United States President under this treaty appointed the general receiver of customs. The Guaranty Trust company of New York was made fiscal agent to provide a sinking fund for the service of the loan. At the beginning of 1920 the sinking fund amounted to 8,309,038 dollars. The public debt, July 31, 1920, was 13,100,786 dollars.

COMMUNICATIONS. The railway mileage in 1919 was 153, and there were besides about 255 miles of private line on the large estates. The two principal railway lines are that from the Bay of Samana to Santiago; and the Dominican Central, which runs from Puerto Plata to Santiago and Moca. The foreign trade shipping entered in 1919 was as follows: 344 steamships of 366,208 tons with cargo; 168 steamships of 186,064 tons in ballast; 164 sailing vessels of 23,713 tons.

DEFENSE. Aside from the American marines the only force consisted of the native constabulary officered by Americans (see preceding YEAR BOOK) which numbered 1150 and was divided into 14 companies.

GOVERNMENT. Executive power under the constitution of 1908 is vested in a president chosen by an electoral college for ten years and a cabinet of seven ministers; legislative power, in a national congress, consisting of a senate of twelve members and a chamber of deputies of twenty-four members. After the civil war of 1916 a military government under the United States was proclaimed (Nov. 29, 1916). Both the executive and legislative power was intrusted to United States naval officers under a military governor who at the beginning of 1921 was Rear-Admiral Thomas Snowden.

HISTORY. The president of the Dominican Republic, Henriquez y. Carvajal, appealed to the president of the United States to withdraw American military and political influence, April 12. On June 14 the President of the United States issued a proclamation, promising to withdraw the American force from the country within eight months if certain conditions were fulfilled, including the holding of orderly elections for a new governor, the ratification of the military government's acts, and the validation of the government loan. The special Senate commission appointed to investigate conditions in the Dominican Republic and Haiti under the chairmanship of Senator Medill McCormick of Illinois, reported on its return to Washington, on December 26, that

the political leaders had refused to accept the conditions laid down in the President's proclamation for the withdrawal of the American military government. The people acting on the advice of their leaders had refused to take any measure for the holding of elections in order to establish a government that could negotiate with the United States government on this proposal.

DOURINE. See VETERINARY MEDICINE.

DOWLING, MICHAEL JOHN. Banker, died at Olivia, Minn., April 25. He was born at Huntington, Mass., Feb. 17, 1866; removed to Minnesota in his boyhood, and lived there until the time of his death. He was a dealer in real estate after 1897, and became president of the Olivia State bank. He was speaker of the Minnesota house of representatives in 1901. In 1900 he served as a special commissioner to the Philippine Islands. In politics he was a Republican.

DRAGO, LUIS MARIA. Noted South American jurist, died at Buenos Aires, Argentina, June 9. He was the author of the doctrine of international law which was known throughout the world under his name. He was born in 1859 and first applied himself to criminal law and criminology, writing two works on that subject which gave him an international reputation. As Minister of Foreign Affairs he formulated the Drago Doctrine, mentioned above, presenting first his statement of it in his *Cobro coercitivo de deudas publicas* (1906). He was a member of the Peace Court at The Hague.

DRAINAGE. See RECLAMATION.

DRAKE UNIVERSITY. An institution of the higher learning at Des Moines, Iowa; founded in 1881. The student enrollment in the autumn of 1921 was 1507 of whom 414 were in the Liberal Arts College, 340 in the Fine Arts College, 322 in Education College; and in the summer term of 1921 there were 5708. There were 80 members of the faculty. The library contained 32,000 volumes. An observatory was built by the city of Des Moines in Waverland Park to be called the Drake University Municipal Observatory. President, Arthur Holmes, Ph.D.

DRAMA. AMERICAN AND ENGLISH. Seasons in the theatre do not begin on January 1 and end on December 31. Instead, they extend approximately from August 1 of one calendar year to May or the arrival of prohibitive heat in the next. Whatever general tendencies may be observed over a period of time are much more evident in the course of this natural season than in the one artificially fenced off by New Year's morn and the following New Year's eve. That fact was never more apparent than it is in the dramatic chronicle of 1921. The first half of the year, belonging normally with the season of 1920-21, fulfilled, both artistically and financially, the prospects set forth in this survey in the previous volume to the effect that it gave promise of becoming one of the most brilliant in recent years. And then, by one of those sudden reversals of the pendulum characteristic of all the arts but especially of the theatre, the latter half of the year, introductory to the season of 1921-22, brought a flood of worthless and nondescript plays above the wreckage of which the really meritorious productions had difficulty in raising their heads.

And yet, after we discount the more obvious fact that from August to December the number of failures roughly equaled the total number of pro-

ductions of the corresponding months of 1920, after we admit that these failures, most of them justly deserved, have had a depressing effect on all the activities of the stage, we are bound to recognize the persistence of those forces which made the previous season what it was and to acknowledge the existence of practically the same number of significant works which have been more or less fortunate in winning public approval. Except, therefore, for the theatrical economic depression, which gave few signs of abating in December, the state of our stage justifies sanguine hopes for the future. And it is even possible that one of the chief reasons for the wholesale failures of the autumn is the growth of a more exacting taste on the part of the theatregoing public.

Just as in 1920, the American stage far surpassed the British in variety, fecundity, and virility. A forward-looking spirit, a spirit of daring, of experiment, of desire to create and to comprehend new things, characterized the theatre this side of the Atlantic, while the British stage, with several notable exceptions, remained content with the ordinary, the mediocre, and the traditional. These few exceptions to the rule of time-worn fustian in London included Clemence Dane's *A Bill of Divorcement*, later to win an equal and deserved triumph in New York; the same author's *Will Shakespeare*, which had only a short run; Halcott Glover's *Wat Tyler*, a fresh treatment of historical material; a continuation of the previous season's unpretentious but effective revivals of the classics at the Old Vic, south of the Thames; and the tardy but ultimately hearty approval of Nikita Balieff's supercabaret from Moscow, *La Chauve-Souris* or *The Bat*. The coldness and petulance with which Bernard Shaw's great comedy *Heartbreak House*, was received, stands in striking contrast with the admiration it commanded in New York the preceding year and may be taken as an index of the comparative contemporary tastes of the two capitals.

The American theatre in 1921 was characterized by curiously contradictory tendencies, some of which were more clearly apparent in the earlier half while others emerged more definitely in the latter months. Among those tendencies may be named a restless and courageous experimental spirit among native artists and producing groups, a spirit which was not wholly stifled but appreciably retarded by such contrary aspects of the situation as a flood of plays from foreign sources amounting almost to an invasion, a financial depression more disastrous than any in recent years, and a consequent attempt to find foothold in precarious times by the revival of the outstanding successes of the last decade and a half.

The positive contribution of the year, therefore, was its urge to exploration. No new playwright of the first order was thereby revealed; no new producing groups of significance took the field; few new actors of great immediate promise were up-turned. And yet, not in one instance but in many, the guiding impulse was to break away from traditional themes and aesthetics and methods of administration and to set out in search of new ones. That these fresher substitutes for the time-worn and the familiar were seldom fully discovered and achieved, by no means discredits the attempt to find them. And if the impulse toward experiment be temporarily retarded by financial considera-

tions, it has been proved to be deeply enough rooted to forge ahead at the first opportunity.

Probably the most important and ambitious of these experiments was the attempt of Arthur Hopkins and Robert Edmond Jones to formulate a new æsthetic of the theatre, comparable with that which has made its way into the pictorial and plastic arts. In brief, they sought to replace representation with abstraction. The channel through which they chose to work, *Macbeth*, was not a happy choice. Originally written to be interpreted literally and encrusted with centuries of realistic tradition, it appeared before its spectators in its new guise with unfortunate handicaps and obstacles to unbiased judgment. Everyone was accustomed to conceiving the tragedy of blood-cursed ambition with backgrounds representative of castle walls and the actual rooms in which the story is unfolded. To ask them, instead, to watch the play against backgrounds depicting the moods and emotions of the several scenes, with bits of scenery and lights suggestive of these moods rather than of the actual locale, was too much. All other contributory causes of the failure—the unsteady realization of a new theory in several of the settings and the acting which was out of sympathy with that theory at every point—were subsidiary to this mistake in the choice of a medium for its expression.

What Hopkins and Jones should have done was to have taken a play or an action—or a pantomime, even—which had been composed by its author especially to be interpreted by abstract means. No matter how brief or how feeble that play had been, the new æsthetic would have been observed on its own merits and the public could have judged the results unhampered by resentment over the violence done to its fixed ideas. Still, the experiment shows which way the wind blows and gives promise of further revolutionary contributions to the art of the theatre comparable to those which have come from European stages in the last two decades.

While preëminent of its kind, the Hopkins-Jones *Macbeth* does not stand alone. Other experimenters toward a new theatre included The Provincetown Players, who enabled Susan Glaspell to explore the possibilities of native drama on social and economic themes in *Inheritors* and to search bravely though in vain for the super-sanity of insanity in *The Verge*; The Theatre Guild, whose production of Frans Molnar's *Liliom* brought to light a fresh and original dramaturgy and whose courage in mounting Arthur Richman's *Ambush* added a new and promising name to the brief list of our realistic playwrights; the Players' Fellowship, who, with Edith Ellis's dramatization of Karen Michaelis' *The Dangerous Age* under title of *The White Villa*, introduced a new manner of bringing plays before the attention of managers; and finally the arrival in exhibition if not yet in actual production on the stage, of two masters of scenic design comparatively new to us: Herman Rosse, of the Chicago Art Institute and formerly of The Hague, and Nikolas Roerich, of Petrograd.

As counterbalance to this virile spirit of experiment, the business depression which had made itself felt the year before on "the road" extended to New York with the opening of the new season in the fall. Judged by some to be the result of extravagant admission prices and by others as an indication of stricter standards on the part of the public,

it was rather, on the whole, a tardy reflection of general business conditions. One of its most manifest results was the wholesale revival of successes of former years, only a few of which stood the test of time.

No new native playwrights of the first order came to the fore, but Eugene G. O'Neill, the most significant discovery of the previous year, added to his repute with *Anna Christie* and *The Straw*, while his *Gold* was a credit to no one through a clumsy production. Zoë Akins, author of *De-classee*, moved forward a notch with her *Daddy's Gone a-Hunting*, but lost the gain with *The Varying Shore*. Gilbert Emery with *The Hero* shared the year's honors in realistic drama, apart from O'Neill and Miss Akins, with Arthur Richman and *Ambush*. In lighter vein, the most commendable work was done by Harry Wagstaff Gribble in *March Hares*, by George S. Kaufman and Marc Connelly in *Dulcy* and by William Anthony Maguire in *Six Cylinder Love*.

Foreign plays of significance outnumbered those of American authorship. Molnar's *Liliom* and Clemence Dane's *A Bill of Divorcement*, already mentioned, led the list in power and interest. Lennox Robinson achieved at least a *succès d'estime* with his rich and pungent comedy, *The White-Headed Boy*. W. Somerset Maugham profited by a notable cast in the interpretation of his shifty but brilliant play, *The Circle*. David Belasco wrought André Picard's *Kiki* into a richly amusing character study of a French street waif. William Archer, famed as a critic, added playwriting to his professions in the absorbing melodrama, *The Greep Goddess*. A. A. Milne, editor of *Punch*, was thrice discovered and thrice welcomed as a dramatist with the light-fingered comedies: *Mr. Pim Passes By*, *The Great Broxopp* and *The Dover Road*. And Harold Chapin, an American ex-patriate who lost his life in the British service, was happily commemorated with *The New Morality* and four short pieces in similarly antic vein: *Augustus in Search of a Father*, *It's the Poor as 'Elps the Poor*, *Muddle Annie* and *Innocent and Annabel*.

Among the American plays which commanded a substantial measure of critical or financial favor or both were: George Cram Cook's *The Spring*, an ambitious but one-sided study of psychic forces for propagandist purposes; Evelyn Scott's *Love*, a novelist's rather thin and undeveloped treatment of an interesting theme; Clare Kummer's *The Mountain Man*, a simple romance tinged with her subtle comedy, and a quartet of one-act plays from her pen: *Bridges*, *Chinese Love*, *The Choir Rehearsal*, and *The Robbery*; Rachel Crothers' studies of the errors of the younger generation, *Nice People* and *Everyday*; Vincent Lawrence's comedy of the interrupting memory of a dead husband, *The Ghost Between*; Augustus Thomas's melodramatic discovery of the dire possibilities from the misuse of finger-print evidence, *Nemesis*; Cloyd Head's exotic and highly stylized *Grotesques*; *Just Married*, an amusing but commonplace farce by Adelaide Mathews and Ann Nichols; Ernest Howard Culbertson's play of negro life, *Goat Alley*; Thomas P. Robinson's halting but frequently amusing comedy, *The Skylark*; *Getting Gertie's Garter*, a high pitched and unsavory farce of the "boudoir" type by Wilson Collison and Avery Hopwood; *The Nightcap*, a mystery farce-melodrama by Guy Bolton and Max Marcin, inferior to *The Bat*, which ran out the year as a hold-over from

the previous season; Owen Davis's shrewd but only partially successful attempt to profit by O'Neill's example in serious realistic drama, *The Detour*; Winchell Smith's play of life among the gamblers, *The Wheel*, and his study of small town life in collaboration with Tom Cushing, *Thank You*; Fannie Hurst's first venture into playwriting, *Back Pay*, a weak imitation of *The Easiest Way*; Aaron Hoffman's comedy of poverty and riches on the East Side, *Two Blocks Away*; Sidney Howard's florid mediæval tragedy in verse, *Swords*; Edward Milton Royle's dramatic version of Tennysonian legend, *Launcelot and Elaine*; A. E. Thomas's sentimental comedy of middle age, *Only 38*; William Hodge's comedy of egotism and canines, *Beware of Dogs*; Harvey O'Higgins' and Harriet Ford's dramatization of Sinclair Lewis's novel, *Main Street*; Booth Tarkington's fragile comedy that had a superb first act and thereafter went to pieces, *The Intimate Strangers*; *The Man's Name*, a tense but thin melodrama on the theme of the triangle by Eugene Walter and Marjorie Chase; *The Dream Maker*, a mystery melodrama devised by William Gillette for his own use in collaboration with Howard E. Morton; and Theodore Dreiser's courageous but futile propagandist tragedy, *The Hand of the Potter*.

Other native plays of less importance were: *The Champion*, by Thomas Loudon and A. E. Thomas; *Dear Me*, by Luther Reed and Hale Hamilton; *Wake Up, Jonathan*, by Hatcher Hughes and Elmer L. Rice; *The Teaser*, by Martha M. Stanley and Adelaide Mathews; *Honors Are Even*, by Roi Cooper Megrue; *Sonya*, by Eugene Thomas Wyckoff; *Nobody's Money*, by William Le Baron; *Pot Luck*, by Edward Childs Carpenter; *Lilies of the Field*, by William Hurlbut; *The Wren*, by Booth Tarkington; *Golden Days*, by Sidney Toler and Marion Short; *The White Peacock*, by Olga Petrova; and *Captain Applejack*, by Walter Hackett.

Still other inferior pieces included: *Pagans*, John Hawthorne, *Near Santa Barbara*, *Smooth as Silk*, *Survival of the Fittest*, *Clair de Lune*, *Sonny Boy*, *The Scarlet Man*, *The Triumph of X Personality*, *The Poppy God*, *Tarzan of the Apes*, *The Elton Case*, *True to Form*, *The Man in the Making*, *Wait Till We're Married*, *Like a King*, *A Bachelor's Night*, *As Ye Mould*, *The Six Fifty*, *The Great Way*, *The Skirt*, *The Demi-Virgin*, *The Mad Dog*, *We Girls*, *Nature's Nobleman*, *Marie Antoinette*, *Her Salary Man*, and *The Fair Circassian*.

The more notable importations from abroad in addition to those already mentioned included: John Drinkwater's *Mary Stuart*, considerably below the standard of his *Abraham Lincoln*; Georges de Porto-Riche's *Amoureuse*, known as *The Tyranny of Love*; Emile Moreau's *The Trial of Joan of Arc*; *A Sunny Morning*, by the Brothers Quintero; Granville Barker's pleasant but superficial play, *The Harlequinade*, written in collaboration with Dion Clayton Calthrop, and his talkative and outmoded realistic comedy, *The Madras House*; Emile Verhaeren's introspective drama, *The Cloister*; Cosmo Hamilton's *The Silver Fox*, freely adapted from the Hungarian of Ferenc Herczeg; Henri Bataille's sophisticated and uninspired *Don Juan (L'Homme à la Rose)*; Blasco Ibañez's novel of the bull ring, *Blood and Sand*, made into a play by Tom Cushing; Henry Bernstein's early character study of a French statesman fallen into moral decay, *The Claw*;

E. Temple Thurston's plodding but pictorial play, *The Wandering Jew*; Gustavo Morales' ballet-pantomime, *The Royal Fandango*; Michael Morton's spectacular melodrama, *In the Night Watch*; Sacha Guitrey's deft and amusing sentimental comedy *The Grand Duke*, in English version by Achmed Abdullah; Perets Hirschbein's Yiddish folk tale, *The Idle Inn*; and Sapper's highly diverting old-fashioned melodrama, *Bull Dog Drummond*.

Other foreign plays of slight importance included: *Transplanting Jean*, by de Flers and Caillavet; *Eyvind of the Hills*, by Johann Sigurjonsson; *Cradle Song*, by Gregorio Martinez Sierra; *Toto*, by Hennequin and Duquesnal; *The Mask of Hamlet*, by Ario Flamma; *The Blue Lagoon*, by Norman MacOwan and Charlton Mann; *Bluebeard's Eighth Wife*, by Alfred Savoir; *The Fan*, by de Flers and Caillavet; *The Children's Tragedy*, by Carl Schoenherr; *The Right to Strike*, by Ernest Hutchinson; *The Tills*, by Arnold Bennett; *The Wife with a Smile*, by Denys Amiel and Andre Obey; *Boulevard*, by Georges Courteline; *Danger*, by Cosmo Hamilton; and *Face Value*, by Sabatino Lopez.

Revivals of plays produced in former seasons included: *The Yellow Jacket*, by Hazelton and Benrimo; *Peg o' My Heart*, by J. Hartley Manners; *The Great Adventure*, by Arnold Bennett; *Romance*, by Edward Sheldon; *The Servant in the House*, by Charles Rann Kennedy; *John Ferguson*, by St. John Ervine; *The Return of Peter Grimm*, by David Belasco; *The Easiest Way*, by Eugene Walter; *Bought and Paid For*, by George Broadhurst; *Alias Jimmy Valentine*, by Paul Armstrong; *The Squaw Man*, by Edward Milton Royle; *Trilby*; *The Playboy of the Western World* and *The Well of the Saints*, by John Millington Synge; *The Married Woman*, by Chester Bailey Fernald; *The Moon of the Caribbees*, by Eugene G. O'Neill; *Trifles*, by Susan Glaspell; and the musical plays, *The Merry Widow*, by Lehár and *The Chocolate Soldier* by Straus. Shakespeare was offered in revival by Julia Marlowe and E. H. Sothern, by the Armfields, by Walter Hampden and by Frits Leiber, in addition to the Hopkins *Macbeth*, considered at length above.

Musical comedy, as usual, had a large place in the year's productions, but the only outstanding and meritorious examples were the *Music Box Revue*; *Blossom Time*, made from the songs of Franz Schubert; and *Shuffle Along*, staged and performed wholly by negroes.

DRAPER, W. H. See NECROLOGY.

DRUM, WALTER. Roman Catholic priest and educator died at Baltimore, Md., December 10. From 1908 to the time of his death he was professor of scripture in Woodstock College, Md. He was born at Louisville, Ky., Sept. 21, 1870; graduated at Boston College 1890 and studied at Woodstock College, Md., and at Jesuit colleges in Austria and in the Near East. In 1904 he was ordained priest, and he was made professor of scripture in September, 1908. He wrote: *Pastoral Medicine* (1905); *Pioneer Forecasters of Hurricanes* (1905); and *Divinity of Christ* (1917).

DRUMMOND, ANDREW L. See NECROLOGY.

DUBOST, ANTONIN. French historian and President for fourteen years of the French Senate, died in Paris, April 15. He was born in 1844 and for a time contributed to the press. After holding local offices he became Councilor of State in 1879 and he was Minister of Justice in 1893-94. He

became Senator in 1906 and was elected President of the Senate. He was anti-Catholic in politics and attacked the teaching of the Catholic clergy as tending to influence their pupils against the Republic. Among his historical works may be mentioned: *Les suspects in 1858* (1867); *Les conditions du gouvernement en France* (1879); *Danton et la Politique contemporaine* (1880); *Danton et les massacres de septembre* (1885).

DUCIE, HENRY JOHN MORETON, EARL OF. See NECROLOGY.

DUNKERS or DUNKARDS. See BRETHREN, CHURCH OF THE.

kilograms; of cacao (Java, 1919), 1,019,729 kilograms. The government tin mine of Banca and others yielded in 1919 20,724 tons. The yield of the principal coal mines in Java, Sumatra, and Borneo in 1919 was 947,915 tons. Petroleum and other mineral oils (1919) came to 1,764,203,000 kilograms. Gold, silver, diamonds, copper, and manganese are mined. In 1919 the lands belonging to the companies had an acreage of 4,603,690 acres of which 2,816,733 acres were in Java.

COMMERCE. Government and private trade, merchandise and specie, are given below for 1918 and 1919 in guilders.

Year	Merchandise	Government specie	Total	IMPORTS		Total	Grand total
				Merchandise	Private specie		
1917.....	20,361,000	1,600,000	21,961,000	467,019,000	7,705,000	474,724,000	496,685,000

1919.....	5,224,227		5,224,227	2,162,116,836	130,455	2,162,246,291	2,167,470,518

DUNLOP, J. S. Inventor of the celebrated pneumatic tire, died at Dublin, Ireland, October 23. He was born in 1840. He conceived the idea of the pneumatic tire in order to facilitate travel on the primitive bicycle over the cobblestone streets.

DUPIN, M. A. Former president of the consistory died at Tours, France, in December. He was born in 1839. He was the author of historical works on the subject of Protestantism in Touraine. At the time of the separation of the Church from the State he took a prominent part in the councils of the Reformed Evangelical Church.

DUPRÉ, MARCEL. See MUSIC, Artists, Instrumentalists.

DUTCH EAST INDIES. A possession of the Netherlands in the Pacific ocean, consisting of islands situated between 6° N. and 11° S. latitude and between 95° and 141° E. longitude. Capital, Batavia.

AREA AND POPULATION. The islands comprise two main divisions: First, Java, consisting of seventeen residences, including the neighboring island of Madura or Madoera; second, the Outposts, consisting of seventeen provinces. The area is estimated variously at from 683,000 to 735,000 square miles, and the total population according to the official estimate of Jan. 1, 1918, 47,000,000. The populations of the four principal towns in 1918 were: Batavia, 234,697 of whom 24,000 were Europeans; Soerabaya, 160,801; Soerakarta, 137,882; Samarang, 106,852. By races the population was distributed as follows: Natives, 46,232,127; Orientals, chiefly Chinese and Arabs, 832,667; Europeans, 138,875.

PRODUCTION. Area (end of 1919) under rice, 8,465,269 acres; corn, 4,784,086; cassava, 1,794,193; areachis, 428,554; soya beans, 391,577; other secondary crops, 1,348,952; sugar cane, 35,189; tobacco, 245,795; indigo, 13,303; capsicum, 13,359. Government coffee plantations in 1919 produced 1854 tons and private plantations produced 53,815 tons; tobacco in 1919 (Java) 38,956,435 kilograms (Sumatra) 5,785,861 kilograms; a total of 44,742,296. Cinchona in kilograms amounted to 7,772,164. The production of tea in the country for 1919 was estimated at 40,392,323

The chief imports according to value in 1918 were: Rice, coal, manufactured articles, and kerosene. The chief exports were: Sugar, coffee, tea, indigo, cinchona, copra, tobacco, copper, and tin.

COMMUNICATIONS. Railway mileage at the beginning of 1920 was 3923, of which 3130 were in Java and 793 in Sumatra. The steamships entered in 1919 numbered 8500 of 4,424,819 tons; and the sailing vessels, 6558 of 418,260 tons. Of these 5969 steamships of 1,389,937 tons and 4676 sailing vessels of 273,421 tons were British.

FINANCE. The revenue and expenditures in guilders for 1920 were as follows: Revenue, 525,923,042; expenditures, 718,561,812; for 1921, revenue, 718,796,156; expenditures, 780,239,373. The public debt, Jan. 1, 1920, was 426,508,102 guilders.

GOVERNMENT. The territory consists partly of lands under the direct government of the Netherlands and partly of subject native states. The chief executive is the governor-general aided by a council of five members, both the governor-general and the council being nominated by the crown. The governor-general has the right to pass laws for the administration of the country subject to the legislation of the Netherlands. Governor-general at the beginning of 1921, Dr. D. Fock.

DUTCH GUIANA or SURINAM. A Dutch possession on the north coast of South America, bounded on the north by the Atlantic ocean, and on the east by the River Marowijne which separates it from French Guiana, and on the west by the River Corantyn which separates it from British Guiana; area 46,060 square miles; population, Jan. 1, 1920, 109,810 exclusive of negroes and Indians living in the forests. Capital, Paramaribo, with a population of 36,038. Movement of population in 1919 was: Births, 2593; deaths, 2888. In 1919 there were 33 public schools with 3835 pupils, and 42 private schools with 7020 pupils. There was also a government normal school. At the end of 1919 the religious denominations according to the number of adherents were: Moravian Brethren, 23,927; Roman Catholics, 19,319; Hindus, 21,500; Mohammedans, 15,431; Reformed and Lutheran, 9594. Sugar

production in 1919 amounted to 7,580,512 kilograms; cacao, 1,318,269 kilograms; bananas, 480,438 bunches; coffee, 1,282,954 kilograms; rice, 11,388,405 kilograms; corn, 1,430,155 kilograms; rum, 706,422 litres; and molasses, 173,705 litres. Imports in 1919 amounted to 6,946,144; exports, 8,987,870. The chief exports in 1919 were sugar, rum, and cocoa. The principal countries of destination for the exports in 1919 were in their order: The Netherlands, United States, British Guiana, and French Guiana. At the head of the government is a governor aided by a council, both appointed by the crown. Governor at the beginning of 1921, Baron van Heemstra.

DYE STUFFS. See CHEMISTRY, INDUSTRIAL.

DYNAMO-ELECTRIC MACHINERY. While the prevailing industrial depression confined the activities of builders of this class of machinery to a small volume of business, notable progress marked the year in the application of electric motors to the newer uses, such as that of ship propulsion. In addition to the U. S. battleship *New Mexico* (see YEAR BOOK, 1919) the electrically propelled battleships *Maryland* and *Tennessee* were put in commission toward the end of the

year. Of four 1640-ton Coast Guard Cutters authorized by the Government and under construction, one, the *Tampa*, was completed and placed in service. The propelling machinery of these vessels was a 46-pole, 3-phase, synchronous motor designed to deliver 2600 h.p. to the main shaft at 130 revolutions per minute and give the ship a speed of 16 knots. The motor was supplied with energy by a direct-driven Curtis turbo-generating unit having a capacity of 2040 kw. at 2300 volts. Some smaller vessels, such as yachts, and two ferryboats were also equipped with similar systems of propulsion, employing either a steam turbine or a Diesel engine to drive the main generator.

Electric motors for operating the machinery of rolling mills were slowly but surely displacing steam engines for similar service; and at one large steel mill, a 7000 h.p. motor built by the Westinghouse Electric & Manufacturing company was put in regular service driving a three-high roll train and gave excellent satisfaction. As regards generating units, there were no spectacular examples of large machines, such as had characterized progress in recent years; but most of those built for large stations were of 35,000 kw. capacity or over. The equipment of the Hell Gate Station, on East river, New York City, which was under construction during the year, included very large units and was laid out with the ultimate idea of its inclusion as an integral part of the proposed Super Power System. See (ELECTRIC POWER, TRANSMISSION OF.)

E

EARLE, LAWRENCE CARMICHAEL. See NE-CROLOGY.

EARTHQUAKES. In January a severe earthquake occurred (January 2) at Elbassan in Albania, killing 14 persons, injuring 300, rendering about 10,000 homeless, and almost completely destroying the city; and shocks were felt in the San Gabriele Valley of southern California (January 8); at Willows, Calif. (January 13); at San Diego, Calif. (January 17); near Corinth and Lake George, N. Y. (January 19 and January 27); at Philadelphia, Pa., and Trenton, N. J. (January 28). In February, shocks were reported on the isthmus of Tehuantepec (February 3); in Salvador and Guatemala (February 19); in March at Fairbanks, Alaska (March 12); Danville, Ill., and Terre Haute, Ind. (March 14); at Chileito in the province of La Rioja, Argentina (March 15); at Syracuse, N. Y. (March 30). Other shocks occurred at Los Angeles, Calif. (April 21); in Jalisco, Mexico (May 14); at Santa Cruz, Calif. (June 11); at San Francisco, Calif. (July 24); at New Canton, Va. (August 7); at Los Angeles, Calif. (September 3); at Riverside, Calif. (September 10); at Elsinore, Utah (September 29-30); at Harrisburg, Ill., and in Nicaragua (October 1).

EAST AFRICA PROTECTORATE (known since 1920 as **KENYA COLONY**). A British dependency organized as a crown colony, July 20, 1920, extending from the former German colony of East Africa to Abyssinia and Italian Somaliland and from the Umba river to the Juba river and reaching inland as far as the borders of Uganda. It is divided into eight provinces and includes in addition a tract of territory not as yet completely organized, lying to the north. It also includes some of the lands of the Sultan of Zanzibar which were leased to Great Britain. The provinces with their respective capitals are as follows: Seyidie (capital, Mombasa); Ukamba (Nairobi); Tarnaland (Lamu); Jubaland (Kismayu); Kenya (Nyeri); Naivasha (Naivasha); Nyanza (Kisumu); Northern Frontier District (Moyale). The area of the protectorate is 246,822 square miles, and the population, estimated in 1919, was 2,807,000, including 5362 Europeans and 1700 Asiatics. Arabs and Swahilis predominate on the coast, and races speaking the Bantu languages along with certain non-Bantu tribes, including Somali, Masai, and Gallas, inhabit the interior. The chief town is Mombasa with a population of about 30,000. It is the terminus of the Uganda railway. The capital, Nairobi, had a population estimated in 1919 at 14,000 of whom 800 were Europeans and 3000 Indians. The agricultural products in the low regions include: Rice, corn, cassava, coconuts, etc.; and in the highlands, wheat, oats, barley, and other products of the temperate zone. There are valuable forests in the highland area lying to the west and north of Nairobi containing: Cedar, camphor, cork, ironwood, etc. Gold, graphite, marble, opals, diatomite, and other minerals have been found, but mineral resources have not been fully explored. The following table from the *Statesman's Year Book* of 1921 shows imports, exports, and tonnage entered and cleared for three years:

Years	Imports	Exports	Tonnage entered and cleared
	£	£	
1916-17.....	3,024,123	1,613,853	1,441,877
1917-18.....	2,809,681	1,741,939	1,170,472
1918-19.....	3,397,810	2,498,574	922,653

The chief imports in 1918-19 were: Cotton piece goods; spirits, wines, and beer; provisions; sugar; tobacco, cigars, and cigarettes; and vehicles. The largest share came from the United Kingdom and other British possessions. The other chief exports in 1918-19 were: Cotton, carbonate of soda, fibres, coffee, hides, and skins. The United Kingdom received the largest share of the exports. The budget estimates for the year ending Dec. 31, 1922, were as follows: Revenue, £1,718,244 (\$8,361,835); expenditure, £2,130,861 (\$10,369,835). Nearly all the items of revenue showed a decrease of about one-third from the 1921 estimates, and owing to the general trade depression the returns from the taxes seemed likely to be reduced. It was proposed in the summer that a loan be floated of \$45,000,000 for public works, especially for harbor developments and railways. The Uganda railway, 618 miles in length, is owned by the state. During the year it was reported that a decision had been reached as to the new railway line to be built from Nakuru on the Uganda railway, Kenya Colony, Africa, to Turbo, a distance of 148 miles. The construction work to be done by British contractors would involve a total amount in the neighborhood of \$10,000,000. The new line was designed to provide transportation for a large agricultural community and was also likely to prove an important feeder to the Cape-to-Cairo railway.

The selected route chosen would bring the highest point of this line 9135 ft. above sea level. The maximum gradient was to be 1.5 per cent and the maximum curvature about 10°. Fifty-pound rails were to be used and maximum train loads will vary from 204 to 428 long tons. The new line will probably be one meter gauge.

The colony was placed under a governor and a commander-in-chief, Nov. 9, 1908, a previous decree having established an executive and a legislative council. In July, 1919, it was provided that the legislative council should consist of eleven members elected by the Europeans, two representatives of the Indians, and one of the Arab population, and a large enough number of official members to constitute a majority. The name was changed to Kenya Colony, August 13

1920. Governor and commander-in-chief, at the beginning of 1921, Major General Sir E. Northey.

ECONOMIC ASSOCIATION, AMERICAN. See **POLITICAL ECONOMY.**

ECUADOR. A South American republic on the Pacific coast between Colombia on the north and Peru on the south. Capital, Quito.

AREA AND POPULATION. Area, estimated at 116,000 square miles but uncertain owing to the boundary dispute with Peru which had not been settled. Population (1903), 1,323,590; estimated (1915), 2,000,000. Quito, the capital, has an estimated population of 70,000. Other large cities: Guayaquil, estimated in 1919, 93,851; Cuenca, 50,000; Riobamba, 18,000.

EDUCATION. Primary education is free and compulsory for children beginning with the sixth year. The Minister of Public Instruction presented to the Congress in 1921 a report showing the following figures for primary schools: Number receiving government funds, 1395, pupils, 75,110; municipal schools, 182, pupils, 13,143; private schools, 139, pupils, 15,091; total number of schools, 1716; total number of pupils, 103,344. The courses given in public schools, with the exception of the normal schools, are entirely dependent on the decision of autonomous school boards. Institutions of higher education include: The Central University at Quito; the Guayas University in Guayaquil; the Azuan University in Cuenca; and the law college at Loja.

PRODUCTION. In the coast regions and lower river valleys tropical farming is carried on while in the highland regions and mountain valleys, hay, grain, fruits, vegetables, and other products of the temperate zone are raised and the latter regions are suited to grazing and dairying. Coconut is the staple product, the production in 1919 being 22,474 cwts. There is a considerable production of coffee which is also exported, and rubber production is important. Gold and silver are found and petroleum is worked in the region of Santa Elena. The greater part of the country is under forests which abound in valuable woods, including dyewoods and cinchona trees. The making of Panama hats is an industry which is carried on almost exclusively in Ecuador.

COMMERCE. The foreign trade in 1919 according to a British authority was as follows: Imports, £2,426,901; exports, £4,316,769. The chief imports were woven goods, foodstuffs, machinery, and clothing and the chief exports were, cocoa, ivory, nuts, hats, coffee, and hides. The total estimated exports of Ecuador for 1921 are given in the following table:

Articles	Price per quintal, sucres	Maximum quantity, quintals	Value, sucres
Cacao.....	18	1,000,000	18,000,000
Tagua.....	4	300,000	1,200,000
Coffee.....	12	40,000	480,000
Hides.....	6	40,000	240,000
Rubber.....	15	7,000	105,000
All other exports.....	—		1,500,000
Total.....	—		21,525,000

The imports into Ecuador during 1921 of foodstuffs and articles required were estimated at 5,000,000 sucres (1 sucre equals \$0.4867 normal

exchange, or \$0.30 present exchange), and this added to the 29,476,525 sucres due in bank drafts' with the 6,000,000 sucres owed by the Agricultural Association to the Mercantile Bank of the Americas, amounted to a grand total indebtedness of 40,476,525 sucres at the end of 1921. The assets of the nation were therefore 21,525,000 sucres and its liabilities 40,476,525 sucres, making a trade balance against Ecuador at the end of 1921 amounting to 18,951,525 sucres. No account is taken in the above estimates of the nation's income from internal revenues.

FINANCE. Of the revenue about 70 per cent comes from the customs duties. The budget estimates of 1920 balanced at £1,999,566 and for 1921 at £2,028,570.

COMMUNICATIONS. There is a railway from Duran to Quito, 280 miles in length. The total mileage in 1917 was 365. Almost all the shipping enters the port of Guayaquil. In 1918, 160 steamships entered with 195,958 tons and 153 cleared with 181,537 tons.

GOVERNMENT. The executive power is vested in a president elected for four years, directly by the people and legislative power in a congress consisting of two houses, namely, the Senate with 32 members elected for four years and the House of Deputies with 48 members elected for two years, by adults able to read and write. The president is assisted by a cabinet of five ministers representing the following departments: Foreign affairs, interior, public instruction, finance, and war. President at the beginning of 1920, Dr. Jose Lewis Tamayo.

EDUCATION. See sections so entitled in articles on foreign countries, and States of the United States; also **AGRICULTURAL EDUCATION; EDUCATION IN THE UNITED STATES; LITERATURE, ENGLISH AND AMERICAN; UNIVERSITIES AND COLLEGES.**

EGERTON, Sir CHARLES COMYN. British soldier, died at Christchurch, Hants, England, February 20. At the time of his death he held the rank of Field Marshal. He was born in 1848 and came into prominence in 1896 when he commanded the Indian contingent at Suakim, winning the approval of the government and appointment as aid-de-camp to the Queen. Returning to India he was placed in command of a brigade on the frontier which did excellent work in putting down native revolts, and in 1901-02, as well as later, he led operations in punitive expeditions against the Waziris. He was subsequently in command for four years of the Punjab frontier force and in 1903-04 he conducted the successful operations in Somaliland which resulted in the defeat of the Mad Mullah, for which he received the G. C. B. In 1907 he was appointed by Lord Morley, Military Member of the Council of the Secretary of State. He retired in 1917.

EDUCATION IN THE UNITED STATES. STATISTICS OF ELEMENTARY AND SECONDARY SCHOOLS. ATTENDANCE. The Bureau of the Census has issued a preliminary statement giving statistics of school attendance for the various States as compiled from the Fourteenth Decennial Census taken as of Jan. 1, 1920. The total population 5 to 20 years of age, inclusive, in continental United States numbered 33,250,870. Of this number 64.3 per cent, or 21,373,976 had attended school at some time between Sept. 1, 1919, and

EDUCATION IN THE UNITED STATES 201 EDUCATION IN THE UNITED STATES

Jan. 1, 1920. As compared with similar conditions in 1910, there was an increase of 5.1 per cent in the number of such persons attending school.

The total population 7 to 13 years of age numbered 15,306,793. Of these 90.6 per cent, or 13,869,010 children were attending school. This was an increase of 4.5 per cent over the corresponding figures for 1910.

When it is recalled that the children 7 to 13 years of age are very generally subject to compulsory attendance laws of the various States, it is somewhat startling to realize that one child in ten in these ages is not in school, and that for the country as a whole 1,437,783 children were unaccounted for by the Federal Census on Attendance.

Among the geographic divisions having the largest percentage of their population 5 to 20 years of age, inclusive, enrolled or attending schools, the following rank highest: the Pacific

Division with 69.5 per cent; the West North Central Division with 68.5; and the Mountain Division with 68.4. The West South Central Division, with 58.7 per cent stood lowest. Then follows the South Atlantic Division, 60.2, and the East South Central Division with 60.9 per cent. The West North Central Division with 68.5 per cent has remained the same as in 1910. All the other divisions show considerable increase.

Among the individual States, the largest proportion attending school in the 5 to 20 age group is shown by Utah with 73.0 per cent, and the smallest by Louisiana with 53.0 per cent. For the 7 to 13 age group, the largest proportion of school attendance, 96.1 per cent, is that for Massachusetts, and the smallest, 75.9 per cent, for Louisiana. Seven States show a proportion of 95.0 per cent or more. These are Massachusetts, Rhode Island, Ohio, Iowa, Delaware, Idaho, and

Utah. The New England Division, with 95.3 per cent, ranks first, while the West South Central with 82.5 ranks lowest. Three States—New Hampshire, Vermont, and Oklahoma,—show a decrease since 1910 in the percentage of persons 7 to 13 attending school.

FINANCES. With the increase in teachers' salaries and the higher costs of buildings and supplies, has come the problem of financing the public schools. The situation is serious in most places, but it is critical in several cities where long term bonds have been issued to meet current expenses.

In the face of these difficulties there has been a constant demand that the school expand its range of service. School systems have been made responsible for the conduct of kindergartens, junior high schools and vocational education when there has been no accurate knowledge as to the expense involved.

The American Council on Education has as-

sumed responsibility for a most thorough study of school finances. For this purpose a fund of \$170,000 has been guaranteed. A committee composed of several of the most competent school specialists has charge of the investigation. Dr. George D. Strayer of Teachers College, New York, is employed to direct the work.

ILLITERACY. No subject connected with education has received more attention during the past few months than that of illiteracy. It was first brought to the attention of the American people in a pronounced way by the illiteracy figures for the army. These were much higher than the illiteracy figures that were given in the 1910 census. The 1920 census shows an improvement of 1.7 per cent in our illiteracy problem. This, however, is not consoling when it is remembered that there are more than 5,000,000 persons in our population ten years of age or over who can neither read nor write.

The week of Dec. 4 to 10, 1921, was set aside for the celebration of American Education Week. The President issued a proclamation which called attention to the fact that there was so large a proportion of our population who were not availing themselves of our free school advantages, and that at the same time were unfamiliar with American ideals and traditions. The President likewise called attention to the fact that the future strength and security of this nation are much dependent on the education of these persons and their commitment to American ideals. Citizens were urged to give the matter special and thoughtful consideration. The subject was presented from the pulpit and by the press. Numerous meetings were held by various organizations. It is safe to say the educational authorities of the country are more thoroughly aroused by the subject of illiteracy than at any previous time in our history.

The census report shows that 1,242,572 native whites are illiterate. This is 2 per cent of our total native white population; 1,763,740 foreign born whites were illiterate, or 13 per cent of the total foreign born white population in the United States. Of the negroes, 1,842,161 were illiterate. This is 22.9 per cent of our total negro population. Upon the individual estates 11.6 per cent of the white population of New Mexico is illiterate. In Texas 33.8 per cent of the foreign born white population is illiterate, and of the negro population in Louisiana 38.5 per cent are illiterate. The illiterate population represented 6.0 per cent of the total ten years of age and over in 1920, the corresponding percentages for the last four preceding census years being 7.7 in 1910, 10.7 in 1900, 13.3 in 1890, and 17.0 in 1880. Connecticut is the only State that shows an increase in the proportion as well as the number of illiterates. Five States,—Montana, Idaho, Wyoming, Utah, and Washington, and the District of Columbia have only three-tenths of 1.0 per cent illiteracy.

AMERICANIZATION. Considerable attention has been directed toward Americanization. There is as yet no agreement as to the elements demanded by Americanization, but various agencies are at work in an effort to improve our citizenship through education.

The American Legion in their Third Annual Convention gave careful consideration to the reports and resolutions offered by the Americanism Committee. The plans suggested by this committee are among the best that have been formulated and may therefore be taken as indication of the education part of the scheme for Americanization. The following abstracts are taken from the report:

"Education in citizenship is the keynote of Americanism. The education must reach the adult as well as the child, native-born and foreigner alike. A knowledge of the draft statistics of the late war showed that 24.9 per cent of the men examined for the draft could not read English. This indicates a deplorable and dangerous menace to the nation's welfare. Although the various states have compulsory attendance laws, it is a matter of official record that of the 27,000,000 children of school age in the United States, but 15,000,000 are in daily attendance, and as a consequence the United States ranks only ninth among the civilized nations of the world in educational matters. We desire to impress most

strongly upon the various posts and departmental organizations of the Legion, and in particular upon the Chairmen of Americanism in the various state departments, that they do everything in their power not only to secure the enactment of laws to control this situation, but to see that such laws when enacted be strictly carried out.

"United States history and civil government are often taught only in a cursory manner in the public schools. Educational authorities should encourage such a full intimate study of these subjects as will develop in the child adequate respect and love for his country. A definite period should be devoted every week in public and private schools to appropriate patriotic exercises.

"In education for citizenship, thorough training in the fundamentals should be emphasized. Ideals of service and coöperation for the common good should be developed particularly in the children, in order to fit them for the responsibilities of modern industrial and political life. Civic playgrounds under proper directors are an exceedingly effective means of developing these ideals and educating children for citizenship, particularly among the foreign-born children. We strongly endorse such playground training and urge its extension.

"Referring to House of Representatives Bill No. 72, submitted April 26, 1921, with reference to the use of the English language in schools, it is the opinion of the Legion that for the words 'controlling medium of instruction' there should be substituted 'only medium of instruction.'

"It is a well known fact that the National Flag is often thoughtlessly treated with disrespect. It should never be used for advertising purposes. The American Legion urges that steps be taken to bring about a condition of affairs in all communities that will insure for the Flag due respect and consideration. The American Legion also suggests that in the twelve States where a law does not exist requiring the flag to be displayed daily during school hours over public school buildings, the Legion of those states do its utmost to have such laws enacted.

"Be It Resolved, that the American Legion favors the adoption of state laws requiring every teacher in every elementary and high school and every instructor or professor in every higher institution of learning, excepting those who are citizens of another country and only temporarily teaching in this country, to subscribe to an oath of allegiance to the Constitution of the United States and of the State where employed, and that we also favor a law permitting the cancellation of the certificate of any teacher found guilty of disloyalty to the government."

THE DALTON LABORATORY PLAN OF SCHOOL ORGANIZATION. During the past few years there have been a number of attempts to change our school organization so as to make it possible for individual pupils to progress at their own rate. A few of these plans have been sufficiently successful to bring them to the attention of large numbers of people in our country. The Dalton Plan is but little known among the school people of the United States. Yet, this particular plan has had a most pronounced influence in England. For a short period the Dalton, Massachusetts, High School experimented with a plan of individual progress among its students. One of the promoters of this

plan was Miss Helen Parkhurst of New York City. During the past summer Miss Parkhurst was in England. Her lectures in six installments were published in the *Times Educational Supplement*. It is reported that two thousand visitors made a pilgrimage to a school that had been experimenting with the new plan, and it is now claimed that several hundred English secondary schools have been organized according to this type.

According to the Dalton Plan, each student at the beginning of each month is given an outline of the work to be done in that subject over the period of the month, and he signs a written "contract" to cover this month's work, much as an adult would contract to do a given job. The pupil is then left with a large amount of freedom as to which subject he shall consider first and the ways in which he shall spend his time in the study of this subject. They study in special rooms called laboratories. These are equipped for each particular subject. The teacher is expected to assist upon call from the pupil. There is not, however, the ordinary type of recitation conducted in the school. The pupil assumes the responsibility for getting the work done on time.

EDUCATIONAL LEGISLATION. During the period of the war, the American public gained a conception of the influence that the public school might exert. As an aftermath the past year has developed an unusual attempt to force changes in the administration or in the curriculum of the schools.

One of the most noteworthy of these efforts was the passage by the New York State Legislature of an amendment to the Education Law in relation to the qualifications of teachers. The "amendment which is known as the 'Lusk Loyalty Law' provides that each teacher employed in the public schools of the State is required to obtain a certificate of qualification from the Commissioner of Education. Such certificate must state that the holder of it is a person of good moral character and that it has been shown to the satisfaction of the Commissioner that he is loyal and obedient to the government of this State and of the United States. It is expressly provided that no such certificate shall be issued to a person who advocates or has advocated in any manner the establishment of a form of government other than the present government of the United States or of the State of New York, or who advocated a change in the form of such government by force, violence, or any unlawful means. The bill requires the Commissioner of Education to ascertain the qualifications of the applicants for certificates. A certificate may be revoked by the Commissioner of Education."

The "Oath of Loyalty" prescribed by the Commissioner of Education provides that each teacher must take oath to the following statement: "That I am, have been and will be loyal and obedient to the government of this State and of the United States; that I have not while a citizen of the United States advocated, either by word of mouth or in writing, a form of government other than the government of the United States or of this State by force, violence or any unlawful means. I hereby apply for a certificate of qualifications, pursuant to Section 555-a of the Education Law, as inserted by Chapter 666 of the Laws of 1921."

The enforcement of this law has been somewhat bitterly resented by teachers. It is certain that an attempt will be made to have it repealed.

A similar law was passed by the Legislature of 1920 but was vetoed by the Governor.

The State of California has a new law that requires that in elementary, secondary, and normal schools there shall be "a course of study in fire prevention dealing with the protection of lives and property against loss and damage as a result of preventable fire." The aims and purposes of the course are defined as follows: (1) To create an understanding of the cause and origin of fires; (2) to emphasize the dangers of carelessness and neglect in homes and public buildings and the necessity of care in the use of fires; (3) to promote an interest in preventing fires and the protection of lives and property.

THE PLATOON SCHOOL ORGANIZATION. This form of school organization has been designed to meet the newer conditions that exist, especially in our large cities. It is extensively employed in the schools of Detroit and is gradually being introduced in the schools of other cities.

Typical platoon schools have 20 to 28 sections or classes of 40 pupils each. The buildings provide a gymnasium, an auditorium, open air play rooms, special rooms equipped for music, art, literature, science, and library, and "home rooms" which correspond to the usual class rooms. The following is a statement of the general plan of a platoon school:

The standard school day adopted is six hours long—a three-hour session in the morning and a three-hour session in the afternoon. The usual morning session is from 8:30 to 11:30, and the afternoon session from 12:30 to 3:30. Some schools have a somewhat longer noon hour. With the exception of pupils of the first grade and those especially excused, all pupils remain in school six hours and are busy during this entire period.

The school membership is divided into two groups or platoons. While one group is engaged in the "home room" or regular room, the other group is attending classes in the special rooms. Thus half of the pupils are in the "home rooms" at any given time and the other half are engaged in special activities. For "home room" activities the school day of six hours is divided into four periods of ninety minutes each. Each platoon has "home room" work for ninety minutes in the morning and ninety minutes in the afternoon.

For special room activities, the six-hour day is divided into twelve thirty-minute periods. Each platoon is engaged in special activities during six of these twelve thirty-minute periods each day.

Each individual pupil spends ninety minutes of the morning in the "home room" under the control of the "home room" teacher and the remaining ninety minutes of the morning in the special activities—spending thirty minutes in three separate special rooms. In the afternoon, he again spends ninety minutes in the "home room" and the remaining ninety minutes in three special rooms.

The number of special room activities possible in a platoon school is determined by the number of classes or groups of pupils involved.

If there are twenty classes involved, the school must house 800 pupils or 400 in each platoon. This requires ten "home rooms" to care for 400 pupils, while at the same time the remaining 400 pupils may be provided for in special rooms as follows: In the auditorium will be 80 pupils each, while 40 pupils will be in each of the sections in

the rooms set aside for music, art, literature, library, science, and 40 pupils will be on the playground.

The cost of buildings for the platoon schools is somewhat greater per pupil in the twenty section school and a little less in the twenty-eight section schools than in the traditional schools. The capacity of the school building is increased by more than 40 per cent by the platoon organization. The per capita cost of instruction remains about the same in both types of schools.

This plan of organization is also called the duplicate school and the work—study—play school plan.

FEDERAL BOARD OF VOCATIONAL EDUCATION. *Vocational Education.* The Fifth Annual Report of the Federal Board of Vocational Education covering the year from July 1, 1920, to June 30, 1921, shows that during this period the Federal Board cooperated with the States in the vocational training of 305,224 pupils in 3859 schools employing 9906 teachers. The pupils were divided among the different occupations as follows: Agriculture, 42,709, Trade or Industry, 83,532, Home Economics, 63,806, and part-time General Continuation Schools, 115,177. The pupils were divided 174,835 male and 130,389 female. Teacher training courses were maintained in 150 schools employing 1109 teachers and enrolling 14,755 students.

The Federal law permits the Board to cooperate with the States in maintaining evening, part-time, all-day, and part-time continuation schools. The all-day schools are most popular in the schools teaching agriculture, while the evening courses enroll the larger numbers in the trade or industrial schools and in the Home Economics schools. The largest enrollment is in the part-time continuation schools.

The total expense of the vocational training and teacher training given in the schools assisted by the Federal Board was in excess of eleven and one-half millions of dollars. The Board paid a total of \$3,366,603.54 divided as follows: Vocational agricultural education, \$1,192,644.73, vocational trade, industrial, and home economics education, \$1,204,560.12, and vocational teacher training, \$969,399.69. The Federal Board contributes about one-third of the expense incurred by the schools.

The States have at no time used all of the available Federal funds. The amount available for the current year is \$4,120,833.72, an increase of nearly \$500,000 over the year ending June 30, 1921.

REHABILITATION OF DISABLED SOLDIERS, SAILORS, AND MARINES. The Federal Board of Vocational Education was charged with the administration of the laws providing for the rehabilitation of disabled ex-service men from June 27, 1918, until August 9, 1921. A law approved on the latter date established the *Veteran's Bureau* and transferred the Rehabilitation Division of the Federal Board to that bureau.

The last report of the Federal Board presents the statistics for rehabilitation to August 15, 1921. The total number of disabled ex-service men and women who registered with the Federal Board was 404,396. After investigation 123,785 of those registered were dropped and 269,940 were found eligible for training. There was assigned to training a total of 235,993, while 33,947 remained un-

assigned and 10,671 awaited the determination of their eligibility.

Prior to August 15, 1921, a total of 116,298 persons had entered training, 54,409 were in process of induction, 43,842 had deferred training, and 20,969 had declined training. On this date 89,250 were in training, 5793 had completed their training, 2494 had discontinued the training of 18,823 had been interrupted, and 1938 were deceased.

Training with maintenance was provided for 155,616 men who were so disabled that they could not, in the judgment of the Federal Board, return to their former employment or be successful in any other employment without training. Training was provided free, without maintenance, for 80,377 men who were determined by the Bureau of War Risks to be 10 per cent or more disabled but not eligible for training with maintenance. This latter number also includes a small number who were in training in hospitals before being discharged.

In addition to the establishments where men were in placement training, 3026 educational institutions furnished training.

The Federal Board employed 6352 persons for rehabilitation purposes. The members of the staff included 2860 members while the clerks numbered 3492.

Among the courses taken by the men those concerned with business enrolled the largest number, next in order were those dealing with the mechanical trades, agriculture, and the professions.

The total appropriations for the rehabilitation service from the date of organization to August 1, 1921, were \$209,000,000. The expenses for the same period were \$145,902,457.45. The expenses for the fiscal year ending June 30, 1921, were \$95,981,225.62 of which \$9,063,154.75 was for administrative expenses.

VOCATIONAL REHABILITATION OF PERSONS DISABLED IN INDUSTRY OR OTHERWISE. The Federal act for vocational rehabilitation which became a law June 2, 1920, provides for cooperation of the Federal Government with the States in the vocational rehabilitation and return to remunerative occupations of persons disabled in industry or otherwise. The law provides for an appropriation of \$750,000 for the fiscal year ending June 30, 1921, and \$1,000,000 for each of the three succeeding fiscal years.

The provisions for the administration of the law are similar to those of the vocational act of 1917. The Federal Board of Vocational Education is charged with the administration of the law, and appropriations are to be apportioned to the States on the basis of population, no State to receive less than \$5000 as its allotment for any fiscal year.

The programme of rehabilitation in general use at present involves three processes: First, the selection of a suitable occupation; second, the preparation for that occupation; and third, the placing, including the follow-up, of the disabled person in that occupation.

The First Annual Report covers a period during which few of the States were in position to initiate the work under the Federal act until late in the fiscal year. The report shows that during the year ending June 30, 1920, all but twelve of the States had legally accepted the provisions of the Federal act. Prior to that date, 5619 cases had been listed, of these 2095 had been surveyed,

and 543 had been put in training. The States had rehabilitated 457 persons, 970 were self-rehabilitated, and 501 had been placed under supervision. The total expense was \$273,312.23 of which \$89,458.98 was from Federal funds and \$180,227.19 from State funds and the remainder from local funds and private contributions.

THE VISITING TEACHER. In every school system there may be found children who do not make satisfactory progress. They are not truants, because the well organized attendance divisions assure their presence in the school rooms, neither are they delinquents nor defectives. They are the victims of some type of maladjustment in the school system or home.

To meet the needs of children who are misfits various places are employing persons who have the title of visiting teachers or home and school visitors.

A visiting teacher locates the difficulties that may exist and then attempts to adjust conditions so as to enable the child to make more profitable use of the school.

The visiting teacher coordinates the efforts of the school, the home, and various independent agencies such as social settlements, civic organizations, parent-teachers associations and others of similar character.

The first visiting teachers, or home and school visitors as they are sometimes called, were employed during the school year 1906-07 in three separate places—Boston, New York, and Hartford, Connecticut. In each place the movement was supported by private funds.

At present there are visiting teachers in at least 28 cities in 15 States. The various cities now generally assume responsibility for the support and control of the work.

California is the only State thus far that provides for home and school visitors. The Home Teacher Act in that State "makes it permissible for boards of education to employ a home teacher for every 500 units of average daily attendance."

There is a national organization called the National Association of Visiting Teachers and Home and School Visitors with headquarters at 8 West 40th Street, New York City.

EGYPT. A British protectorate in northeastern Africa after Dec. 18, 1914, whose status was under discussion in 1920 and 1921 owing to proposals for modification in the direction of independence. Capital, Cairo.

AREA AND POPULATION. Total area of Egypt proper including the region between the Nile and the Red sea, the Libyan Desert, and the Sinai peninsula, but not the Sudan, estimated at 350,000 square miles. The cultivated area comprising the Nile valley and delta, is estimated at 12,226 square miles. The population according to the census of March, 1917, was, 12,750,918 exclusive of nomads; estimated July 1, 1919, 12,878,000. The movement of population in 1919 was as follows: Births, 493,507; deaths, 383,872. Egypt proper comprises the five governorships of Cairo, Alexandria, Damietta, the Canal District and the Suez District. The remainder of Egypt is divided into Lower Egypt and Upper Egypt, which are in turn, subdivided into six and eight provinces respectively. The population of Cairo in 1917 was, 790,939; Alexandria, 444,617; Port Said (including Ismailia),

91,090; Tanta, 74,195; Damanhur, 47,867; Asyut, 51,431; Mansura, 49,238; Faiyum, 44,400.

EDUCATION. Primary education is supplied by native elementary schools called *Maktabas* which in 1920 numbered 3632, with an enrollment of 228,997 pupils. There are, besides, higher primary and higher elementary schools, elementary training colleges for teachers, special and technical schools, secondary schools, etc. The total number of schools under the control of the provincial councils in 1920 was 3420, with 217,603 pupils and those directly under the management of the ministry of education had an attendance of 34,472. The following table taken from the *Statesman's Year Book* of 1921 shows the proportion of illiterates in the respective religious communities at the census of 1917:

Religion	Population	Number illiterate per 1000 *		
		Males	Females	Total
Moslems.....	11,658,148	901	937	919
Orthodox.....	854,773	739	920	830
Christians.....	155,168	505	556	531
Jews.....	59,581	482	642	562
Others.....	23,243	912	955	934
Total.....	12,750,918	883	982	933

* Provisional figures.

RELIGION. The population by religions at the census of 1917 was as follows: Moslems, 11,658,148; Orthodox, 854,773; Roman Catholics, 107,687; Jews, 59,581; Protestants, 47,481. The centre of Mohammed culture is the Mosque and university of El-Azhar at Cairo.

AGRICULTURE. Egypt's arable area was placed in 1919 at 7,691,793 feddans (1 feddan equals 1,038 acre), of which 2,829,215 could be cultivated only after reclamation. In 1919 there were 7409 foreign landowners owning 627,586 feddans and 1,799,238 native landowners owning 4,883,673 making a total ownership of 5,511,259 feddans distributed among 1,806,647 proprietors. Cotton is the chief crop. The following table from the *Statesman's Year Book* of 1921 shows the cotton area and crop for three seasons:

Season	Area, feddans	Crop, quantars
1917-18.....	1,877,000	6,293,000
1918-19.....	1,361,000	4,821,000
1919-20.....	1,574,000	5,572,000

The other principal crops with 1919 figures are as follows: Wheat, area and yield, respectively, 1,323,376 acres and 820,195 tons; barley, 356,530 acres and 219,620 tons; corn, 1,792,109 acres; millet, 266,556 acres; rice, 149,630 acres.

THE COTTON SITUATION. At the close of the year Egypt was still suffering from the effects of the cotton crisis. The drop in price and the lessened demand have been all the more keenly felt because Egypt is essentially a one-crop country and responds immediately to conditions affecting that crop and its marketing. With the placing of new orders and increase in prices in September, coincident with arrivals of the new crop at Alexandria, and with consistent reports of a short crop in the United States, prices began to rise, reaching as high as approximately 56 cents per pound (at normal rate of exchange) spot price for fully good fair Sakellarides by the end of the month. The anxiety of growers, however, to dispose of their

cotton, even at a sacrifice, produced the inevitable result and a jumpy market ensued, with arrivals in Alexandria much more than counterbalancing shipments to foreign countries. Prices fell steadily, with occasional reactions from approximately 60 cents per pound on October 1 to 41½ cents on November 4. Arrivals of cotton at Alexandria from the beginning of the cotton season on Sept. 1, 1921, to November 5 amounted to 1,635,675 kantars (of 99.05 pounds each) as against 961,878 kantars for the corresponding period of the preceding year. Exports for the above period of 1921 amounted to 153,739 bales or 1,208,268 kantars, and for the corresponding period of 1920 and 1919 to 51,905 bales or 396,535 kantars and 113,409 bales or 860,241 kantars, respectively. Stocks at Alexandria on Nov. 5, 1921, amounted to 2,262,407 kantars, as against 963,525 kantars and 1,327,932 kantars for the corresponding date in 1920 and 1919, respectively.

According to the Egyptian Ministry of Agriculture, the cotton crop for the 1920-21 season (beginning Sept. 1, 1920, and ending August 31, 1921) was the poorest in point of quality for many years owing to unfavorable weather conditions, shortage of water during one period of the season and an oversupply later, and attacks by boll worms in almost all parts of Egypt. The crop was also reduced in quantity because of the restriction in cotton area ordered by the State and the meagre use of fertilizers, but this has been largely offset by the unusually large carry over of ginned cotton (about 180,000,000 pounds) from the preceding season's crop, and the relatively large quantity remaining unginned in the interior (about 75,000,000 pounds), so that the cotton available for the present season will probably amount to over 600,000,000 pounds.

The exports of raw cotton form by far the most important part of Egypt's foreign trade. In 1913, out of a total export trade valued at ££31,662,065, the exports of cotton were valued at ££25,513,109, or 81 per cent. For the two following years, the values of cotton, as well as total exports were lower than for 1913, but commencing with 1916, rose rapidly, and for 1920, total exports were valued at ££85,467,061 and cotton exports at ££75,096,026, or 88 per cent. That year proved to be the peak of the cotton trade, and for the first nine months of 1921, the value of the total exports was only ££19,090,050, as against ££72,107,129 for the same period of 1920, and the value of the cotton exports for the same period was ££13,196,788, as against ££63,913,013 for the same period of 1920.

Exports of Egyptian cotton to the United Kingdom in 1913 amounted to 2,996,404 kantars, valued at ££10,996,440, and to the United States, to 673,255 kantars, valued at ££2,442,530. In 1920 with the enhanced prices that prevailed during the greater part of the year, the 1,764,410 kantars exported to the United Kingdom were valued at ££31,064,882; and the 1,268,689 kantars going to the United States at ££26,222,272. During the first nine months of 1921, total exports of cotton, were 2,816,862 kantars valued at ££13,196,788; the exports to the United Kingdom were valued at ££5,974,605, and to the United States at ££1,976,312.

COMMERCE. The following table shows the import and export totals for the fiscal years

1913, 1919, and 1920 and the annual balance of trade:

Year	Merchandise *		Specie	
	Imports ££	Exports ££	Imports ££	Exports ££
1913.....	27,865,195	31,662,065	9,791,188	11,137,932
1919.....	47,409,717	75,888,321	183,513	3,174
1920.....	101,890,963	85,467,061	399,039	12,249

* Excluding re-exports (££2,551,894 in 1920) and transit trade (££12,811,874 in 1920).

The following table from the *Statesman's Year Book* of 1921, shows imports and exports by countries in the fiscal years 1919 and 1920:

COMMERCE (MERCHANDISE)		BY PRINCIPAL COUNTRIES		
Countries of origin or destination	Imports from		Exports to	
	1919	1920	1919	1920
	££	££	££	££
Great Britain . . .	21,480,957	37,894,760	40,222,821	36,343,284
India and Aden . .	2,347,965	3,338,709	587,015	747,707
Australasia	1,848,623	4,900,722	48,910	91,137
United States . . .	2,889,749	10,751,055	16,714,085	26,469,171
China	1,317,270	2,325,707	25,881	19,907
Japan	1,729,164	2,264,051	1,864,292	1,236,763
France	2,390,640	6,104,865	5,871,556	8,069,200
Greece	1,893,105	2,085,531	696,591	413,036
Italy	2,512,028	5,705,020	3,499,514	3,303,414
Switzerland	455,307	1,549,646	1,811,096	2,246,838
Belgium	202,710	1,927,150	207,019	324,260
Chile	1,098,055	2,057,266	5,494	6,559
Germany	6,527	1,186,121	243,561	1,294,373
Sweden	443,118	1,639,665	56,779	19,721

The following information in respect to the foreign trade in 1920 was supplied by the United States Bureau of Foreign and Domestic Commerce:

The foreign trade of Egypt in 1920 was valued at \$935,353,745, which was an increase of \$319,775,961 or 52 per cent over 1919, the total of that year having been \$615,577,784. The exact balance of trade in favor of Egypt in 1919 amounted to \$142,182,278, but in 1920 the balance of trade was against the country to the extent of \$81,948,047. In 1920 the gross imports increased 115 per cent over 1919, but exports increased only 12 per cent. In 1913 the imports amounted to \$139,047,324 and the exports to \$157,251,311, with a favorable balance of \$18,203,987. The chief imports from the United States in respect to value in 1929 were coal and flour and the chief export to the United States, making up nearly the whole total was, as usual, cotton. During the first nine months of 1921, exports to the United States from Egypt were \$10,364,812 as compared with \$93,672,889 for the corresponding period of 1920. Imports to Egypt from the United States for the first nine months of 1921 were \$10,754,782 as compared with \$30,581,246 in the corresponding period of 1920.

FINANCE. The revenue and expenditures for five fiscal years are shown in the following table taken from the *Statesman's Year Book* of 1921:

Years	Revenue ££	Expenditure ££
1913.....	17,368,616	15,728,785
1916-17.....	19,927,274	17,240,606
1917-18.....	23,166,074	22,496,948
1918-19.....	27,661,289	23,384,326
1919-20.....	33,677,401	28,991,934

The Egyptian fiscal year ends on March 31. Operations for the fiscal year ending March 31, 1921, showed a deficit of £E15,604,261, receipts being £E46,446,921 and expenditures £E62,051,182. Estimated revenues for the fiscal year ending March 31, 1922, were, £E36,701,000 and estimated expenditures £E38,682,000, or a further deficit of £E1,981,000. Basically Egypt is sound, but is almost entirely at the mercy of the cotton crop, and as a considerable part of the national revenue depends upon the success of the crop and its marketing under favorable conditions, there is always an element of uncertainty in the revenues. Some important sources of revenue have not yet been tapped. Should it be possible for the government to increase the income from these hitherto unused means, the return to an actual gold basis in its circulating medium and the redemption of its material obligations would be accomplished in a relatively short time. The financial depression of 1921 showed a tendency to lessen under the influence of new cotton orders, but at the close of the year was still sufficiently grave.

At the end of 1920 the bank-note circulation exceeded £E40,000,000, of which only about £E3,333,000 were secured by gold. Of the remainder, less than £E400,000 were in Egyptian government securities. The rest was secured by treasury notes and national war bonds of Great Britain, which were greatly depreciated. Statements of the National Bank of Egypt for July 31 and August 31, 1921, showed bank-note circulation of £E31,400,000 and £E30,500,000, respectively. One of the effects of the restricted sale of cotton and the large quantities of unginned cotton held in the interior was a reduced bank-note circulation. Under normal conditions the bank-note circulation is heavy until the season of large cotton shipments is over, which is usually not before the end of March. During 1921, however, conditions were extremely abnormal, and circulation declined early.

The public debt of Egypt at the end of 1920 amounted to £93,067,640, divided as follows: Guaranteed debt, 3 per cent, £5,967,900; privileged debt, 3½ per cent, £31,127,780; unpaid debt, 4 per cent, £55,971,960. At the end of January, 1921, the debt remained the same, with the exception of the 3 per cent guaranteed debt, which has risen to £6,098,400, and after that time it remained at almost the same figures.

The Egyptian pound, with a normal value of \$4.9431, bears a fixed ratio to the pound sterling, the latter being equivalent to 97½ Egyptian piasters, of which there are 100 in the Egyptian pound. Consequently the Egyptian pound fluctuates with the pound sterling.

DEFENSE. The native army of Egypt was disbanded in 1882 and a new army organized under a British commander with the title of Sirdar, which, however, was a comparatively small force, the strength being placed at 17,000. Before the late war there was a British army of occupation comprising about 6067 of all ranks. After the country became a protectorate the British garrison numbered about 11,605 and there was an additional body of Indian troops, which brought the total to about 20,463 (1920).

GOVERNMENT. As noted above the British protectorate was proclaimed, Dec. 18, 1914. On the following day Abbas Hilmi was deposed and the title of Sultan was bestowed on Hussein Kamil, who died in 1917 and was succeeded by

Ahmed Fuad Pasha, who assumed the title of Fuad I (Oct. 9, 1917). The British policy as set forth toward the close of 1919 aimed at the self-government of the country under British protection, the British government to retain control of foreign affairs while developing a system that would admit of increasing participation in the government by the natives. Pursuant to this policy a mission under Lord Milner was sent to Egypt for the purpose of working out a programme. This resulted in a report containing recommendations to the home government in 1920. As noted below under *History*, the year 1921 was taken up with a discussion of this question of independence between the Egyptian representatives and the British government. In 1921 the Egyptian ministry was constituted as follows: Prime Minister, Adly Yeghen Pasha; Vice-President of the Council, Hussein Rushdi Pasha; Interior, Abdel Khalek Sarwat Pasha; Education, Gaafar Waly Pasha; Public Works, Marine and War, Mohammed Shaffik Pasha; Justice, Abdel Fattah Yehia Pasha; Agriculture, Nuguib Ghali Pasha; Wakfs (Pious Foundations), Midhat Yeghen Pasha; Communications, Ahmed Ziwer Pasha; Finance, Ismail Sidky Pasha.

HISTORY

THE MILNER PROJECT. Before the war Egypt was nominally under the suzerainty of Turkey and the English military occupation had not been recognized by the Powers. A certain degree of self-government was enjoyed by the country which had its own sovereign, army, legislative system, and coinage. During the war, as is noted in the preceding *Year Books*, England placed Egypt under a protectorate but declared that the status was merely provisional and would be changed after the war. Egypt was a loyal ally during the war and out of its population of 14,000,000, about 1,200,000 were mobilized. Palestine was conquered largely by the Egyptian recruits. After the armistice the Egyptians requested the privilege of sending a delegation to the Peace Conference. The British arrested and deported four National chiefs. Thereupon, the Nationalist element protested and made demonstrations which brought upon them armed attacks and methods of repression, compared by critics of the British policy to those employed in Ireland. Finally, the British government permitted the four Nationalist leaders, including Zaglul Pasha to go to Paris, but they had no success in putting their claims before the congress. Hostile demonstrations continued in Egypt and the British government finally sent Lord Milner to Alexandria to make investigations. He remained in Egypt three months, but found that the Nationalists always avoided meeting him and his plans were effected without conference with them. He returned to London and, realizing the necessity of coming to terms with the Nationalists themselves, inspired the government to invite Zaglul and his colleagues to a conference. Meanwhile the Milner report was submitted to the British Parliament, February 18. The essential points of the British proposal were, that the British troops should be maintained only at Port Said and in the eastern zone of the Suez Canal; that Alexandria should be a British naval base with an international police force; that a British controller of the public debt should be appointed; that Egypt

should have the right of diplomatic representation abroad but that the British government should have the right to be consulted in all treaties except commercial agreements; that the Anglo-Egyptian Sudan should continue as at present, both countries having equal rights in it; that the safety of the Egyptian water supply should be guaranteed. It was criticised in certain respects in Parliament by the Prime Minister and Mr. Winston Churchill, who had succeeded Lord Milner as Secretary of the Colonies on January 17.

NATIONALIST OPPOSITION. The Milner project was attacked by the Egyptian Nationalists as inconsistent with Egyptian independence. Zaglul rejected the project but agreed to present it to the judgment of the people. When this was done, the popular decision demanded the abolition of the English protectorate and the independence of Egypt, but conceded considerable advantages to Great Britain. Lord Milner refused to accord the degree of independence demanded, for fear that detriment might come to the Empire since Egypt was on the road to India, and the negotiations were broken off. The British representative in Egypt suggested to the Khedive that a new ministry be formed under Adly Yeghen Pasha, and invited him to send a delegation to conclude an agreement. A coalition cabinet was formed, March 15. But when Adly Pasha assumed office he realized that the people were behind Zaglul and that they desired that no negotiations should be undertaken in which he did not take part. Adly Pasha then invited Zaglul to serve as a delegate. The latter laid down the conditions that martial law should be abolished, that the basis of the negotiations should be the independence of Egypt, and that the majority of the delegates should be chosen by the people instead of appointed under British influence. These demands being refused, Zaglul declined the appointment. Thereupon demonstrations were renewed in all parts of the country and a demand was made that a national assembly should be called to decide the question. The proclamation on the subject contained the following passage: "If Lord Milner treats with Adly Pasha, it is as if King George V were treating with King George V. It cannot be admitted that they should decide the fate of our country and change the course of our destiny and that of our children without consulting the people. England wishes to treat with Egypt. Let her address herself to us. This demand is the more legitimate in that the legislative assembly, the only elective body in the country, has not been called together since the war." After the repression of Nationalist newspapers and the arrest of agitators by the British authorities, popular demonstrations became more violent and in some parts of the country were accompanied with bloodshed. The riots spread to various cities, including Cairo and Alexandria. The British press attributed the disturbances to the Egyptian hatred of foreigners, as illustrated by street fighting between Greeks and Egyptians. On the other hand it was urged that in general, foreigners in Egypt were well treated.

THE EGYPTIAN DELEGATION. In August conferences were held in London between the British government and an Egyptian delegation headed by Adly Pasha which demanded enlarged powers of self-government and virtually complete independence. One of the stumbling blocks was the demand of the Egyptians that British troops be

withdrawn. The conference was adjourned in August and resumed September 24. During this interval, riots in Egypt were continuing. The Egyptian delegation under Adly Yeghen Pasha left London, November 12. According to the press the reason for their departure was the inability to reach an agreement in regard to the question of military representation. In other quarters it was pointed out that the Egyptians were favorable to British control of the canal zone and to an arrangement of the military question as regarded military authority in other parts of the country; and it was hinted that the real reason was the unwillingness of the Foreign Office to conform to the recommendations of Lord Milner in February, who in a report to Parliament had declared that the promise of self-government ought not to be postponed. It was believed by some that the real cause of the breaking off of the negotiations was the question of Egyptian diplomatic representations in foreign countries. The Egyptians desired to appoint their own diplomats and to receive diplomatic representatives from foreign Powers including a British ambassador, while the British authorities wished Egyptian foreign affairs to be directed by a British commission.

SITUATION AT THE CLOSE OF THE YEAR. It was supposed that Adly Pasha would take a moderate position and reject the extreme programme of Zaglul but although he made certain concessions he refused to give way on the main points; thus a rupture resulted and Adly in setting forth his side declared that he supposed that he was concluding a treaty of alliance with England but it turned out that England was insisting upon a pact of subjection. England intended to maintain in Egypt a high commissioner invested with exceptional powers. England insisted that she must be the sole protector of foreign interests in the valley of the Nile and that she must control absolutely the foreign relations of the country. The London government declared this characterization false and Lord Allenby sent a letter explaining the British point of view. This, however, did not have any effect and no agreement was reached. It appeared from the official documents published late in 1921 that the stumbling block was the military question. In the plan drawn up on November 10, Great Britain undertook to furnish her support to Egypt for the defense of her vital interests and her territorial integrity. British troops were to have the right of passage across Egypt and British garrisons were to be maintained in certain places for a fixed period. They were also to have the means at their disposal for securing barracks, etc. The Egyptian delegation in its reply of November 15 suggested that the maintenance of troops in the canal zone ought to suffice and that the proposed measures amounted to a pure and simple occupation of the country. The delegation also objected to the plan for controlling the foreign policy of the country through the British high commissioner who must be consulted before Egypt could enter into an agreement with a foreign Power. Lord Allenby in a letter to the Sultan dated December 3, declared that the British government was ready to examine all methods for the execution of its plans but it could not modify the principles on which these plans rested. From the Nationalist point of view the criticism of the British position was that it did not take into account at all the interests of Egypt,

being exclusively concerned with the interests of Great Britain. The correspondence after the return of the delegation had satisfied no one but on the contrary had aroused the indignation of the entire country. The leader of the Nationalists toward the close of the year declared that while Great Britain was of course strong enough to force Egypt to submit she never would succeed in destroying the sentiment of patriotism and that the day was approaching when British statesmen would perceive that Egypt would accept nothing less than her independence. He concluded with the declaration that the Egyptians were ready to fight for their liberty. Disturbances occurred at Cairo in the latter part of December, arising in the first instance from the arrest and removal of the Nationalist leader, Said Zaglul Pasha, who had refused to obey the order of the military authorities that he and his supporters should at once cease all their political activities and leave the city. When the police were removing him, the people began rioting in the streets. On December 25 it was reported that as a result of the disturbances during the preceding two or three days twelve persons had been killed, but that marines from the British ships had the situation under control. On September 26, however, five more persons were killed and four wounded by the troops. It was also learned that the majority of the government officials had decided to go on strike. It was admitted that the situation had become serious, but it was believed that the British forces were better prepared to deal with the movement than they had been when the outbreaks had occurred in 1919. Complete control of the affair was in the hands of Lord Allenby, the British High Commissioner, there being no check on his authority. It was hoped that the deportation of Said Zaglul Pasha to Sues would be approved by the more moderate element in the country.

OTHER EVENTS. There was difficulty in the course of the year over the question of American Shipping Board's cargo prices of cotton. A cooperative cotton syndicate was formed in Egypt, January 5, to combat these prices, and it supported the British steamship lines in the latter's quarrel with the American Shipping Board in July. The Egyptian planters in some instances refused to admit the monopoly enforced by the lines.

EINSTEIN THEORY. See ASTRONOMY.

ELDRIDGE, FRANK HAROLD. Naval engineer, died in France in December. He was born at Columbus, O., July 14, 1852; graduated at the United States Naval Academy in 1875; and was promoted through the various grades to the rank of commodore in 1909, retiring in that year. He served in the Spanish-American war, and was head of the department of steam engineering and naval construction in the Naval Academy from 1900 to 1902. He was reengaged in active service during the late war.

ELECTRIC BATTERIES. Little was heard of progress in battery design or manufacture during the year. The condition of deflation that prevailed everywhere easily furnishes a reason. It should be noted, however, that wherever electric trucks or fire apparatus had been introduced, the battery equipment was reported to be highly satisfactory and dependable, only awaiting more activity in business to demonstrate its popularity.

ELECTRIC LIGHTING. One of the notable features of the past year was the steady replace-

ment of arc lamps for street illumination by high-efficiency gas-filled tungsten lamps, characteristic of the progress of the past four years; the incandescent units having now become standard. For moving picture projection, some powerful incandescent lamps were brought out, one of these being a 900-watt bulb, operating at 0.46 watt per candle power. Increasingly skillful use of color as an adjunct to lighting effects, not only in theatres, but also for the purpose of intensifying the lighting of special scenes on the moving picture screen was very noticeable. Advertising signs made use of well-chosen colors in the scheme of their nightly displays more than ever before. In Washington, D. C., there was a wonderfully effective display at the time of the convening of the Disarmament Conference. The Washington Monument was illuminated by the rays of four searchlights placed at its base and behind the Capitol, there blazed out an "aurora borealis" produced by a battery of powerful searchlights radiating, through colored screens toward the sky; while the "jeweled archway," with its lights suspended between two illuminated obelisks in front of the building wherein the Arms Conference had met combined to produce a spectacle that, while it involved no new features, was unique of its kind. On railroads, the use of colored lamps for daylight as well as night indications became more general, as being more dependably visible than semaphore arms.

ELECTRIC POWERS. TRANSMISSION OF. Business conditions during 1921 prevented the inception of any important new transmission lines, although several projects that had been under construction were pushed to completion. There was noticeable much more rugged design and construction in the steel towers built to carry electric power lines, experience having demonstrated that the earlier types lacked the strength necessary to withstand unusual strains such as tornadoes, heavy coatings of ice on the conductors, etc. Owing to the constantly increasing capacities of the newer generating stations, improved designs of oil switches, large enough to deal with the very great quantities of energy involved were built and put in service.

On the Canadian side of the Niagara river, the canal from Chippawa, above the Falls, to Queenston, at the mouth of the river was completed and the first generating unit put in service at the close of the year. This was a part of the system of the Ontario Hydro-Electric Power Commission, which with many other plants under its control, supplied energy to all parts of the Province. Although not completed, the Chippawa-Queenston development was interesting for the reason that it utilized the maximum fall of the river, 305 feet. In the West, the Great Western Power Company completed its Caribou station and began distribution of energy at 165,000 volts. The Pacific Gas and Electric Co., on its Pit river transmission line, was operating at 220,000 volts, the highest pressure ever employed in regular distribution work. One of the lines of the Southern California Edison Co., already operating at 165,000 volts, was being changed to adapt it to 220,000-volt current. New, specially designed transformers and a better arrangement of insulators were among the improvements under way to insure satisfactory operation.

The year was notable for the preliminary steps

in the creation and organization of a Super Power Zone, comprising the territory between Washington, D. C., and Portsmouth, N. H., and extending about 150 miles back from the Atlantic coast. The object of the plan was to develop water powers for the generation of electric energy and build steam-driven central stations near coal mines, or wherever other considerations also were favorable. Existing plants of sufficient capacity were to be utilized, while the smaller, less efficient stations were to be closed and the districts supplied by them taken care of by connection with the larger distributing centres. Dependent upon the amount and location of demands for maximum power, these stations could be so inter-connected as to equalize their loads and enable them to operate at higher efficiency. Electrification of the railroads in the Super Power District would follow as a matter of course, the amount of coal thus saved being enormous. The large power stations could supply electrical energy at a lower cost than steam locomotives can develop their power; and furthermore, the plan does away with the cost of hauling coal from mines to distributing points, as well as avoiding the empty-car haulage back to the mines. Engineers estimated that about ten years would be required to put the plan into effect.

ELECTRIC RAILWAYS. See RAILWAYS, ELECTRIC.

ELECTRICAL INDUSTRIES. Present-day industry and manufacturing are so dependent upon electrical energy for their very existence, that any review of the condition of electrical industries is inseparable from industry in general. So, in the financial depression and industrial readjustment that marked most of the year 1921, the electrical industries did not escape their share of the burden and the establishments manufacturing electrical machinery, wire, appliances, etc., were no exception to the rule of reduced working forces and greatly diminished output. At the same time, the natural growth of many communities created a constantly increasing demand for electric energy for light and power. While general business was quiet, there was a steady demand that had been created and stimulated by active sales campaigns for household electric appliances. In another direction also, the constantly increasing needs of the public for additional telephone service kept the factories producing such instruments and apparatus steadily employed. Electric furnaces for steel works and for brass foundries were being generally considered for replacing oil and gas fired furnaces for such purposes. The success already attained with electric furnaces for the purposes mentioned made their widespread introduction dependent only upon a resumption of business activity and a condition of greater ease in money available for manufacturing.

If anything were needed to illustrate the ever widening use of electricity, the following table, which appeared in *Electrical World*, Dec. 24, 1921, is convincing. The statistics were compiled by *Monthly Sales Service*, a publication issued by the Society for Electrical Development.

Homes wired in the United States.....	7,636,469
Homes reached by electric service.....	13,000,000
Homes not reached by electric service.....	8,145,126
Homes reached by central-station lines but not wired.....	5,363,531
Homes not wired.....	13,508,657
Communities reached by central-station lines...	14,000

Annual central-station revenue from use of electric irons.....	\$39,000,000
Annual central-station revenue from use of vacuum cleaners.....	\$4,750,000
Annual central-station revenue from use of washing machines.....	\$3,500,000
Annual central-station revenue from use of electric ranges.....	\$6,000,000

ELON COLLEGE. An institution of higher learning situated at Elon College, N. C., maintained by the Christians; organized in 1889. In the fall of 1921 the number of students enrolled was 321 and the faculty numbered 29. The library contained about 12,000 volumes. The productive fund totaled \$977,470. President, William Allen Harper, Litt.D.

ELWES, GERVASE. See NECROLOGY.

EMORY UNIVERSITY. An institution of the higher learning situated in the outskirts of Atlanta, Ga.; founded in 1914. In 1921 the students numbered 1020 and the faculty 83. President, Harvey Warren Cox, Ph.D.

EMPLOYERS' LIABILITY. See WORKMEN'S COMPENSATION.

EMPLOYMENT. See LABOR LEGISLATION.

ENGEL, PETER. Roman Catholic Abbot of St. John's Abbey, Collegeville, Minn., and President of St. John's University there, died at Rochester, Minn., November 27. He was born at St. Nicholas, Wis., Feb. 3, 1856, and educated at St. Michael, Minn. Having graduated from St. John's University in 1874, he entered the order of St. Benedict, and rose in it to the high rank of Abbot. He was one of the most prominent Benedictine prelates in this country, and the recipient of marks of special favor from Rome.

ENGINE, GAS or OIL. See INTERNAL COMBUSTION ENGINE.

ENGINEERING. The industrial depression of 1921 the world over naturally limited the field for the efforts of the engineer and comparatively little was accomplished in new design or construction save on the most pressing and necessary basis. Reference to the article BRIDGES will show that bridge engineers had under way a number of ambitious undertakings and that some important new projects were under discussion or even being designed. FLOOD PROTECTION continued to arouse the interest it deserved and notable was the approaching completion of the Miami Conservancy works in Ohio. In TUNNEL construction the tendency was rather to line or widen tunnels than to build new bores in the existing state of railway finances. For new POWER (q. v.) and other projects a number of DAMS were under way, while new CANALS were being agitated. WATER WORKS were attracting increased attention during the year, and the problems of urban and interurban RAPID TRANSIT continued to be of interest both in the way of new facilities and furnishing immediate and much needed relief to the congestion of city streets. In mechanical engineering, connected as it was so closely with manufacturing, there was not much in the way of extraordinary progress though new power plants and projects were equipped with BOILERS, STEAM ENGINES, STEAM TURBINES, and WATER WHEELS, or perhaps some form of INTERNAL COMBUSTION ENGINE (q. v.). In electrical engineering there is the usual record under DYNAMO-ELECTRIC MACHINERY and RAILWAYS, ELECTRIC, while under RAILWAYS the YEAR BOOK as usual records the general progress and construction of the year,

slight though it was so far as the United States was concerned. In marine engineering after the feverish activity of the war and immediately thereafter there was an inevitable reaction so that SHIP BUILDING and SHIPPING suffered. In mining and metallurgy likewise there was little incentive to new effort, while the developments of the year is also discussed under GOLD, SILVER, TIN, LEAD, ZINC, and other metals, including iron and steel which of course suffered during the year. In sanitary engineering there was progress to be recorded in GARBAGE AND REFUSE DISPOSAL and SEWERAGE, while for municipal engineers the subject of CITY PLANNING continued to interest WIRELESS TELEGRAPHY AND TELEPHONY made important advances during the year and the broadcasting of news and its being received at countless amateur stations with simple equipment made notable progress. The year was not barren of achievement in the various branches of engineering as the topics suggested and other will show, but as already stated design and construction seemed to await greater prosperity.

ENGINEERS. See MUNICIPAL GOVERNMENT.
ENGINES, STEAM. See STEAM ENGINES, STEAM TURBINES.

ENGLAND. England proper is the largest and most densely populated portion of the United Kingdom. The term as employed in reference to the government often applies to the United Kingdom and Ireland. See GREAT BRITAIN.

ENGLAND, CHURCH OF. The established church of England and Wales, is represented by the Protestant Episcopal Church in the United States. The church was disestablished in Wales and Monmouthshire by act of Parliament in 1914, but the process was deferred until after the war. The supreme governor of the church is the King of England. He has the right to fill vacant archbishoprics and bishoprics. Many deaneries, prebendaries, and canonries are under the appointment of the First Lord of the Treasury, and a large number of livings and some canonries are in the gift of the Lord Chancellor. The country is divided into two provinces for administrative purposes. They are Canterbury and York, each being controlled by an archbishop. In addition there are 41 bishops and 38 suffragan and assistant bishops. Under the bishops are about 34 deans and 100 archdeacons. Under mandate of the King each province may sit in Convocation or council, for the purpose of passing regulations, resolutions, etc., affecting the clergy and the church in general. Such measures must be approved by the House of Parliament before they became effective. In 1915 there were 2,359,599 full members of the church, with 14,079 ministers. The number of adherents is about 7,000,000. There were also 3,063,437 Sunday School pupils and Bible class members. Voluntary offerings for the year 1915-16 totaled £7,061,000.

ENGLISH LANGUAGE AND DIALECTS. See PHILOLOGY, MODERN.

ENTOMOLOGY. See ZOOLOGY.

EPILEPSY. The experience of the great war has taught us that shock without injury as well as actual injury of the skull may produce all of the clinical varieties of this disease; and that they may come on soon after the injury or not until months—perhaps a year and a half at the outside—have passed. The belief in some quarters that there is but one epilepsy was already held

before the war. In the YEAR BOOK for 1920 the drug luminal was mentioned as a decided addition to our resources and recently Maillard, a physician of the Bicêtre Hospital, where Paris epileptics are treated, has expressed himself enthusiastically on the new remedy. It is known in France as gerdalen, its full chemical name being too long for familiar use. The drug is not entirely innocuous, for a condition not unlike alcoholic intoxication has sometimes been seen to follow overdosage. While experienced epileptologists warn the profession and public not to expect too much of it, Maillard lays stress on several undoubted advantages over bromides and other old remedies. Thus it is of value in all of the epilepsies and not merely, like bromides, in the motor paroxysms. It does not produce, when given indefinitely in proper doses, any such condition as bromism which in its extreme forms is more dreadful than the disease itself. The mental failure which sooner or later succeeds to chronic severe epilepsy has not been seen, although the observation period is too short to decide so important a point. In theory, whatever can arrest the convulsions and other seizures will prevent the mental deterioration and since luminal antagonizes all forms of the disease, it should be far superior to bromides in preventing dementia. But not every patient can benefit from the luminal treatment alone and some of these are controlled by a mixture of the latter and bromides, each in small doses. Another new drug which may come into some use as a substitute for bromides is boropotassic tartrate, which is being widely tested.

EPIRUS. A district of southern Albania and northern Greece, the Greek portion corresponding to the department of Yanina. The boundaries are uncertain. The Greek provisional census of 1913 gave the department of Epirus or Yanina a population of 245,618. Northern Epirus has a population placed at about 250,000.

ERIE SYMPHONY ORCHESTRA. See MUSIC, Orchestras.

ERITREA. An Italian colony in Africa on the west coast of the Red sea extending from Cape Kasar to Cape Dumeirah with a coastline of about 670 miles. Area, about 45,800 square miles; population, largely nomadic, about 450,000, though an estimate in 1919 placed it as low as 380,000. The Europeans numbered about 3000, of whom 2600 were Italians exclusive of the military forces. Capital, Asmara, with a population of 14,711 of whom 2500 were Europeans. Massawah or Massaua with about 2645 inhabitants is the centre of a large trade with the Arab regions on the Red sea. There is a considerable production of palm nuts which are an important export. Mineral products include gold, salt, and petroleum. There is a local trade in animal products, and the live stock include camels, oxen, sheep, and goats. There is a considerable pearl-fishing industry. The imports in 1918 amounted to 103,811,379 lire and the exports to

85,254,452. The colony's budget for the year 1920-21 was as follows: Colonial revenue, 10,132,040 lire; state contributions, 6,650,000 lire; extraordinary revenue, 5,224,400; total 22,006,440. Expenditure: Civil administration, 12,049,820 lire; military, 3,857,290; extraordinary expenditure, 6,099,330; total 22,006,440. Governor at the beginning of 1921, Marquis G. Cerrina Feroni.

ERZBERGER, MATHIAS. Former German Vice-Chancellor, shot and instantly killed near Offenbergl in Baden, August 26. He was born at Buttenhaus, Sept. 20, 1865, the son of a poor tailor; taught school and, entering the university, pursued special studies in international law and political economy. He attracted attention by his writings on political and economic subjects and by his eloquence as a political orator, and was elected a member of the Reichstag in 1903 as representative of the Centre. During the war he came into general notice through his famous resolution, known throughout the world as the July Resolution (1917), in favor of peace without annexations. At this time he proposed a formula of parliamentary reforms which was refused by Chancellor von Bethmann Hollweg. The July Resolution was regarded by the extreme military party in Germany as one of the things that tended to break down the morale of the people. For many years Erzberger was chief of the Centre and after the war he was one of the leading personages in political life. From the time of the July Resolution down to his death, he was the target for the attacks of the reactionaries. After the defeat he was appointed a minister without portfolio in the cabinet of Maximilian. During the negotiations for peace he was a member of the German delegation that arranged with Marshal Foch the terms of the armistice. After that he was leader of the Majority Socialists in the formation of a new ministry. His part in the acceptance of the armistice further exasperated the military party against him. Several attempts had been made to assassinate him, concerning which he wrote as follows in his *Recollections of the War* published a year before his death: "Some members of the Reichswehr made a murderous assault on the evening of the day when the Weimar Assembly accepted the Treaty of Versailles. This failed. A few days later they bombarded my study at the Ministry of Finance. A hand grenade wrecked one of the rooms that they believed was my sleeping-room. On the occasion of the third attempt at assassination which took place at Moabit, I was plainly protected by the hand of God. . . . All the hatred of my adversaries has not weakened in me the conviction that the signing of the Peace was at the time of which I have been speaking the only means of saving the German people." After the last attempt to assassinate him in January, 1920, he resigned from the cabinet but ran for parliament again in June, 1920, and was elected. His political enemies accused him of having sent money abroad and in May, 1921, the Reichstag removed his parliamentary immunity. Later he made a speaking tour in west Germany and according to the dispatches from Berlin recommended in his addresses the confiscation of the gold and silver hoarded by private individuals, the immediate levy of a tax on capital, and the carrying out of several plans of socialization. It was announced on September 13 that the Baden police had identified the murderer of

Erzberger as an ex-officer and former member of the brigade of the marines which had occupied Berlin at the time of the Kapp coup d'état.

ESKIMO. See ALASKA.

ESSAYS. See LITERATURE, ENGLISH AND AMERICAN.

ESTHONIA. One of the Baltic provinces of the former Russian empire comprising the former province of Esthonia, the northern part of the former province of Livonia, the islands of Moon Sound, the northwestern part of the Pskov government, and a small portion of the Petrograd government. Area, estimated at from 18,340 to 23,160 square miles; population, at from 1,500,000 to 1,750,000 of which over 90 per cent are Esthonians. The language spoken is Esthonian, but German and Russian are also generally spoken and understood.

PRODUCTION. Agriculture is the main occupation. On Oct. 10, 1919, a reform of the land system provided for the division of the large estates and this process was still being carried out in 1921. The country had not yet adjusted itself to the change. The stocks of farm animals were greatly reduced during the war. According to the latest available statistics the forest land made up about 20.1 per cent of the total area and the cultivated land 22.9 per cent. Of the forest land about 70 per cent was under fir trees. The chief crops are rye, oats, barley, and potatoes. There was a falling off in the average yield in 1920 from 1919, owing chiefly to the disorganization caused by the division of the large estates above mentioned. The yield of potatoes in 1920 was 21,232,605 bushels; oats, 5,319,471; winter rye, 3,788,955; barley, 2,514,555. The live stock in 1920 showed an increase over the preceding year and were as follows: Horses, 155,489; cattle, 414,955; sheep, 497,838; pigs, 244,912. The industries, which include textiles, shipbuilding, metal works, mining, and chemicals, did not suffer as much as in the neighboring countries, especially Latvia, from the German and Bolshevik occupations. Nevertheless, in 1920 most of the industrial plants were either idle or working only to a fraction of their capacity. This was due largely to the shortage of raw materials and fuel and to the cutting off of exports from Russia on account of the disturbed conditions there. The workmen in the industries before the war numbered 50,000 and in 1920 were reported at 8000 or 9000.

COMMERCE. Both exports and imports increased in 1920 over 1919. The imports in 1919 were \$11,177,744 and in 1920 \$19,931,218. The exports in 1919 were \$5,562,310; and in 1920 \$17,544,278. The chief imports in 1920 were coal, fertilizers, fish, salt, petroleum, and petroleum products, and the chief exports in 1920 were flax, paper, spirits, and timber.

FINANCE. The Esthonian mark fell steadily in exchange value during 1920, being 100 to the dollar at the beginning of the year and 375 to the dollar at the end of the year. The total paper money at the end of 1920 amounted to 2,100,000,000 Esthonian marks. The budget expenditures proposed for 1922 amounted to 5,500,000,000 marks of which 30 per cent was for military purposes. Exchange in December stood at about 400 to the dollar, but the government promised that the budget would be made to balance by the aid of internal credits, without recourse to new paper issues.

COMMUNICATIONS. There are two regular freight and passenger steamships between Reval and Stockholm and a regular Finnish service between Reval and Helsingfors. The vessels entering the port of Reval in 1920 numbered 2975 with a tonnage of 293,803. The largest tonnage next to the Estonian was that of the German vessels and the next was that of the Finnish.

GOVERNMENT. A constitution was adopted by the constituent assembly, June 15, 1920, and went into effect, Dec. 20, 1921. The executive power was vested in a state head and a ministry chosen by the state assembly, and the legislative power in a state assembly of 100 members elected for three years by universal, direct, equal, and secret suffrage, on the basis of proportional representation. The assembly was composed after the election of Nov. 28, 1920, of the following groups: Reformist Labor, 22; Agrarians, 21; Social Democrats, 18; Independent Socialists, 11; Populists, 10; Christian Party, 7; Bolsheviks, 5; Balts, 4; Russians, 1; Economist group, 1. The state head at the beginning of 1921 was Konstantine Paets and the Minister for Foreign Affairs, Ant. Piip.

EULENBURG, PRINCE PHILIP ZU. See NE-CROLOGY.

EVANGELICAL ASSOCIATION. A denomination composed largely of German born citizens of the United States. Its doctrines are very similar to those of the Methodist Church. The latest available statistics are those of 1919: they show 154,564 communicants; 1697 churches and 1160 ministers. Pupils in the Sunday Schools numbered 198,435, with 24,358 officers and teachers. In addition there were 1148 societies of the Young People's Alliance, with an enrollment of 39,718. In 1920 there was a total of 735 missions, of which 527 were in the United States with 510 missionaries; 163 missions were in Europe, with 159 missionaries; and 45 missions with 53 missionaries were in Asia. Considerable missionary work was done in this country during 1920 and 1921 among the Italian population. An active part has also been taken in missionary work in Japan and China. In 1920 receipts for missionary work totaled \$640,817.05, which was an average of \$4.02 per member. Besides the two principal periodicals, the *Evangelical Herald* and the *Evangelical Messenger*, which are published in Cleveland, Ohio, the association prints several other periodicals in German. Several hospitals are maintained in Philadelphia, Chicago, and other cities in the Middle West. Educational institutions are as follows: Correspondence College, Reading, Pa.; Evangelical Theological Seminary, Naperville, Ill.; Northwestern College, Naperville, Ill.; Schuykill Seminary and Evangelical School of Theology, Reading, Pa.; and a preachers' seminary in Germany. The headquarters of the association is in Cleveland, Ohio.

EVANGELICAL CHURCH, UNITED. For the year ending June 1, 1921, statistics of this denomination are as follows: Total membership, 90,096, or an increase of 1269 over the previous year; itinerant preachers, 519; local preachers, 218; organized congregation, 918. There were 922 Sunday schools, having 13,578 officers and teachers and an enrollment of 111,472 scholars. Home Missionary work is conducted in ten fields, principally in the Middle West. There were 282

missions operated last year, having a total church membership of 29,428, and a Sunday School enrollment of 49,670. Conversions during the year numbered 4195. The denomination maintained foreign missionaries in China and the Sudan region of Africa. Total receipts for all missionary work were \$321,871.10, or an average of \$3.57 per member, and an increase of \$40,299.52 over 1920. Contributions to the forward campaign in which the church is now engaged amounted to \$27,786.68, of which \$755,888 were pledged in 1921. The total amount contributed for all purposes was \$1,538,471, or an average of \$17.09 per member. The total value of all church property, which includes 482 parsonages, 891 church buildings and other property was \$8,931,634. The church maintains the following colleges and educational institutions: Albright College, Western Union College, The Bible Teachers' Training School (New York City), and the Illinois School for Christian Workers. The publishing house of the denomination is at Harrisburg, Pa. The principal publication is *The Evangelical*.

EVANGELICAL SYNOD OF NORTH AMERICA. Formerly the German Evangelical Synod of North America. This denomination stands for the positive and progressive principles of the German Reformation and emphasizes the unity of the spirit in the bonds of peace among all the Protestant bodies of the country. According to last available statistics (1920) there were 1292 congregations of which 1023 were in active membership with the Synod; 1073 pastors, with 376,955 members; 128,469 Sunday School pupils, with 12,546 teachers and officers. The total value of church property is given as \$23,352,070.96. The total amount contributed for the support and maintenance of churches was \$3,356,385.58; benevolences of all kinds amounted to \$419,223.76. Of this sum \$130,452.06 went to European relief. The General Conference meets every four years; in the interim, affairs are administered by four executive officers and fifteen boards.

Missionary work is carried on in many parts of the United States, India, Honduras, and South America. In the United States in 1920 there were 102 mission pastors in 19 districts and 2 outlying fields, maintained at the expense of about \$57,000. The Board of Foreign Missions, with an income of nearly \$70,000, reports progress in their Indian work, comprising 6 main stations with 49 out-stations, served by 11 men missionaries and 11 women missionaries, married and single, assisted by 275 native workers. A new mission has been organized in Honduras, and five missionaries are at work on two stations. The Eden Publishing House, the official publication agency of the denomination, is in St. Louis, Mo., and there is a branch in Chicago. The Eden Theological Seminary is also at St. Louis and a preparatory academy is also maintained at Elmhurst, Ill. The church maintains twelve deaconess' homes and hospitals, two for epileptic and feeble-minded, and eight homes for orphans and old people, valued in the aggregate at nearly \$1,500,000. The General Conference (September, 1921) provided for expansion of the work in many ways, including mission work in South America. The official church paper is *The Evangelical Herald*.

EVANS, HENRY CLAY. Manufacturer, and former consul-general in London, died at Chatta-

nooga, Tenn., December 12. He was born in Juniata County, Pa., June 18, 1843. During the Civil War, he was stationed with the union troops at Chattanooga, and after the war he served in the army during the trouble on the Mexican border. On retiring from military service he settled at Chattanooga where he became an iron and railway-car manufacturer. He was twice mayor of that city and was regarded as one of the most prominent Republicans of the South. He was delegate at large to the Republican National Conventions from 1892 to 1916; commissioner of pensions, 1897-1902; and consul-general in London, 1902-05. He did much for the improvement of Chattanooga, especially in the development of the school system, having served as commissioner of education early in his political career.

EVANS, MARY. See NECROLOGY.

EVOLUTION. See ZoöLOGY.

EXPERIMENT STATIONS. See AGRICULTURAL EXPERIMENT STATIONS.

EXPLORATION. (For Antarctic and Arctic regions, see POLAR RESEARCH.) The spirit of adventure turns more and more to the realms of scientific research. It now matters little to add a new land to geography, but it is important to contribute to the knowledge of the fauna, flora and ethnology of regions unexplored. At present the search for unvisited regions is confined to the Antarctic zone.

AFRICA. The most important exploration was that of Commander Lauzanne, with a force of mauretanian camelists, who by a journey of more than one thousand miles across the western Sahara, opened up a new route between western French-Africa and Algeria. Leaving Rallaouia, about 21.5° N., 10° W., he traveled northeast across the Maqtier and the Hank, to el Mzereb and el Kseib, 25° N., 6° W. Thence his route was westward to southern Iguidi, and back to the starting point,—reached in January, 1921. The regions traversed are largely occupied by the Requibat tribe,—warlike, numerous, hardy desert-dwellers, who live on their flocks and on plunder from distant forays. They received Lauzanne hospitably. The Hank consists of rocky hills, with scant vegetation sustained by rare but violent winter rains. The Iguidi and Maqtier, high sandy plateaus with much vegetation, afford as a rule good pasturage. Many of its plants, some species new, cover great desert areas, but trees were entirely absent.

The exploration of this entirely unknown region is of such importance that the Société de Géographie, Paris, awarded to Lauzanne the Amaury d'Adhemar prize.

Prince William of Sweden made a zoölogical exploration of the regions south and southwest of Uganda. His collections are said to number about 1000 mammals,—including a dozen gorillas,—2000 birds, and more than 6000 insects.

Accompanying the South-African expedition, Mr. H. C. Raven, of the Smithsonian Institute, made collections from Cape Town north to Uganda,—covering the Transvaal, Kafue river valley, Lake Tanganyika, and the Budongo forest. His collections include 697 mammals, 567 birds, 206 reptiles, 193 fishes, and a chimpanzee from Uganda. Another member, Mr. L. H. Shants devoted his efforts to securing live plants suitable for introduction into the United States, and to the study of agricultural methods practiced by whites

and by natives. His report covers quite fully the general character of the fauna and flora of the regions, and illustrates the various local methods of agriculture in Africa. His collection numbered about 1000 botanical species; of 1600 specimens of plants for introduction into this country for agricultural purposes, the most important are forage plants, nut plants, fruits, and vegetables. The American Museum, N. Y., through Mr. C. E. Akeley secured gorillas and other specimens.

ASIA. Among the most notable explorations of 1921, was the attempt to ascend Mt. Everest, possibly the highest peak in the world. This effort involved the exploration of large areas of unknown mountainous regions surrounding Everest. Colonel Bury led the main party, which left Darjeeling, occupied as the base of operations, on May 19. After two months of arduous labor, when success seemed probable, the party was obliged by extremely severe weather to abandon the attempt for this year. They reached a "col," at an altitude of 23,000 feet, the summit of Everest being placed at 29,002 feet. At the highest point reached there appeared to be a practicable route to the summit over snow of easy slope. The preliminary work of the expedition proved to be both extensive and scientifically important. About 13,000 square miles of unknown areas were visited and mapped. Most remarkable was the discovery at about 19,000 feet of human footprints, which the native bearers said were of a mountainous people rarely seen. Later they met these Tibetans, who, living at an elevation of 15,000 feet in complete isolation, had never before seen a white man or an European. The tribe was found to be polyandrista, with strange customs, one being the exposure of the dead to birds and animals. Animal plant and bird life were unusually abundant. Ten kinds of birds were seen above the snow-line, the sparrow above 18,000 feet. A thousand feet higher the party met hares and foxes. Extensive collections in the domain of natural history were made, especially in botany and geology. They gathered 206 different species, among which were primulas of various colors, dwarf rhododendrons, the yellow pedicularis, dephinium, a claret-colored poppy, and the eidelweiss, some plants being new to science. One of the pink family was found growing at the remarkable height of 20,400 feet.

Dr. A. Hrdlicka, of the U. S. National Museum, in an extended trip relating to the origin of the American aborigines, visited and made investigations in Japan, Korea, China, and Manchuria. The American Museum of Natural History dispatched its Third Asiatic Zoölogical expedition on a five years' survey under Andrews and Granger.

EUROPE. Henry Fairfield Osborn, President American Museum of Natural History, renewed in 1921 his search for New Stone sites throughout Europe.

NORTH AMERICA, CANADA. The Geological Survey of Canada has made important explorations in its sub-arctic regions. In the Mackenzie river district Dr. G. S. Hune made traverses of Root and North Nahanni rivers. J. W. Whitaker ascending Horn river 125 miles penetrated Horn Mountains, and also ascending Trout and Beaver rivers explored Lake Kakisa. Dr. M. Y. Williams ascending Willow river made incursions into the mountain ranges east of the Mackenzie. Dr. W. E. Cockfield made a traverse from Mayo,

Stewart river, to Selkirk, Yukon river. Dr. G. A. Young explored geologically Belcher island, Hudson Bay. Dr. E. M. Kindle working northwest of Lake Melville, made explorations on Grand Lake and in the valleys of the Red and Nascaupsee rivers. F. W. Waugh, of the Victoria Memorial Museum, made ethnological studies of the Nascaupsee Indians near Nain, Labrador. Dr. C. D. Walcott, Secretary of the Smithsonian Institute, continued his geological explorations of the Canadian Rocky Mountains, his researches covering the intervals of non-deposition of sedimentary rock-forming material west of Calgary, and other geological work in the Glacier Lake section.

UNITED STATES. The National Museum of Natural History continued at Aztec, N. M., its sixth year of excavation of Pueblo ruins. In Mimbres valley, N. M., and adjacent region, as also in Grand Gulch, Utah, N. C. Nelson explored prehistoric ruins, being assisted in Utah by B. T. B. Hyde. Mr. A. Thomson collected fossil vertebrates in Nebraska.

The explorations and field work of the Smithsonian Institute in 1920, while largely carried on in the United States, yet covered other widely separated regions, which are treated under the continental heads of Africa, Asia, South America, and Australasia. Coöperating with the National Park Service, Dr. J. Walter Fewkes continued his exploration of prehistoric ruins in the region of the Mesa Verde National Park. His researches disclose the existence of extensive ruins of structures used for religious rites. The principal are Sun Temple, Cedar Tower, Fire Temple, and Oak Tree House; in all the New Fire cult was probably practiced. Mr. N. M. Judd continued his archeological researches in the arid region north of the Colorado river, Arizona, especially in the Toroweap valley, and also of the caves in Kane County, Utah. Some exposed Pueblo ruins were of superior construction. Dr. W. Hough, National Museum, continued his ethnological work among the Hopis, whose advances towards modern civilization were specially noted. Mr. N. M. Judd, under the auspices of the National Geographic Society, explored in the Chaco canyon, New Mexico, eighteen major ruins of special importance. The arrangement of the rooms and the perfection of the masonry place these ruins among the finest prehistoric architectural art in the United States. In beauty and in technique these canyon dwellers reached a plane of æsthetic and social development unsurpassed elsewhere in the southwest. Mr. J. A. Jeancon initiated intensive archeological research in Taos valley, finding ruins at Llano, and also in La Jara and Dulce canyons. The Bureau of American Ethnology, in coöperation with the University of Texas, through Professors Pearce and Engerrand, made interesting investigations bearing on the life of the prehistoric aborigines of eastern Texas, in Bowie, Cherokee, Harrison, and other counties. Mr. G. Fowke pursued his investigations of the caves and mounds in Ozark County, Mo., Mr. W. E. Myer made researches in the Indian ruins in Davidson, Cheatem, and Williamson counties, Tenn., which promise future results of interest.

ADJACENT ISLANDS. In a biological expedition to southern Hayti, Dr. W. L. Abbott collected 201 bird-skins, while the botanist, E. C. Leonard, obtained nearly 10,000 specimens of plants, beside

many insects and land-shells. The Jamaica botanical exploration was made by the coöperation of the Smithsonian Institute, Arnold Arboretum, Gray Herbarium, Field Museum of Natural History, the University of Illinois, and the New York Botanical Garden. The botanists, W. R. Mason and E. P. Killip, obtained more than 10,000 specimens, representing about 1700 collection numbers. Over 800 numbers were from the Blue mountain regions, including nearly 200 species of ferns.

SOUTH AMERICA. Mr. A. S. Hitchcock, of the Smithsonian Institute, in coöperation with the U. S. Department of Agriculture, Gray Herbarium, and New York Botanical Garden, made a botanical exploration of British Guiana, 1919-20, where he collected four sets of 1134 numbers. Mr. J. W. La Varre made a journey from Manoa, Brazil, to Venezuela, via the Rio Negro, 1919-20. During his six months of jungle life he made for the National Zoölogical Park an interesting collection, in which were the rare, black-headed ouakari monkey, capuchin, and squirrel monkeys, egrets, ibis, parrots, etc.

Mr. W. R. Allen, 1920-21, of the Irwin Expedition of Indiana University, investigated the fish fauna of eastern Peru. His journeys extended as far as Iquitos, and covered the watersheds of the great rivers Ucayali, Marañon, and Huallaga. Mr. W. Beebe completed his fourth year of tropical research in British Guiana, for the New York Zoölogical Society. The research work of the American Museum of Natural History in the biological survey of the Andes is continued under G. K. Cherrie and G. Gill. Mr. P. E. Goddard investigated the ancient treasure grounds of Peru. Dr. H. H. Rusby started in July, 1921, to explore the extreme headwaters of the Amazon.

MISCELLANEOUS. Dr. J. Schmidt, in the Danish ship *Dana*, left in August for researches, at various depths, of the botanical and other physical phenomena of the north Atlantic ocean. Special attention will be given to the Sargasso sea; work began in the Bay of Biscay. Le Noix-Chateau, in the French steamer *Perche* made hydrographic studies of the Mediterranean gulfs of Gabes, Hammanet, and Tunis. Commander Charcot, of the *Pourquoi Pas?* located and landed on isolated Rockall, about 300 miles west of the Hebrides. It is the first landing in 60 years, and geological specimens thus obtained seem to indicate unique formation. Mr. C. M. Hoy, Smithsonian Institute, made from 1919 to 1921 natural history collections in Australia. In 1920 he sent to the Institute 400 mammals, about 140 species, 570 bird-skins, with smaller collections of reptiles, amphibians, insects, etc.

Among the miscellaneous activities of the American Museum were the ecological researches of H. E. Crampton mostly in the islands of the Pacific ocean, in its southeastern regions. The Whitney South sea expedition through its field representative, R. H. Beck, made extensive collections of birds at Christmas Island and in the Marquesas group.

EXPLOSIONS. See **BOILERS.**

EXPOSITIONS. No international world's fair was held during the year.

Among expositions to be held in the future that of Philadelphia commemorating the 150th anniversary of the Declaration of Independence in 1926 has developed most promisingly. In

November 1920, a meeting of 100 citizens was held in Philadelphia to advance this project and J. Hampton Moore appointed a committee to prepare a plan of procedure, which resulted in the presentation of a series of preliminary plans by Paul P. Cret, which in addition to the usual features, recommended the following permanent improvements: 1. The improvement of the river banks, which is becoming more and more a necessity and which would thus be realized at once and forever; 2. The creation of the needed new bridge between North and West Philadelphia; 3. The completion of the Parkway; 4. An opportunity to adjust the complicated railroad situation in that part of the city; and 5. In the case of those buildings which are only erected temporarily, an opportunity would be presented to determine their most desirable form and their most desirable location. The site proposed is the Fairmount Parkway and the banks of the Schuylkill river. Local financial support for preliminary studies has been granted and further action by Congress is pending.

Portland, Ore., has in progress plans for an exposition in 1925 in celebration of the anniversary of the first transcontinental railway and the development of hydro-electric power. The President and his cabinet have been invited to attend and Congress has authorized the participation of foreign nations.

Boston, Mass., has again agitated a world exposition in 1925 as a part of the commemoration of the landing of the Pilgrims at Plymouth Rock. The proposition will be laid before the Massachusetts legislature at its next session, and business, industrial, and educational leaders are said to be urging the scheme.

Of foreign expositions, that to be held in Rio de Janeiro from Sept. 7 to Nov. 15, 1922, commemorating the centenary of the independence of Brazil has received the support of Congress and an appropriation of \$1,000,000 for participation by the United States has been passed by the Senate.

The announcement is made of an industrial exposition that will be held in Tokyo in March, 1922, which will be the largest ever held in Japan. It will have halls for educational, agricultural, electrical, forestry, chemical, industrial, dyeing, fine arts, and botanical exhibits.

The Seventh National Exposition of Chemical Industries was held in the Eighth Coast Artillery Armory, New York City, during the week of September 12, and for details concerning it, see *CHEMISTRY, Industrial*.

The seventh annual British Industries Fair was held at the White City in London and in Castle Bromwich in Birmingham during February 21-March 4 and in Kelvin Hall in Glasgow during February 28-March 11. The goods displayed in London were organized in seven sections: Pottery and glassware; fancy goods, leather, and brush ware; office appliances, stationery, printing, and publishing; scientific instruments, photographic, and drug supplies, jewelry, cutlery, and silverware; toys, games, and sport goods; musical instruments and furniture. In the Birmingham section of the fair were shown fishing tackle, saddlery, guns, motor cycles, lighting, heating, and cooking appliances, ironmongery, engineering, and metals, hollow ware, brass foundry, and metal furniture, while at the Glasgow section were

displays of textiles of all kinds, wearing apparel, dyes, chemical products, and foodstuffs. The exhibits at these fairs were restricted to British productions and were shown by the manufacturers and not by the jobbers. There were 1250 exhibits in London and 640 in Birmingham. Arrangements are already in progress for a British Industries Fair to be held in London and Birmingham in 1922.

The usual trade fairs were held in France. The spring sample fair of Lyon was held in March and the autumn fair in October. At the last named the exhibits were devoted principally to the following classes of industries: Industrial supplies, light hardware, metallurgy, general engineering, industrial buildings, rubber goods, electrical engineering, general building, musical instruments, agricultural products, dry foodstuffs, liquid foodstuffs, agricultural machinery, colonial and imported products, foreign and colonial governments, transport and touring. In all there were 1027 exhibitors. There was also a trade fair held in Bordeaux during June 15-30. Early in 1922 a French Colonial Exhibition will be held in Marseilles. This exhibition, which will show the progress of France and her colonies during the last 16 years, will occupy more than 90 acres of ground.

The second annual Brussels commercial fair was held during April 4-21. The total number of exhibitors was 2327 as compared with 1602 in 1920. Belgian commerce was represented by 1493 exhibitors, which shows how the interest in the fair is steadily increasing, for in 1920 there were only 1173 Belgian entries. After Belgium the leading exhibitors were: French, 423 against 220 in 1920; English, 94 against 90 in 1920; and Dutch, 100 against 22 in 1920. Only 23 American firms were represented; this small number was due principally to the fluctuating exchange rate, which makes the sale of American goods difficult at present. It was estimated that nearly 1,000,000 persons visited the fair and on April 10 the attendance was 135,000.

The fifth Jaarbeurs or annual fair was held in Utrecht, Holland, during September 6-16 and this year it was international in character. It was held in the permanent building erected for the purpose. In April there was held in Amsterdam an exposition in which were shown the various products of the Union of South Africa. A special feature of the exposition was the showing of the various industries and views of the principal towns of South Africa by means of motion pictures.

The third Frankfort international fair was held in October, 1920, when 90,000 buyers visited the fair, of whom 10,000 were foreigners. It was reported that 3500 exhibits were shown compared with 3000 at the fair in May. The fourth fair was held during April 10-16 and was more successful than any of its predecessors. More than 100,000 visitors were reported.

The Leipzig Allgemeine Mustermesse, or general sample fair, for the spring of 1921 was held in conjunction with the technical fair in that city during the week beginning March 5. This fair excelled previous fairs as regards quality and quantity of exhibits. The total number of exhibitors at the general fair was about 13,000 as compared with the 12,150 at the general fair last autumn. The management was compelled

to refuse some 3000 applications for stand reservations on account of lack of space. About 3500 exhibitors were represented at the technical fair, a slight increase over the total of 3470 last fall. The total number of visitors at both the general fair and the technical fair was estimated at 130,000 as compared with the attendance of 104,000 at these combined fairs last autumn. A company has been organized in Leipzig for the purpose of erecting a permanent International Central World Commerce Palace, which will be the biggest thing the world has ever seen in the way of permanent industrial exhibitions. It is proposed to purchase from the city for 30,000,000 marks a site facing the railway station on which to erect combined exhibition halls and hotel covering 32,500 square metres, and to be ten stories high. Its cost is estimated to be 1,000,000,000 marks and will include 1000 showrooms, 4000 offices, two exchanges, conference, cinema, and festal halls, with gigantic sheds for motor cars. It will provide first-class hotel accommodations for 20,000 guests, who will have at their disposal among other things 10,000 house telephones, a roof terrace with gardens, swimming baths, and tennis courts. This scheme is inspired by the conviction that German industry will so develop that the Leipzig fair soon will reach treble its present proportions and will attract business men from all over the world.

The spring ostmesse or eastern fair, which was held in Königsberg, East Prussia, was characterized by considerable business in most of the branches represented. Good connections were established by the exhibitors with foreign buyers, especially those of Lithuania. This year's fair convinced its promoters of the fact that the impressive growth of this institution has had a far-reaching influence in the Baltic States as a medium of advertising for German products.

From Sweden there comes the report of the success of the fourth Swedish industrial fair, which was held in Göteborg during July 4-10. The number of exhibitors was 450. The third annual trade fair of Scania was held in Malmö during August 1-7, and its exhibits were restricted to Swedish products and manufactures. In Norway a second Norwegian industrial fair was held in Christiania during September 4-11.

An international fair was held in Riga, Latvia, during July 31-August 28 at which goods from all countries were shown. Its purpose was to aid in the restoration of the war-ruined industrial and agricultural conditions of that country.

A second sample fair was held in Prague, Czecho-Slovakia during February 28-March 8, at which there were 2306 exhibitors and 120,000 visitors. Subsequent to this fair, an exposition special train made a six weeks' tour of Roumania, Bulgaria, and Jugo-Slavia. The cars contained sample displays of products of Czecho-Slovak industries which are normally exported to the Balkans. An autumnal fair was again held in Prague during September 1-8. The success of both of these events was satisfactory, and plans are being made for a permanent building to be completed in 1926. Also there were sample fairs held in Reichenberg, Bohemia, during August

13-21 and one in Vienna, Austria (for the products of that country only), during September 11-17.

Reports from Italy show that a commercial exhibition was held in Catania during August 1-20. The first international Trieste sample fair was held during Oct. 10-Nov. 4, 1920, and the results were sufficiently satisfactory to warrant the holding of a second similar fair during Sept. 11-25, 1921. It is believed that this venture will open markets not only in the Balkan countries but also the Orient beyond. A second international sample fair was held in Milan in April, at which there were 3000 exhibitors. At its opening the statement was made that in extent it was only exceeded by the Leipzig fair. A sample fair was held in Naples during September. The Italian floating fair referred to last year (page 216) changed its plan so as to extend its itinerary to include Malta, Rhodes, Alexandria, Bengasi, and Tripoli, and in consequence postponed its departure until late in the year.

The Barcelona, Spain, sample fair held in October, 1920, was so successful in its results that the management held two fairs in 1921, one during April 1-10 and the other during September 1-10. The next fair will be international in character and will be held during March 15-25, 1922.

An exposition of Dutch products, industries, and facilities was held in Madrid, Spain, during May. A careful selection of manufactured products was shown, having in mind the diversity, utility, and beauty of the articles which the Netherlands can place in the markets of the world. There was also exhibited by pictures, drawings, and other means what the municipality of Amsterdam was doing in education, in hygiene, and in the construction of dwellings for the working classes. In addition to these exhibits the grounds about the building were utilized for products of the soil. Samples of the flower bulbs for which the Netherlands is famous were planted there, and at the time of the exposition they were in the full glory of their bloom.

The exposition of American products planned to be held in Buenos Aires, Argentina, under the auspices of the American National Expositions, which after several postponements (the *Year Book* for 1920, page 216) was in February not abandoned, but postponed indefinitely until the business conditions existing in Argentina should be improved and more favorable to American expansion. Argentina's first international dairy exposition was held in Buenos Aires during May 19-June 2. Notwithstanding a combination of unforeseen obstacles the plans for the exhibits in three sections: displays of cattle, ewes, and goats; instruments, machines, and installations for the dairy industry; and dairy products, were successfully carried out.

In an effort to stimulate trade in products manufactured in Winnipeg, Manitoba, Canada, an exhibition was held from May 9 to 14, at which goods produced in Winnipeg factories were shown.

EXTENSION, AGRICULTURAL. See AGRICULTURAL EXTENSION WORK.

F

FAILURES. See FINANCIAL REVIEW.

FALKLAND ISLANDS. A British crown colony in the South Atlantic 300 miles east of Magellan Straits, comprising East Falkland with an area of 3000 square miles; West Falkland with an area of 2300; and about 100 small islands with an area of 1200; total 6500. In addition to this, there are the dependency of South Georgia estimated at 1000 square miles and the extensive domain known as the Dependencies of the Falkland Islands since the proclamation of July, 1908, including the South Shetland islands, the Graham islands and adjacent islands, South Orkney islands, Coats, Leopold, and Caird lands and presumably all the unknown seas and lands of a region in the Antarctic Zone extending as far as the South Pole. The chief towns of the Falkland Islands is Stanley with an estimated population of 950. South Georgia is celebrated as a whaling station. The population of the Falkland Islands proper, exclusive of South Georgia, was estimated in 1918 at 3252. The chief industry of the islands is sheep-farming but horses and cattle are raised. In 1918 the exports were £2,054,286 and the imports £939,937. The whale fisheries of the Falkland Island dependencies were followed by 46 vessels against 43 in 1919-20, all presumably fishing under British license. The catch around South Georgia was about 180,000 barrels of oil, while that around the Shetlands reached 212,000 barrels, two-thirds being taken by Norwegians. Other fishing brought the Antarctic total for 1920-21 to about 435,000 barrels.

FARRAR, JAMES McNALL. Clergyman and author, died, June 22. He was born at Candor, Pa., June 16, 1853; graduated at Westminster College, Pa., 1875, and Princeton Theological Seminary, 1878. In the latter year he was ordained to the United Presbyterian ministry. After holding pastorates at Harrisville, Ohio, and at Philadelphia, Pa., he became pastor of the First Reformed Church at Brooklyn, N. Y. He was president of the general synod of the Reformed Church in America from 1905 to 1906, and president also of the board of domestic missions; and he was director of the Bible Training School in New York City. He wrote: *A Junior Congregation* (1908); *Little Talks to Little People* (1910); *Chats with Children of the Church* (1912).

FARRELLY, JOHN P. Roman Catholic bishop died, February 12. He was born at Memphis, Tenn., March 15, 1856; educated at Georgetown College, D. C., and in Belgium and Rome. He was ordained priest in 1880 and from 1893 to

1909 was spiritual director of the American College at Rome. On May 1, 1909, he was consecrated Bishop of Cleveland.

FAVERSHAM, MRS. WILLIAM. See OPP, JULIE.

FECHTELER, AUGUSTUS FRANCIS. Naval officer, died, May 26. During the few years immediately preceding his death he was commandant of the navy yard at Norfolk, Va. (1918), and of the fifth naval district (1919). He was born at Paderborn, Prussia, Sept. 1, 1857, but came to the United States in 1865 and graduated at the Naval Academy in 1877. By March, 1900, he had risen to the rank of lieutenant-commander. Down to that time he had made cruises in the Mediterranean and South Atlantic; cruised around the world through the Suez Canal; served with the office of naval intelligence at Washington; in the protection of seal herds in the Bering sea; in charge of the hydrographic office at San Francisco; and had taken part in the capture of Manila. He was made commander in 1905; captain in 1909; and rear-admiral, July 11, 1915. In 1910-11 he was in command of the *South Carolina* in the cruise to the English Channel and the Baltic. He was president of the board of inspection, 1911-13; placed in command of the division of battleships in the Atlantic fleet in July, 1915; commandant of the Norfolk navy yard, January, 1918, and of the 5th naval district, April, 1919.

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA. Founded in 1908 for the purpose of rendering more effective coöperative service. It is a federation of thirty evangelical denominations, embracing approximately 140,000 local churches and more than 18,000,000 communicants. The purpose of the Council is to express the fellowship and catholic unity of the Christian Church, to bring the Christian bodies of America into united service, to encourage devotional fellowship, to secure a larger combined influence for the churches of Christ in all matters affecting the moral and social condition of the people. It does not exercise a directing control over the churches, but is rather their own agency for coöperation and common expression, directed and controlled by their representatives. The Council is made up of four hundred members elected by the denominational assemblies; it meets every four years and has an executive committee meeting annually. An administrative committee meets monthly and has representatives of other coöperative agencies carrying on specialized work for the churches. These are at present The Home Missions Council, the Council of Women for Home Missions, the Foreign Missions Conference, the Federation of Woman's Boards of Foreign Missions, the Sunday School Council of Evangelical Denominations, the International Committee of the Y. M. C. A., the National Board of the Y. M. C. A., the American Bible Society, the Committee on Coöperation

in Latin America, and the Student Volunteer Movement. It also serves as a connecting link between the Church and great social agencies, such as the American Red Cross, the United States Department of Public Health, and the Child Welfare Movement. National offices are maintained in New York, Washington, and Chicago; in addition the Council operates through several permanent commissions, as follows: Commission on Evangelism, Commission on the Church and Social Service, Commission on Christian Education, Commission on International Justice and Goodwill, Commission on Relations with the Orient, Commission on Relations with Religious Bodies in Europe, Commission on Relations with France and Belgium, Commission on Interchurch Federations, and Commission on Negro Churches and Race Relations. The function of the Commission on Evangelism has been to promote united campaigns of evangelism in the more important cities, assisting the churches in their organization for this work. The Commission on Church and Social Service has done special work in studying the relation of the Church to the present industrial unrest. The outstanding features of this work in 1921 have been the development of its Research Department, the extension of industrial conferences, and the work of the Study Committee on Community Organization. The year saw the establishment of an Information Service, through which bulletins containing facts relative to current social movements and conditions of industry are furnished twice monthly to the religious press and others. During the year reports were published on the Denver Tramway strike and the Deportation Cases of 1919-20. Several industrial conferences were held throughout the year. The Commission on Christian Education has for its purpose the coördination of the many Christian educational agencies. The Commission on International Justice and Goodwill interested itself in the Washington Conference on the Limitation of Armaments and inaugurated in September a comprehensive programme of educational publicity. In this connection many pamphlets and other educational matter were distributed. The Commission on Relations with the Orient aimed through its investigations to promote better understanding between the United States and China and Japan. Strong objection was made to much anti-Japanese legislation in California. The purpose of the Commission on Relations with Religious Bodies in Europe has been to afford to Protestant churches in this country contracts with church movement and development in Europe. The Commission on Relations with France and Belgium undertook reconstruction and relief work among the denominations in areas devastated by the war; relations have been established with the French Protestant Federation. The Commission on Interchurch Federations assisted in the formation and perfection of local councils of churches; many of these councils or federations of churches were added in 1921. The commission on Negro Churches and Race Relations, organized in the past year, concerns itself with the bringing about of fuller cooperation between the two races. The Committee on the War and the Religious Outlook was an outgrowth of the General War-Time Commission of the Churches, discontinued in 1919. It makes a study of the present state of religion as affected by the war. One volume was published

during 1921 by this committee, entitled *Christian Unity, its Principles and Possibilities*.

The Department of Religious Publicity issues a monthly paper known as the *Federal Council Bulletin*, and furnishes general religious news to the secular and religious press.

The programme of the Council was carried on in 1921 by a budget of approximately \$275,000. This amount is contributed by individuals interested in the work and no appeal has been made to the various denominations. The central office of the Federal Council is at 105 East 22d Street, New York City. The officers in 1921 were Dr. Robert E. Speer, President; Rev. Rivington D. Lord, recording secretary; Alfred R. Kimball, treasurer, and Rev. Charles S. MacFarland and Rev. Samuel M. Cavert, general secretaries.

FEDERAL TERRITORY. A territory under the Commonwealth of Australia lying within the state of New South Wales. Area about 940 square miles; population estimated, Jan. 1, 1920, at 1919. It was acquired by the Commonwealth in 1910 from New South Wales as the site of the new capital of Yass Canberra which was founded there in 1913 under the name of Canberra.

FEDERATED MALAY STATES. The following states under British protection, comprising a large part of the Malay Peninsula: Perak, 7800 square miles; population (1911) 494,057; capital, Taiping. Selangor, 3156 square miles; population, 294,035; capital, Kuala Lumpur (the largest city in the states with a population of about 60,000). Negri Sembilan, 2550 square miles; population, 130,199; capital, Seremban. Pahang, 14,000 square miles; population, 118,708; capital, Kuala Lipis. Total, 27,506 square miles with a population of 1,036,999; of whom 420,840 were Malays; 433,244, Chinese; and 172,465, natives of India. The estimated population in 1919 was 1,315,700. Down to 1918 there was a large immigration of Indians who were employed on the estates as laborers. For figures see preceding YEAR BOOK. In 1918 the number of Indian workmen on the estates began to decrease. In 1919 the English schools, maintained or assisted by the government, had an average attendance of 6143 boys and 1651 girls. The native schools numbered 390 with an average attendance of 16,851. The total number of schools was 533 with an average attendance of 27,323. The revenue of the states in 1919 was £8,415,758, and the expenditures, £8,245,645. The leading items of revenue in the order of their importance were as follows: Customs, licenses, railways, interest, war tax, land revenue, fees of court or office, and municipal revenue; and of expenditures: Railways; miscellaneous services, including war contributions; public works; personal salaries. The public debt in 1919 was £1,750,000. Chief products: Cocoanuts, rubber, rice, sugar, tapioca, pepper, gambier, and nipah palms; chief mineral production, tin. The main industries are the cultivation of rubber and the mining of tin. In 1919, 955,960 tons of timber of all kinds were taken from the forests, and the revenue of the forest department was £213,829. In addition to tin there are considerable mineral resources, including: Gold, lead, copper, iron, mercury, arsenic, manganese, and other minerals. The workmen engaged in mining at the end of 1919 numbered 113,107. No later figures for commerce were available than those given in the preceding

YEAR BOOK. The following table shows total imports and exports for 1918 and 1919, exclusive of bullion and specie:

	1918	1919
Imports.....	£8,720,921	£13,866,412
Exports.....	26,024,400	32,565,782

Vessels, excluding native craft, entered in 1919 numbered 3545 of 1,444,899 tons; cleared, 3538 of 1,444,124 tons. Native craft, entered and cleared, numbered 13,925 of 372,117 tons. In 1919 the railway line, opened for traffic, had a length of 1003 miles, and at the beginning of 1921 about 72 miles were under construction. At the head of the government in each state is a state council, consisting of the sultan, the resident and his secretary, and leading Malay chiefs and Chinese merchants; and the central government is under the control of a chief secretary and a high commissioner. High Commissioner at the beginning of 1921, Sir Lawrence Nunns Guillemard.

FEDERATION OF LABOR, AMERICAN. See LABOR, AMERICAN FEDERATION OF.

FENCING. The visit paid the United States by a British team added an international flavor to fencing in 1921. The occasion for the visit was the holding of the first of a series of matches for the Col. Robert M. Thompson Perpetual Trophy and for the Amateur Fencers' League of America Gold Medals. The U. S. team was victorious despite the fact that it met defeat in two of the three styles of competition. Bouts alone counted, and the fine showing the Americans made with the foils more than counterbalanced the successes scored by the Britons in the épée and sabre contests.

In the national senior championships Chauncey R. McPherson of the New York A. C. was returned the winner with both the épée and the sabre while Major F. W. Honeycutt of the Washington Fencers' Club gained the laurels with the foils. The New York A. C. fencers triumphed as a team with the sabre, but the Washington swordsmen gained the victory with both the épée and the foils. Miss Adeline Gehrig of the New York V. P. won the women's national title. The intercollegiate honors went to Columbia University, although the fencers of the U. S. Naval Academy carried off the three individual championships.

FERNALD, CHARLES H. See NECROLOGY.

FERRARI, CARDINAL. See NECROLOGY.

FERTILIZERS. As stated in a communication from the Secretary of Agriculture to the United States Senate, Feb. 17, 1921, all conditions combined at that time to make the fertilizer outlook uncertain. Continued high prices for mixed fertilizers in the face of a break in prices of unmixed goods and a marked decline in buying power on the part of users of fertilizers here and abroad resulted in delaying the buying of fertilizers for the spring of 1921 at least three months, the market becoming largely a resale and competitive one, with very wide variations in price for the same material. Under such conditions stocks that had seemed inadequate at the end of 1920 developed into a surplus and the indications were that readjustment in the fertilizer trade would extend over at least one and perhaps two years.

The situation afforded a striking illustration of the dependence of the fertilizer trade upon the

price of farm products and the general condition of agriculture, the depressed condition of agriculture in Europe, and especially the slump in the price of cotton which usually supplies a great market for commercial fertilizer in this country, had their inevitable result in reduced buying power and use of fertilizers. Before the end of the year, however, the outlook for fertilizer sales was much improved, with potash, nitrates, and other materials which enter into mixed fertilizers, in larger demand. An important factor in the situation was the improved condition of the cotton and tobacco planters. The foreign demand for fertilizers had also materially improved.

There was much evidence during the year of the purpose of the fertilizer manufacturers to aid in putting the use of fertilizers on a sounder basis. For example, the National Fertilizer Association, in line with its policy for several years past, went on record by formal resolution as favoring "the manufacture and sale of high-analysis fertilizers containing not less than 14 units of plant food" and pledged itself to promote the use of such fertilizers. In commending this action, the Secretary of Agriculture made the following statement: "The stand taken by the fertilizer industry for the elimination of low-analysis mixtures and the useless, wasteful multiplicity of brands must ultimately react to the benefit of manufacturer and consumer alike." A number of well-planned conferences between representatives of fertilizer manufacturers and experiment station officials, extension workers, and others were held during the year, unusually at the experiment stations, for the purpose of promoting better understanding and coöperation between all the agencies directly concerned in efforts to promote the more efficient use of fertilizers.

A preliminary report of the census of 1919, which appeared during the year, showed that 599 establishments primarily engaged in the manufacture of fertilizers and 219 partly engaged in such manufacture produced in that year 8,291,000 tons of fertilizers valued at \$280,288,000. The census of 1914 showed 1238 establishments, of which 784 were primarily engaged in the manufacture of fertilizers, which produced 8,432,000 tons valued at \$153,260,000.

POTASH. The year started with the prospect of more abundant and cheaper potash and more discriminating use of potash fertilizer by farmers as a result of the lessons of the war.

Rapid progress was made in the rehabilitation of the German potash industry and in the exploitation of the large, rich, and easily accessible Alsatian potash deposits now owned by France. American manufacturers are reported to have contracted with the German and Alsatian producers for a large part of their future supply of potash.

The production of American potash, which amounted to about 48,000 short tons of pure potash (K_2O) in 1920, continued to fall off during 1921, and the outlook for the maintenance of a permanent American potash industry became very unpromising. The tariff bill introduced in Congress during the year carried a duty on potash designed to protect the American industry, but this, as well as all duties on fertilizing materials, was opposed by representatives of farmers on the grounds that experience has shown the wisdom of unrestricted imports of fertilizing materials.

The search for new sources of potash in the United States was continued by the United States Geological Survey and others during the year. Evidence has been discovered of deposits in Texas similar to those of Germany, but whether these are of commercial importance has not yet been determined. The United States Bureau of Soils made a survey of the blast-furnace industry with reference to production of by-product potash, similar to the one previously made of the cement industry. The kelp potash investigations of the bureau were discontinued.

NITROGEN. The year opened with sufficient nitrate in the United States for a year's normal consumption, one-half million tons in Europe and large stocks in Chile.

There was considerable activity in developing processes and plants for artificial fixation of nitrogen. Germany led in capacity for such production, although handicapped by shortage of coal and by the disastrous explosion which destroyed the nitrogen-fixation works of the Badische Anilin und Soda-Fabrik at Oppau on the Rhine, Sept. 21, 1921. Italy pressed the construction of hydro-electric plants, which will greatly increase her output of combined nitrogen. Norway continued to lead all competitors in hydro-electric (arc) production of fixed nitrogen. Minor amounts of fixed nitrogen were produced in Great Britain, Canada, and the United States. The Claude process of nitrogen fixation was actively developed in France. The world's capacity for supplying nitrogen compounds has been estimated to be over 1,500,000 tons annually, of which 57 per cent is derived from Chile nitrate, industrial by-products and the like, and the rest from artificial fixation processes.

Legislation, looking to the completion of the Muscle Shoals project for the production of nitrate for agricultural and other purposes was under consideration in Congress during the year, but failed of enactment. It was opposed by the National Fertilizer Association and others on the grounds that there is no need for this plant from a fertilizer standpoint, and in any case the Government should not manufacture general commodities in competition with private makers. On the other hand, the American Farm Bureau Federation and other farm organizations have favored its completion and operation in order to lessen the cost of fertilizers. Government work on the plant ceased July 1 and negotiations for its sale or lease for private operation were in progress at the end of the year.

The Fixed Nitrogen Research Laboratory of the War Department was transferred to the Department of Agriculture during the year, special attention being given to the recovery of ammonia from the mixture of hydrogen and nitrogen in the catalytic process.

The first unit of a nitrogen-fixation plant, having a capacity of 20,000 pounds of anhydrous ammonia per day, was completed and put in operation at Solvay, N. Y., during the year.

The comparative fertilizing value of the different synthetic nitrogen compounds continued to receive much attention in this country and abroad.

PHOSPHATE.—The United States Geological Survey reports that the production of phosphate rock in the United States in 1920 was 3,265,000 long tons as compared with 2,249,000 tons in 1919.

It is estimated that the production of acid phosphate in that year was about 4,500,000 tons. With actual short sales in the fall of 1920 and anticipated short sales in the spring of 1921, stocks accumulated on hand to such an extent that some of the acid plants having reached their storage capacity closed down. Apparently 1921 opened with sufficient stocks of phosphates on hand to meet the needs of the year.

There has been notable recent development of the western phosphate field and of the manufacture of the phosphate into acid phosphate with smelter by-product acid.

The discovery of phosphate deposits in Texas was reported, but their extent and value have not yet been determined.

The United States Bureau of Soils reports progress in developing the oil-burning furnace process of reducing low-grade phosphates. The use of such processes has been strongly advocated on the ground that they provide for the utilization of low-grade phosphates now going to waste, and effect an enormous saving in acid required for the production of acid phosphate.

FICTION. See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE, ETC.

FIELD, HERBERT HAVILAND. Zoologist, died at Zurich, Switzerland, April 5. He was born at Brooklyn, N. Y., April 25, 1868, graduated at Harvard in 1888 and studied at universities in Germany and France. He was the founder and director of the *Concilium Bibliographicum*, and editor of the *Zoologischer Anzeiger* of Leipzig from 1903.

FIGUERAS, A. See NECROLOGY.

FIJI ISLANDS. A group of about two hundred fifty islands of which eighty are inhabited in the Southern Pacific, constituting a British crown colony. The largest island is Viti Levu with an area of 4053 square miles, and another large island is Vanua Levu with an area of 2130 square miles. Total area, including the island of Rotuma which since 1880 has been a dependency, 7083 square miles, or according to other authorities, 7435 square miles. The population in 1911 was 139,541; estimated, Jan. 1, 1919, 163,847 of whom 87,493 were Fijians and 62,640 were Indians. The Europeans in 1916 numbered 4552. The chief crops are: Sugar cane, coconuts, rice, corn, yams, rubber, etc. The trade for 1919 was as follows: Exports, £1,871,062; imports, £1,042,390. British possessions received £1,249,391 of the exports and supplied £912,477 of the imports. Revenue for 1919 was £415,432; and expenditure, £442,127. There is regular steamship connection with New Zealand, Australia, Canada, Honolulu, Tonga, and Samoa. The total tonnage of merchant shipping, entered and cleared, 1919, was 571,203 of which 530,674 were British. It is under a governor who is also the high commissioner for the Western Pacific. Governor at the beginning of 1921, Sir Cecil Hunter Rodwell.

FILTRATION. See WATER WORKS and WATER PURIFICATION.

FINANCIAL REVIEW. GENERAL CONDITIONS. The year was one of continued reaction in business, merging into widespread agricultural and industrial depression. Both domestic and foreign trade fell off sharply, production declined, and unemployment assumed serious proportions. Fall-

ing prices made it difficult if not impossible to avoid serious loss in working off swollen inventories accumulated during the period of postwar expansion, and commercial mortality rose to record high figures. Not until summer did lessening financial strain and growing evidence of price stabilization tend somewhat to relieve a picture which was destined to remain dull largely by reason of the all-pervasive agricultural gloom, of the continuing high costs of production and transportation, and of labor troubles—actual or threatened.

The various measures of business activity tell similar stories. Car loading ruled well below the amounts recorded in 1920, except for a brief period in the spring, for which comparison is vitiated by reason of the "outlaw" switchmen's strike of 1920. For the year as a whole they were some 13 per cent below loadings in 1920. Gross operating revenues of Class I railroads fell off \$600,000,000 to a total of \$5,625,000,000, despite rate increases granted late in 1920. Largely as a result of economies, however, net income increased from \$67,000,000 to \$616,000,000. Unfilled orders of the United States Steel Corporation continued the decline begun in August, 1920, and closed the year at 4,268,000 tons, or slightly more than half the figure for the preceding December. Production of iron, steel, and bituminous coal decreased greatly, but the output of petroleum was considerably increased. Despite a certain decline of prices, building expenditures in each month after April were larger than in 1920. With scarcely an exception, monthly exports and imports of merchandise were smaller than in the corresponding months of 1920. The total value of the year's foreign trade was just under 7 billions as compared with 13½ billions in 1920, and the excess of exports shrank from \$2,949,000,000 to \$1,977,000,000. Careful estimates indicate, however, that the decline in the physical volume of export trade was relatively slight.

The Bureau of Labor Statistics index of wholesale prices fell from 189 (as compared with 1913) in December, 1920, to 148 in June and closed the year at 149, which is practically the same as at the end of 1916. The decline within the year was thus 21 per cent. The price movement was highly irregular, however, and this irregularity, together with a somewhat tardy readjustment in retail prices, had a deterrent effect on business recuperation. In December the price indexes for clothing, fuel, building materials, and house furnishings were still from 85 to 118 per cent above the prewar level, while those for farm products and metals were only 13 and 19 per cent above it. Among specific commodities, pig iron declined from \$33.00 in December, 1920, to \$18.75 in December, 1921. In the same period No. 2 wheat fell from \$2.00 to \$1.14, cattle from \$9.50 to \$7.20, and hogs from \$9.10 to \$6.95.

Farm crops were generally smaller than in 1920, and low prices aggravated the farmers' difficulties. The yield of wheat was somewhat increased, but the total value of the crop was not two-thirds as great as in 1920. Cotton was low in yield as well as in price. The estimated value of 20 leading farm crops was \$5,419,000,000, as compared with \$8,708,000,000 in 1920, a decline of 38 per cent. Extraordinary measures were undertaken to afford relief to agricultural interests: An emergency tariff was imposed with a view to

protecting agricultural products from foreign competition, a \$50,000,000 banking pool to aid the live-stock industry was formed, and the powers of the War Finance Corporation were expanded, with the result that during the year it advanced upwards of \$125,000,000 in aid of agriculture and agricultural products. In the cotton belt the situation was improved by an autumn advance in the price of cotton, which accompanied a remarkable underestimate of yield by the government. But the buying power of the farmer as a class had been seriously curtailed, his liabilities had been swollen, and business dependent upon him for a market remained in a state of stagnation.

BANK CLEARINGS in 196 cities outside New York declined from \$208,000,000,000 to \$144,000,000,000, or 31 per cent. The relative decline in the larger cities was in the neighborhood of 20 per cent. Clearings in New York were \$194,000,000,000; in Chicago, \$26,000,000,000; in Philadelphia, \$20,000,000,000; and in Boston, \$14,000,000,000. Debits to individual accounts as reported by clearing house banks in some 150 cities aggregated \$398,000,000,000, or 16.5 per cent less than in 1920.

BANKS AND BANKING. In banking circles the year was one of contraction and liquidation, and was of special interest because it was the first extended period of contraction since the establishment of the Federal reserve banks. Between the last business day of 1920 and the end of November, 1921, Federal reserve notes outstanding declined by almost \$1,000,000,000 to \$2,366,000,000 but increased nearly \$80,000,000 thereafter as an incident of holiday requirements. Bills discounted for member banks of the reserve system declined from \$2,719,000,000 to \$1,160,000,000, or 57 per cent. The decline throughout the year was remarkably steady even during the crop-moving period, and reflected the improving position of member banks as well as the falling volume of general business and the recession in prices. The amount of war paper discounted fluctuated somewhat more than total discounts, but the proportion remained fairly constant at about 42 per cent. Bills bought declined sharply to \$19,000,000 at the end of July, but increased irregularly thereafter to \$114,000,000 at the end of the year. While the volume of prime bills coming into the market fell off with the decline of foreign trade, wider distribution of bills reduced the dependence of the open market upon reserve bank purchases.

The increase of gold holdings was almost uninterrupted throughout the year, and amounted to \$800,000,000, of which \$667,000,000 were supplied by importations of the yellow metal. Total reserves passed the three billion mark in mid-December, but showed a smaller increase than gold alone. The ratio of total reserves to net deposit and note liabilities rapidly mounted from 45.4 per cent to 73.1 per cent on December 7, and closed the year at 71.1 per cent. The position of the New York reserve bank was particularly strong. Inter-reserve bank re-discounts were smaller than in 1920, but the maintenance of the minimum legal reserve by some of the southern and western banks was conditioned on assistance from other reserve banks during most of the year. The aggregate of these inter-bank re-discounts fluctuated widely, from about \$100,000,000 at the beginning of the year to \$12,000,000 in March

and \$71,000,000 in September, but they disappeared from the accounts in the latter half of December.

National banks showed similar but less striking changes. Between the end of 1920 and Sept. 6, 1921, loans and discounts declined over 9 per cent to \$10,977,614,000. Re-financing of loans as indicated by borrowings in the form of bills payable and re-discounts declined from \$2,342,000,000 or nearly one-fifth of loans and discounts, to \$1,256,000,000 or about one-ninth. Total assets declined \$2,350,000,000 to a little more than \$19,000,000,000. Total deposits declined from \$16,277,000,000 to \$14,560,000,000, while demand deposits fell off \$1,150,000,000 to \$8,352,000,000. Reserve balances declined \$155,000,000 to \$1,030,000,000, but cash holdings alone fell off \$137,000,000 to \$358,000,000. Acceptances outstanding continued their decline, falling from \$375,000,000 to \$218,000,000.

If regard be had to banks outside reserve cities, the picture is not a little different. Loans and discounts there declined \$335,000,000, or about 6 per cent, to a total of \$5,096,000,000. Borrowings were reduced about \$63,000,000 to an aggregate of \$595,000,000, but were still nearly 12 per cent of loans and discounts. Total assets declined from \$9,720,000,000 to \$9,155,000,000, or \$565,000,000. Demand deposits declined \$467,000,000 to a total of \$3,768,000,000. Lawful reserve declined from \$421,000,000 to \$368,000,000, and actual cash holdings were reduced nearly one-fourth to \$206,000,000. Altogether these figures support the view that the problem of "frozen loans" has been most pressing in the agricultural districts.

Member banks in leading cities reduced their holdings of war paper by more than 40 per cent to \$512,500,000 during the year. Loans on security collateral increased slightly to \$3,165,000,000, and all other loans declined from \$9,224,000,000 to \$7,542,000,000, or 18 per cent. Owing to increases in security investments, however, total loans and investments decreased only 11 per cent to \$14,780,000,000. Borrowings at Federal reserve banks declined to \$698,000,000, or one-third of the indebtedness at the beginning of the year; at that figure only 4.7 per cent of loans and investments were being re-financed in this manner, as compared with 12.5 per cent a year before. Net demand deposits declined 7 per cent to \$10,174,000,000, and reserve balances declined in the same proportion.

American enterprise in the year evinced less interest in the development of foreign banking. Although one new international acceptance institution was organized, the \$100,000,000 Edge Act corporation which was undertaken in 1920 failed of consummation. Uncertain monetary and exchange conditions abroad resulted in the withdrawal of some fourteen branches or agencies of American banks in foreign countries. Moreover, domestic institutions organized to deal in foreign credit instruments in several cases dissolved or to a large extent withdrew from the foreign field. Bank credit previously extended on exporters' paper was curtailed, and difficulty in collecting bills, particularly in some Latin-American countries, resulted in serious embarrassment to trade. The attitude of domestic banks toward foreign credits, coupled with the easier credit terms offered by foreign shippers, seems to have permitted foreign trading countries to make some recovery of their relative position in world trade.

MONEY RATES. Federal reserve bank rates held steady at 7 per cent until May, when accumulating reserves in the Boston and New York banks initiated a series of reductions which left rates at $4\frac{1}{2}$ per cent and 5 per cent at the end of the year, though rates at Western banks were well maintained until their indebtedness to other reserve banks had been reduced to moderate amounts. In the open market in New York prime commercial paper opened the year at 8 per cent and thereafter gradually declined to 7 per cent at the end of April, and to 6 per cent at the end of July. The rate fell definitely below 6 per cent in October and closed the year at 5 per cent. Eligible 90-day bank acceptances sold at $6\frac{1}{4}$ per cent in the first week of the year and then fell with some regularity to $4\frac{1}{2}$ per cent at the close. The rate did not touch 6 per cent in the second half year, and prime bills and good commercial paper were alike relatively scarce. Early in the year, there appeared a relative shortage of demand for funds from satisfactory credit risks; the estimated volume of commercial paper outstanding continued to decline and showed at the end of November its first increase in over a year. Call loans on securities ranged from 6 per cent to 8 per cent in January, reached 9 per cent early in February and thereafter sagged irregularly until the rate touched 4 per cent on several days in the closing weeks of the year. Time loans on securities ranged from $7\frac{1}{2}$ per cent down to 5 per cent.

FOREIGN EXCHANGE. The varying influence of economic and political factors favored the development of heavy speculation on the foreign exchange markets, which exhibited noteworthy fluctuations during the year. Reparations, indebtedness of the Allied nations to the United States government, and the Washington Conference on Limitation of Armaments all played a part in market movements. To these factors are to be added declining foreign trade, industrial disturbances, unbalanced budgets, and paper money financing, as well as the continuance of an excess of imports, balanced only in part by gold shipments and security flotations. An export trade balance of the United States amounting to nearly \$2,000,000,000 was offset in part by gold imports of \$667,000,000 and new foreign loans of approximately \$550,000,000. After careful revision of its estimates of unfunded foreign trade balance the Federal Reserve Board sets the amount at "\$3,000,000,000 upward," of which at least \$700,000,000 appears to have been created during 1921.

From about \$3.54 at the opening of the year sterling cables rose rapidly during January and then crept past the \$4.00 mark in May. Thereafter the rate sagged, apparently under the influence of the British coal strike and the payment of German reparations in dollars purchased with sterling. After touching \$3.56 in July and early August, the market rose consistently throughout the remainder of the year to about \$4.21 $\frac{1}{4}$, at which it closed. This sustained strength during the final third of the year was the more remarkable since it is the season in which export bills in the New York market ordinarily depress the price of sterling, and reflected some improvement in the general international situation as well as further price declines in Great Britain.

Although the course of French francs was in general similar to that of sterling, they exhibited

rather more frequent fluctuations and did not maintain their gains so well. From around 5.80 cents cables advanced irregularly to the year's high of 8.82 cents in May, fell below 7 cents in September and again near the end of November, and closed the year at 8.13. Lire rose from about 3.40 cents to 5.72 in May, then sagged irregularly below 4 cents in September and October, and closed the year at 4.39, or a net gain of one cent in the year.

German marks opened the year at about 1½ cents, and touched the high point of 1.8 in January and again in May. Thereafter marks declined almost continuously under the pressure of selling occasioned by efforts to accumulate funds for reparations payments and influenced by a remarkably heavy paper inflation. The year's low of about 1/3 cent was touched in November, from which the quotation rose to above ½ cent toward the end of the year.

The Argentine quotation showed little net change from its opening at 33½ cents, but rose somewhat in the first quarter only to fall in July to slightly more than 28 cents. Canadian dollars showed an almost constant tendency to improve, and closed the year around 95 with a net gain of practically ten cents.

Gold movements of 1921 resulted in the largest net imports ever recorded in one year, viz., \$667,387,000. Exports were extremely small, totaling less than \$24,000,000. Imports from the United Kingdom aggregated \$202,000,000, and represent in large part South African gold. Purchases of this gold on the London market were almost entirely for account of the United States. France contributed \$190,700,000 to our gold holdings; most of this amount was directly or indirectly gold of Russian origin. Imports from Sweden amounting to \$66,350,000 were also largely derived from Russia; exports of \$2,600,000 to that country probably represented Russian gold returned for want of the official mint stamp of a friendly government, which is required by the United States assay office. Together these three countries furnished net imports of \$456,500,000, or more than two-thirds of the total. Other import sources of supply were Canada with \$34,000,000 net; British India, with \$31,000,000, aside from considerable quantities reaching this country via London, Germany, and the Netherlands, with \$20,000,000 each; China with \$18,000,000; Australia, \$14,000,000; and Colombia, \$12,000,000.

There was a net importation of silver amounting to \$12,000,000, as compared with a net exportation of \$25,000,000 in 1920. About two-thirds of the imports were from Mexico. The United States mint has continued to absorb the domestic output of silver under the purchase provisions of the Pittman Act.

Security issues in American markets, as compiled by the *Commercial and Financial Chronicle*, aggregated \$4,231,000,000 in 1921 as compared with \$4,010,000,000 in 1920. Excluding refunding issues, new capital flotations were \$3,575,000,000, or about \$60,000,000 less than in 1920. New corporate issues amounted to \$1,822,000,000, or about two-thirds the amount issued in 1920. Issues of railroad and other public utility securities increased considerably in amount, but industrial issues declined more than one-half. The altered character of the market for corporate securities last year as compared with that of 1920 is indicated

by the reduced amount of stock financing. In 1921 this amounted to \$268,000,000, or one-seventh of the total; in 1920 new stock issues reported were \$1,035,000,000, or more than one-third of aggregate corporate flotations.

Issues of new domestic municipal bonds were never before so large. These aggregated \$1,194,000,000, or three-fourths greater than in 1920. Issues of new foreign government and municipal securities in this market aggregated \$436,000,000, as compared with \$253,000,000 in 1920. Other estimates show a total of \$550,000,000 of foreign securities, including corporate as well as public financing.

New and refunding issues of 1921 are classified by source in the following table, amounts being stated in thousands of dollars:

	New	Refunding	Total
Corporation.....	\$1,821,919	\$597,903	\$2,419,822
Stocks.....	(268,442)	(9,733)	(278,175)
Bonds and notes.....	(1,553,477)	(588,170)	(2,141,647)
Federal Farm Loan.....	121,940		121,940
Domestic Municipal.....	1,194,441	8,580	1,203,032
Foreign.....	436,526	50,000	486,526
Government.....	(335,270)	(50,000)	(385,270)
Municipal.....	(101,256)		(101,256)
Grand Total.....	\$3,574,827	\$656,493	\$4,231,320

Dividends on industrial shares as reported for 1921 aggregated \$541,000,000 as compared with \$602,000,000 in 1920. Steam railroad and traction dividends declined \$10,000,000 to \$374,000,000 in 1921.

BUSINESS FAILURES. Ultimate business liquidation in the form of failure gave striking evidence last year of the scope and intensity of the readjustment following the post-armistice boom. This movement was merely a continuation of that begun in 1920, although the number of failures declined somewhat during the first five months of the year. After May, however, the increase in monthly failures was almost unbroken, and the total reached 2380 in December. The year's total of 19,982 failures is more than double that of 1920 and is the highest on record, being 5 per cent greater than the previous high record set in 1915. Aggregate liabilities were \$750,000,000, thus exceeding by 76 per cent the high record established in 1920 and practically doubling the figures for 1893, 1907, and 1914. It appears, furthermore, that an unusual number of virtual failures not here recorded were settled by private compositions or were carried along by creditors' committees. Among geographical sections the South appears to have suffered most. Failures there were 6167, nearly a third of the total, and liabilities exceeded \$203,000,000, or more than those reported from any other section.

The total of large failures was also greater than ever before recorded, and the number of bank suspensions has been exceeded but once in the preceding forty years. In the first eleven months of 1920 there were 320 bank suspensions involving liabilities in excess of \$162,000,000, and over 700 failures of industrial or commercial concerns each having liabilities in excess of \$100,000. Altogether, these large failures (including those among banks) accounted for 6 per cent of the number and 60 per cent of the liabilities reported to Bradstreets during the eleven months.

Over against this sombre picture should be set certain considerations bearing on the relative

severity of the crisis. The number of business houses has greatly increased in the past few years, and despite the weakness of new concerns, the proportion failing (.97 per cent) was less than in 1915. Average liabilities were considerably less than in 1920, and the ratio of assets to liabilities was relatively large, having been exceeded in but four recorded years. Above all, despite the large number of bank failures, there was nothing like a banking panic. The Federal Reserve System has amply justified itself, although it did not—and could not—prevent widespread liquidation from following in the wake of such abnormal business stimulation as characterized the boom period.

GOVERNMENT FINANCES. During the fiscal year ending June 30, 1921, ordinary receipts of the United States government aggregated \$5,625,000,000, out of which were defrayed expenditures of \$5,538,000,000, including \$422,000,000 applied to reduction of the principal of the public debt. For the fiscal year 1922, receipts are estimated at \$3,968,000,000, ordinary expenditures at \$3,605,000,000, and public debt expenditures chargeable against ordinary receipts at \$388,000,000. A deficit of about \$25,000,000 is thus to be expected on the current fiscal year's operations.

On the calendar year basis, ordinary receipts during 1921 aggregated \$4,971,877,000, of which \$2,817,258,000 represented collections of income and profits taxes imposed in the main upon income of the calendar year 1920. Total expenditures chargeable upon these receipts were \$5,058,013,000, including \$612,193,000 devoted to reduction of the public debt. The net deficit on the calendar year's operations was thus about \$86,000,000.

The following table classifies receipts and expenditures by six months' periods from July 1, 1920, to Dec. 31, 1921, and gives for comparison the estimates for the fiscal year ending June 30, 1922.

offering of three-year 5½ per cent Treasury notes was largely oversubscribed, and some \$311,000,000 were allotted. Again in September the Secretary invited subscriptions to a similar issue bearing interest at 5½ per cent. Allotments totaled \$390,700,000. Thus provision was made for some \$700,000,000 of Victory notes and certificates of indebtedness. The total reduction in the maturity value of short-term debt accomplished during the year was \$456,000,000; but the reduction of debt maturing before June 30, 1923, was \$1,133,000,000. The interest-bearing debt as a whole declined from \$23,749,540,000 to \$23,188,800,000. The classification of the debt and the amounts outstanding at the beginning and end of the calendar year are indicated in the table on page 227.

STOCKS AND BONDS. Shares sold on the New York Stock Exchange numbered approximately 171,000,000 as compared with 223,000,000 in 1920. Monthly sales were lower than in 1920 except in May and June. Maximum monthly sales were recorded in June (18,000,000 shares); minimum in July (9,000,000 shares). There were only 13 million share days, fewer than in any year since 1914. There were 83 such days in 1920. The price of Stock Exchange seats ranged between \$79,000 and \$100,000. The high price of the year had been exceeded only in 1919 and 1920. The par value of bonds sold on the exchange aggregated \$3,517,000,000, or more than one-tenth less than in 1920. United States obligations made up 70 per cent of the total as against 80 per cent in 1920. Monthly sales of all bonds ranged from \$225,000,000 in February to \$418,000,000 in December, and from July to November ruled larger than in 1920.

Price movements on the Stock Exchange in the main reflected the course of the business cycle as judged by the professional element, rather than

question of German reparations, worked an improvement in financial sentiment, and the year's high price of 73.13 for 50 railroad and industrial shares (as reported by the *Annalist*) was reached in May. The course of prices in the two groups was, however, quite dissimilar. Twenty-five rails reached a low price of 47.50 in June, after a continuance of disappointing earnings and of dividend reductions. Thereafter relative improvement in the railroad situation gave rails a somewhat stronger position than industrials, and there resulted a fairly steady climb toward the year's high price of 56.54, attained in November. Industrials reached their low of 66.24 in August, and although business conditions then gave some indication of approaching stabilization, dividend prospects were by no means bright. The improvement in the general political and economic situation afforded basis for the rise which occurred during the last four months, but industrials closed the year at prices substantially below those of May.

Two potent factors affected the market for bonds, which was particularly strong during the latter part of the year. The first of these factors was the general business situation, which inclined investors away from stocks and toward bonds; the second was the decline in money rates, which tends to be automatically reflected in bond prices. Moreover, easy money rates induced a considerable amount of speculation in bonds. Starting the year at about 69, the average price of 40 bonds slowly receded to a low point of 67.56 in June. From about that time on, falling money rates and continued demand for investment securities brought prices gradually upward to the year's high of 76.31, reached at the end of November. December prices were only fractionally lower.

FINLAND. An independent republic since Dec. 9, 1917, formerly a grand duchy of the Russian empire, situated in the northwestern part of Europe on the Gulfs of Finland and Bothnia. Capital, Helsingfors.

AREA AND POPULATION. Area in 1915, estimated at 125,689 square miles, but after recent accessions of territory, placed at 144,249 square miles. Population (1918), 3,331,814. The urban population in that year was 522,608, and the sex distribution was: Males, 1,646,227; and females, 1,685,587. The Finnish-speaking in 1915 numbered 2,565,742; and the Swedish-speaking, 344,366. The great majority of the population are Lutherans, 3,283,035 at the end of 1917. In 1919 Helsingfors along with Sveaboar had a population of 187,544, but other estimates placed it at over 200,000. Other large cities: Abo, 56,168; Tammerfors, 46,353; Viborg, 29,753; Vasa, 24,776; Vleaborg, 21,940. The movement of population in 1918 was as follows: Births, 79,494; deaths, 95,102; marriages, 15,008. This, however, was a year of warfare, and in 1916-17 the excess of births over

deaths was 25,076 and 22,183, respectively. From 1893 to 1918 the emigrants from Finland numbered 267,755, most of them coming to the United States.

EDUCATION. No later figures were available for education than those given in the preceding YEAR BOOK for the school year 1919-20. Each parish has at least one elementary school. For secondary education there are lyceums, middle schools, etc., and for higher education there is the university at Helsingfors, and a Swedish university opened at Abo in 1919.

PRODUCTION. Agriculture is the chief occupation, although only 8.5 per cent of the surface is cultivated. Among the chief crops are rye, barley, oats, hay, potatoes, and wheat. One of the chief resources of the country is the state forest production. In 1921 the timber was estimated at 13,213,874,240 cubic feet, comprising about 307,000,000 trees of which 70 per cent were pine.

ECONOMIC CONDITIONS. Precise figures for the cost of living in Finland in 1921 were not available, but the following information from the United States Bureau of Foreign and Domestic Commerce indicates conditions down to the beginning of that year. In 1921 the prices of foodstuffs and certain other necessary articles had increased over 1913 at rates varying from 423.1 per cent to 1668.9 per cent, the lower increase being shown by fish and potatoes, and the higher by grain, meat, and dairy products. The index figure of prices as reckoned from a normal basis of 100 in July, 1914, stood in December, 1920, at 1103.2 per cent. It was not till the early months of 1921 that the lower prices common in other countries extended to Finland.

COMMERCE. The following tables from the *Statesman's Year Book* of 1921 shows the commerce for five years, and the value of the chief exports and imports in Finnish marks for 1919 and 1920.

	1916	1917	1918	1919	1920
Imports.....	962,814	1,231,930	504,612	2,509,900	3,620,400

FINANCE. The state budget of Finland for 1921, submitted to the Finnish Diet on Oct. 30, 1920, for its approval, was finally passed on March 12, 1921, with the ordinary revenues estimated at 2,154,855,650 marks (\$53,871,391) and extraordinary revenues at 76,291,000 marks (\$1,907,275), or a total of 2,231,146,650 marks (\$55,778,666), while the ordinary expenditures were placed at 1,808,631,305 marks (\$45,215,783) and extraordinary expenditures at 430,473,100 marks (\$10,761,827), or a total of 2,239,104,405 marks (\$55,977,610). Thus there was a deficit of 7,957,555 marks (\$198,944), which the Diet decided to make up from the state capital funds, amounting to about 120,000,000 marks.

In the Finnish budget for 1922, in which the revenue was estimated at 2,065,660,000 Finnish marks and the expenditures at 1,885,340,000 marks, 31 per cent of the revenue was due to taxes, of which direct taxes constituted 30 per cent. Other items of revenue were: From forestry, 123,700,000 marks; from the state railways, 440,000,000 marks; from import duties, about 555,000,000 marks; and from export duties and export taxes, 25,000,000 marks and 12,000,000 marks, respectively. From the alcohol monopoly a revenue of 43,700,000 marks was expected, and the revenue derived from the new excise on matches was calculated to yield about 25,000,000 Finnish marks. Of the expense items, the largest amount, 512,000,000 marks, was for the Ministry of Traffic. The Ministry of War was allotted the sum of 283,000,000 marks; 245,000,000 marks were set aside for general expenses. Some 237,000,000 marks were to be used for the state debt, and 172,000,000 marks were given for ecclesiastical and educational purposes. Military expenses amounted to approximately 15 per cent of the total, while cultural expenses were allotted only 9 per cent. Simultaneously with the budget, the government made out a new customs tariff the main object of which was to protect native industries.

COMMUNICATIONS. On Jan. 1, 1921, the railway mileage was 2685, all of which belonged to the state, with the exception of 186 miles. The merchant marine on that date was 5358 vessels of 619,790 tons.

DEFENSE. The military system is based on the law of January, 1919, as modified in July, 1920, and comprises an army of three divisions with an independent brigade of troops of all arms and a brigade of cavalry. Besides this standing army there is a reserve of able-bodied men between seventeen and forty-five years of age and also a civil safety corps. The strength of the volunteer army was placed at about 105,000; the civil safety corps, 100,000; and the regular army, 36,000. See NAVAL PROGRESS.

GOVERNMENT. After the declaration of independence by the Finland house of representatives, Dec. 6, 1917, the new state was recognized by most of the Powers. According to the constitution the executive power is vested in the president elected for six years by popular vote and in a cabinet of 12 ministers; and the legislative power in a house of representatives elected by universal male and female suffrage of all persons who have reached their twenty-fourth year. Every person qualified to vote is eligible to the house of representatives. President at the beginning of 1921, K. J. Stahlberg. Ministry

appointed in April, 1921: Prime Minister, Dr. Juho Vennola; Foreign Affairs, Dr. Eino Rudolf Woldemar Holsti; Finance, Risto Ryti; Interior, Heikki Ritavuori; Justice, Dr. Heimo Helminen; Education, Niilo Liakka; War, Lieutenant-Colonel O. Hämäläinen; Communications, Erkki Pullinen; Commerce and Industries, Erkki Makkonen; Social Affairs, Vilkku Joukahainen; Agriculture, Kyösti Kallio; Minister without Portfolio, Juho Niukkanen.

HISTORY. In eastern Karelia at the beginning of November a serious uprising was reported. This region, chiefly inhabited by Finns, had been left under Russian administration by the terms of the treaty with Finland, signed earlier in the year. The Finns denied all complicity with the disorder, but this was not believed by the Russian government, which addressed a note to Finland, December 7, sharply demanding: the disbanding of all Karelian insurgent forces; the cessation of Finnish military, financial, and moral support of the rebels; and the expulsion from Finland of all Russian counter-revolutionists. The note declared that Finland's proposal just received to submit the question to the League of Nations was unfriendly to the Russian government. Toward the close of the year mobilization of a large force of Soviet troops against the Karelian insurgents was reported. Meanwhile, the Finnish element in the region had set up an independent government. See LATVIA.

FIRE INSURANCE. See INSURANCE.

FIRE PROTECTION. There was little of encouragement to be noted in connection with the fire situation in the United States and Canada during the year 1921. There were no important conflagrations but a vast total of distributed losses due to defective building. Carelessness and inadequate protection, not to mention the ever present moral hazard. Under various conditions of housing, high cost of building, increased taxes, etc., comparatively little could be done to improve the situation although insurance and fire department officials throughout the country were zealous in their efforts and there were no retrograde steps.

AMERICAN FIRE LOSSES IN 1921. The fire loss record of the United States for the year 1921 was exceeded only in 1906, the year of the great San Francisco conflagration. The year's losses by fires in the United States and Canada as compiled from the daily records of *The Journal of Commerce* (New York) reached a total of \$332,654,950. An amount greater even than the 1920 total of \$330,853,925, when higher valuations on property of all kinds acted to increase the total. There was no great conflagration in 1921 and the fact that the fire losses came from all sections of the country and serve to build up the vast total mentioned was a particularly serious matter.

Furthermore, study of the statistics revealed that the fires of 1921, which, in each instance, resulted in an estimated property loss of \$10,000 or over, were greater in number than in 1920 by over 10 per cent. In 1921 there were 3855 fires reported where the loss reached or exceeded \$10,000 as compared with 3457 such fires in 1920, 2904 in 1919, and 2943 in 1918.

Naturally the moral hazard showed its influence and the wave of excessive fire losses started in September, 1920, when business depression became pronounced. This continued in force until

the end of the year, as may be seen from the accompanying table of fire losses by months for the past three years:

	1919	1920	1921
January.....	\$ 29,446,325	\$ 37,912,750	\$ 35,319,950
February.....	26,891,950	26,631,500	25,888,850
March.....	22,201,900	27,597,700	28,581,100
April.....	15,484,750	22,108,750	22,178,900
May.....	16,516,300	25,440,300	23,956,800
June.....	20,475,750	25,743,900	29,000,700
July.....	20,198,600	26,135,825	33,355,750
August.....	24,526,000	17,930,800	25,829,000
September.....	29,063,500	25,630,050	26,502,400
October.....	13,358,400	28,331,100	27,955,350
November.....	23,450,800	28,093,350	26,178,600
December.....	27,366,500	41,197,900	28,907,550
Year.....	\$269,000,775	\$330,853,925	\$332,654,950

The 1921 fire losses brought the total fire waste of the United States and Canada during the forty-three years (1879-1921) during which statistics were maintained, to the remarkable sum of \$7,695,475,695, or an average of \$178,964,551. These losses, must be considered as based upon steadily increasing property values exposed to fire hazards and the ever-changing burning ratio. The fire losses of \$164,347,450 in 1901 to take a single instance resulted in as high a burning ratio to the aggregate value of all property in that year as the \$332,654,950 loss of 1921 is to the valuations of that year. The accompanying table gives the fire loss record by years since 1879:

1921.....	\$332,654,950	1899.....	\$ 136,773,200
1920.....	330,853,925	1898.....	119,650,500
1919.....	269,000,775	1897.....	110,319,650
1918.....	317,014,385	1896.....	115,655,500
1917.....	267,273,140	1895.....	129,835,700
1916.....	231,442,995	1894.....	128,246,400
1915.....	182,836,200	1893.....	156,445,875
1914.....	235,591,350	1892.....	151,516,000
1913.....	224,728,350	1891.....	143,764,000

FIRES DUE TO DEFECTIVE CHIMNEYS AND FLUES. The actuarial bureau of the National Board of Fire Underwriters compiled data regarding fires from defective chimneys and flues in dwelling houses during the past six years, 1915 to 1920. These statistics showed a total loss on insured property of \$71,037,084, and it was estimated that the additional losses unreported or upon uninsured property would probably amount to at least 25 per cent more, making a total of \$88,706,355 for the entire United States. It was stated that probably no single fire hazard affected the home and family more closely than the defective chimney and flue, yet hundreds of thousands of such chimneys and flues were in existence and new ones were being built every

day upon unsafe specifications. Defective chimneys and flues were responsible for greater losses by burning in residences than any other factor excepting exposure, which must be considered an effect and not a cause of fire. In one typical year it was found that 12.4 per cent of all dwelling house fire damage was chargeable to defective chimneys and flues, and this figure represented 66.6 per cent of all the losses in all occupancies from this cause. In rural communities where fire protection is scant or entirely lacking, so that a fire once started becomes serious, this hazard is a very important matter.

The summary by States of the dwelling house losses resulting from defective chimneys and flues during the past six years from 1915 to 1920, as compiled by the actuarial bureau of the National Board of Fire Underwriters is as follows:

Alabama.....	\$1,302,432	Nebraska.....	\$762,208
Arizona.....	100,967	Nevada.....	44,437
Arkansas.....	1,116,637	N. Hampshire.....	920,018
California.....	2,733,742	New Jersey.....	2,471,259
Colorado.....	521,824	New Mexico.....	219,685
Connecticut.....	1,195,969	New York.....	6,060,168
Delaware.....	109,360	N. Carolina.....	883,391

Total for United States.....			\$88,796,355

STATISTICS OF FIRES. The Committee on Statistics and Origin of Fires of the National Board of Underwriters presented its annual report on May 26, 1921. From this report there have been abstracted as usual statistics of fires in the larger American cities for 1920. Attention in particular may be directed to the per capita losses which for 1920 amounted to the high figure of \$91.31 for Sheboygan, Wis., with Galveston, Texas, second with \$50.19, the average for the entire United States being \$4.73 per capita. The report calls attention to the fact already noted in the YEAR BOOK for 1920 that the inflated value of merchandise and materials was of course in a measure responsible for the vast total loss while the readjustment of business to existing condition doubtless was accompanied by incendiary fires. However, the annual loss in the United States was excessive as shown by statistics compiled for the five-year period 1915-20, during which time Cedar Rapids, Iowa, showed the largest average per capita of loss of \$12.72, with Norfolk, Va., second with \$10.73, the per capita fire loss for the United States for the same period averaging \$2.71.

BOSTON HIGH PRESSURE FIRE SERVICE. During the year the High Pressure Fire Service protecting a portion of the business section of Boston was completed and on December 11, in the presence of the engineers of the National Board and local fire underwriters President Davenport and other officials of the Boston board, as well as the Mayor and fire chiefs from all parts of the State, a final test was made before the official inspection board. The tests took place on Tremont street and covered over a section of Boston Common over which water was discharged from water towers, turret, and other nozzles in the required volume. It was found that sufficient pressure could be secured and maintained to extinguish any kind of a fire which might start. The tests were highly satisfactory in all respects from every angle.

NEW FIRE BOAT FOR NEW YORK HARBOR. Late in the year the powerful fleet of the New York Fire Department fire boats was strengthened by the new fire boat *John Purroy Mitchel*, which was put into commission after a severe test in which its great pumping capacity was demonstrated.

FISHER, SYDNEY ARTHUR. Canadian cabinet minister, died April 9. He was born at Montreal, Can., June 12, 1850; and educated at McGill College, Montreal, and at Trinity College, Cambridge, Eng. He was elected to the Canadian parliament in 1882 and reelected several times, but defeated in 1911. He was minister of agriculture from 1896 to 1911.

FISHERIES. See ALASKA; ZOOLOGY.

FISHERIES IN THE UNITED STATES. The fish-cultural operations in 1921 were conducted in 33 States, Alaska, and the District of Columbia, and the output reached every State and Territory. The number of fingerlings handled was 226,589,545, fry aggregated 3,626,262,730, and the fertilized eggs assigned to State hatcheries or planted on the natural spawning grounds of the respective species numbered 1,109,637,130. The following table gives the total of eggs, fry, and fingerlings of each species:

SUMMARY, BY SPECIES, OF THE OUTPUT OF FISH
AND FISH EGGS DURING THE FISCAL YEAR 1921

Species	Total
Catfish.....	35,257,070
Carp.....	109,961,580

Winter flounder.....	1,768,660,000
Pole flounder.....	19,410,000
Miscellaneous fishes.....	4,935,165
Total.....	4,962,489,405

As compared with 1920, there was a general increase in production of nearly 200,000,000. Species handled in larger numbers were whitefish, cisco, alewife, chum salmon, blackspotted trout, brook trout, carp, pike perch, yellow perch, striped bass, and haddock, while the output of catfish, buffalo fish, shad, various Pacific salmon, lake trout, cod, and pollock was less.

The New England fishing fleet at the ports of Boston, Gloucester, and Portland during the calendar year 1920 numbered 471 sail, steam, and gasoline-screw vessels, including 41 American and 3 Canadian steam trawlers. These vessels landed at Boston 3342 trips, aggregating 118,558,902 pounds of fish, valued at \$6,136,569; at Gloucester 2381 trips, aggregating 46,740,296 pounds, valued at \$1,460,336; and at Portland 1883 trips, aggregating 12,981,503 pounds, valued at \$630,108. The totals for the three ports were 7606 trips and 178,280,701 pounds of fresh and salted fish, having a value to the fishermen of \$8,227,013. Compared with the previous year, there was a decrease of 663 trips, or 8.01 per cent, in the total number landed at Boston, Gloucester, and Portland, and of 18,200,569 pounds, or 9.26 per cent, in the quantity, with an increase of \$678,630, or 8.99 per cent, in the value of the products landed. The only important species showing an increase in both quantity and value were halibut, mackerel, and swordfish. The catch of halibut increased 1,674,669 pounds, or 79.19 per cent, and \$354,630, or 91.59 per cent; the mackerel catch increased 1,580,525 pounds, or 27.66 per cent, and \$215,852, or 39.44 per cent; and the catch of swordfish increased 1,648,942 pounds, or 186.80 per cent, and \$281,834, or 132.71 per cent.

The fishing fleet at Seattle, Wash., during the year 1920 brought in 822 fares, consisting of 14,355,450 pounds of fish, having a value to the fishermen of \$1,992,759, from the fishing grounds

along the coast from Oregon to Alaska. The largest quantities were taken from Flattery Banks, off the west coast of Vancouver Island, and in Hecate Strait. The products included 12,683,450 pounds of halibut, valued at \$1,913,849; 950,200 pounds of sablefish, valued at \$49,963; 513,035 pounds of "lingcod," valued at \$21,153; and 208,765 pounds of rockfishes, valued at \$7794. Compared with the previous year, there was an increase of 152 trips landed and an increase of 704,430 pounds, or 5.16 per cent, in the quantity, and of \$462,475, or 30.22 per cent, in the value of the products. The yield of halibut increased 1,572,730 pounds, or 14.15 per cent, and \$491,330, or 34.53 per cent, but there was a decrease in the catch of other species.

The fishery products taken in Puget Sound and landed at Seattle by collecting vessels during the year aggregated 9,813,966 pounds, valued at \$881,066. This quantity included 7,911,820 pounds of salmon, valued at \$765,145, and the remainder consisted of herring, steelhead trout, smelt, rockfishes, flounders, crabs, and other species. Compared with the previous year, there was a net decrease in the products landed by collecting vessels of 1,995,484 pounds, or 16.89 per cent and \$102,753, or 10.44 per cent, which decline was due to a large falling off in the catch of salmon. The decrease in salmon was, however, offset to some extent by a considerable increase in various less important species.

The cooperation of the Bureau of Fisheries having again been sought by the United States Public Health Service in the anti-malaria campaign in southern States, investigations were continued to gain additional information as to the conditions of the most effective use of fish for destruction of mosquitoes both in southern waters, where the prevention of malaria is a primary object, and in northern waters, where mosquitoes have a recognized deleterious effect upon the efficiency of labor and upon property values. The fish-cultural service was called on to supply lots of the mosquito-eating fish *Gambusia* for consignment to foreign countries. The fish were collected at several southern stations and were desired because of the success that has attended their employment in this country in eradicating malarial mosquitoes. In response to requests from the League of Red Cross Societies, with headquarters in Geneva, Switzerland, shipments of these little minnows were made to Italy and Spain, and pursuant to a request coming through the usual diplomatic channels, a consignment was furnished for the government of Argentina. A lot supplied to the international health board was destined for Porto Rico. All these fish were intended to be used in antimalarial work.

Under the general direction of the fisheries biological station at Fairport, Iowa, extensive work was done, in the propagation of pearly mussels native to the Mississippi river and tributaries. During the fiscal year 1921, 169,740,050 glochidia, or larval mussels, in a condition of parasitism on fishes, were liberated in public waters, as compared with 183,021,720 in the previous year. The fish hosts used for inoculation with glochidia were salvaged from overflowed waters, chiefly in the vicinity of Fairport, Iowa, and New Boston, Ill. The number of fishes rescued was 976,550, of which 40,020 were adults, and the number infected with the glochidia of

appropriate mussels before being liberated was 50,268. Two species of commercial mussels were handled in this work, the Lake Pepin mucket (*Lampsilis luteola*) and the river mucket (*Lampsilis ligamentina*), the last being propagated in only limited numbers. The infected fish were liberated in Lake Pokegama, Minn., and in the Mississippi river at the following places; Lake Pepin, Minn. and Wis.; Minneiska, Minn.; Lynxville, Wis.; Fairport, Iowa; New Boston, Ill.; and Lake Keokuk, Iowa and Ill. Operations were not conducted in Arkansas as in previous years, owing to the impracticability of obtaining the necessary labor and equipment.

FISK UNIVERSITY. A co-educational institution for negroes at Nashville, Tenn.; founded in 1866. In the fall of 1921 the total enrollment was 472 and in the summer session 200. The faculty numbered 63. The library contained 12,000 volumes. The endowment was \$250,498 and the income \$136,867. President, Dr. Fayette Avery McKenzie, Ph.D.

FISKE, AMOS KIDDER. Author, died, September 21. He was born at Whitefield, N. H., May 12, 1848, graduated at Harvard in 1866, and was admitted to the bar in New York City in 1868. He was associated with George Ticknor Curtis in preparing the Life of Daniel Webster and worked on the staffs of the *American Encyclopedia* and New York newspapers down to 1902; became an associate editor of the *New York Journal of Commerce* and after January, 1903, of the *Commercial Bulletin*. He wrote *Midnight Talks at the Club* (1890); *Beyond the Bourn* (1891); *The Jewish Scriptures* (1896); *The Myths of Israel* (1897); *The Story of the Philippines* (1898); *The West Indies* (Story of Nations series, 1899); *The Modern Bank* (1904); *The Great Epic of Israel* (1911); *Honest Business* (1914).

FITZGERALD, A. L. See NECROLOGY.

FIUME. An independent state, established under the treaty of Rapallo between Italy and Jugo-Slavia, signed Nov. 12, 1920 (see articles on ITALY and WAR OF THE NATIONS in this and preceding YEAR BOOKS). Area, 8 square miles; population, 49,806. On October 9 the president of the new state, Riccardo Zanella, made public the names of his ministers, which were as follows: Interior, M. Blasich; Justice, M. Jechel; Finance, D. Mohovich; Education, V. Soelch; Public Works, L. Petteani; Welfare, E. Laschiach. The president was to take the portfolio of Foreign Affairs, Commerce, and Communications. In the programme announced by the president, all thought of revenge against political enemies was renounced and citizens of the new state living abroad were placed under the protection of the representatives of the king of Italy. The programme was voted by the assembly by a vote of 50 against 10, the opposition being in favor of direct annexation with Italy.

FLAX. According to data published by the International Institute of Agriculture, Rome, the flaxseed production of the world in 1921 was still below normal. The yields reported by a number of countries were approximately as follows: Belgium, 324,000 bu., Bulgaria, 17,600 bu., Italy, 393,700 bu., Spain, 45,900 bu., Netherlands, 155,300 bu., Tunis, 59,000 bu., British India, 10,760,000 bu., Japan, 633,700 bu., and Canada, 4,365,000 bu.

Estimates published by the Department of

Agriculture place the production of the United States at 8,112,000 bu. and the area at 1,165,000 acres, making the average yield per acre 7 bu. as compared with 6.1 bu. and 4.8 bu. per acre for the years 1920 and 1919 respectively. The production in 1920 was greater by 2,662,000 bu. and the area by 592,000 acres. The average farm value on Dec. 1, 1921, was 144.6 cts. per bushel as compared with 176.7 cts. and 438.3 cts. in 1920 and 1919 respectively. On this basis the total value of the 1921 crop was \$11,732,000 or \$7,307,000 under the total value of the 1920 crop and \$20,070,000 under the value of the 1919 crop. Before the European War the world's fibre crop was about 1,156,000,000 lbs., of which nearly 940,000,000 lbs. were produced by Russia. The Russian acreage of fibre flax in 1920 was reported as only about 10 per cent of the prewar area. In prewar times Russia consumed about 250,000,000 lbs. of fibre and exported 650,000,000 lbs. In 1920 the crop was only 90,000,000 lbs. or not even half of the domestic requirement.

The French government encouraged flax culture in Morocco to offset the Russian failure of supply, and in this regard to make French spinners independent of foreign countries. Russia formerly supplied about 80 per cent of the fibre flax used in making the world's linens. The normal prewar consumption of flax fibre in the United States was about 10,000 tons annually, most of which was imported. The Department of Agriculture continued work during the year to promote domestic fiber production but owing to the relatively low price the acreage in 1921 was only 3000 acres as compared with 6000 acres in 1920 and with 60,000 acres to produce the supply required.

FLETCHER, SIR LAZARUS. British physicist, died in London, January 9. He was born at Salford, Eng., March 3, 1850; graduated at Oxford with high honors in mathematics and mechanics; and was a Fellow of University College, Oxford, from 1877 to 1880. He was keeper of minerals in the British Museum from 1880 to 1909, and after that director of the natural history department of the museum until 1919. Meanwhile he was an officer or president of many important associations within his field of research both in England and in other countries. He wrote in addition to numerous contributions to periodicals and books of reference: *Introductions to the Study of Meteorites* (1881); *Introductions to the Study of Minerals* (1884); *Introductions to the Study of Rock* (1895); *The Optical Indicatrix* (1892).

FLOOD, HENRY DELAWARE. Congressman, died at Washington, D. C., December 8. In his later years he was particularly known as the author of the resolution declaring war with Germany. He was born in Appomattox County, Va., Sept. 2, 1865, educated at Washington and Lee University, studied law and was admitted to the bar in 1886. He was elected to the Virginia House of Delegates in 1887 and to the State senate in 1891, 1895, 1899. In 1896 he was elected to Congress on the democratic ticket and was a member of that body from 1901 to 1921. He was chairman of the committee on foreign affairs.

FLOODS AND FLOOD PROTECTION. The year 1921 saw the virtual completion in the United States of two important projects designed

to protect communities from the dangers of sudden floods due to streams being swollen by rain and overflowing their banks. Of those the Mill Creek improvement which had been put under way at Erie, Pa., after the disastrous flood of 1915 was entirely finished, while the larger and well-designed district project developed for the Miami Valley in Southwestern Ohio was nearing completion and stood as an important engineering work. In contrast to these projects already accomplished mention must be made of serious floods at Pueblo, Colo., San Antonio, Texas, and Phoenix, Ariz. At these cities protection had previously been discussed in view of threatening circumstances, but protective works had not been started, and the result of the year's experience was to put the various designs and projects under way in earnest.

MIAMI CONSERVANCY DISTRICT. In 1921 this great project was nearing completion and in particular work was being actively prosecuted on finishing the Taylorsville dam, the largest of the five detaining dams of the Miami Conservancy District. It was located a few miles above Dayton, so as to control the main course of the Miami river and was 3000 ft. long, with a maximum height of 78 ft. It contained about 1,200,000 cu. yd. of earth embankment. This dam had a special discharge or outlet structure, comprising a series of four 15 by 20 ft. arched openings through a concrete spillway weir. This was the largest of the concrete structures on any of the district work, and contained about 50,000 cu. yd. of concrete. This outlet in case of extreme flood would discharge 50,000 sec.-ft., while in a flood as large as that of 1913 the basin formed by the Taylorsville dam would impound 152,000 acre-ft. of water. At the end of 1921 at the Taylorsville dam the embankment and concrete work had been completed, but various finishing jobs, it was estimated, would last into the spring of 1922. To control Laramie Creek, one of the headwater streams further north, the Lockington dam was completed also during the year. Two important tributaries entering at Dayton, Stillwater river, and Mad river, were controlled by detaining dams at Englewood and at Huffman respectively, which at the end of the year were almost completed. Finally, ten miles south of Dayton the inflowing Twin Creek was controlled by the Germantown dam, which was completed in 1920 and was in service.

MILL CREEK FLOOD PROTECTION. The city of Erie, Pa., on Nov. 23, 1921, formally announced the completion of its Mill Creek flood control works, built to prevent such a disaster as that experienced in 1915 when the stream, passing through the built-up section of the city for more than a mile, overflowed its banks and caused the death, by drowning, of forty people and a property loss estimated at \$2,000,000. By the new improvement the stream was entirely inclosed in a 22x18-ft. concrete conduit on which were located graded and paved streets, while on ground that was formerly the open-stream channel buildings were erected. In addition to securing protection considerable land in the heart of the city was thus reclaimed for building purposes.

PUEBLO FLOOD. The valley cities of central and southern Colorado east of the continental divide suffered severely from devastating floods between June 4 and June 6, 1921. The most

serious loss of life and heaviest property damage was in Pueblo, where the waters of the Arkansas river and its tributary, Fountain Creek, rose 15 ft. above the highest previous stage and flooded some 350 city blocks, destroying buildings and causing many deaths. A total damage of \$20,000,000 to \$25,000,000, was estimated as due to the floods, of which nearly \$15,000,000 represented the loss in the city of Pueblo.

The flood had its origin in a heavy long-continued rainstorm which began June 2, and which attaining a maximum on June 3 and 4 produced a swollen condition of the Arkansas and the South Platte, two rivers which drain the region east of the continental divide. The most intense rainfall affected the upper drainage area of the Arkansas, and Pueblo, its chief city, suffered to an extraordinary degree, while roads and bridges in this region were also seriously damaged. Denver and other cities in the northern region, however, suffered but little, but extensive damage was done to farms and to bridges and the highways in the South Platte area also, though here there was little loss of life.

The failure of the Schaefer dam, a 90 ft. high earth fill dam on Beaver Creek, a northern tributary of the Arkansas near Florence, intensified the flood conditions on the morning of June 5, when the rainfall was at its maximum.

In the city of Pueblo where the greatest damage was done by the flood and the rush of the current through the city, wooden houses were floated from their foundations and smashed against more resistant structures, with the effect of causing many of the more substantial buildings to collapse. At the height of the flood a fire that started in the lumber yards added to the danger, but it was brought under control largely with the aid of the continuing rain. In addition to the destruction of dwelling houses, those of frame generally being utterly destroyed, more than 50 large business buildings were damaged by water or fire. Substantial brick wall construction of 13-in. thickness succeeded in resisting the flood and a big concrete grain elevator, which for a day or two stood in a sea of mud and water, was found undamaged when the flood receded. Naturally the breakage of water mains and local blocking of the sewers added to the difficulties of existence in the flooded district, but gas and electric light service continued, in part at least, in residential districts above flood level.

Measures to prevent the occurrence of a similar disaster were set on foot and local interests sought the coöperation of the U. S. Reclamation Service in a plan to construct a storage reservoir for irrigation water 8 miles above the city of Pueblo. The Reclamation Service began an investigation of such a project, looking up a survey that was made several years previously.

SAN ANTONIO, TEXAS, FLOOD. The city of San Antonio suffered from the most extensive and destructive flood in its history during the night of September 9 and the early morning hours of Sept. 10, 1921. After 24 hours of almost continuous rain, a heavy storm broke in the evening of September 9, accompanied by heavy rain from 7 to 9 p. m. In the city itself during the twenty-four hours preceding the flood there was a total rainfall of approximately 8 in., while a few hours previous to the heaviest of this rain the valley of the Olmos Creek, which empties into the San

Antonio river at the city line, had experienced some 13½ in. of rain in even less time. About midnight the resulting torrent further increased by the heavy local rain swept down upon the centre of the city so that by 2 a. m. of September 10 a section six miles long and from one-third to one mile wide was under water. Water to a depth of from 3 to 10 feet covered practically the entire business district, while about two square miles of residence section also were inundated.

The total property loss was estimated at about \$10,000,000.

Like many other American cities San Antonio in 1921 had practically no protection against cloudbursts, and the lesson was sufficient to lead to measures for the construction of a detention reservoir above the city to regulate the flow of flood waters so that they could be confined to a definite channel, and the excess permitted to run off in subsequent hours or days. This dam was estimated to probably cost in the neighborhood of \$2,000,000.

PHOENIX, ARIZONA, FLOOD. A section of the western portion of Phoenix, Ariz., from two to ten blocks wide, on the night of August 21, was flooded by water originating in Cave Creek. No lives were lost and the principal damage was to the state capitol, where water stood about 2½ ft. deep on the first floor, though many private residences suffered severely, the property damage being estimated at \$300,000. Considerable damage also was done to cattle and crops of ranchers living to the north of the city.

Cave Creek, responsible for the flood, drains an area of 200 sq. mi., and from a point about 12 miles north of Phoenix flows through no defined channel. With average rains the waters spread over a delta and find their way through the Salt River Valley Water Users' Association canals to the Salt and Gila rivers, but not infrequently these canals have been broken through and with areas flooded when there were heavy rains.

After two days of unusually heavy rain, an unusually heavy runoff took place, which Cave Creek was unable to handle. The flood waters overflowed the Arizona Canal, which has a flood capacity of 800 sec.-ft., 8 miles from Phoenix and later overflowed the Grand Canal, parallel to and 5 mi. south of the Arizona Canal. This canal has a flood capacity of 600 sec.-ft. In the early evening the flood reached Phoenix, and reached its maximum there at 10 p. m., receding by the following morning.

As a result the city voted bonds for \$100,000, to be supplemented by amounts from the county of Maricopa, the State, the Salt River Valley Water Users' Association and other interests, to an aggregate of \$400,000 to institute protection against Cave Creek floods, but no definite announcement had been made of the engineering plans.

DECEMBER FLOODS. Late in December heavy rains in the State of California have caused the railroads considerable damage and inconveniences. San Diego, Calif., was completely isolated on December 25 for several days as it was necessary to suspend traffic on both the Atchison, Topeka, & Santa Fe and the San Diego & Arizona on December 25. A washout in the Santa Fe cost 1000 ft. of track and roadway near Sorrento, and there were small washouts at several other points, while the bridge over the San Diego river was

threatened. High water in the Ohio region caused the Cleveland, Cincinnati, Chicago & St. Louis, the Southern and the Baltimore & Ohio to abandon the Central Union station at Cincinnati temporarily and service could not be resumed, except for one or two local trains operated on a track above the water line, until December 28. The railroads at Cincinnati and at other points on the river experienced considerable inconvenience from the high water rather than actual damage.

CANADIAN FLOODS. During the week of October 23, heavy rains resulted in serious flood damage to the Canadian railroads in the vicinity of Vancouver, B. C., in the Cascade Mountains. At Coquitlan, B. C., 17 miles east of Vancouver, two 80-ft. spans of the Canadian Pacific bridge across the Coquitlan river were carried out, while the Coquitlan terminal, the freight terminal for Vancouver, was entirely under water. Slides and washouts in the Fraser river canyon held up transportation through the canyon, and damage was recorded at Yale Creek, where one pier of a bridge was carried out. At a point 17 miles east of North Bend a small lake in the mountain overflowed, flooding the tracks, and carrying out the fill for a distance of 200 ft. to a maximum depth of 110 ft., and making it necessary to detour traffic over the Great Northern, to Huntington, B. C. On the Kettle Valley line washouts and slides in Coquihalla Pass held up transportation on October 28; slides and washouts in the Fraser Valley held up operation on the Canadian National on October 29, with serious damage at Lytton, B. C. There was reported serious damage to the Pacific Great Eastern between Clinton, B. C., and Squamish. These various mishaps put sections of line out of operation for from two days to two weeks. See DAMS.

FLORIDA. POPULATION. According to the report of the census of 1920, there were 968,470 residents in the State, Jan. 1, 1920, as compared with 752,619 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	788,000	11,032,000	\$5,847,000
	1920	750,000	10,125,000	10,125,000
Oats.....	1921	41,000	533,000	346,000
	1920	41,000	697,000	418,000
Tobacco.....	1921	4,000	13,600,000	360,000
	1920	4,000	14,200,000	2,018,000
Hay.....	1921	118,000	185,000	1,640,000
	1920	121,000	181,000	1,575,000
Potatoes.....	1921	17,000	1,564,000	2,972,000
	1920	23,000	2,415,000	4,830,000
Sweet potatoes.....	1921	32,000	2,720,000	2,611,000
	1920	30,000	2,850,000	3,420,000
Cotton.....	1921	77,000	13,000	1,170,000
	1920	100,000	18,000	1,540,000
Peanuts.....	1921	80,000	154,000,000	1,728,000
	1920	90,000	156,250,000	3,375,000
Oranges.....	1921		8,200,000	14,350,000
	1920		8,100,000	17,820,000

¹ Pounds. ² Tons. ³ Bales. ⁴ Boxes.

DRAINAGE. The statistics in table on page 235 of the drainage of the State in 1920 were published by the United States Bureau of the Census:

The total works completed by drainage enterprises to Dec. 31, 1919, comprised 1990.8 miles of open ditches and 66.2 miles of levees; the additional lengths under construction were 694.0 miles of open ditches and 106.5 miles of levees.

DRAINAGE ON FARMS

Number of all farms in the state.....	54,005	100.0
Farms reporting land having drainage.....	4,597	8.5
Farms reporting land needing drainage.....	8,486	15.7
All land in farms.....	acres.. 8,046,691	100.0
Improved land in farms.....	acres.. 2,297,271	38.0
Farm land reported as provided with drainage.....	acres.. 147,940	2.4
Farm land reported as needing drainage.....	acres.. 687,021	11.4

DRAINAGE ENTERPRISES

Approximate land area of the state.....	acres.. 35,111,040	100.0
All land in operating drainage enterprises.....	acres.. 1,637,073	4.7
Improved land.....	acres.. 94,689	0.3
Timber and cut-over land.....	acres.. 542,648	1.5
Other unimproved land.....	acres.. 999,836	2.8
Capital invested in and required for completion of operating enterprises.....	\$26,762,497	100.0
Capital invested in these enterprises to Dec. 31, 1919.....	\$13,846,807	51.7
Additional capital required to complete these enterprises.....	\$12,915,690	48.3

These figures do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises, nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. The cost of nine locks and dams completed in the state canals in the Everglades Drainage District, amounting to about \$278,000, and of two others under construction is included in the cost of the enterprises. The principal crops grown on the drained land in drainage enterprises were potatoes and other vegetables.

MANUFACTURES. The census of the manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the factory system. A comparative summary for the State for 1914 and 1919 follows:

levied, revenue therefrom to be used for building and maintenance of State Highways. This latter act was fought in the courts. Appropriation of \$250,000 made for enlarging and remodeling capitol building. Act to punish passing worthless checks. Constitutional amendment submitted, to be voted upon in the election in November, 1922, providing for a reapportionment of legislative representation, largely increasing the membership of both senate and house. Seven new counties created by carving from old counties.

JUDICIARY. Supreme Court, Chief Justice, Jefferson B. Browne; Associated Justices, James B. Whitfield; Thomas F. West, William H. Ellis; R. Fenwick Taylor.

OFFICERS. Governor, Cary A. Hardee; Secretary of State, H. Clay Crawford; Comptroller, Ernest Amos; Treasurer, John C. Luning; Attorney General, Rivers H. Buford; Superintendent of

	Census—		Per cent of increase ¹ 1914-1919
	1919	1914	
Number of establishments.....	2,581	2,518	2.5
Persons engaged in manufactures.....	79,986	63,204	26.6
Proprietors and firm members.....	2,616	2,682	-2.5

Value added by manufacture (value of products less cost of materials).....	121,313,000	47,297,000	156.5

¹ A minus sign (—) denotes decrease.

The increase in Florida seem to be explained by the large increase shown in the shipbuilding industry. The value of products in this industry amounted to \$804,000 in 1914 and \$32,662,000 in 1919. Fertilizer plants, lumber, and timber, and turpentine also show considerable increases.

CHARITIES AND CORRECTIONS. The State institutions are: Institute for Deaf, Dumb, and Blind at St. Augustine; Hospital for the Insane at Chattahoochee; Industrial School for Boys at Marianna; Reform School for Delinquent Girls at Ocala; Prison Farm at Raiford; Home for Feeble-minded and Epileptics at Gainesville.

LEGISLATION. The session of 1921 enacted a law putting the pay of county officers on a graduated fee system, greatly reducing their remuneration. License tax on automobiles changed to a weight basis instead of on horsepower as heretofore. Tax of one cent a gallon on gasoline

Public Instruction, William N. Sheats; Commissioner of Agriculture, William A. McRae; Auditor (office abolished and duties transferred to office of Comptroller).

FLORIDA, UNIVERSITY OF. A State institution of the higher education at Gainesville, Fla., founded in 1905. The enrollment for the fall of 1921 was 922 and for the summer session, 780. The faculty numbered 54. Resources for the year were given at \$224,354. The library contained 40,000 volumes. Special emphasis is laid on affording facilities for the study of agricultural, scientific, legal, educational, business, and social conditions of the State. President, A. A. Murphree, LL.D.

FLOTILLA LEADERS. See BATTLESHIPS AND OTHER WAR VESSELS.

FLOUR. See AGRICULTURE.

FLUORSPAR. The total quantity of fluor spar

reported as shipped from domestic mines in 1920, according to figures compiled by the United States Geological Survey, was 186,778 short tons, valued at \$4,718,547, which shows an increase of 35 per cent in quantity and 34 per cent in value as compared with the figures for 1919. The general average price per ton f. o. b. mines or shipping points for all grades of spar in 1920 was \$25.26; in 1919 it was \$25.49. The total quantity of merchantable spar recovered in 1920 was 201,372 short tons, an increase of 31 per cent over 1919. Stocks of spar at mines or shipping points, mainly in Illinois and Kentucky, amounted to 41,784 short tons, an increase of 31 per cent over 1919.

FLYING RECORDS. See **AERONAUTICS**.

FOCH, FERDINAND. Marshal of France, delegate to the Disarmament Conference at Washington, arrived in New York City, October 28. The part he played in the late war has been sufficiently described in preceding **YEAR BOOKS** and the present article is confined to a sketch of his life and a brief mention of his military principles. He was born, Aug. 4, 1851, at Tarbes, France, the son of the secretary-general of the prefecture; studied at the lycée there and at Rodez. In 1867 he entered the college of Saint Michel directed by the Jesuits, and afterwards the college of Saint Clément at Metz. At an early age he showed an aptitude for mathematics although he was also an enthusiastic student of history; and he made up his mind at an early age to become a soldier. He entered the Polytechnic School in 1871 and studied afterwards at the Cavalry School at Saumur. In 1884 he was received at the war school; in 1891 he became chief of squadron and in 1896 adjunct-professor of strategy and general tactics at the war school, rising to the rank of lieutenant-colonel two years later. He was an energetic and successful teacher and felt much regret at being obliged to leave this work on account of changes in administration of the war school in 1901. Placed in command of the 35th Regiment at Vannes in 1903 he performed his duties with marked fidelity and in 1907 was appointed brigadier-general. Soon afterwards he was called to the direction of the war school. This work he took up with great enthusiasm, believing that in respect to the higher military studies the French were behind the Germans and resolving to improve instruction to the utmost. In 1911 he was placed in command of the 13th division at Chaumont and shortly afterwards of the 20th division at Nancy. He was still at this post when the war broke out.

He had made a reputation for himself as a military scholar and teacher, having published two books that were regarded as standard works, namely, *The Principles of War*, and *The Conduct of War*. These two volumes were a condensation of his lectures at the war school. One of the main features of his military teachings was that any theory of war was false if it took account only of material factors. It must take account in full measure of the moral and intellectual qualities of men, for war was not an exact science but a drama. Inasmuch as knowledge was essential to success, hard study was required of all officers. Only a man of genius, who of course was an exception, could trust to inspiration to carry him through difficulties. He reduced the art of war to these three principles: Preparation;

formation of mass; the possibility of multiplying the effect of mass by impulsion. In modern fighting, order and method were employed in the direction of masses by the application of the principle of economy of forces, combining the mass in such a manner as to bring the requisite number to the chosen point of attack. To accomplish this, it was necessary to have liberty of action and this must be obtained by intellectual discipline. In war-time aside from the commander-in-chief, there were only the subordinate officers, each one of whom must think first of all of obedience, but obedience in view of unnumberable unforeseen circumstances was a matter of great difficulty. To overcome this difficulty there was need of an exact discipline of spirit and intelligence. The successful general was first of all a man of character and secondly a man capable of understanding problems and making the necessary combinations in order to carry out instructions. Discipline for a general does not mean that he should execute his orders merely in the measure that seems proper or even possible. It means that he must actually participate in the thought and the point of view of the superior officer, who has given him the order to execute. These and his many other principles were all illustrated by appeals to the history of war, his writings and lectures being especially rich in concrete illustrations from the campaigns of Napoleon and other great generals of the past. He had unflinching enthusiasm for teaching and devoted himself to the work with extraordinary energy. The influence that he exerted on his pupils was remarkable.

After the war his influence was exerted in favor of extreme watchfulness against Germany, and he believed that the safety of France depended on her retaining a firm hold of the Rhine. He traveled widely in the United States visiting the principal cities, and was everywhere received with great enthusiasm.

FOOD AND NUTRITION. On the whole, food conditions during the year tended to become more normal. In the United States the downward trend in wholesale prices noted in the latter part of 1920 continued during the first half of 1921, followed by comparatively small reactions upward through the fall, while at the end of the year prices were again slowly receding. On Dec. 23, 1921, *Bradstreet's* reported as its weekly food index figure, based on wholesale prices of 31 standard food articles, \$2.95, as compared with \$3.51 for the corresponding week of the previous year. This was approximately comparable with the price level of 1916 and was only about 20 per cent higher than that of 1914. During 1921 wheat flour declined from \$8.50 to \$5.75 per barrel; dressed beef and pork from 18 and 16.5 cents per pound, respectively, to 12.5 and 12 cents; butter from 57.5 to 47 cents; lard from 17.25 to 9.4 cents; sugar from 8.75 to 5.2 cents; and salt from 1.13 to 0.93 cents per pound. Other commodities showed similar reductions, except milk, mackerel, coffee, tea, apples, and

United States in 1921

...

lemons, all of which had advanced, and codfish and peanuts, which were unchanged.

As regards retail prices, the United States Department of Labor announced that estimates on 43 food articles in 51 cities showed an average decrease for the year ended Nov. 15, 1921, of 22 per cent. However, as compared with Nov. 15, 1913, there was still an increase of 45 per cent.

The continued failure of retail prices to decrease as radically as wholesale prices on most commodities was a subject of much complaint from the ultimate consumer, who beheld tremendous shrinkages in the farm value of foodstuffs to points far below the cost of production with comparatively little relief to himself; For instance, he read reports of the use of corn as fuel in the Middle West, although the United States Department of Agriculture announced that its relative heating value per bushel, as compared with a fair grade of western soft coal at \$10 per ton, was only about 20 cents, and he reflected that this was the prevailing retail price for two half-pound packages of corn breakfast food. On Dec. 23, 1921, the beginning of a Federal investigation of retail prices for food, as well as fuel, clothing, and other commodities, was announced by the Attorney-General, who declared that these prices were too high and that in some instances the profits of retailers were "unconscionable."

The food situation was further complicated by numerous strikes among employees handling food products. These included the extensive labor disturbances in the Chicago packing houses and elsewhere, and the strikes of milk drivers in New York City and Cleveland. A congressional investigation of the milk supply of the District of Columbia was in progress at the close of the year.

Food conditions abroad still continued abnormal, though with wide variations between various countries. In Europe, an unusually severe drought caused a serious shortage in the 1921 crop in many regions. In Great Britain prices materially increased with the reduced supplies on practically all foodstuffs, but especially fruits and vegetables, potatoes doubling in cost. The German potato crop was only 60 per cent of that of 1913. Prices rose in Belgium to a point on November 14, 394 per cent above that in 1914, and in the Netherlands in July to about 177 per cent above that of 1913. In Spain prices became higher than for five years, and price regulation was again resorted to for cattle, fresh meats, fish, fruits, wheat, and flour. There were also material advances in Italy. On the other hand, Poland and Rumania reported good crops and some exports, and in Denmark the cost of living in October was 202 per cent above the 1913 level as compared with 403 per cent in October, 1920. Belgium was able to relinquish Government control over sugar, November 1.

In Austria the cost of living was officially estimated in June as 11,000 per cent above the 1914 figures, and an increase of 578 per cent was noted from January to November alone. Furthermore, conditions were expected to be even less favorable after Jan. 1, 1922, on which date the Republic discontinued its subsidies to producers. Large purchases had been made by the Government in an attempt to assure a sufficient food supply, but it was predicted that bread would be increased in cost to the consumer from 10 to 15

times, as the previous charge had included little above the expenses of baking.

In Russia the drought and general unsettled state of affairs caused a shortage in grain production which resulted in a virtual agricultural breakdown, bringing famine conditions to at least 15,000,000 people in the region of the Volga and a food shortage to an equal number surrounding them. Relief by the United States was urgently recommended by President Harding in his message of December 6, and a measure signed by him on December 22 appropriated \$20,000,000 from the funds of the United States Grain Corporation for this purpose. This amount was to be expended for corn and preserved milk for immediate relief and for seed grain for spring planting.

Heavy exports of foodstuffs from the United States to Europe were made during the fall, particularly of wheat and corn. It was reported that the latter cereal, for which there had been little European demand before the war, was now being imported in amounts fully 10 times as large as formerly.

Much of the popular interest in nutrition research stimulated by the war was continued during the year. There was particular interest in the discoveries being made as to the so-called "accessory substances" or "vitamins" in foods and their relation to nutritional diseases, and these questions were being more generally studied than any others. A review by Sherman of the status of this subject cited no fewer than 230 scientific contributions since the beginning of these inquiries in 1906. At least three vitamins, known for convenience as A, B, and C, are now believed to exist in foods, differing considerably in their properties but all followed by physiological disturbances unless present in sufficient quantities in the diet. Numerous proprietary preparations purporting to supply these vitamins were placed on the market during the year, and there was considerable exploitation of yeast and other materials, but such data as were available still indicated that with a well-balanced mixed diet, especially one in which milk, vegetables, and fruit were abundant, the body needs would be amply provided for.

A study of diets in farm families by the United States Department of Agriculture showed, contrary to the opinion sometimes expressed, a larger total consumption of food and a freer use of animal foods, chiefly milk, and of vegetables and fruits than in non-farm families. It was concluded that "there can be no doubt that the food eaten on the average American farm is abundant, wholesome, and varied enough for health and enjoyment."

Digestion experiments reported by the same department with artificially hardened cottonseed, peanut, and corn oils, now being extensively used as lard substitutes, showed no digestive disturbances, and indicated that these materials are as well utilized as natural fats of corresponding melting points. Similar experiments with kid, rabbit, horse, and seal meat showed essentially the same digestibility as other better known meats. Studies by the Benedicts of the energy content of "extra foods" indicated that sandwiches supply considerable energy, though they are not economical sources thereof at prevailing prices.

In a series of studies on the influence of various factors on digestion, Hawk et al. obtained results indicating that attractive appearance and palatability of food might hasten the time of digestion, but not the ultimate utilization of the protein, while anxiety and mental strain delayed gastric digestion. The consumption of large quantities of tea or coffee without sugar did not appreciably retard digestion, but cocoa caused distinct delay and coffee with sugar less marked delay. Puddings were digested more rapidly than cake and pies, and pies more readily than cake. Sugars and candy delayed digestion, and the authors suggest candy eating after rather than before meals and the use of hard rather than cream candies for children.

Processes were worked out at the California Experiment Station and elsewhere for sterilizing ripe olives at temperatures sufficiently high to minimize risk of poisoning from *Bacillus botulinus*. Other studies of botulism indicated anew that the surest means of preventing this disease is the rigid avoidance as food or even the tasting of any material which either in appearance or odor shows the slightest sign of spoilage.

An important development was the establishment of the American Food Research Institute at Leland Stanford University. A grant of \$700,000 was made by the Carnegie Corporation of New York for the support of this institute during the next ten years. An intensive study of problems connected with the production, distribution, and consumption of food, in coöperation with existing food research agencies, is being planned.

BOOKS OF THE YEAR.—Some of the more important treatises include the following: *Analyses and Energy Values of Foods*, R. H. A. Plimmer, London; *The Microbiology and Microanalyses of Foods*, A. Schneider, Philadelphia; *The Vitamin Manual*, W. H. Eddy, Baltimore; *Red Cross Course in Food Selection*, Washington, D. C.; *Food and Cookery and the Care of the House*, M. L. Matthews, Boston, and *School and Home Cooking*, C. C. Greer, Boston.

FOOD POISONING. During the year cases of botulism continued to be reported and the uselessness of the term "ptomaine poisoning" was conceded. Drs. Rosenau and Weiss have recently reported in the *Journal of the American Medical Association* for Dec. 17, 1921, a form of food poisoning but little known in America. The cause is a microorganism known as Gaertner's bacillus, otherwise intestinal bacillus (*B. enteritidis*), which causes an acute infectious fever. On one occasion in Washington twenty-five students sat down to a meal and 18 were made ill. The offending dish was shown to have been the bread-pudding of the dessert, but the question of how the food became contaminated has not yet been answered. The dish, as is usually the case now-a-days, was apparently quite wholesome in every respect. The authors endeavor once more to warn the public that in most cases contaminated food presents nothing to offend the sight, smell, or taste. Gaertner's bacillus cannot be detected in water or food, in contrast with the bacterial causes of typhoid fever and cholera: fortunately the infection which it sets up is relatively short and mild but nevertheless a true enteric infection like typhoid and paratyphoid fevers, dysentery, and cholera. This condition differs radically from botulism, for here

the food is slightly decomposed from the secondary action of the germ and has a slightly cheesy or rancid-butter smell. A small fragment of such tainted food is enough to cause a fatal illness. Householders should avoid throwing infected or suspicious food in dumping places for in this manner loose hogs and other animals can become contaminated and continue to spread the bacteria by means of excrement and in this way poultry may contract the disease.

FOOT AND MOUTH DISEASE. See VETERINARY MEDICINE.

FOOTBALL. Football added considerably to its prestige in 1921, when the various college contests throughout the United States attracted record-breaking throngs of spectators. To the introduction of the forward pass the ever-increasing popularity of the game is undoubtedly due. Not only does the resultant "open play" enhance the enjoyment of the spectator, but it also has made it possible for the elevens from smaller institutions to meet the "big college" teams on more even terms. There was some agitation for the restriction of the "pass" at the close of the 1921 season, but the rule-makers appeared to be unwilling to make any changes at the present time. Of interest in connection with the growing enthusiasm for the game was the large number of "inter-sectional" contests held by the American colleges in 1921.

The preëminent teams of the year—Penn State, Lafayette, Cornell, and Washington and Jefferson in the East—Iowa University and Notre Dame in the Middle West—Centre College in the South, and the University of California on the Pacific coast. The triangular battle for supremacy between Harvard, Yale, and Princeton had an unusual outcome, Princeton winning from Harvard only to be beaten by Yale, which, in turn, was forced to bow to Harvard.

A summary of the games played by the leading college elevens follows:

Penn State 53, Lebanon Valley 0; Penn State 20, Franklin and Marshall 0; Penn State 7, Gettysburg 0; Penn State 35, North Carolina State 0; Penn State 28, Lehigh 7; Penn State 21, Harvard 21; Penn State 28, Georgia Institute of Technology 7; Penn State 28, Carnegie Institute of Technology 7; Penn State 13, U. S. Naval Academy 7; Penn State 0, Pittsburg 0.

Lafayette 48, Muhlenberg 0; Lafayette 6, Pittsburg 0; Lafayette 27, Dickinson 0; Lafayette 20, Bucknell 7; Lafayette 28, Fordham 7; Lafayette 35, Rutgers 0; Lafayette 38, Pennsylvania 6; Lafayette 44, Delaware 0; Lafayette 28, Lehigh 6.

Cornell 41, St. Bonaventure 0; Cornell 55, Rochester 0; Cornell 110, Western Reserve 0; Cornell 31, Colgate 7; Cornell 59, Dartmouth 7; Cornell 41, Columbia 7; Cornell 14, Springfield 0; Cornell 41, Pennsylvania 0.

Washington and Jefferson 14, Bethany 0; W. and J. 28, Bucknell 0; W. and J. 54, West Virginia Wesleyan 0; W. and J. 14, Carnegie Institute of Technology 0; W. and J. 14, Lehigh 7; W. and J. 17, Syracuse 10; W. and J. 49, Westminster 14; W. and J. 7, Pittsburg 0; W. and J. 13, West Virginia 0.

Harvard 10, Boston University 0; Harvard 16, Middlebury 0; Harvard 3, Holy Cross 0; Harvard 19, Indiana 0; Harvard 10, Georgia University 7; Harvard 21, Penn State 21; Harvard 0,

Centre 6; Harvard 3, Princeton 10; Harvard 9, Brown 7; Harvard 10, Yale 3.

Yale 28, Bates 0; Yale 14, Vermont 0; Yale 34, North Carolina 0; Yale 23, Williams 0; Yale 14, U. S. Military Academy 7; Yale 45, Brown 7; Yale 28, Maryland 0; Yale 13, Princeton 7; Yale 3, Harvard 10.

Princeton 21, Swarthmore 7; Princeton 19, Colgate 0; Princeton 0, U. S. Naval Academy 13; Princeton 0, Chicago 9; Princeton 34, Virginia 0; Princeton 10, Harvard 3; Princeton 7, Yale 13.

U. S. Naval Academy 41, North Carolina State 0; Navy 53, Western Reserve 0; Navy 13, Princeton 0; Navy 21, Bethany 0; Navy 6, Bucknell 0; Navy 7, Penn State 13; Navy 7, Army 0.

U. S. Military Academy 28, Springfield 6; Army 7, New Hampshire 10; Army 19, Middlebury 0; Army 33, Lebanon Valley 0; Army 21, Wabash 0; Army 7, Yale 14; Army 53, Susquehanna 0; Army 0, Notre Dame 28; Army 49, Villanova 0; Army 0, Navy 0.

Iowa University 32, Knox 14; Iowa 10, Notre Dame 7; Iowa 14, Illinois 2; Iowa 13, Purdue 6; Iowa 41, Minnesota 7; Iowa 41, Indiana 0; Iowa 14, Northwestern 0.

Notre Dame 56, Kalamazoo 0; Notre Dame 57, Depauw 0; Notre Dame 7, Iowa 10; Notre Dame 33, Purdue 0; Notre Dame 7, Nebraska 0; Notre Dame 28, Indiana 7; Notre Dame 28, Army 0; Notre Dame 48, Rutgers 0; Notre Dame 42, Haskell Indians 7; Notre Dame 21, Marquette 7; Notre Dame 48, Michigan "Aggies" 9.

Centre 14, Clemson 7; Centre 14, Virginia Polytechnic Institute 0; Centre 28, St. Xavier 6; Centre 98, Transylvania 0; Centre 6, Harvard 0; Centre 55, Kentucky 0; Centre 21, Auburn 0; Centre 25, Washington and Lee 0; Centre 21, Tulane 0.

California 51, Nevada 6; California 39, Oregon 0; California 14, Washington State 0; California 38, Southern California 7; California 72, Washington University 3; California 42, Stanford 7.

Soccer activities of the year were marked by the organization of the American Soccer League to comprise eight clubs representing New York, Brooklyn, Harrison, Philadelphia, Jersey City, Fall River, Holyoke, and Pawtucket. The Robins Dry Dock eleven was the leading team of 1921, winning the championship cups offered by the United States Football Association and the American Football Association. The Robins captured the first trophy by defeating the Scullin Steel F. C. of St. Louis, 4 goals to 2. The A. F. A. rival to be beaten was the Fore River F. C., the score being 5 to 1 in favor of the Robins.

Efforts made to boost professional Rugby football in the larger cities of the Eastern United States met with little success, but in the Middle West, particularly in Chicago and vicinity, such contests attracted large crowds.

FORDHAM UNIVERSITY. A Roman Catholic university at Fordham, N. Y. C.; founded in 1841. The number of students in 1921 was 2184 and there were 172 members of the faculty. President, Rev. E. P. Tivnan, S. J.

FOREST POLICY. See UNITED STATES DEPARTMENT OF AGRICULTURE.

FORESTRY. A most encouraging development of the 1921 season was the general awakening of public opinion to the necessity of protecting the remaining forests from fire injury and from wasteful exploitation. This was brought about in part by President Harding's proclamation setting aside the week of May 22-28 as forest protection week, and in part by the public press, which rendered efficient service by means of able editorials and suggestive cartoons. National interest was reflected in many of the States.

The growing public interest in timber production and the need for forest protection and reforestation throughout the country was generally evident in the State appropriations for forestry during 1921, which in most cases were substantially increased. According to figures obtained by the United States Forest Service, the total appropriation of 32 States amounted to \$4,065,434, an increase of 78 per cent over that of 1919. California's appropriation advanced from \$45,800 in 1919 to \$398,800 in 1921, an increase of 771 per cent.

FOREST FIRES. Although no forest fires of a catastrophic nature occurred during 1921, yet the fire-fighting funds of the United States Forest Service became exhausted early in the season, showing the total inadequacy of the amounts usually appropriated for this purpose. A hazard of unique nature was created by a tornado which swept the west side of the Olympic Peninsula in the State of Washington on Jan. 29, 1921. Approximately 6,000,000,000 ft. of timber were felled in a tangled mass, creating a most formidable fire trap which threatened not only the down timber itself but also the adjacent forests, including the Olympic National Forest. Due to the effective protective measures carried on coöperatively by the United States Forest Service, State authorities, and private owners, the first and most dangerous season was successfully passed. The loss of marketable timber was very large, due to the nature of the disaster and to the fact that the greater part of the down timber consisted of western hemlock and spruce, both of which species are subject to rapid decay.

The first national forest fire conference ever held was recently completed at Mather Field, near Sacramento, Calif. Representatives from seven national forest districts were present. A programme of some 70 topics, embracing practically every phase of national forest-fire control, was carried out in general discussions and in committee meetings.

In Pennsylvania funds were appropriated for the erection of 50 steel observation towers on commanding elevations, these to be thoroughly equipped with all modern devices for the detection and reporting of fires. Congress evidenced a greater appreciation of the importance of fire protection by increasing the appropriation for fire fighting and, under the provisions of the Weeks Law, enacted March 1, 1911, providing for co-operative fire protection between the National Government and the States, caused a much greater sum, \$400,000, to become available for the year beginning July 1, 1921.

DEPLETION OF THE VIRGIN FORESTS. The United States Forest Service and other agencies continued during the year to emphasize the serious decline in the timber resources of the United States. W. B. Greeley, United States Forester, in his annual report, pointed out that three-fifths of

the virgin forests have disappeared and that the present drain upon the balance is over four times their production. He also directed attention to the vast areas of denuded and unproductive lands which should be used for the growing of forest crops.

Keen interest was manifested among foresters and landowners in general in two proposed Federal forestry bills, known respectively as the Snell bill and the Capper bill, both of which concerned the exercise of public control over privately owned forest lands, one through police powers and the other through the medium of taxation on forest products. Both measures contained provision for the extension of organized fire protection over all classes of forest land. The National Forestry Policy Committee of the United States Chamber of Commerce, holding open meetings in several important cities during the summer season for the purpose of collecting the views of the various interests, announced upon the close of their sessions that there was an apparent willingness on the part of lumber interests to support a constructive national forest policy, the fundamental basis of which should be fire protection.

ALASKA FORESTS. The decline in the forest resources of the United States diverted attention to other sources of supply, notably Alaska. W. B. Greeley, in his annual report as United States Forester, presented some interesting statistics showing that the national forests of Alaska comprise approximately 20,000,000 acres, containing an estimated quantity of 75,000,000,000 ft. of usable timber. These forests yield approximately 86 per cent of all timber used in the Alaskan territory and will in the future probably furnish much material for the United States. Two sales of Alaska pulp timber aggregating 700,000,000 ft. were negotiated by the Forest Service during the year. All bona fide undertakings for the development of timber resources of Alaska are to be encouraged provided such are consistent with the public interest in maintaining permanent production. Transportation by land and sea is deemed the primary need for the proper development of Alaskan resources.

PULP WOOD. The Nation's pulp wood supply received considerable attention during the year. As an illustration of the extent of the industry, it was estimated that a total of 6,114,072 cords of pulp wood were used in the United States in the year 1920. Pennsylvania alone used 489,211 cords, of which it was necessary to import 74 per cent. The Dominion of Canada, realizing the importance of the pulp wood industry, authorized the establishment of a paper and pulp mill in Manitoba to cost not less than \$1,000,000 and a similar mill in British Columbia at a probable cost of \$6,000,000. Pulp and paper manufacturers in general exhibited a keen interest in the possibilities of growing wood for their own use, and many concerns commenced to grow trees for transplanting. The woodland sections of the American Paper and Pulp Association found that the actual cost of commercial tree growing was much lower than had been generally estimated.

THE NATIONAL FORESTS. The net area of the National Forests at the close of the fiscal year ended June 30, 1921, was 156,666,045 acres, a gain of 633,992 acres during the year. The largest single increase unit was 321,360 acres added to the Modoc National Forest in northern California. A

total of 92,072 acres were eliminated from the National Forest during the period, but chiefly in the form of small areas adaptable to agricultural purposes. The total expenditures of the Forest Service during the fiscal year ended June 30, 1921, were \$6,220,822, an increase of \$378,953 over the preceding year, due entirely to increased expenditures for fire suppression. The receipts of the National Forests during the same period were \$4,468,940, a decrease of \$324,542.

FOREST PRODUCTS. The work of the Forest Products Laboratory at Madison, Wis., was continued with success during the year. One of the important problems studied during the year was that of the utilization of second growth timber and of species hitherto deemed of too little value to be worth cutting. Among such inferior species are the jack pine and the aspen, which occur in large stands in the Lake States. The most important new project undertaken at the Forest Products Laboratory was a study of the practicability of cutting timber of the exact size required for specific manufacturing purposes. Since much of this material is now cut from large logs, it was shown that 50 per cent of the lumber is often lost under the present wasteful system.

FOREST RESEARCH. Under the stimulus imparted by the consciousness of rapidly diminishing forests, research received more extended consideration during the year. A noteworthy achievement was the establishment of two new experimental forest stations, one at Asheville, N. C., in the heart of the Appalachian district, the second in Louisiana, in the southern pine belt. Statistics show that the production of merchantable timber decreased 60 per cent in the Appalachian area during the past decade and that the southern pine supply was rapidly diminishing under a policy of unrestrained exploitation which utterly disregarded the future. In view of the importance and wide scope of the problems needing solution in both these areas, as pointed out by E. H. Clapp, Assistant United States Forester, in Circular 183 of the United States Department of Agriculture, entitled "Forest Experiment Stations," these stations were established at a most opportune time and can, if properly supported, do much to remedy a deplorable situation. Agitation for the foundation of similar stations in other parts of the United States was shown in the form of bills presented to Congress in the late fall.

During the year the Swiss Forest Station at Zurich published a report upon an investigation concerning the flow of two streams arising in very similar watersheds, differing only in the amount of forest cover. The results, based on many years of painstaking work, revealed that, whereas the total annual flows were proportionately equal, the flow of the heavily wooded stream was quite constant and without floods, and the watershed of the wooded stream much less subject to erosion and drought injuries.

EDUCATIONAL. The annual session of the Society of American Foresters was held jointly with that of the Canadian Society of Forest Engineers at Toronto, Canada, Dec. 27 and 28, 1921. The annual meeting of the Association of State Foresters was held in the field in New York State in September, at which time representatives from 16 States gathered to study the white pine blister rust control in actual operation. At the second decennial reunion of the alumni

of Yale Forestry School, held in December, 1920, it was announced that 61 per cent of the graduates of the school were actively engaged in various branches of forestry. The Yale Forestry School received a gift of \$300,000 during the year from William H. Sage to be used for the erection of a building which will serve as a memorial to his son DeWitt Linn Sage, of the class of 1907. This building will afford an opportunity of housing the forestry library, long exposed to fire hazard, and of exhibiting museum materials in a satisfactory manner.

MISCELLANEOUS. The use of aeroplanes and air ships as detectors of forest fires continued to receive considerable attention during the year, particularly on the part of large private corporations. It is evident from the experiences obtained that air craft will play a very important rôle in future fire protection, especially in inaccessible areas reached with difficulty by the ordinary means of transportation.

John H. Reisner, in a progress report of forestry activities in China during the year, stated that tree planting continued to show a steady increase. A greater part of the forestry enterprises in China were said to be directed by Americans or American-trained foresters.

The National Geographic Society of the United States, supported by a number of public spirited citizens, purchased the Martin tract, a square mile within the heart of the Sequoia National Park, and in turn donated this tract to the United States—a most worthy example of patriotic effort.

FOREST TREE DISEASES. See **BOTANY.**

FORMOSA, or TAIWAN. An island belonging to Japan lying off the coast of the Chinese province of Fukien. Capital, Dai-hoku or Taipei. Area, 13,839 square miles; population (1918), 3,698,918. Population of Dai-hoku is given at 102,249. The other large towns are Tainan, Kagi, and Taichu. The chief agricultural product is rice and among the others are sugar, tea, sweet potatoes, jute, ramie, and turmeric. Camphor, which is a government monopoly, is raised in the forests. Among other industries are fisheries, sugar manufacturing, flour-milling, tobacco, oil,

spirits, iron work, glass, bricks, soap, etc. Live stock are raised in considerable numbers. Mining has developed latterly. The commerce is largely with Japan. In the foreign trade China and the United States have taken the lead. In 1919 the imports from Japan amounted to 90,526,766 yen and the exports to 141,885,540 yen. The chief exports in that year were: Tea, coal, sugar, and camphor, and the chief imports, opium, rice, oil-cake, beans, and tea seed. The revenue and expenditure for 1920-21 balanced at 94,451,263 yen. The main items of expenditure were internal administration and public works and the main items of revenue were inland taxes and customs and the returns from public enterprises. The Japanese government has subsidized the local budget annually in amounts ranging from 5,000,000 to 9,000,000 yen. In 1918-19 there were 345 miles of railway open for traffic. Post offices in 1919 numbered 166 and telegraphs had a mileage of 692. Formosa was ceded by China to Japan, May 8, 1895, and Japan's civil government was established there March 31, 1896. Colonization on a considerable scale was undertaken by the Japanese in 1909 and a number of Japanese villages grew up with a population estimated in 1916 at 3268. The island is under a Japanese governor-general.

FORNEY, JAMES. Military officer, died, February 2. At the time of his death he was brigadier-general of the United States Marine Corps. He was born at Lancaster, Pa., Jan. 17, 1844; entered the United States Marine Corps as second lieutenant, March 1, 1861, and served in the Civil War. He was on board the *Brooklyn* in the battles of Forts St. Philip, Jackson, and Chalmette; in the capture of New Orleans; and in the attacks on Vicksburg, Baton Rouge, and Galveston. He was in command of the marines in Formosa in 1867, and on various duties thereafter, including, service in the North Pacific squadron; and in command of the marines at various stations. During the Spanish-American war he was in command of the camp of Spanish prisoners from the fleet of Admiral Cervera; and he commanded the first brigade of marines in the Philippine Islands in 1901-02.

FORRER, LOUIS. See **NECROLOGY.**

FORTY-EIGHT, COMMITTEE OF. This is a political organization and consists of representatives from the 48 States of the Union. It is engaged in the organization of a National Liberal Party along liberal lines. In 1921 it organized fourteen State units of the National Liberal Party. It issues a fortnightly political news service to some 400 leading papers and periodicals throughout the country and is rapidly developing a strong constituency. The outstanding feature of the Committee's work is its method. Contrary to other national political movements, it is building up its organization State by State, after which a national conference will be called of delegates from the States so organized. Such a conference is contemplated in 1922. It intends to contest a large number of congressional districts and to obtain a nucleus of representatives who will help the more liberal elements in Congress to a substantial measure of immediate reform. Membership in the Committee or Party is on a dues-paying basis, the amount per month being left to the discretion of each person enrolling. It makes its appeal to "every American citizen dissatisfied with reaction,

resentful of unfulfilled promises, tired of political cure-alls, and ready to work for the constructive changes required to end our economic chaos, our political tyranny, and the madness of competitive armaments." Its platform purposes "the abolition of privilege, meaning by privilege the unjust economic advantage by possession of which a small group controls our natural resources, transportation, industry and credit, stifles competition, prevents equal opportunity of development for all, and thus dictates the conditions under which we live." To accomplish this, it urges "Public control of natural resources by taxation of all land values, including land containing coal, oil, natural gas, mineral deposits, large water powers and large commercial timber tracts, in order to prevent monopoly and speculation, to aid industry, and to force idle lands into use; public ownership of railroads, canals, and pipe lines, including all necessary distributing and terminal facilities, and all necessary means of communication, in order to give the same service to all users; and equal rights, economic, legal, and political, for all citizens, and all Civil Rights, including Free Speech, Free Press, and Peaceable Assembly, as guaranteed by the Constitution."

The National Headquarters are at 15 East 40th Street, New York. J. A. H. Hopkins is Chairman of the Executive Committee; Allen McCurdy is secretary and Charles V. Ingersoll, treasurer.

FOSTER, MURPHY JAMES. Former United States Senator from Louisiana, died, June 12. He was born at Franklin, La., Jan. 12, 1849; studied at Washington and Lee University and graduated at Cumberland College in 1870. He afterwards studied law, and engaged in practice at Franklin, La. He was a leader in the successful campaign against the Louisiana State lottery; governor of Louisiana, 1892-1900; and United States Senator, 1901-13. After this he returned to the practice of law and was appointed United States collector of customs. In politics he was a Democrat.

FOWLER, BENJAMIN AUSTIN. Ranchman, died, April 11. He was prominent in agricultural and irrigation developments in Arizona. He was born at Stoneham, Mass., Dec. 14, 1843; studied at Phillips Academy, Andover, Mass.; and served in the signal corps during the Civil War. He afterwards graduated at Yale, 1868. He was for seventeen years engaged in the subscription book business, and then went into ranching near Phoenix, Ariz. (1899), where he became director of a title and trust company, president of the board of trade, and prominent in other institutions. In 1901 he was a member of the State legislature; and in 1910-11, president of the National Irrigation Congress.

FOWLER, WILLIAM WARDE. British classical scholar and ornithologist died at Hingham, England, in June. He was born at Langford, Somerset, May 16, 1847, studied at Oxford where he took high classical honors and was elected fellow of Lincoln. He held this fellowship throughout his life, but became a tutor in 1873 and sub-rector in 1882. Among his classical writings may be mentioned the volume on *Julius Caesar* in the *Heroes of the Nations* series (1892); *The City State of the Greeks and Romans* (1893); *Roman Festivals of the Period of the Republic* (1897); *Religious Experience of the Roman People to the Age of Augustus* (1911). He wrote his *Year with*

the Birds (1886) which dealt with bird life as observed during his vacations at Oxford and Hingham and in the Alps. This was followed by *Tales of the Birds* and *More Tales of the Birds*, consisting of stories for children. During the war he wrote *Essays in Brief for Wartime* (1916) and in 1920 he published a volume of *Roman Essays and Interpretations*.

FRANCE. A European republic constituting the westernmost state of central Europe, separated from England by the Channel and the Straits of Dover; lying between 42° 20' and 51° 5' N. latitude, and 7° 45' E. and 4° 45' W. longitude; area before the war 207,054 square miles; after the war increased by the departments of Bas-Rhin Alsace, 1843 square miles; Haut-Rhin, 1354 square miles; and Moselle, 2403 square miles, these additions corresponding to Alsace-Lorraine under the German empire. Capital, Paris.

POPULATION. According to the census of 1911 the population was 39,602,258, an increase of about 350,000 since 1906. For other details of that census including population of departments, chief cities, and vital statistics, see preceding **YEAR BOOKS**. The provisional figures of the French census taken March 6, 1921, were published, July 1. The figures given corresponded to those of the census of March 5, 1911, in that they did not include the population of Alsace-Lorraine. The total number of persons residing in France on March 6, 1921, was 37,499,394, as compared with 39,601,509 in 1911. The figures for 1921, however, did not include the members of the French military forces in foreign countries and on the Rhine. There was therefore, a decrease in the population of 2,102,115, from which must be deducted a considerable number of soldiers, as above mentioned. The main reason for this decrease was the fact that France lost during the World War nearly 1,500,000 men, while the influenza epidemic of 1918-19 was responsible for the premature death of several hundred thousand persons. The statistics for 1921 showed that on March 6, 1921, there were 1,415,128 foreigners included in the census, as compared with 1,159,835 in 1911, an increase of 255,293. This increase was accounted for to a great extent by the presence in the northern regions of France of a large army of foreign laborers engaged on reconstruction work and of a considerable number of Italian and Spanish workers in the south of France. The departments of France with the largest number of foreign residents were as follows: The Seine, in which Paris is situated, with 233,849; the Nord with 171,746; Bouches du Rhone, including the city of Marseille, with 147,057; the Alpes Maritimes, 100,717, a large number of whom are foreign residents in the fashionable resorts on the Riviera; the Var and Herault, two of the large wine-producing districts, employing foreign labor, with 52,495 and 52,211, respectively.

EDUCATION. Primary education is free and compulsory for children from six to thirteen years of age. In 1919-20 primary and higher schools of France and Algeria excluding Alsace-Lorraine, numbered 68,015 with 102,433 teachers and 3,835,816 enrolled pupils. The infant schools numbered 2849 with 6241 teachers and 227,156 enrolled pupils. Secondary education is supplied by the state in the lycées and by colleges maintained by the communes; also by free schools supported by private individuals and associations.

The public secondary institutions in France and Algeria in 1919 excluding Alsace-Lorraine were as follows: Lycées 67,730 pupils; communal colleges 32,500 pupils. For girls there were in 1919, 55 lycées and colleges, with 39,274 pupils, and 47 secondary courses with 5894 pupils. Higher education is supplied by the state universities and by special schools directed by the state and also by various private faculties and schools. The universities are 16 in number and are situated at the following places: Paris, Strasbourg, Lyons, Bordeaux, Toulouse, Grenoble, Montpellier, Aix-en-Provence, Rennes, Poitiers, Nancy, Caen, Dijon, Lille, Clermont-Ferrand, and Besançon. Of these the largest is the University of Paris with 11,026 students, July 31, 1919. The next in numerical importance are Bordeaux, 2241; Toulouse, 1764; Grenoble, 1724; Aix-en-Provence, 1179; Strasbourg, 1122. The number of students in the faculties of law, medicine, letters, sciences, and pharmacy in the state institutions numbered in 1919, 29,890. Of these the most numerous attended were in their order of importance, law, medicine, letters, and sciences. Besides the above there are various higher institutions dependent on the ministry of public instruction including the Collège de France; the Museum of Natural History, which gives instruction in sciences; the practical school of higher studies with its seat at the Sorbonne giving instruction in history, philology, and the sciences; the superior normal schools; the École des Beaux-Arts and many others. Besides these there are the diverse institutions of technical instruction dependent on other ministries, including schools of commerce, agriculture, military science, mines, etc. Finally there are many technical schools of lower grade dependent on the ministry of commerce.

AGRICULTURE. The following table shows the acreage and production of cereal crops in France in 1920 as compared with 1913, 1918, and 1919, the acreage and production of Alsace-Lorraine being included in the figures for 1920, but not in those for previous years:

	Year	Acres sown	Metric tons produced
Wheat:			
1913		16,166,134	8,691,905
1918		10,992,962	6,143,584
1919		11,375,974	4,965,370
1920		12,586,435	6,448,218
Spelt:			
1913		304,062	149,064
1918		206,418	95,982
1919		238,258	96,794
1920		277,671	127,987
Rye:			
1913		2,905,230	1,271,475
1918		1,745,718	734,986
1919		1,906,608	729,937
1920		2,147,757	876,139
Barley:			
1913		1,878,500	1,043,760
1918		1,371,083	598,200
1919		1,386,700	499,984
1920		1,640,551	835,688
Oats:			
1913		9,832,949	5,182,601
1918		6,720,870	2,561,976
1919		7,055,697	2,493,584
1920		8,278,637	4,229,782
Buckwheat:			
1913		1,115,502	566,435
1918		769,137	224,180
1919		812,083	271,969
1920		869,659	369,521

	Year	Acres sown	Metric tons produced
Corn:			
1913		1,132,800	543,075
1918		753,693	247,907
1919		736,050	253,411
1920		829,183	387,814
Potatoes:			
1913		3,825,345	13,585,965
1918		2,940,019	6,519,722
1919		3,103,899	7,730,562
1920		3,560,424	11,637,765

The average weight per bushel in 1920 was: Wheat, 58.7 pounds; spelt, 56.6 pounds; rye, 55.5 pounds; barley, 49.6 pounds; oats, 36.6 pounds; buckwheat, 50.3 pounds. Wine and cider production in thousands of gallons in 1920 was as follows: Wine, 1,310,719; cider, 212,005. The production of fruits and nuts in 1920 in metric tons was as follows: Apples (exclusive of apples for cider), 68,480; pears, 34,315; olives, 22,864; cherries, 21,614; plums, 20,177; peaches, 17,255; apricots, 7466; strawberries, 6737; currants, 2153; chestnuts, 152,924; walnuts, 31,440; almonds, 4370; and smaller quantities of oranges, mandarines, lemons, raspberries, etc.

The number of farm animals, Jan. 1, 1920, was as follows: Horses, 2,413,190; cattle, 12,373,660; sheep, 8,990,990; pigs, 4,080,360; goats, 1,166,770; asses, 303,100; mules, 167,180. At the end of 1920 cattle numbered 12,755,720; sheep, 9,376,630; and pigs, 4,585,280.

In 1921 according to the report of the Minister of Agriculture the cereal crop of France, including the Alsace-Lorraine region was as follows: Wheat, 5,329,830 hectares; 87,842,770 quintals; meteil, 108,220 hectares; 1,460,880 quintals, rye, 874,280 hectares; 11,302,030 quintals. These figures show that the wheat crop nearly approached the level of production before the war, which was remarkable in view of the fact that the area under cultivation was nearly one million hectares less. The average output per hectare was the highest that had ever been noted in France. The 1921 crop was slightly superior to the average annual production in the period 1909-13.

Before the war the productive forests of the country had an acreage of about 185,000,000, of which about 177,000,000 were under private ownership the rest being in possession of the central government or of the communes. During the war vast areas were destroyed not only at the front but in the adjoining regions where they were drawn heavily upon for firewood, trench timber, and other needs. The war zone comprised 11 of the forest-bearing departments. The loss to France was estimated at an annual shortage of over 35,000,000 cubic feet. A special reconstitution service was established under the Water and Forest Board after the war which in 1921 was actively engaged in measures for reforestation.

Silk production is carried on under government encouragement, especially in the departments of Sard Ardèche, Drôme, and Vaucluse but also in twenty other departments. In 1918 there were 16,057 producers and the total value of the output was 22,258,000 francs; in 1919, 52,401 producers and 20,121,000 francs; in 1920, 65,592 producers. While the figures for the value in 1920 were not available the total output in that year was 9202 kilos, nearly four times as great as that in 1919.

MINERAL PRODUCTION. The leading minerals and the mineral production in metric tons in 1918 were as follows: Coal and lignite, 26,259,083; iron ore, 1,572,000; pig iron, 1,292,958; worked steel, 1,800,079; finished iron and steel, 193,812. The output of pig iron in 1919 was 2,412,149 metric tons. The coal output in 1920 was 25,276,000 metric tons; the output of the Saar basin was 9,410,433 tons. In 1919-20 the sugar factories yielded 155,101 metric tons of refined sugar. In 1920 the production of alcohol was 28,489,000 gallons.

According to the estimates of 1921, the coal deposits in France at a depth of not more than 3937 feet amounted to 13,143,000,000 tons, and at a depth of 5905 feet amounted to 17,600,000,000 tons. In the year before the war France produced 40,844,000 tons and consumed 64,834,000 tons, obtaining the additional 23,990,000 tons from England, Belgium, and Germany. The following table shows French coal production during the eight years ending with 1920:

	Tons
1913	40,844,218
1914	26,568,258
1915	19,523,863
1916	21,310,000
1917	28,891,723
1918	25,000,000
1919	22,476,786
1920	25,274,304

The production of iron ore in France during the first six months of 1921 reached the following figures: January, 1,516,662 metric tons; February, 1,291,621 tons; March, 1,270,947 tons; April, 1,213,787 tons; May, 1,125,319 tons; and June, 1,114,532 tons. The total at the end of June accordingly was 7,532,868—1,693,464 tons more than the output in the first half of 1920. Of pig iron, the half-year's output aggregated 1,744,644 metric tons, against 1,272,518 tons in January-June of 1920. This gain of 37 per cent in pig-iron production was approached but not quite equaled by the output of steel. For January-June the steel plants of France had a total output of 1,527,950 metric tons of steel ingots and castings, against 1,179,998 tons in the first six months of 1920, a gain of practically 30 per cent.

RECONSTRUCTION. Figures for the damage done to industrial establishments during the war showed that at the time of the armistice the establishments suffering damage numbered 20,603 and that on the basis of their value in 1900 the loss exceeded 7,000,000,000 francs, of which 920,000,000 francs occurred to the coal mines. Moreover the productive power of the damaged works had been reduced from 25 per cent to 93 per cent, the chief loss being in the textile industry. The 10 devastated departments contained some 30 per cent of French industries and produced 35 per cent of the sugar, 50 per cent of the coal, 63 per cent of the steel, 81 per cent of the textiles and 92 per cent of the iron, of the country. After the armistice a Board of Industrial Reconstruction was established by the government and this was aided by the Central Associations for the Revival of Industrial Activity in the Invaded Areas, by the Central Purchasing Board, and by regional committees. Excellent work had been done by all these organizations. As an illustration of the difficulties in the way of distributing

building materials, foodstuffs, and other means of reconstruction, it may be noted that 5600 kilometres of railway line had been destroyed or rendered useless, 50 bridges, 12 tunnels, 51,547 kilometres of highway and 3168 engineering works of various kinds, to say nothing of the obstruction of canals. Six months after the close of 1918 about ten per cent of the personnel of the damaged works had returned. A year later, July 1, 1920, the personnel numbered 42 per cent of that employed in 1914. At the end of another year, July 1, 1921, it was reported at over 47 per cent. The main difficulty in the way of reconstruction was this necessity of recruiting the personnel. Everywhere there was a scarcity of labor which was roughly estimated at 250,000 men. The housing problem was serious, but considerable progress had been made toward solving it.

THE DEVASTATED REGIONS. During 1921 monthly statistics were published by the government showing the progress made in restoring the invaded regions. These indicated the steady return of workmen to the factories, which had been in part restored. As a result of an investigation the following figures in respect to output were published in October: In general the output of the factories of the damaged or destroyed factories which had been restored, amounted to about 50 per cent of the output in 1914 and it was estimated that they were able to employ about 55 per cent of the manual labor engaged in them before the war. The details of the leading industries were as follows:

Industries	Production per cent compared with 1914	Labor per cent compared with 1914
Textiles	45	55
Metallurgy	50	55
Ordinary Metal Working	66	63
Chemicals	58.5	63
Cloth and Clothing	58.5	73
Hides and Leather	45	67
Mines	31	36
Total	50	55

In order to employ an amount equal to that before the war, the output would have to be brought to the same point, which was difficult in view of the shorter hours of work. But on the other hand there was the advantage of a better system in the distribution of manual labor and better hygienic conditions, etc.

WAGES. The course of wages from 1911 to 1921 was the subject of official investigation of which the results were published toward the close of the year. The average daily wage at the beginning of 1921 for manual laborers was 14 francs; weavers, 143 francs; workmen in other industries from 16 to 20 francs; working-women from 9 to 10 francs. The above, however, only applied to cities other than Paris. In Paris the daily wage of workmen was generally from 25 to 32 and for working-women about 16 francs. In comparison with 1911 the hourly rate in cities other than Paris had about quintupled and the daily wage had a little more than quadrupled. The rate of increase in particular industries from 1911 to 1921 was as follows: Bricklayers, 378 per cent, terrassiers and stone cutters, 350 per cent; weavers, ropemakers, coopers, blacksmiths, and day laborers (unskilled) 330-335 per cent.

These trades showed the greatest increase and they were the ones that had been the lowest paid before the war. The rate of increase was the slackest in the case of printers and binders—275 to 280 per cent. There were considerable differences in the level of wages in the different regions, the highest increase occurring in the liberated regions. As to the other trades, wages at the beginning of 1921 were from four to five times higher than in 1911. In the textile industries the spinners of Roubaix received an increase of

431,360,000 francs (\$83,252,480), respectively. The adverse French trade balance in 1920 fell to 12,970,194,000 francs, as compared with 23,919,667,000 in 1919, a net decrease of 10,949,473,000 francs. Expressed in dollars these figures are even more striking, the adverse balance in 1919 having been \$3,276,666,712 and in 1920 only \$894,496,139, a net gain for French trade of \$2,382,170,573.

The statistics of French trade, exclusive of specie, and bullion, by principal countries, during 1920, 1919, and 1913, are given in the following table:

Countries	1913		1919		1920	
	France	Dollars	France	Dollars	France	Dollars
IMPORTS						
United States.....	894,742,000	172,685,206	9,217,844,000	1,262,718,356	7,061,721,000	487,015,241
United Kingdom.....	1,115,136,000	216,221,248	8,800,911,000	1,205,604,247	6,746,959,000	465,307,517
Germany.....	1,068,800,000	206,278,400	755,272,000	103,461,918	2,658,429,000	183,339,931

404 to 485 per cent and the spinners of Troyes, of 637 per cent; weavers of Roubaix, 562 per cent and weavers of Rouen, 388 per cent. The average increase in agriculture was 400 per cent. As to the relation to the cost of living, it was believed that for France as a whole the movement of wages about kept pace with that increase. In 1916 the increase of wages had not responded to the mounting cost of living but at that time a large number of workmen were engaged in war industries at far higher rates than were paid in private industry. In 1917 the wages of the unskilled workmen had partly caught up to the increased price of necessities but had surpassed it on the average in 1919 and at the beginning of 1920. Then the decrease in wages in 1921 brought down the index figure to a point close to that of the index figure of prices and even somewhat lower.

COMMERCE. In 1920 the total foreign trade of France, exclusive of gold, silver, bullion, and the baser coins, reached 57,839,708,000 francs or \$3,968,945,379 (at 14.50 francs to the dollar), as compared with 47,678,867,000 francs or \$6,531,351,644 (at 7.30 francs to the dollar) in 1919, and 15,301,549,000 francs or \$2,953,198,957 (at 5.18 francs to the dollar) in 1913. The value of imports amounted to 35,404,951,000 francs (\$2,441,720,759) as against 35,799,267,000 francs (\$4,904,009,178) in 1919, and 8,421,332,000 francs (\$1,625,317,076) in 1913; while the value of exports was 22,434,757,000 francs (\$1,547,224,620) in 1920, 11,879,600,000 francs (\$1,627,342,466) in 1919, and 6,880,217,000 francs (\$1,327,881,881) in 1913. Imports of gold, silver, bullion, and the baser coins in 1920 amounted to 129,916,000 francs (\$25,073,788), as compared with 176,143,000 francs (\$33,995,599) in 1919 and with 974,980,000 francs (\$188,171,140) in 1913, and the value of exports during 1920, 1919, and 1913 was 425,401,000 francs (\$82,102,393), 36,601,000 francs (\$7,063,993), and

From January 1 to November 30 the imports amounted to 20,394,209,000 francs, and the exports, to 19,370,781,000 (merchandise), or an excess of imports of more than a billion francs. During the same period the year before the imports had amounted to 27,189,071,000, and the exports, to over 16,557,711,000.

Much was said during the year about commercial relations with Spain which were far from satisfactory. The new Finance Minister of Spain, Señor Cambo, had been appointed to that position after serving in parliament as a representative from Barcelona. It was believed that his financial policy was influenced by the requirements of the large Catalonian manufacturing towns, which were complaining of the difficulties occasioned by the rate of exchange and were threatening to close their factories, if the central government did not protect their industries by increasing the duties to the necessary degree. In France it was desired that French products should enter Spain under more favorable conditions. In April the Spanish government was asked to make certain reductions on French imports and to enter into a provisional commercial agreement which would relieve France from the heavy charge resulting from the surtax that compensated for the rate of exchange, but this was refused by the Spanish ministry. Later the French ambassador at Madrid informed the Spanish government that he considered the present tariff then in force wholly unacceptable as a basis for an understanding. There seemed no better prospect from the French point of view from the tariff bill which was to be made public on December 31. The tariff measures taken by Spain during the year aimed not only at the protection of national industries but at the suppression of all foreign competition. As an instance of Spain's tariff policy, the French cited the fact that the Ministry of War in the autumn refused a delivery

of 180,000 military blankets that had been proposed by a French group at a price of 7 francs apiece and had turned over the order to Catalan manufacturers at a price of about 40 francs apiece. French writers complained that a Chinese wall was being set up between the two countries by Spain. Finally the French government announced the termination of the *modus vivendi* in respect to Franco-Spanish trade, November 10. The reason for this according to the press was the failure of the Spanish cabinet to meet the requests of the French government for a new agreement that would result to the advantage of both countries. The new tariff would not serve as a basis for such an agreement and the Spanish government had not shown good will toward the French proposals. The termination of the *modus vivendi* caused much concern in Spain where it was extensively discussed in the press.

About the same time that France terminated her commercial understanding with Spain she pursued the same course with Italy, denouncing the accord with that country on November 1, to take effect after February 1. The news was received in Italy with concern but there was no indication of an actual rupture. The delay before the existing arrangement terminated gave time for matters to adjust themselves. The French defense of this action was that it was required by the necessities of French merchants. The clause of the treaty which gave France the most favored treatment had become a dead letter and the collection of customs duties had increased the charges on French products to a point in many cases where they were ten times as heavy as before the war. According to French accounts, French commerce was treated no better in Italy than in Germany.

FINANCE: THE BUDGETS, AND THE DEBT. The ordinary budget for 1921 was as follows: Ordinary expenditure, 22,327,000,000 francs; extraordinary expenditure, 5,498,000,000; total, 27,826,000,000; ordinary receipts 19,735,000,000; extraordinary receipts, 5,228,000,000; total 24,963,000,000. Special budget expenditure 16,539,000,000. The national debt, March 1, 1921, was 302,000,000,000 francs, as compared with 27,000,000,000, Aug. 1, 1914. Down to Jan. 1, 1921, France had advanced to the Allied governments the sum of 8,873,000,000 francs. The chief items being as follows in millions of francs: Russia, 4210; Belgium, 2286; Serbia, 706; Poland, 431; Greece, 376; Czecho-Slovakia, 100.

The budget for 1922 was adopted in the Chamber, December 15, as follows: Expenditures 25,140,000,000 francs; receipts, 24,327,000,000 francs. At the close of the year the national debt of France was placed at 328,000,000,000 francs of which, according to a statement in the French Senate in December, 146,500,000,000 were incurred after the war.

FINANCIAL DISCUSSION. In the autumn there was much discussion in the press of the efforts of the finance committee of the Chamber to balance the budget and keep within the ordinary budget the exceptional expenses. In the Chamber there were frequent questions on this subject addressed to the Minister of Finance, the Prime Minister, and the Minister of War. The policy of the Budget Commission was to diminish expenses but was criticised on the ground that it sometimes confused economies with reduction of credits. An economy would result from the removal of a

charge or an improvement of the service, whereas a reduction of credit simply meant as a rule a demand for a supplementary credit somewhere else. First of all the Commission had decided as a means of reducing expenses to put an end at once to the Cilician expedition, and a treaty of friendship with Turkey was in consequence brought about. As to Morocco, the question had come up as usual and some had contended that the effectives in Morocco should be reduced but such a course did not seem advisable. In regard to the war budget the policy had been to oppose any reductions that seemed to threaten the national security, but others had been accepted, for example, reduction of the credits for the manufacture of war material, certain reductions of the effectives, increase of the time of leave for soldiers, etc. The wisdom of this policy was questioned in certain quarters, in view of the European situation and the doubt whether Germany was either disarmed or peaceful in her intentions.

A careful summary and analysis of the budget was made public in a general official report in November, of which the chief points were as follows: The principle upon which the budget was based was the necessity of restoring confidence and of relieving productive energy from the danger of disastrous social experiments and from excessive burdens. The total expenses at that time were placed at 24,953,239,027 francs and the total receipts at 23,327,980,897 francs, thus leaving a deficit of 1,625,258,130 francs. The deficit of ordinary expenses as compared with ordinary receipts was 1,976,000,000 while the excess of extraordinary receipts over extraordinary expenses was 350,000,000. This would leave the actual deficit as above and it was expected that this deficit would be partly covered by the surplus accruing from a better financial administration. It seemed certain that the budget would balance without recourse to a loan since in place of the securities remitted in payment of the extraordinary tax on war profits would be issued treasury bonds to the required limit. These bonds would not represent any increase of the public debt and the transaction would simply mean the substitution of this amount of consolidated debt by an equal amount of floating debt. Nor would new taxes be necessary for the balancing of the budget. As to the effecting of economies, Parliament must not consent to any expense that was not absolutely necessary. There were many difficulties in the way. Certain measures of economy would be disastrous at a time when there were so many causes of disturbance and so great uneasiness. For example, in the matter of national defense: On the eve of the Disarmament Conference the naval Powers had increased their budgets; in Germany there was a strong current of pan-Germanism; and the League of Nations had given no signs of ability to maintain peace. Nevertheless there were means of economy that seemed practical, especially the suppression of monopolies. Although some of these services could best be administered by the government, it had appeared that the government conducted them at a loss and that an output inferior to what they would produce under private industry, as for example in the case of telephones and tobacco. It was recommended that tobacco should be turned over to private enterprise to the advantage both of the public treasury and the consumers. Also it

was possible to reduce the number of public functionaries. Already the government had proposed the striking from the list of 42,000 and even if that were done the number would still remain 147,000 greater than in 1914. It was argued that a measure of financial reorganization was necessary in order to permit the government to apply the fiscal laws voted by the legislature. According to the chairman of the finance committee the maximum to be expected from Germany was 68,000,000,000 gold marks. France needed for reconstruction between 60,000,000,000 and 80,000,000,000 francs. There was also the amount needed for pensions, placed at 4,000,000,000, and for interest on the sums already borrowed on this account placed at 2,000,000,000. In the budget discussion the proposal that the ordinary budget expenses should be covered by loans or by inflation of the currency was condemned. Of the total expenditure, interest and the administration of the public debt required 12,866,000,000 francs, leaving a little over 12,000,000,000 francs for other expenditures of which 4,821,000,000 were allotted to national defense, leaving a balance of 7,266,000,000 for foreign affairs, finance, education, agriculture, public works, etc. No new taxes were proposed, the taxation during the coming year being expected to yield more than present conditions indicated.

Debate in the Chamber of Deputies, which commenced on November 28, terminated December 15. The principles brought out in debate may be summed up as follows: Germany to be held to strict execution of her pledges; no new taxes to be imposed until the public is educated to present tax legislation; fiduciary inflation to be checked; and reduction to be effected in the operating expenses of the government. In carrying out this last principle provision was made for more efficient operation of the government monopolies and elimination of 50,000 government employees during 1922, about 35 per cent of the additional employees taken on since 1914.

FINANCE: TAXATION. During the first ten months of the year the returns to the French treasury from indirect taxes and monopolies amounted to 10,954,760,500 francs which was 951,550,400 francs less than the budget estimates. This difference was mainly due to the failure of the tax on business to yield the anticipated results. The customs tax also showed a lower yield than was expected, being about 729,037,000 francs. Other classes falling below the budget estimates were: The tax on stock exchange operations, 10,237,500 francs; the duty on wines, cider, and perry, 19,483,000 francs; spirits and costly wines, 27,006,000 francs; postal monopoly, 40,482,700 francs. On the other hand, the following classes showed an excess beyond budget estimates: Registration, 147,348,500 francs; stamps, 104,311,500; personal property tax 232,089,000; automobile tax, 52,230,000; railway transportation tax, 16,063,000; tax on petrol, 41,433,000; tobacco monopoly 230,266,000; and several other classes. From the revenue of the state domain the treasury received 631,985,900; and from the liquidation of stocks, 1,383,658,700. From the general income tax and taxes cedulaire only about a quarter of the total was collected, namely, 495,574,000 francs. In 1913 less than 20 per cent of the French revenue was supplied by direct taxation, while the 1921 estimates, taking a total

of official direct taxes, inheritance taxes, taxes on securities, war profits tax, and the portion of the incidence of the turnover tax which is undoubtedly direct, showed direct taxes as amounting to from 40 to 50 per cent of the total revenue. The depression of 1920-21 caused an increased share of these taxes to fall on business, and they were seriously felt for the first time during that period. The high points in the new régime were the income and "business turnover" taxes. The latter was very much favored by French businessmen at first, because they felt that the public would pay it. But the period of low prices and depression which followed caused the merchant to receive the greater part of the load. The existing form of the income tax was likewise objected to on the ground that agricultural interests and large fortunes did not pay their share, and that labor was exempt. Coming at a time when business was slowly and painfully issuing from a period of deep depression, this burden was acutely felt and served to impede progress, the more so since the new taxation had been an important factor in persuading investors to place their savings in tax-free government securities rather than in productive enterprises.

The following interpretation of French policy represents the point of view of its numerous critics during the year: The central fact of French finance was the expectation of German payments. Its operations were based largely on false hopes, and consisted largely in a sort of juggling of accounts, such as carrying as extraordinary expenses all amounts in excess of receipts from revenue and taxation, trusting to ultimate solvency by means of German reparations. In the course of the year, however, the government's anticipation became less sanguine. In March, M. Briand was still insisting on Germany's payment of sums which economists everywhere regarded as impossible, and the French finance minister, M. Doumer, was asking for still more. The former president, M. Poincaré, consistently with his extreme nationalism professed surprise that Germany was not made to pay on the exact date appointed the installment of twelve billions which was due. The government was even criticised for accepting as the total German debt, so small an amount as one hundred thirty-two billions. Rather than do this the government ought, according to the critics, to have seized the Ruhr basin. In effect the French budget carried on the deficit side of its account the expenditures in the invaded regions and war pensions, and on the credit side, the expected contributions from Germany. Gradually, however, French public men began to realize that Germany would be unable to meet her obligations. Then came the separate agreement of Wiesbaden for the payment of a portion of the debt in kind. The rapid collapse of the mark was one of the causes of the change in French expectations. Certain French writers at the close of the year admitted the danger of an insolvent Germany, and many articles were written to the effect that Germany would default in her January payment, not because of obstinacy, but because of lack of money. The Reparations Commission went from Paris to Berlin to study the causes of the disaster. From this time on the cry in France that Germany must and will pay which had been continuing for three years, and which was the basis of the French

financial policy, tended to be less unanimous. From the budget figures the deficit that France would have to face appeared to be only one or two billions, but in reality it was from twenty to twenty-five billions, and this vast amount would have to come from public loans, taxation, the issuing of paper money, etc. If Germany were really unable to pay, the French financial policy of the past three years would thus have been utterly wasted. The French press was unwilling to face this possibility, and it was generally argued in the newspapers that the collapse of the mark had occurred because the Germans desired it to collapse. In some quarters it was argued that France would have to resort to military measures.

FINANCE: QUESTION OF THE DEBT. The debt figures above quoted, namely, 328,000,000,000 francs of which 146,500,000,000 had been incurred since the war, were those presented by a French Senator, M. Chéron, before the Senate at the close of the year. Of this indebtedness 69,000,000,000 consisted of advances against the German indemnity for reparations, and was classed in the budget as recoverable; but M. Chéron estimated that at most 45,000,000,000 of that sum would be recovered by France in the next eight years and that during the same time France would have spent a further 100,000,000,000 on reconstructions and pensions.

Another large item in this increase of indebtedness was 49,000,000,000 francs due to the breaking of the fixed exchange convention by England and America in March, 1919, with the consequent fall in the value of the franc. These figures of indebtedness were not admitted by the government, the finance minister, M. Doumer, declaring that he estimated the debt at 290,000,000,000 as "he did not believe any of the Allies would seek to be reimbursed at the present rate of exchange." Another item on the account was 28,000,000,000 for such expenses as the valorization of the mark in Alsace. According to M. Chéron the French debt on Jan. 1, 1930, would amount to 425,000,000,000 and would need at five per cent over 21,000,000,000 to meet interest. But the total revenue for 1921 was only 24,327,000,000. On what, then, was France to live, he asked. Interest on the public debt would absorb the total receipts of the budget. The inference drawn by him and other Senators from this analysis was that the Premier, M. Briand, must at all costs keep the promise he made to the Chamber that at the approaching conference at Cannes the obligations of Germany would not be reduced by a single centime.

INTERNAL WATERWAYS. In the autumn the government was concerned with two measures that had just passed Parliament for the development of the canal system. The first concerned the canals from the Marne to the Rhine, and from the coal beds of the Saar, and the canalization of the Moselle between Metz and Thionville; the second with the canals of the Berri, the Nivernais, the Midi, and the branch canal of the Garonne. These projects were part of a programme of public works that had been developed for 1921, including besides these schemes for canals, various plans for the distribution of electric power. Its realization was expected to involve an expense of thirty billions, which was distributed over a period of 15 years.

SHIPPING. The vessels entered and cleared in 1919 with their tonnage were as follows:

Entered		Cleared	
1919	1918	1919	1918
French.... 6,579	6,022,000	French.... 3,637	3,613,000
Foreign... 27,059	16,812,000	Foreign... 8,737	5,777,000
Total... 33,638	22,834,000	Total... 12,374	9,390,000

RAILWAYS. The railways of France naturally were in a very serious condition after the war and the efforts to secure the rehabilitation of the various systems of both those that suffered actual damage in the invaded region and those where the inevitable effects while less direct were quite serious. This of course was reflected in the financial and operating results which in 1920 for the six important railway systems in France, namely: the Nord; Est; Paris, Lyons & Mediterranean; Paris-Orleans; Midi, and Etat, showed a very disastrous deficit, the average operating ratio for the entire six roads being 135 per cent, that for the State Railway being 153 per cent, which was the largest of the six.

For the year 1920 the gross deficit resulting from operation and charges on capital for all six roads amounted to 3,007,500,000 francs (at a normal rate of exchange \$601,300,000). For the seven years, 1914 to 1920, inclusive, the total gross deficit amounted to 5,574,400,000 francs, or \$1,114,880,000, there having been a loss during each year of that period.

The following table shows the relative increases in numerous items of expense for the year 1920 as compared with the year 1913:

Increase in number of operative locomotives..	5.8	per cent
Increase in power of operative locomotives...	17.5	per cent
Increase in number of freight cars.....	15.5	per cent
Increase in capacity of freight cars.....	22	per cent
Increase in operating ratio.....	116	per cent
Increase in traffic receipts.....	167	per cent
Increase in passenger receipts.....	103	per cent
Increase in operating expenses.....	470	per cent
Increase in cost of wages.....	340	per cent
Increase in number of employees.....	40	per cent

* This does not include receipts from the handling of war traffic.

In round figures the operating expenses of the French railways in 1920 were approximately \$1,380,600,000 (par exchange) as compared with \$225,000,000 in 1913. The enormous increase was due to higher cost of fuel and supplies, increased forces due to shorter hours and to higher wages, as indicated in part above.

The number of railroad employees on the different roads in 1913 and 1920, and the amounts paid in wages are shown below in a striking comparison:

	Number Employees		Wages (millions of dollars)	
	1913	1920	1913	1920
Northern....	53,053	76,632	24.2	105.0
Eastern....	54,259	75,326	22.8	94.0
P. L. M....	81,000	118,577	41.8	160.0
Midi.....	27,489	40,586	8.6	47.8
Orleans....	50,338	72,179	19.0	98.0
State.....	78,805	106,586	32.6	120.2
Totals ..	344,944	489,886	159.0	625.0

Under the term "wages" are included indemnities growing out of the war which were in 1920 incorporated in the sums paid as wages.

There was an increase in wages in 1919 and again in 1920.

The cost of fuel on all the French roads increased from \$35,000,000 in 1913 to \$398,200,000 in 1920. Total cost of operation of individual roads compares as follows (millions of dollars):

	1913	1920
State.....	55.4	275.2
Northern.....	41.2	232.0
Eastern.....	37.8	174.0
P. L. M.....	67.8	366.0
Orleans.....	36.2	238.0
Midi.....	16.6	95.4
Totals.....	255.0	1,380.6

The total length of railway line in France in actual operation, in 1921 was 26,250. This included the Alsace-Lorraine railway system in the north which was being run as a second government railway and was an integral part of the French national system. In addition about 761 miles of line were under construction in 1921 and 688 miles of new lines were projected.

The mileage of the six principal lines in 1921 was as follows:

	Miles
Paris, Lyons, & Mediterranean.....	6,078
State.....	5,599
Paris-Orleans.....	4,844
Est.....	3,071
Midi.....	2,546
Nord.....	2,358

Except the State railway of course, the other systems mentioned were incorporated companies operated under concessions that would expire between 1950 and 1960, at which time the line and equipment would revert to the government under certain conditions of payment while the government had the right of purchase under certain specified conditions. In some cases there was a guarantee against a deficit while for the Nord and the Paris, Lyons, and Mediterranean was temporary, expiring in 1914, while for the Est it was to expire in 1934 and for the Orleans and the Midi it held good through the life of the concession. The Nord had never applied for the government guarantee prior to the war, while the P., L. & M. and the Est have repaid their debts, the former even was ready to share its profits with the government. Special legislation was passed to enable the various lines to operate during the war. At the beginning of hostilities, the financial position of the French railways was as follows: In 1913 three companies had shown a surplus—the P., L. M., \$1,600,000 and the Est and Nord about \$1,400,000 each. Two companies had a deficit—the Paris-Orleans \$3,400,000 and the Midi about \$200,000. The State railway alone showed a deficit of \$13,400,000. One explanation of this last statement was that the management of the State railway had always been much inferior to that of the private companies. When in 1913 the operating ratio of the companies rose from 55 per cent to 61 per cent, that of the State railway reached 85 per cent. Although the traffic conditions of the Orleans railway and the State railway were very similar, the first was able to obtain a net yield per mile of \$5220 and the second \$1628 only. Under these and other circumstances it was not strange that public

opinion had changed and in 1921 was in opposition to any extension of government operation and in some cases the abandonment of government monopolies as unprofitable and impractical was urged.

Obviously such a situation called for heroic measures and after a thorough canvass of the question a Railway Act was passed by the French Parliament which involved a complete reorganization of the French railroads. This provided for the operation of the six main railway lines of France under a single agreement with the government. There was involved first of all the pooling of the net revenues into a common fund, from which any deficits of weaker lines would be paid. This fund would be maintained at a specific figure, after an initial contribution had been made by the state, by periodic advances or reductions of tariffs, as required. The maximum rates would be fixed by the government and all surpluses, after payment of guaranteed dividends, were to pass into a general fund for the benefit of all roads and increases in dividends were only possible by a "management premium" based upon efficiency of operation.

The new law provided a supreme council in which the operating companies, the government, and the public will be represented. This body will serve in a consulting capacity but will formulate the future policies of the railways, which will be binding on all the companies. In all matters of general policy the government would exercise a supervisory control, leaving to the corporations the actual administration and operation of the lines. The state guaranteed operating expenses, bonded indebtedness, and preferred dividends, thus making it easy for the lines to raise the large amount of capital necessary for improvements and extensions.

The Higher Council of Railways, just mentioned, was to be composed of 60 members; 30 representatives chosen by the Minister of Public Works from the nation's most important interests (shipping, industry, etc.), 12 representatives elected by the railroad employees and 18 representatives of the railway administration (2 directors and the general manager from each of the 5 existing private companies, and the president, vice-president, and manager of the state railway).

In addition to the Higher Council there was provided an executive committee or "board of management" consisting simply of the 18 representatives of the railway administration who are members of the Supreme Council—to be the actual managing body, but both the board of management and the Supreme Council of Railways to be under the authority of the Ministry of Public Works.

Furthermore the work of rehabilitation and improvement was not all organization. France long since had realized cost of fuel; detailed plans and estimates had been prepared for the electrification of 5000 miles of railways to be operated as far as possible by the utilization of the water-power resources of the nation in electrifying rail lines. Power stations operated with coal were to be installed in the vicinity of Paris and other large cities to supplement the hydro-electric plants.

Finally a system of through connections was definitely planned, to better the communication with Central Europe, the Near East, and the Orient. A line, passing through Nantes, La

Rochelle, Bordeaux, and Lyons, was to reach Switzerland, Northern Italy, Czecho-Slovakia, the Danubian countries, the Balkans, and Constantinople; also through Switzerland, Vienna, and Budapest. Another line, more to the north, was planned to pass through Harve, Paris, Strassburg, Prague, and Cracow to Kieff, and form the western section of the proposed Eurasian Transcontinental line from the Atlantic to the Pacific.

ARMY. At the beginning of 1921 the total strength of the active forces, including colored troops, was about 660,000 of which 200,000 were in occupation of the Rhinelands. Besides these there were forces in occupation of Syria and Constantinople. The military system is based on the principle of universal compulsory service. In 1914 the period of three years' service in the active army was required, but in November, 1920, the period of eighteen months was proposed. During 1921 the question was under discussion and the military legislation was before Parliament in the closing weeks of the year. According to the report of the army committee of the Chamber, the effectives of the French army numbered 818,000 on October 1, but a large part of the class of 1922 was on leave for the harvest or on indefinite leave, so that the number of men in active service was only about 600,000 at that time. The class of 1922, according to the committee, would probably serve only for eight months, and thus would introduce the reduced period of service that had been accepted. The distribution of the army was as follows: Whites, 591,000; natives of northern Africa, 117,000; natives of other colonies and troops of the foreign legion, 110,000. The military budget for 1922 presented before the Chamber, December 8, showed a reduction of 702,000,000 francs from the budget of 1921, the decrease being due to a reduction of the effectives in Morocco and the Near East, the granting of numerous absences on leave, the suppression of certain allowances which had been made in war time, and also to economies resulting from a lower degree of armament. The budget provided for a total of 701,726 men and 35,953 officers distributed as follows: Metropolitan troops, 414,552 men and 24,055 officers; Colonial troops, 47,898 men and 2909 officers; Morocco, 85,951 men and 2816 officers; the Near East, the Saar Basin and the regions under plebiscite, the Rhine countries, etc., 153,325 men and 6173 officers.

The reduction of military service was discussed in the Senate in the latter part of November; when it was brought out that it would result in a saving of 1,000,000,000 francs a year, half of this coming from the reduced cost of maintaining the troops and the other half from the gain by returning men to productive industries. The bill under discussion fixed the duration of service at two years instead of three and provided that the government might keep men with the colors beyond two years if exceptional circumstances required. The reduction had already begun by the disbanding of certain regiments and the discharge of certain classes of troops. According to the government programme these measures were to be followed by the reduction of the service to 18 months and it would be necessary to vote a new act which, however, was to be preceded by a measure in regard to compulsory physical training. A measure providing for the formation of a

nucleus of provisional soldiers which would be necessary for an army of young troops engaged only for 18 months was submitted on November 26 to the Army Committee of the Chamber. This nucleus would consist of a body of 100,000 men. On December 6 the Chamber voted by 495 to 69 for the calling of the 1922 class in two sections, in May and in November, which would thus introduce the eighteen-month service by 1923. The new military laws were pending at the close of the year. The main features of this legislation were as follows: After May, 1922, the active army would consist of one class and a half. The term of active service for the time being would be eighteen months. The two last classes released from active service would remain at the disposal of the active army. Sixteen and a half classes would form an active reserve and the ten oldest classes would constitute a territorial reserve. The annual contingents were estimated at about 250,000 men. This average would be maintained until the calling of those classes which corresponded to the births during the years of war. It was estimated that the thirty Metropolitan classes nominally numbering about 7,500,000 would be reduced to a total effective of about 5,000,000. The distribution of these 5,000,000 would be as follows: For the home army 400,460; interior zone, 1,250,000 of whom 250,000 were active reserve and 1,000,000 territorial reserve; reserve of forces liable to duty in the interior, 1,250,000 of whom 900,000 were combatants; armies of the first and second lines, 250,000 of whom 1,685,400 were combatants. See **MILITARY PROGRESS.**

NAVY. The following table taken from the *Statesman's Year Book* of 1921 shows the number of each class of vessels in the French fleet including the French share of the German fleet.

	Complete at end of		
	1919	1920	1921
Dreadnaughts.....	7	7	7
Pre-Dreadnaught battleships *.....	13	10	9
Armoured cruisers.....	15	15	15
Light cruisers.....	18	12	13
Dispatch vessels, etc.....	35	35	40
Destroyers.....	80		63 †
Torpedo boats.....	153	100(?)	63
Submarines.....	100(?)	102	49

* Four of these, the *Diderot* class, may be called "Semi-Dreadnaughts."

† In addition are 12 squadron torpedo boats, which in reality are small destroyers.

There was a great reduction in the naval forces after the war; work was discontinued on the super-dreadnaughts; the Mediterranean squadron was reduced; and many other economies were effected. The naval forces are under the direction of the minister of marine who is aided by the chief of staff. The latter is chief of the military cabinet and has charge of all matters pertaining to construction, maintenance, mobilization, and preparation for war. There is a superior council of the navy which serves as an advisory body to the minister. In the central administration there are many branches, including, those of personnel, war material, artillery, finance, submarine defense, hydrography, etc. The navy is recruited, partly by voluntary enlistment, and partly by conscription. The so-called "maritime inscription" provides lists of the male maritime population between the ages of eighteen and fifty years,

and this serves as a basis for the French naval reserve, which has averaged about 114,000 men of whom about 25,500 were usually engaged in the active service. On December 9 the Chamber unanimously adopted a measure providing for 3 light cruisers, 6 destroyers, 12 torpedo boats, and 12 submarines during the period from 1922 to 1925 at a total cost estimated at 755,000,000 francs. It was estimated that future naval budgets would average 1,200,000,000 francs including 50,000,000 francs annually for submarines and coast defense. The present naval budget amounted to about 5 per cent of the total budget as compared with 13 per cent in 1914. See NAVAL PROGRESS.

GOVERNMENT. The president in 1921 was Alexandre Millerand who was elected, Sept. 23, 1920, and the ministry appointed, Jan. 16, 1921, was as follows:

Prime Minister and Minister of Foreign Affairs, A. Briand; Justice, Bonneway; Interior, P. Marraud; War, L. Barthou; Marine, Guist'hau; Finance, P. Doumer; Colonies, Albert Sarraut; Public Instruction and of Fine Arts, L. Bérard; Public Works, Y. Le Troquer; Commerce, L. Diot; Agriculture, Lefebvre du Prey; Labor, Daniel-Vincent; Liberated Territories, L. Loucheur; Hygiene, Assistance, and Social Prevision, Leredu; Pensions, Awards, and War Grants, André Maginot.

HISTORY

FALL OF THE LEYGUES MINISTRY. Opposition had been gathering to the government during the closing weeks of 1920 and it became stronger at the beginning of 1921. The moderate tendency of the Leygues ministry offended the Nationalists and it was attacked in respect to its attitude toward Germany and toward internal dangers including the Bolshevik propaganda and the monarchist attempts. In respect to Germany it was especially blamed on the ground that it had made small progress in enforcing German disarmament and was too lenient in the matter of reparations. The government was weakened also by the bad conditions of the country resulting from industrial depression, unemployment, the high cost of living, and the heavy taxes. The question of confidence was raised January 12 and the vote was strongly against the government, being 463 to 125.

THE BRIAND MINISTRY. After an unsuccessful attempt to form a ministry under M. Péret a new cabinet was chosen under M. Aristide Briand. It was composed of two Senators and thirteen Deputies as follows:

Premier and Minister of Foreign Affairs, M. Briand; Justice, M. Bonnevay; Interior, M. Murrand; Finance, M. Doumer; War, M. Barthou; Navy, M. Guist'hau; Education and Fine Arts, M. Bérard; Public Works, M. Le Troquer; Commerce, M. Dior; Agriculture, M. du Prey; Colonial Minister, M. Sarraut; Labor, M. Daniel-Vincent; Liberated Districts, M. Loucheur; Hygiene, M. Leredu; Pensions, M. Maginot.

The programme included among its features the following: Reduction of expenditures and reorganization of finance; measures for remedying unemployment and industrial depression; reduction on military forces so far as was compatible with the necessary military power of the country; a new treaty with Turkey; refusal to recognize

Soviet Russia; a firm hand with Germany; close friendship with Great Britain. A vote of confidence in response to the prime minister's appeal gave the government a large majority, being 475 to 68.

This was the fourth premiership of M. Briand whose long career in parliament gave proof of a great skill in political management and in debate. Outside France he is best known for his vigorous course in suppression of the railway strike in 1910 by calling the workmen to the colors under the military law. His last ministry succeeded that of M. Viviani at the end of October, 1915, at the darkest period of the war.

THE REPARATION QUESTION. The attitude of France towards the German reparations which throughout the year tended to deprive her of the sympathy of other nations is described in the article WAR OF THE NATIONS. In France itself there was a division among parties on this subject. Not that any of them went so far as leading groups in Great Britain and other countries toward relaxation of the demands on Germany, but that a more moderate spirit was gaining ground in certain quarters. The Briand ministry represented this more moderate tendency and on this account was sharply attacked by the more extreme Nationalists as represented by the former president, M. Poincaré and the former minister, André Tardieu. The Briand ministry in accord with the President M. Millerand were anxious to avoid any break with England while M. Poincaré and his supporters were ready to break with England if necessary and were constantly emphasizing the need of maintaining France's military power as a sanction in her foreign policy. The difference of opinion in respect to the German reparations showed itself in a debate in the Chamber in the middle of March and a vote of confidence being taken the government won by 491 to 66.

There was much discontent with the financial agreements reached by the Allies in respect to German payments including the decisions of the Allied finance ministers and experts who met in Paris, August 16. As a result of these agreements to which the French government reluctantly consented, France received no part of the first \$250,000,000 to be paid by Germany during the year 1921. There was a vast volume of complaint and criticism on this subject. The ground for this discrimination against France was that France and Belgium had already received payments in kind to an amount considerably in excess of the cost of their occupation of the Rhine, while Great Britain had not received as much as she had disbursed, her deficit being from £25,000,000 to £30,000,000. In these calculations, however, the French wished to exclude the coal deliveries from such payments in kind on the ground that the yield of the Saar coal fields could not be immediately realized and they argued that if these were excluded the French would show a deficit of about 150,000,000 gold marks whereas the Reparations Commission had charged up against her an excess of 300,000,000 gold marks. No special provision was made in the Treaty that coal deliveries should be charged against the first \$250,000,000 installment from Germany, but at the Spa conference it had been agreed that coal should be charged against this payment. The financial experts brought out this point and

further declared that France was exporting and re-exporting coal and that notes were in circulation bearing the inscription of the "Mines of the Saar." See the WAR OF THE NATIONS, paragraph, *Wiesbaden Agreement*.

The situation in respect to reparations as outlined in press reports in the autumn was as follows: On September 29 the economic guarantees on the Rhine were abolished. On October 1 the Inter-allied Commission on Guarantees announced in Berlin that the 26 per cent of German exports due for the three months ending July 31 had been covered by deliveries of materials. The total was estimated at 350,000,000 gold marks. The American representative on the Reparations Commission had been asked to arbitrate as to the method in which Germany should repay the sums loaned to Belgium after the German invasion. He ruled that the debt should be reckoned in gold marks at the rate prevailing Nov. 11, 1918. According to Article 232 of the Treaty Germany was required to repay these loans at five per cent interest. They were as follows: France, 2,500,000,000 francs; England, £60,000,000; United States, \$250,000,000. The above decision was satisfactory to France who at the financial conference of Paris in August protested against the loss she would incur if the debts were reckoned at the present rate of exchange. This decision of the American representative, Mr. Roland W. Boyden, would enable France to recover the full value of what she loaned. The most satisfactory settlement to France, however, was that concluded at Wiesbaden which has been summarized in another paragraph.

ATTITUDE TOWARD GERMANY. The line between the two policies in respect to Germany continued as in 1920 and the general attitude of the ruling classes in France may be illustrated by the following arguments of M. Maurice Barrès, apropos of a remark of Lloyd George in August, to the effect that his chief anxiety was lest the Allies were driving Germany too hard and would sow the seed of future conflicts. The French were agreed, according to M. Barrès, in demanding that all the sanctions for the execution of Germany's engagements should be maintained. The committee of foreign affairs of the Chamber had voted for this unanimously and there was no sign of any dissension either in the Senate or among the people at large. It was idle to hope that any concession to Germany would result in gratitude toward the Allies. If Germany had the power, she would immediately seek revenge and try to realize her Pan-German dreams. M. Briand had said there could be no question of abandoning any one of the military or economic sanctions of March and April before the complete execution of the obligations to which they had reference. If M. Briand had not made such a declaration he would have disappeared from public view amid cries of treason. France insisted on the security of her eastern frontier, recalling the words of Marshal Foch, that he would not have slept a single night in peace, if French troops had not been on the Rhine; and this measure was not only for the sake of France, but for the peace of the whole world. The politicians who wished to lift the sanctions of March 7 complained especially of the customs zone of 570 kilometres that the Allies had established between the Rhineland and Germany. It was perhaps advisable to examine the alleged grievances of Germany

in respect to this matter, but there was no doubt that the zone ought to be maintained. The Rhineland was already on the point of adapting themselves to the situation. Moreover, if the imperial government wished to give any color to its claims, it ought first to fulfill its engagements toward the Allies. Germany, in signing the Treaty of Versailles, agreed to execute before May 1, 1921, a certain number of definite engagements. On March 6, 1921, she declared that she would not execute these conditions and would not even make an effort to do so. The result of this refusal would be the crushing of France under the burden of the war. Her trade and commerce would be strangled by taxes and her treasury would be bankrupt. The Allied governments realized this and accordingly on March 7, they took measures for the execution of the sanctions. Later, on May 6, they granted Germany further delays and lightened the conditions, although the Treaty had not been executed and Germany had not fulfilled the obligations which fell due May 1, 1921. Now it was not merely the ruling classes of France that insisted on the enforcement of the conditions laid down on March 7; all France was behind Briand and Millerand. No government would stand that did not take this course. If the government followed the policy that Lloyd George seemed to recommend and relinquished the one means of forcing Germany to execute the terms, there would be a national movement to call parliament together. Certain French newspapers declared in favor of supporting the German government and winning its good will on the ground that that government was trying to do all that it could; but such a policy was unwise in the opinion of the majority. The present German government was on an insecure footing, as had been recognised by the German statesman Rathenau. No one knew what the internal condition of Germany was, or whether it was tending. France had only one guarantee, and that was the custom zone. No other argument would be of any avail. If France followed the criminally stupid policy of letting this weapon slip from her hand, she would return to the floundering state that she had been in throughout the period following the Treaty down to the beginning of March, 1921, when Germany was cynically refusing to fulfill her obligations. The sole gauge that France had for her safety and for the payment of the German obligations was on the Rhine. According to M. Barrès, there was not a Frenchman who did not perceive this. He gave warning against a policy that would merely favor the democratic régime in Germany. He argued that it was unwise to consider the Wirth Ministry as the beginning of German democracy. It was all very well to encourage, as Briand had done, the new German Chancellor and to favor the peaceable elements in Germany, but it was not wise to change the general policy of France toward Germany. The key to the situation was the left bank of the Rhine. M. Barrès, as representative of the school of Nationalist politicians that had always concerned itself with the Rhineland, declared it to be the eternal doctrine of France that there must exist between Prussian Germany and the countries of the west a zone of order and peace and that the Rhine country must forever be a bastion of France against the east, not necessarily a military one, but certainly an intellectual one. The emphasis on this latter

point was probably more exaggerated on account of M. Barrès' well-known chauvinism in this particular than in the general arguments of French publicists; but on the whole the above summary represented the French political opinion as expressed in the newspapers during the greater part of the year.

UPPER SILESIA. The difficulties and ill-temper resulting from the attempts to partition Upper Silesia occasioned much discussion of foreign policies and the following outline from the writings of a French publicist represents fairly well the point of view of the French ruling classes: The so-called Supreme Council which attempted a solution of the problem, consisted of French, Italian, English, and Japanese representatives. Of these only the first three were concerned with the question, which obviously was a purely European one. The United States sent Colonel George Harvey, the American Ambassador to Great Britain, as a spectator of the session. None of the smaller states of Europe were included although several of them were deeply interested in the result. Poland, of course, had no representative. This exclusion of the newly formed states of Europe seemed unfortunate to the French but no one officially made any objection to it. In France it was generally accepted that the right policy for her to pursue was to place herself at the head of these new states and try to assure by means of them a proper balance of power. A small minority in France criticised this policy, saying that after all Czecho-Slovakia, Jugo-Slavia, and Poland were not really nations so much as political experiments. The majority, however, were enthusiastic partisans of these small states and believed in their future. They believed also that Germany wished to organize her power not only by annexing Austria and coming to an understanding with Hungary, but also by breaking up any movement toward unity on the part of these new states. French public opinion favored a policy that would oppose this design. It was argued that just as England had intervened in August, 1914, to save Belgium from Germany, France ought to intervene at the present time on behalf of Central Europe when it was menaced by Germany. All these new states had submitted to the influence of France. While in Austria and Hungary only a few members of the upper classes spoke French, in Roumania and in part of the Banat the teaching of French was compulsory in the schools. The Czecho-Slovak army was entirely organized by a French military commission. It was necessary that these new states should come to an understanding with one another if they were to prosper and in 1921 such an understanding was in progress. It was the policy of France to encourage this and the government was criticised for certain diplomatic mistakes in 1920 which had tended to put obstacles in its way. For example, it had allowed Hungary to hope that the boundaries would be readjusted in her favor, thus causing dissatisfaction among the Roumanians, Serbs, and Czechs. The subject was discussed by representatives of these states, M. Take Jonesco, and M. Benes. The former statesman succeeded in settling all difficulties between Roumania and Serbia and signing a treaty with her. This was the nucleus of the Little Entente which now included Poland. The object of the Little Entente was to maintain the status quo in Central Europe and prevent foreign Powers from

stirring up trouble there. Obviously France ought to assume the leadership of this movement. According to many French publicists, French foreign policy should have as its chief object the development and utilization of the Little Entente. See **WAR OF THE NATIONS.**

FRANCE AND AUSTRIA. On the one hand the Slav and Latin allies of France on the Danube had united in the formation of the Little Alliance, comprising Czecho-Slovakia, Jugo-Slavia, and Roumania. On the other hand, there was a tendency, as had been indicated by the Bohemian statesman, M. Benes, to form a sort of economic union among the Danubian Powers. These movements were entirely in accord with the spirit of the French foreign policy since 1918. In the first place France had a large financial interest, estimated at 15,000,000,000 francs before the war, in the Danubian region. Thus the collapse of the Hapsburg monarchy created a new problem, namely, that of the new Austria where the German-speaking provinces were believed to desire a union with Germany. Austria had been cut off from all relations with the former subjects of the monarchy and deprived of most of the regions which assured her economic existence. According to her Minister of Foreign Affairs, Austria was reduced to her ancient capital of Vienna along with a rocky sterile strip of the Alps; hence the economic necessity of a union with Germany or some other combination. The propaganda of Pan-Germanism had been unceasingly active since the war. Many French writers dwelt on the danger of this accession to the power of Germany, pointing out that it would compensate her for all her losses by the annexation of 80,000 kilometres of territory and 6,000,000 inhabitants. Their publicists pointing to the map showed how such a combination would assure Germany of communication with her allies or dependents in the Near East, while it would isolate France from her Slav friends. In short it would establish a corridor for Germany toward the east while barring the movement of France in that direction. The arguments throughout on the Austrian problem from the French point of view were summed up effectively in a volume published in 1921 by M. Marcel Dunan, well known for his work's on Central Europe and the Balkans.

ALSACE. The French charged the Germans during the year with a systematic endeavor to misrepresent conditions in Alsace. They gave it out that although Germany had lost the land, they still retained the affections of the inhabitants—that in short the country was at heart German. This idea was expressed in many of the leading German periodicals. It was said that although the German administration had not been able to convince the Alsations of their essential German character, the Alsations had now learned this from the few weeks of French administration. Many articles appeared in the German press in regard to the disappointment of the Alsations and their regrets at the change. According to the French it was a campaign of exaggeration and even downright lies. The pretense that the Germans alone had been able to understand the Alsation character was widely ridiculed in France. The religious question was also agitated in the German press where the attempt was made to give the impression that through fear of the introduction of the law of separation, all believers

of whatever confession were inclined toward neutrality. For example, at Strasburg an assembly was held at the end of May of the party known as the Popular Republican Union to consider the question of parochial schools. It was attended by some 4000 persons from all parts of Alsace. The language spoken was Alsatian, for although the school children were rapidly acquiring French, it had not yet come generally into use, but as the dialects of the north and south are different a committee had proposed that the speakers should deliver their principal speeches in German. Thereupon occurred a remarkable demonstration against this proposal, everyone exclaiming that they were not Germans and did not wish to speak the German language.

THE RUSSIAN FOREIGN DEBT. The note of the Russian foreign office in respect to the recognition of the Russian foreign debt incurred prior to the war was followed by a note from the French Foreign Office to the British embassy pointing out that the Russian offer rested simply on universal right and did not present any chance for bargaining; that it made no mention of the obligations on the part of Russian or companies that had the support of the Russian government but whose property had been destroyed at the Soviets; that the acceptance of these obligations by the Soviet government indicated its abandonment of its entire propaganda and its policy of interfering in the internal affairs of other countries; if these conditions were fulfilled the economic restoration of Russia might follow; and in case of their fulfillment the French Republic would consider the possibility of negotiating with the Russian government.

POLITICS OF THE RIGHT. Leading French politicians and publicists not only admitted the charge that France was the most reactionary country of Europe but expressed their gratification at this condition and even said that the country had no worse enemies throughout the world than those elements that were known as Liberal. As to extreme radicalism it made no important demonstration. The government had already in 1920 shown a firm hand against all radical labor organizations. Two representatives of the British Council of Labor who were sent to France to confer with French representatives were expelled by the government. The French Confederation of Labor which had expressed sympathy for Soviet Russia in October, 1920, and denounced the French government for its reactionary attitude was directly attacked by the government, and a court decision on Jan. 13, 1921, ordered its dissolution on account of its responsibility for the railroad strike of May, 1920, charging it with an endeavor to set up the Soviet system in France. It was argued against it that by the terms of its incorporation it was simply to study and defend the interests of the working classes whereas for some time past it had preached social revolution and incited disorders including a mutiny in the navy, strikes, etc., and at the same time it sought to influence the government's foreign policy. This court decision against the Confederation was ignored by that body.

As indicated in foregoing paragraphs and under **WAR OF THE NATIONS** the French government continued to stand throughout the year in the way of all compromise in respect to Germany and of progress toward the adjustment of Euro-

pean affairs on a permanently peaceful basis, that is to say, her attitude was thus defined in the other countries of the Allies, as well as in apparently impartial quarters. The defense of this position on the part of the leading members of the ruling class and the official press has been outlined in other paragraphs. Every act of the French government, from its course in respect to Poland down to and including its attitude toward limitation of armament at the Washington Conference, was condemned by the Liberal press as self-interested and even imperialistic, and was defended by the leading French papers and publicists, including the most eminent historians and literary men of France, as absolutely justified, and in fact as not being sufficiently firm on behalf of French interests. It appeared from the quotations from French sources in British and American papers that French opinion was practically solid in this respect and that the French government was thoroughly representative of the nation. The *National bloc* which had triumphed at the election of Nov. 16, 1919, appeared to be still firmly in control. Extreme Nationalists, such as M. Poincaré, M. Tardieu, the great generals of the war, and the leaders most suspicious of Germany and jealous of England, were everywhere in evidence. Nevertheless, there were indications of a growth of independent opinion in France and an attempt to withstand the wave of nationalistic feeling and reactionary thought. Hardly any account of these elements was taken in the British and American press. In the United States, French opinion was almost always the opinion of the groups of the Right, at present in control of the situation, and are represented by the best known French papers and the most conspicuous figures of the moment. The articles of M. Poincaré in the *Revue de Deux Mondes* and the dispatches to the *Times*, for example, were widely read, while the French critics of these views were not heard from. Thus France was represented in the United States exclusively by the element that apparently interpreted every act of Germany as prompted by revenge, every act of the British government as due to imperialistic motives, and all criticism of present French policy as animated by pro-Germanism, Bolshevism, or national selfishness, no matter in what quarter it appeared. Even the literary men most familiar to the American public were representatives of the conventional and accepted older group who made no concessions to new tendencies of the times—such men, for example, as M. Barrès, P. Bourget, A. Capus, L. Madelin, and various other members of the French Academy; while the class from which France chose her leading representatives to America was that of the generals of the war, sending finally, Marshal Foch who believed that the salvation of Europe could only be secured by giving France a permanent grip on the Rhine. These facts accounted in some measure for the belief in the United States that France was solidly in favor of reaction and tending rapidly toward militarism. There were, however, many indications both in the political and literary world of Liberal opposition; and the quotations from the French press which gave the impression in the United States of a strange and monotonous uniformity was by no means representative of actual conditions. Aside from extreme radical publications, such as, *Clarté*, the revolutionary

organ founded by M. Barbusse and supported by Anatole France, there were newspapers and weeklies in Paris and in the provinces with large circulations which were fighting constantly for the union of the parties of the Left against the National bloc. There were movements for a coalition of all Liberal elements against the policy of the present ruling element. Many of the intellectuals were enrolled in them, and they were headed by politicians of Liberal tendency, such as, MM. Doumergue, Herriot, Boncour, Painlevé, etc. The French policy toward Russia was sharply attacked, and a readiness to reconcile France with Germany was manifested. In internal affairs it was asserted that the rich were spared while the poor were overburdened. From this class of newspapers and other periodicals there was but little quotation in the American press. Nevertheless, there was no sign that the majority in France was discontented with the government's policy. On the contrary, toward the close of the year there were signs that M. Briand who was condemned in Liberal quarters in other countries as too uncompromising was embarrassed by the elements in the National bloc who considered him too much inclined to compromise. At the close of the year when the conference at Cannes was approaching there were signs that the party represented by M. Poincaré was gaining in strength and would block all such efforts as M. Briand was willing to make to remove France from her position of isolation among her former allies, characterizing his policy as feeble, and as unduly submissive to the foreigner.

THE OCCUPATION OF THE RHINELANDS. In December a Deputy raised the question in the Chamber as to the reasons that had led the Allied governments to consent to the nomination of a new German high commissioner in Rhenania, whose attitude immediately became inconsistent with the Treaty and with the interest of France. Before this the Allied high commissioner of the Rhine territories had received representatives of the economic interests of the occupied regions, including delegates from twenty chambers of commerce, twenty chambers of agriculture, the chief commercial private associations, the trade unions, farmers' associations, etc. At the meetings of the high commission many questions pertaining to economic conditions of the occupied region, and social problems, including the questions of manual labor, etc., were studied. It was reported that there was comparatively little unemployment in the region, and that the question of food supply was not serious. These sessions were held in the presence of the high commissioners of France, Belgium, and Great Britain; the general in command of the American troops of occupation; and Prince Hatzfeld Wildenburg, Imperial Commissioner of Germany.

M. BRIAND AND THE DISARMAMENT CONFERENCE. The proposal that M. Briand should attend the conference at Washington raised in France somewhat the same question as had been raised in the United States on the eve of President Wilson's departure for the Peace Conference. M. Briand took the stand that he ought to go in person but insisted that he must have the assurance of complete approval from Parliament. On October 21, the subject came up for discussion in the Chamber. In reply to interpellations he

declared he would not go if he received a doubtful expression of confidence or a narrow majority. He met the objections of the various critics of the government during several important sessions of the Chamber. The main points in his replies were as follows: Declaring that the programme of the government was a programme of both internal and external peace, he said that it had applied itself for more than a year to the enforcement of the Treaty. It must not be forgotten that in so doing there had been the necessity of coöperation with the Allies. The danger of any other course was obvious for it would have left France in a position of isolation. He had always maintained that the Treaty was the work of the Allies in common and that solidarity among the Allies must be retained. The claim of France had been fixed, but Germany refused to recognize the Treaty and had not carried out her obligations under it. The Treaty established certain guarantees and penalties and France had undertaken to apply them. In London the French government had maintained that as a measure to force the Germans to respect their obligations she had a right to seize the cities of Ruhrort, Düsseldorf, and Duisburg, but her Allies opposed and it was only after long discussion that she had accomplished her end. At the second conference the government notified the Allies that in case of German resistance France would do what seemed to be her duty and a rupture was narrowly averted. The government accordingly had carried its point in that respect. After the occupation of the German territory the German government had changed its attitude and the party that favored loyalty to the terms of the Treaty was placed in power. The Chancellor then declared that it was necessary for Germany to submit and to pay. "And now," said M. Briand, "I ask you what we ought to have done? We said we were going to do what we decided to do. Our Allies went away without warning. The government stood face to face with the enemy. France was strong in a military sense but if she acted alone there was great danger. In former times France found herself in a position of isolation and the result was her defeat in the Franco-Prussian war. When a man finds the fate of his country in his hands and sees that forty years of the Republic have given it friendships and alliances, has he the right to take a course that will run the risk of leaving his country without friends?" As to the disarmament of Germany the Prime Minister declared that the situation had improved. The government had certainly not been indifferent to that necessity. Of the 4000 cannon declared in March, 1920, there remained in 1921, 600 pieces which were delivered and destroyed. Also 800 cannon on the coast of the North sea had been destroyed. By September 10 the material of war destroyed was as follows: Cannon, 32,800; minenwerfer, 11,000; machine guns, 84,000; hand weapons, 4,250,000; loaded shells, 35,000,000; unloaded shells, 2,000,000; carriages, 55,000; traveling kitchens, 11,000. The old police force was disarmed and although the German government afterwards created a central police force the Control Commission required that it should be disbanded and according to last accounts this was being done. The great fortress of Kiel had been demolished. As to Upper Silesia the French government had defended its policy. Agreement

in respect to it had been impossible. Under the Treaty the Supreme Council had turned it over to the League of Nations and this course was condemned in advance by many critics. Meanwhile of the two great arsenals of Germany, Essen was within the range of French cannon and the arsenal in Upper Silesia had ceased to be in Germany. When such results were obtained without bloodshed it was not fair to blame the government. In respect to the Near East it had been extremely painful for France after a long war to endure these conflicts on the eastern frontier but that difficulty was now removed and he was able to announce that the Assembly of Angora had agreed upon an arrangement in respect to the frontier between Syria and Cilicia. Germany had come to terms in respect to the first instalment of the reparations. It must be remembered that the war had burdened the country and that if the mark had retained its normal value Germany would be able to pay her debts. But she was obliged to pay in gold marks or rather in foreign securities having an equivalent value and the purchase of these securities in turn lowered the value of the mark. This fall of the mark favored the great German industries at the expense of their own government. Controllers of these industries hoped to bring about the bankruptcy of Germany and nullify Article 234 of the Treaty, but Germany as a whole admitted the responsibility for her debt. In any case the creditor must not take any measures that would make it impossible for the debtor to pay. M. Loucheur had been reproached for having made the Wiesbaden arrangement with Herr Rathenau, but it should be understood that the government was behind M. Loucheur and strongly favored this new method of payment. As to the Rhine-lands if there had been substituted for the Prussian administration, an administration by the natives, excellent results would have followed. The French soldiers of occupation had deserved all praise. When the order of occupation was issued the allies of France were apprehensive and the propaganda of the Germans had stirred up great alarm. The three cities of Germany were occupied and no serious incidents had developed as a result. At this point in the speech M. Barrès interrupted with a remark that he did not blame the government for that but blamed it for removing the economic sanctions. M. Briand replied that the government had resorted to another method. England had proposed a tax of 50 per cent on exports. The French government after receiving the reports of its agents decided on another means of obtaining the money, namely, by setting up a customs zone. The result of this was unfortunate. There seemed to be a sort of paralysis in the region and the allies of France protested against this policy. The French government had therefore withdrawn it and had, on the advice of experts, set up a commission which was still in operation and which was keeping the government well informed on the subject. The French government believed that without detriment to its own interests it could aid Germany in keeping her engagements. While the government had yielded to the Allies in respect to the economic sanctions it had remained firm in the matter of the military sanctions which it had retained in spite of the opposition of the Allies. It was obviously to French interests to

lend the support of France to the party in Germany that was peaceful in its aims and endeavoring to be loyal to the nation's obligations. That was why the government had done its best to strengthen the cabinet of Chancellor Wirth. France being exposed on one side to Germany and the other to England must pursue a policy of alliances and avoid the danger of isolation. She could not take any attitude toward Germany that would prevent her living on friendly terms with England. A willingness to negotiate with Germany was necessary to the good will of England. Serious difficulties had arisen and were likely to arise. A part of the German parliament had protested against the partition of Upper Silesia but the most serious difficulties of all were financial. M. Briand described explicitly the situation. He said that in the discussions of the Supreme Council there were times when an act of imprudence or oversight would have dangerously compromised the relations between the Powers and the responsibility of the French representatives in these circumstances was most serious. Crises arose in which it was necessary to choose between the just claims of France and the continuance of her alliances. In these crises M. Briand had chosen the latter, thinking it better that the country should be disappointed in respect to a portion of its claims than that it should be condemned to political isolation. But he said he had no intention of abandoning the guarantees in respect to Germany, for while he had confidence in Chancellor Wirth the latter might at any time be overthrown. As to the Washington Conference he said it was the first great international conference in the United States and France must not be absent from it. The Pacific problem concerned France as well as other countries and it was the duty of France to present her own case and not submit to being misrepresented by her enemies. In respect to internal policy he declared that social peace was necessary to the recovery of the country and that the government would pursue a policy of national harmony.

It was predicted in certain quarters down to the last minute that the Prime Minister would be defeated, but he succeeded in rallying to his support all the moderate elements in the Chamber, after his address. On the final vote, out of the 593 members, he received 338 ballots, the vote against the government being 172. The Senate gave the Prime Minister a still larger majority in proportion, the vote of confidence on October 27 being 30 to 9. M. Briand on this occasion pointed to the success of his ministry in respect to the German payment of indemnity and gave full credit to the German Chancellor, Wirth, for his loyalty in keeping his promise. He declared the best guarantee of peace in Europe was close agreement among the Allies. As to the Conference there were two questions involved, namely, equilibrium in the Pacific and disarmament. France would not take a combative attitude but would go among friends in the interests of the world peace.

Although M. Briand shortly before he left for the United States to attend the Disarmament Conference had declared in Parliament that Germany was loyal to her engagements in respect to disarmament and had done all that was demanded of her, thus removing the danger of war, he, nevertheless, took as the central argument in

his main speech at Washington the danger in which France found herself from German military aggression in the future. In France there seemed to be a moderate element that regarded the fears of German aggression as exaggerated, but, so far as the leading newspapers were concerned and some of the most conspicuous public men, the nightmare of German conquest seemed to be constantly present. After M. Briand's return there was an excited discussion of this subject in the newspapers à propos of a suggestion that the British government had in mind the offer of a treaty with France that would guarantee her against attack and would, therefore, admit of a reduction of her military forces. Newspapers thereupon pointed to the great increase in German population as indicating that in the future the German people would necessarily seek conquests elsewhere, and asked how a mere paper guarantee could suffice as a protection to France. France, they said, must in her own interest and that of her allies keep a large enough force to repel any aggression, and to maintain the situation created by the Treaty, and this necessity would never disappear until a solidly established international force was able to keep the peace of Europe, as it had been constituted under the Treaty. At that time the army laws were on the point of being discussed in the Chamber. These provisions were apparently based on the possibility of a German attack and provided for reserves that in time of war would supply an available trained force of over five million men. See section on *Army*, above.

On his return from Washington the Prime Minister, in response to the demand of the Senate that he make a public statement as to the position of France in relation to the Disarmament Conference and in respect to German reparations, declared that he had explained to the American people the danger in which France stood and had denounced the campaign that had been carried on in the press against her; that France was in a solid position in respect to the reparations and would insist upon the payment of the sums decided upon by the Reparation Commission; also that the German government had been notified that it must put its finances in such order as would permit of the payment of the reparations. A vote of confidence was taken December 6 which in the Chamber gave the government 460 votes against 100, and in the Senate, 249 against 12.

On December 27 the ministry encountered an embarrassment as the result of M. Berthelot's resignation. The latter had incurred reproach on account of his relations with his brother who was involved in the affairs of the Industrial Bank of China. The correspondence while reflecting no personal discredit on the minister was regarded as implying improper relations on the part of a government official. The opposition was disposed to attack the Briand ministry on the strength of this incident.

THE LONDON CONFERENCE IN DECEMBER. The French point of view in respect to the two principal subjects discussed by the Conference of Prime Ministers in London in December, may be summarized as follows: As to the German payment in kind the French declared that their policy was based simply on the joint interests of France and her Allies. The French treasury would receive no part of these payments which were absorbed by the Belgium priority or rather by certain privileged

creditors in Belgium. The amount of these credits had not been officially given out but were considerable and according to French estimates came to about 2,000,000,000 gold marks. This sum was burdened by an English credit of about 150,000,000 gold marks and an American credit of from 550,000,000 to 600,000,000 gold marks. These debts to England and the United States were to be discharged in pro rata payments in accordance with their respective amounts. France had no desire to embarrass in any way the affairs of her Allies but the situation seemed unfair to France as well as to Belgium. It appeared that England would abandon her right to the privilege that she possessed in respect to the Belgian priority if the United States would do so, but there seemed to be no prospect of that. The second subject discussed at the conference was the question of the German financial situation and its relation to Germany's ability to pay her debt. The French argued that the German government was making no effort to put its house in order and was constantly taking a tone of despair in its public announcements. The latest address of Chancellor Wirth had compared the reparations to a pot without a bottom and indicated that the country was inevitably tending toward bankruptcy. The government did nothing to check the wasteful financial policy of parliament. According to the German press the ministry simply abandoned their positions one after another and allowed all control to fall from their hands. According to the French critics Germany was slipping into bankruptcy partly through the incompetence or inability of her leaders and partly through their ill-will. The Germans accused France of wishing to interfere in German finance as in the past western Europe had interfered in the finances of Turkey, that is to say, favored a policy of foreign control. To this the French replied that they had no such desire but that Germany in not making any effort to straighten out her own affairs naturally invited foreign interference. Many remedies had been suggested by the Allies, the French proposals being of a radical character, that were not likely to receive the assent of the British government. The French critics pointed to certain abuses that aggravated the financial situation of Germany. In the first place there was the monetary situation. Everybody agreed that something ought to be done to stabilize the market but there seemed to be no chance of accomplishing anything to this end so long as the books of the Imperial Bank presented such aspects as these, for example: On October 31, the accounts of the bank included 98,700,000,000 treasury bonds and 880,000,000 of commercial paper. On November 30 they comprised 100,552,000,000 of treasury bonds and 1,109,000,000 of commercial paper. In these circumstances the Imperial Bank evidently did not possess the necessary independence to refuse the government the absurd sums the latter demanded when it discontinued its treasury bonds. So long as the government could draw from the Imperial Bank as many billions as it chose the public administration would continue its wasteful policy. The government naturally took the easiest course and issued paper currency. Therefore it was argued by certain French writers that the Imperial Bank must be made more independent and it was suggested to this end that an international arrangement should be made involving a competent

supervision of the Bank's affairs by the Allies and a control over the situation with a view to placing the Bank in a position to regulate the foreign securities of German citizens. The Imperial Bank could never stabilize the market unless it held an important reserve of securities. No German investment in foreign securities or in foreign money ought to be permitted without the Bank's having the means of verifying its existence and of disposing of it if necessary in return for a fair indemnity in marks. The budget included apparently three classes of unduly burdensome expenses: (1) Military expenses either admitted or concealed; (2) substitutions designed, for example, to lower artificially the cost of bread thus constituting an indirect premium to German industry. This device had already been exposed and denounced by Sir Robert Horne in an address at Manchester; (3) expenses which bore the character of subventions to the different German states—in reality, investments. For the current year a credit of about 17,000,000,000 marks was applied to the payment of the floating debt that the several German states in their capacity as owners of railway had contracted for their railways before the central government acquired them. It was pointed out by the French that these sacrifices should not be borne by the budget of the country as a whole inasmuch as the German states were less burdened than the central government since they did not have to pay the reparations. To be sure the Prussian budget showed a deficit of 933,000,000 marks for the coming year, but this contained items far less urgent than the reparations which the central government had to pay. Another question raised by the French was whether the central government ought to lay out billions on the reconstruction of the German merchant marine. Vast sums had been advanced to German shipbuilders and it was reported that all the shipyards in Germany were working at their full capacity.

FRANCO-TURKISH TREATY. As noted under **WAR OF THE NATIONS** the treaty between France and the Angora government occasioned criticism in England and caused friction between the two countries. According to the French point of view, there was no justification of the British criticism and the address of Lord Curzon on the subject caused great offense in France. The treaty of Sèvres signed, August 10, 1920, by the Allied Powers and Turkey put an end to the war in the Near East. From that time on, according to the French view, the London agreement of Sept. 4, 1914, in which the Allies bound themselves not to make a separate peace was no longer in effect, and each Power was free to pursue its own course. In the war between Greece and Turkey France had a right to take whichever side she chose. According to the English view she was bound by her entente with England. That was the main point of disagreement. The French argued that while they desired to maintain the English alliance, they must reserve complete equality in the Near East. It was England who had been the first to claim freedom of action in 1920, in spite of the formal expressed objections of France. England had recognized the anti-French government of Feisal. It was England also who had carried into the affairs of the East the competition in respect to petroleum; who had imposed on Persia a treaty reducing that

country to vassalage; who had concluded with Turkey before the Treaty of Sèvres the separate and secret treaty of Sept. 2, 1919, which contained clauses in respect to colonization and which implied the loss of Turkish rights; and it was England who had encouraged Greece in her recent course, beginning with the restoration of Constantine to the throne and continuing with the invasion of Turkey. This was the French side of the case as expressed ordinarily in the newspapers. To Lord Curzon's protest against the treaty with Kemal, they replied that Kemal's authority rested on a sounder basis than that of Tewfik Pasha, for while the latter had behind him the Sultan's sovereignty, the former had behind him the sovereignty of the National Assembly. Moreover, the real power centred in the Angora government whose agents to all appearances even controlled the government of Constantinople. As to the complaint of Lloyd George that the French had treated with the revolutionary leader Kemal, they replied that Lloyd George had himself treated with the revolutionary leader Lenin. The French hunting for the motive of the British policy suggested that the British government had hoped to mediate between the Greeks and the Turks, and the course that France had taken opened the way of mediation to France instead, because France was at peace with both belligerents, while Great Britain would not be acceptable as a mediator to Turkey. Another motive attributed to the British was the fear that the strengthening of Kemal's power would enable him to interfere in Mesopotamia, and brush aside the new kingdom of Feisal. French newspaper articles assumed a triumphant tone on the subject, saying that in the Turko-Greek war, England had bet on the wrong horse and would have to abandon the Greeks sooner or later; that she must realize that Turkey sought only the right to live, and that the Turks were essentially peaceful. The Turks had said, let the Greek army retire from Anatolia and peace would be restored in the Near East. The treaty of Kars had quieted the Caucasus and the three republics in that region had respected the guarantee of their independence, and were satisfied with their frontiers. The treaty of Angora had put an end to hostilities on the Cilician front. The only disturbed region now was the seat of the Turko-Greek war, and this war must be brought to an end. The French reminded the British of Lloyd George's promise that Turkey should not be robbed of her rich and prosperous region of Thrace or the vilayet of Smyrna.

COMMERCIAL RELATIONS. The *modus vivendi* with Spain expired on December 10, owing to the failure of negotiations for an amicable agreement. France is applying to Spanish imports its general tariff plus a special *ad valorem* surcharge on certain principal articles and also an additional surcharge to compensate the difference in currency values. On November 10 the French Government also denounced the commercial agreement with Italy, denunciation to be effective Feb. 1, 1922. See above under *Commerce*.

OTHER EVENTS. Elections to the Senate held, January 9, resulted in a gain of three seats by the parties of the Left. The successful candidates were distributed among the parties as follows: Republicans, 39; Radicals, and Radical Socialists, 43; Republican Socialists, 11; Conserva-

tives, 3. On February 15 the French Confederation of Labor defeated the Bolshevik programme by a vote of 243 to 224. The celebrated case of the alleged anarchists, Sacco and Vanzetti, under trial in the State of Massachusetts caused agitation among radical groups in France as in other countries. In Paris there were demonstrations against the American Ambassador, Mr. Herrick, as a protest against the conviction of the anarchists, and a bomb exploded at the embassy, but without fatal result. At the same time bomb-throwing in Paris resulted in the injury of about 20 persons.

A highly sensational trial, the reports of which were read all over the world, was that of Henri Landru, known in the press as "Bluebeard," accused of killing ten women and a boy. The crimes covered a period of several years during the war and afterwards, and were marked by astonishing powers of deception and skill in concealing evidences of crime, even the relatives and friends of the many victims being for a long time without suspicion. The details of the affair are too numerous and minute for repetition. The main feature of the trial was the conduct of the case by the accused himself, who displayed much cleverness and wit in the early sittings. No proof was found that any one of the victims was actually killed, and the defense rested on this fact. Nevertheless, on the grounds of wholly circumstantial evidence, strengthened by the fact that a long search had failed to bring out any sign that any of the victims were still living, he was found guilty, November 30, and sentenced to the guillotine.

FREEDMAN, JOHN JOSEPH. See NECROLOGY.

FRENCH. See PHILOLOGY, MODERN.

FRENCH, FRANCIS HENRY. Army officer, died, March 10. He was born in Indiana, Sept. 27, 1857; and graduated at the United States Military Academy in 1879. He was appointed captain, Nov. 26, 1894; and major, Feb. 28, 1901. He served on the Mexican border, 1916-17, having risen to the rank of brigadier general, Dec. 30, 1916; and major general, August 5, 1917. He commanded Camp Jackson, S. C., in 1917 and retired, March 27, 1918.

FRENCH CONGO. See FRENCH EQUATORIAL AFRICA.

FRENCH EQUATORIAL AFRICA (*formerly FRENCH CONGO*). A French colony situated in Equatorial Africa with Kamerun on the northwest, Belgian Congo on the southeast, and the Atlantic ocean on the west. It extends northward to the Bahrel-Ghazal and Lake Chad, and is bounded in the interior by the Congo and Ubangi rivers. Area, including the Kamerun territories, about 1,037,131 square miles, with a population estimated in 1915 at about 9,000,000. It comprises the colonies of Gabun, Middle Congo, Ubangi-Shari, Chad, and Kamerun. The resources, which are altogether undeveloped include: Wild rubber, palm oil, coffee, and farm animals. No recent figures for production or commerce were available. In 1917 the exports were 27,732,410 francs; and the imports, 9,575,000 francs. The chief ports are Port Gentil and Libreville. There is telegraphic and wireless connection with Loango. There is a budget for the region as a whole, and separate budgets for each colony. The general budget in 1920 called for an expenditure of 7,600,000 francs. Of the budgets for the separate colonies that of Kamerun

was the largest, being 10,283,000 francs, each of the others being between three and four million francs. In 1910 French Congo was divided into the districts of Gabun, Middle Congo, Ubangi-Shari, and Chad. A portion of French Congo was ceded by France to Germany in 1911 in return for certain territory in Kamerun and German recognition of French protectorate of Morocco, but, after the war France regained this region as well as the German portion of Kamerun. The colony is under the governor of Equatorial Africa, and each of the divisions has a lieutenant-governor who is aided by an administrative council. Governor-general at the beginning of 1921, J. Augagneur.

FRENCH ESTABLISHMENTS IN OCEANIA. See OCEANIA.

FRENCH GUIANA (CAYENNE). A French colony and penal settlement on the northeastern coast of South America. Area, 34,069 square miles; population in 1918, 26,325; unofficial estimate in 1919, 49,231. Capital, and only seaport, Cayenne, with a population in 1919 of 13,619. At the beginning of 1919 there were 24 primary schools with about 2000 pupils. The chief products are rice, corn, cocoa, coffee, manioc, sugar cane, indigo, tobacco, and gutta percha, and the chief industry is gold-mining of which the production in 1918 was 80,477 oz. No later figures for production or trade were available than those given in the preceding YEAR BOOK. The penal population at the beginning of 1919 numbered 6036 of whom 2179 had been freed. The colony is under a governor assisted by a privy council of five members and a council-general of sixteen members and is represented by one deputy in the French parliament.

FRENCH GUINEA. A French colony of West Africa lying on the coast between Portuguese Guinea and the British colony of Sierra Leone. Area about 95,218 square miles; population in 1920, 1,851,200 including 1200 Europeans, most of whom were French. Capital, Konakry with a population of 6623. The chief commercial centre is Kankan. Other towns: Boké, Kindia, and Dubreka. The chief product and export is rubber. Other products are palm oil and palm nuts, millet, peanuts, rice, gum, and coffee. In 1919 the cattle numbered 420,000 and sheep, 102,000. Gold is worked to some extent. There is a railway from Konakry on the coast to Kourassa on the Niger and thence to Kankan, a distance of 776 miles. Jonakry has regular steamship service by French and English companies. Vessels entered in 1919, 169 of 288,614 tons; cleared, 173, of 292,780 tons. In 1920 the budget balanced at 13,124,800 francs. The colony is under the Governor-general of French West Africa.

FRENCH INDIA. The territory included in the French dependencies in India with an area of about 196 square miles and a population of 268,499. The provinces with their populations in 1919 are as follows: Pondicherry, 166,023; Karikal, 55,201; Chandernagar, 26,490; Mahé, 11,111; Yanam, 5043; total 263,868. The government maintained in 1919, 61 primary schools and three colleges with 312 teachers and 9491 pupils. The chief products are rice, sugar, cotton, cacao, coffee, manioc, and peanuts. Imports to the three ports in 1919, 22,529,747 francs; exports, 26,792,148 francs. Vessels entered and cleared

at the three ports in 1919, 159 of 36,856,198 kilos. Budget of 1920 balanced at 2,266,420 rupees. The colonies are under a governor, whose seat is at Pondicherry and under an elective general council and are represented in the French parliament by one senator and one deputy.

FRENCH INDO-CHINA. The region in southeastern Asia belonging to France and consisting of the following five states with their area and population: Annam, 52,100 square miles; population, (1919) 5,592,000; Cambodia, 45,000 square miles; population (1919) 2,000,000; Cochin-China, 20,000 square miles; population (1919), 3,452,248; Laos, 98,000 square miles; population (1914), 640,877; Tongking, 46,400 square miles; population (1919), 6,470,250; also the leased territory of Kwang-Chau-Wan, 190 square miles; population, about 168,000. Total area of French Indo-China, about 256,000 square miles; total population in 1914, about 16,990,229 of whom about 23,700 were Europeans exclusive of the military. Higher estimates in 1921 placed total area at about 280,000 sq. mi. and total population at about 20,000,000. About three-fourths of the people are Annamites. Capital, Hanoi in Tongking with a population of 109,500 in 1919. Other towns: Cholon, 191,665; Bindinh, 75,000; Saigon, 72,000; Penom-Penh, 54,621; Hué, 65,000; Vien-Tiane and Haifong, 27,000 each.

The economic divisions of the country include first the territory which depends on Saigon as its market comprising Cambodia, Cochin-China, the southern part of Laos and the southern part of Annam which is almost exclusively an agricultural region and is one of the greatest rice-producing tracts in the world. In addition it has fisheries on the coast and in the lakes. In the second place there is the region dependent upon Haifong comprising Tongking and the northern part of Annam, where the chief interests are agricultural. Finally there is the region of central Annam depending for its outlet on the port of Tourane, where the main exports have been cinnamon, sugar, and tea. The mineral products of Indo-China include coal, lignite, tin, antimony, wolfram and zinc. The territory is under a governor-general who is assisted by a secretary-general, and at the head of each state is a so-called resident-superior except for Cochin-China which is directly under the central government. For the whole of Indo-China there is a superior council which maintains a permanent commission.

THE JAPANESE QUESTION. Certain French publicists made much of a "Japanese peril" to French interests in the Far East. They declared there was no doubt that Japan was animated by a truly Prussian spirit which pervaded not only the military caste, but the financial and intellectual classes; and that every Japanese secretly desired to take the place of France in colonizing Indo-China. They were all looking to the Southern Pacific where a booty lay ready to their hand. They were coveting the Philippines, the Malay Archipelago, Indo-China and in fact all important points in the Pacific ocean. There was no open declaration of these aims but they intended to take advantage of every circumstance to realize them. Japan knew that France was trying to develop the resources of her great possessions overseas and looked to a close coöperation with the United States. She turned to her own financiers who understood better than the Americans

the great undeveloped wealth of the French colonies and from them she had received the offer of an advance which, if she accepted it, would render American interests decidedly insecure in the Far East and would threaten their hold on the Philippines. Japan wished to be the leader of the yellow race and was watching the European situation in the hope of attaining that object. Some day in the future she would not hesitate to unmask her designs on the Pacific. Her justification was the right to provide for the existence of her race which could not survive if confined to its narrow territory. For the new partition in Europe, the western countries were invoking the rights of nations. Japan appealed to the same right and argued that they were in a better position in that respect because after all they were Asiatics and if the principle of America for Americans and Europe for the Europeans was legitimate, why not the principle of Asia for the Asiatics?

FRENCH LANGUAGE AND DIALECTS. See **PHILOLOGY, MODERN.**

FRENCH LITERATURE. The impression that writers of books and plays are still groping after the great event of the war, is even stronger than last year and the year before. It is not strange that it should be so. The more one realizes the changes brought about in the past, and the changes to be brought about in the future, the more views must be widely differing from each other. Thus some will insist on forgetting the war, some on thinking about it; some decide that the best is to lean on the past, some to start all afresh; some indulge in pessimism, some in hope; some cultivate old time realism, and some give themselves up to creative imagination.

WAR LITERATURE. The war is still omnipresent in the minds of many poets. Jean de Suberville won the Grand Prix de Poésie Française of the French Academy for his *Le Dieu Inconnu*. It is a dialogue between the Domes des Invalides under which sleeps the leader of the "grande armée", Napoleon, and the Arc de l'Etoile which rises above the "soldat inconnu" of the Great War; the latter says to the first

Toi tu n'es qu'une tombe, et je suis un auel.

Fr. Proché reprints his famous poem *L'Arrêt sur la Marne*, together with other war poems in *Commandements du Destin*. Duhamel sends out 25 *Élégies*, little jewels echoing the note of the *Vies des Martyrs*. Barbusse, who reëdits *Pleureuses*, preface Rancé d'Avenay's *Filées brocatrices*, with the same note of hatred for war. E. Moussat, has some beautiful Sonnets of a war prisoner, *Sous le Ciel d'Allemagne*. J. Ochsé also is well inspired in his *Repose ailleurs*; and so is A. Delacour in *La Victoire de l'Homme*. Quite a number of collections of war poems are described in *Mercure de France*, June 1, 1921 (pp. 455-6).

Although gradually diminishing in number, war novels often still force attention. Claude Anet's *Quand la Terre Trembla* was favored by many for the Prix Goncourt. Dumur's *Le Boucher de Verdun*—a worthy companion novel to *Nach Paris* (1920)—had the same sort of success; moreover, it involved the author in a lawsuit which added to the interest created by the picture of the life of the Kronprins before Verdun. Nobody could help pointing out in *L'Espatrié*, by A. Thérive, the case of Romain Rolland, although the

author tried hard to differentiate the hero's case from that of the "intellectuel" Rolland. Romain Rolland himself has a rather touching novel *Pierre et Luce*, two young people who are dragged into the war but live their "real" life at the same time outside; they die together in the Church of Saint-Gervais in the catastrophe brought about by a shell of the Big Bertha on Good Friday, 1918. P. Reboux, in *Drapeaux* (2 vols.) takes a novel as a pretext to discuss all sorts of problems connected with the war. J. H. Rosny, aîné, in *Les Pures et les Impures* offers a psychological study of love during the war and after, some yielding to the wave of brutal instincts sweeping the world, some taking their love up into a sphere of moral exaltation. J. de Granvilliers, in *L'Amour libérateur* depicts the awakening of love in women in consequence of their activities as war-nurses. Sheridan, in *Renée, confession d'une amoureuse*, explains how individual desertion in case of war is incompatible with honor, but how desertion "en masse" might not be. E. Ripert, in *L'or des ruines* shows a hero who dies in the war dreaming of the "or des ruines" of his Provence. Iman, *Les Nocturnes* is a study of the chiefs of the Bolshevik during the war and before their revolution. Abel Hermant, in *Phili, ou au delà du bien et du mal* tries to tell humorously how a German prince is driven out of his country, by the war, accepts his fate without anger, loafs for some time in Switzerland, and in the course of time is called back as president of his kingdom which has been "called" a republic. Two novels deserve special mention: In Pierre Villetard's *Monsieur Bille dans la Tourmente* (which was awarded by the French Academy the Grand Prix du Roman): Bille is a great talker as well as a cunning fellow who succeeds in achieving all his heroism by words, coming back from the war with a good reputation and undamaged. J. Valmy-Baysse's *Le Retour d'Ulysse* can best be described as a *Gaspard* of after the war: Ulysse Taniau returns from the front only to find his wife gone, his affairs in a dreadful state, and altogether an ungrateful world; but he loses no time grumbling or thinking; he has lots of good sense and gradually with much cheerfulness and good humor, he sets things straight again; even his wife he brings back to her home. Let us only mention two collections of short stories: one by G. Leconte, *Bouffonneries dans la Tempête*, a series of heroes "of the rear"; and H. Bordeaux's sketches *Ménages d'après guerre*.

Ch. Derennes, *Le renard bleu*, tells the adventures of a "soldat auxiliaire" in a small southern city of France. Jacqueline Houley in *Madedé* tells very interestingly how her little boy went through the war.

On the stage nothing very striking was produced: Marie Lénérus's posthumous play *La Paix* was given at the Odéon; Chr. Frogé, in his *Porte-glaive*, adapts to the modern world the theme of Antigone who curses war; H. Béchade, in *Le Remous*, shows how humanity is yielding in turn to reason and to emotionalism,—and is thus dragged into crises; but he does not decide which one is better. Jacques Deval adds one play to the list of stories of soldiers blinded in the war in *Soleil de Minuit*.

J. J. Bernard, *Le feu reprend mal*, takes up a case of retrospective jealousy of a soldier who returns home and finds that an American officer has been long quartered in his house; his suspicion is more-

over unfounded but means none the less real torture. Roman Rolland publishes a play *Le Temps viendra* . . . the time will come when humanity will no longer suffer war.

Some volumes of recollections of the war: Vick-Amiral Rornach, *Souvenirs de la Guerre* (of the famous Ypres battle); the fourth volume of Général Palante's *La Grand Guerre*; *Victoires de la Marne*; Général de Castaing, *Méditations et Pensées de guerre*; Paul Casin, *L'Humaniste à la guerre* (remarkable letters from an intellectual); Alain, *Mars ou la guerre jugée* (a little in the style of Suarès); Barbusse, *Le couteau entre les dents*—no change in his views. Two fine volumes: H. Bordeaux, *La bataille devant Souville* (a phase of the Verdun battle); and Boucher et Delvert, *Verdun* (1 vol. illustré).

We come now to literature which is not affected by the war:

POETRY. From the recognized great poets the following collections must be mentioned: Madame de Noailles, *Les Forces éternelles*, with her usual forceful pantheism; H. de Régnier's *Vestigia Flammae*, a rather gloomy return to the days of his abundant and vigorous production; Paul Fort, a new collection of *Ballades françaises*: *Au pays des Moulins de Hollande*, and *Hélène en fleur, et Charlemagne*; Maurice Bouchor, *Chants de la Terre et de l'eau*; A. Spire, *Samael*, ambitious poem about the fall of man, paradise lost, hardship of humankind and vain aspirations of the soul; Ch. Morice's posthumous *Le Rideau de pourpre*, poems of the time of melancholy symbolism. Rather above the average of excellence were the following: Vaudoyer, *Rayons croisés*; Pierre Jalabert, *La vie enthousiaste*, and Pierre Terme, *Mon languedoc* (the two celebrating sunny Provence); Johachim Gasquet, *Bûcher secret*; Lefebvre, *Prières d'un homme*; G. Aimel, *Poèmes au bord de la mer* (about the genre of H. de Régnier's "première manière"); Tr. Derème, *Poème des Chimères étranglées*; A. Dealimeris, *Rimes chevrolantes* (light), and P. Valéry, *Le Cimetière marin* (gloomy). The following poets have tried to strike original notes: Raoul Ponchon, *La Muse du Cabaret*, a sort of Brillat-Savarin in verse; Edmond Sée, *L'Indicret*, a novel in verse, by short poems; Frank-Nohain, *Fables*, an attempt to walk in La Fontaine's steps; Ch. Maurras, *Inscriptions*, elliptic style; Paul Morand, *Tendres Stocks*, subtleties that remind one of Giraudet in prose; Paul Reboux, *55 Poèmes d'amour*, very bold, but in very correct verses; Antoine Orliac, *Métabolisme*, futuristic cryptography. Women have again published much poetry, e. g.: Marie Burnat-Provins's *Poèmes troubles*, and Marie Jonesco's *Les Vers du Silence*; moreover, the reader will find in *Mercury de France*, Sept. 1, information on poems by the following women: Th. Gadala, J. T. Boussac, V. Grétor, O. Albert-Lambert, M. Noel, Callaud-Bellisle, de Montgomery, F. Darfeuil, D. Houel, Mad. X. and other anonyms.

THE THEATRE. Among the "reprises" let us mention *Cyrano*, Porto-Riche's *Le passé*, Sardon's *Madame Sans-Gêne*, Labiche's *Perrichon*. Adaptations of novels to the stage were many, e. g.: Pierre Benoit's *Koenigsmark*, and *Atlantide*; Farrère's *Homme qui assassina*, and *La Bataille*. The Spanish drama *Dolores* by José Felice y Codina (1897) in spite of its gloominess was well received. There was no rousing success this year, but quite a number of very interesting plays,

such as: Kistemaekers' *La Passante*—A French scholar, prisoner in Germany, flees to Russia, where Bolshevism has just been established; a wife of a great Russian dignitary of old régime avoids death by a marriage on paper with the French scholar, and they succeed in going to France; the woman loves her savior, and saves his life when he is about to die at the hand of a Russian revolutionist. Pierre Wolf's *Chemin de Damas* is the story of a very rich cynic, who is disgusted with life, but coming in contact with a young woman doctor understands the beauty that may be in life; the play is in turn brutally realistic and poetic. H. Bataille in *Tendresse* pictures a deep love in a man of fifty, which is finally rewarded. Lenormand's *Simoun* illustrates the enervating effect of the Saharian climate on the mentality of even normal people. Albert Jean, in *Le Sursaut*, shows a man crushed by his wife and who finally revolts against the tyranny in behalf of his son. Brioux offers a provincial triangle play, *Trois amis*, which was not much appreciated by many, while it reminded some of Molière. J. H. Rosny's *La Prisonnière* is a melodrama that reminds one of *Cavalliera Rusticana*—with an attempt to bring out the difference between civilized nature and primitive nature, in passion. Hirsch's *Cœur de Lilas* finds lofty aspirations concealed in the mind of an *apache*. Descaves' *Vestales* is a very modern play in spite of the title; and Zaza's *Berton et Simon* tells the love of a café-concert artist who goes to the home of the man and then is brought to better thoughts in seeing the child whose home life she was going to wreck. Amiet et Obey's *La souriante Madame Beudet* is a good picture of a woman who suffers martyrdom because of her husband's bourgeois mind. Poizat's *Circé* explains that the reason why Ulysses was not metamorphosed into a hog like his companions by the magician Circé was because he was not mentally a hog. Crommelynck's *Le Cocu magnifique* is a bold attempt to treat in an unconventional vein an old theme of the stage. Jacques Richepin revives the antique farce of *La Matrone d'Ephèse*. Maurice Magre (the successful author of *La Mort enchaînée*, 1920) gives, in verse, *Arlequin*, another tragedy of love. So does Bureau-Guérault in *L'éternel amour*. The inexhaustible Sacha Guitry had three plays: *Comédien*, *Le Grand Duc* (given in New York in English) *Jacqueline* taken from a story by Duvernois of a man who realizes very late that he has been a brute. Certainly one of the plays which claimed most interest was Fr. de Curel's *La Comédie du génie*—a writer who has come to understand that nothing in art matters but what can have a sound social and moral influence on the audience. In Maurice Rostand's *La Gloire*, the despair is shown of a young artist who suffers because the father has absorbed for himself all the fame that can properly belong to one name; the allusion was all too transparent, and the play too much of an elegy.

It is interesting to observe how at times a single theme will simultaneously claim the attention of several writers: The legend of Don Juan was put on the stage not less than five times this year. First came the posthumous play by Rostand, *La dernière nuit de Don Juan*—Don Juan only knew the least profound side of love; this he learns in seeing appear before him all his victims. The Don Juan of H. Bataille, *L'Homme à la Rose*, who attends his own funeral, can realize how much

of his success he owed to the prestige of his name, since now that people believe him dead his power ceases to have effect. H. de Rénier, in *Le Srupule de Sganarelle* shows the valet of Don Juan who is finally indignant about all the evil done by his master, only precipitating a new tragedy in warning a new victim,—as the woman is fascinated all the more by the devilishness of the wicked hero. Nozière's *Elvire* is a poetic fancy play around a Don Juan episode, and Eggerter also chose to deal with the subject in verse in his play *Une halle de Don Juan*. The fascination by the past or by old legends is also found in plays like J. Variot's *La Rose de Roseim*, an Alsatian legend; F. Herold's *Cléopâtre*; Paul Fort's *Louis XI, homme curieux*; L. Languier's *Les Bonaparte* (in verse).

A great variety of plays were offered by the company of the Vieux Colombier: *Figaro* was revived; a one-act play by Anatole France, *Au petit bonheur*; H. Ghéon, *Le Pauvre sous l'escalier*, the old legend of St. Alexis, symbolically readapted: The hero comes back from war, a stranger in his own home, where he does not claim his place; he will live under the staircase and die a martyr; he is happy. Schlumberger, *La Mort de Sparte*, pictures the struggle between the old Lycurgan spirit and the inclinations of the younger people who revolt as they wish to live according to modern less ascetic ideas. F. Porché's *Dauphine* seems almost like a new edition of *Le Butoir et la Finette*, aside from the direct allusions to the Great War. L. Fallens, *La Fraude*, a terrible drama on the Dutch frontier. Some good successes in comedy were (besides such as are mentioned in other connection): *Les Mariés de la Tour Eiffel*, by Cocteau; Falk et Bousquet, *Un ange passa*; Tristan Bernard, *Daisy*. A complete failure seems to have been P. Claudel's *L'Homme et son Désir*, with its strange symbolism.

The *Revue Mondiale* of August 1 gives an account of the "Théâtre du Peuple," managed by Gémier, at the Trocadéro. Gémier was afterwards called to the Odéon to replace Gavault. L'Oasis made an interesting reconstitution of the Café-Chantant of the second Empire with songs famous at the time. The "Théâtre du Peuple," of Bussang, in the Vosges, run by Pottecher was reestablished having of course been suspended during the war. Mathias Morhardt was making an attempt to establish at Cap Breton (Dept. des Landes), a theatre specially of, for, and by children. The book of souvenirs of Madame Dussane, *La Comédie Française* was eagerly read. A new edition was printed of the original *Ubu Roi*, by Jarry, which had been out of print so long.

THE NOVEL. Pierre Benoit, who is a first class story teller, tried to become a philosopher in his new novel *Le Lac Salé*, and the success was mediocre; it is an unconvincing attack on American clergymen and an exaltation of a Jesuit priest in Utah, during the troubles of the middle of the last century. The Prix Goncourt having gone to a negro, of Martinique, René Maran, for his very realistic negro novel *Batouala*, much discussion ensued and it was suggested in many quarters that while the book was interesting considering that it was written by a negro, it was far from equal to the rival novel which had as many suffrages (five) and lost the prize only because the president had given his vote to Maran. This rival novel, *L'Épithalame*, by Jacques Chardonne (pseudonym for Boutelleau) is a two-volume study which reminds one of the

pitiless analysis of character of which Stendhal's *Rouge et Noir* remains the prototype. The other two much discussed novels—by Dumur and by Villetard—were mentioned with war books. The most undisputed success of the year, however, was the delightful novel of French Canadian life *Maria Chapdelaine*, by Louis Hémon (who died by accident in the Canadian woods); the word "masterpiece" has been used freely by the best critics.

No particular tendency prevails in the novel of the year. A. Thérive, however, in *Revue Critique*, November 25, thinks that he can discern an offensive return of realism. Works of men whose fame is already firmly established, and whose inclinations have, all told, remained the same as in former years were as follows: P. Bourget, *Un drame dans le monde*; Lavedan, *Gaudias* (see YEAR BOOK, 1920); Marcel Prévost, *La nuit finira*; H. de Régnier, *Pêcheresse* (keen analysis of a woman equally sensual and puritanic); P. Marguerite finished before dying a two-volume novel *Le sceptre d'or*, in which he attacks money makers as he had attacked pleasure-seekers in his last novel *Jour*. All in their own and known manner also were the following: R. Boylève, *Élise*; E. Jaloux, *Fin d'un beau jour*; Tinayre, *Persephone*; H. Bordeaux, *La chair et l'esprit*; A. Corthis, *Sa vraie femme*; Pierre Grasset, *Aimer*; J. H. Rosny, *Amoureuse aventure*; A. Beaunier, *L'amour et le secret*; H. Bachelin, *Le béliar, la brebis et le mouton* (in the country); Binet-Valmer, *L'enfant qui meurt* (a child suffering from tuberculosis); Cl. Farrère, *Condamnés à mort* (story of a strike in the twentieth century, in America, and in which the strikers all must perish because of the scientific inventions in the hands of capitalists); Duvernois, *La brebis galeuse* (same theme as Hervieux's *Les Paroles restent*; a girl unjustly suffering of terrible slander); Marc Elder, *Thérèse ou la bonne éducation*, and *Sang des Dieux* (unworthy child of an Academician); Schlumberger, *Un homme heureux* (a man who has the energy to start life entirely anew); L. Werth, *Yvonne et Pijallet* (a story that refuses to be commonplace); M. Boulenger, *Marguerite* (story of a man who suffers because he has no control over the life of a child for whom he is responsible but cannot recognize); E. Giraudoux, *Suzanna et le Pacifique* (the story of a Robinson Crusoe); A. Lichtenberger, *Raramené* (picture of the inhabitants of an island in the Pacific in which once more certain good features of the man of nature are studied); Marcel Berger, *Les Dieux tremblent* (a curious story of a strange and powerful maniac who causes all the guests in a great hotel to die after putting them all in a state of erotic folly); E. Montfort, *Chanson de Naples* (Naples the city of passion); Duhamel, *Confession de minuit* (trying to picture the mechanism of the brain with all its apparent contradictions); Gyp, *Mon ami Pierrot* (a good story of the old time Gyp); Tristan Bernard, *L'enfant prodigue du Vésinet* (with the usual wit and good humor). Quite a crop of novels by women some of whom have the talent to know their own talent like: Gérard d'Houville, *Tant pis pour toi*, Jehan d'Ivray, *Rose de Fajorn*, Séverine, *Line*, Jane Catulle-Mendès, *Prière pour l'enfant mort*, Jean Berteux, *Pavot mystique*. Others continue to offer pictures of the "real woman," and show her as low a creature as they can imagine: Marcelle Vioux's *Une enlisée* owes much of its success to its outspokenness; and Madeleine Marx's

much advertised *Vous* (published simultaneously in New York, in English, and in France) is after all only one more imitation of the style inaugurated by Marie Baskirtsheff, and also claims an introduction by Barbusse. Rachilde, in *Souris Japonaise*. . . is Rachilde. Some authors less well known by the general public have given novels which attracted attention: A. de Salmon, *La négresse du Sacré Cœur* (life on the famous hill of Montmartre); G. Chéreau, *Valentine Pacquault* (realism with the fine artistic finish aimed at by Faulbert); Lafage, *Abeilles mortes*. L. F. Rouquette, *Le grand silence blanc* (reminding of the *Call of the Wild*, in Alaska); André Billy, *Barabour ou l'harmonie universelle* (satire on reformers); A. Lang, *Les responsables* (atavism in outspoken terms); M. Dekobra, *Haryndal philosophe* (a very humorous story of a boy born in a harem who has many men and many women he calls fathers and mothers and he tries to work out some philosophy of life); Dr. Lucien-Graux, *Reincarné* (a spiritualist novel supposed to be based on facts). Fr. Jammes writes a historical novel for the rehabilitation of *Saint-Joseph*; José Germain revives the legend of King Arthur's wife in *Pour l'amour de Guenièvre*; and Jules Perrin writes *Le mariage d'Abélard* in a new and suggestive manner. We might end by quoting the *roman d'aventure*, *Anicel*, by the "dadaist" Léon Aragon.

Some of the best volumes of short stories are: Marcel Tinayre, *Lampes voilées* (stories of people who have come to an age when the lamp of their lives are not extinguished, but the light is veiled); Paul Reboux, *Chonchon et Chouchoune* (humor and delicacy); B. Duvernois, *Gisèle* (3 stories); Pierre Mille, *Nuit d'amour sur la montagne*; E. Rey, *Ariane* (adaptation of a new philosophy to old legends); A. Pavie, *Contes du Cambodge*.

OTHER FORMS OF LITERARY ACTIVITY. Last year we pointed out the many autobiographies published. This tendency seems to continue. See F. Jammes, *De l'âge divin à l'âge ingrat*, the first part of the story of his life; André Gide, *Si le grain ne meurt pas* (published in *Nouvelle Revue Française*); Hugues LeRoux, *Te souviens-tu*, evoking the time when his son (killed in the war) was still alive.

Philosophical meditations so expressed that they can be counted as literature have retained the attention of the reading public, as Maeterlinck's *Le Grand Secret* (the question of the spiritualistic world); Colette Yver, *Dans le jardin du féminisme*; E. Seillière, *G. Sand, mystique de la passion, de la politique et de l'art*; Elie Faure, the intense author of *La Sainte Face*, writes in a lyric style about *Napoleon* on the occasion of the centenary of his death. Edouard Schuré has published a beautiful and inspiring volume and very timely, *L'âme celtique et le génie de la France à travers les âges*. René Gillouin, in *Une nouvelle philosophie de l'histoire moderne et française* summarizes with little criticism the "philosophie de l'impérialisme" of Seillière with its somewhat worn out diatribes against romanticism. Jean Rostand, in *La loi des riches*, directs a scathing attack against the class to which he belongs. The book was read with no little amazement; he is the second son of Ed. Rostand.

CRITICISM, HISTORY OF LITERATURE, AND LITERARY EVENTS. Scholars seem to have almost completely resumed their prewar activity. The output is considerable. Volume XIII of *Levi's*

great work: *Histoire de la Nation Française*, contains the contributions of Picavet, Lavisé, and Bédier on mediæval literature, all three very remarkable. For the time of the Renaissance: H. Chamart, *Origines françaises de la Poésie du la Renaissance*; Pierre de Nolhac, *Ronsard et l'Humanisme*. J. Boulenger edits Noel du Fail's *Propos rustiques*. For the XVIIth century: Magne, *La joyeuse jeunesse de Tallemant des Réaux*; André Allays, *Madame de Sévigné*; G. de Truc, *Lettres de Madame de Maintenon à d'Aubigné et à mad. des Ursins*; Mad. Saint René Taillandier, *Mad. de Maintenon*; Milhaud, *Descartes savant*; G. Cohen, *Ecrivains Français en Hollande au XVIIe siècle*. For the XVIIIth century: G. Seillière, *J. J. Rousseau*. For the XIXth century: G. Goyau, *Pensée religieuse de Joseph de Maistre*; F. Vermales, *Notes sur J. de Maistre inconnu*. H. Bordeaux, *Au pays de Lamartine*; L. F. Choisy, *Sainte Beuve, l'homme et le poète*; Michaut, *Sainte Beuve*; C. Bouglé, *Proudhon et son temps*; L. Arréat, *Nos poètes . . . de Béranger à Samain*; T. Bertrand, *Amitié romantique* (G. Sand et Rollinat; F. du Miomandre, *Pavillon de Mandarins* (Stendhal, Rousseau, de Gourmont, Verhaeren, etc.); A. Lantoin, *Paul Verlaine et quelques uns*; M. Esch, *En relisant Maupassant*; Deffoux et Zavier, *Le groupe de Médan*; C. Maclair, *Princes de l'esprit* (Poe, Flaubert, Mallarmé, etc.); Antoine, *Mes souvenirs sur le Théâtre Libre*. For the XXth century: J. de Suberville, *Edmond Rostand*. Peirre Lasserre, *Les Chapelles littéraires* (an attack on Claudel, Jammes, Péguy, or even more on their blind followers); P. Gsell, *Matinées de la Villa Saïd* (conversations with Anatole France); J. H. Rosny, *Aîné, Torches et Lumignons* (indiscretions on contemporary writers by one of the best known of them). We ought to mention also: *Anthologie littéraire de l'Alsace et de la Lorraine du XIIe au XXe siècle*, edited by van Bever; Th. Mustoxidi, *Hist. de l'Esthétique Française*. In the domain of Linguistics: E. Bonaffé, *L'anglicisme et l'anglo-américanisme dans la langue française*, *dictionnaire étymologique et historique*; J. Mazoureau, *La Linguistique*; and L. Sainéan, *Le Langage Parisien au XIXe siècle* (sharply criticised by Enault, a good authority himself, in *Mercur de France*, June 16, 1921).

The question whether it is wise to publish the tenth and last volume of the *Journal des Goncourt* was not settled. Another lively debate of the year was about Flaubert, who was treated with little respect by the Secrétaire perpétuel of the French Academy, Mason-Forestier, and whose centenary was celebrated with enthusiasm by many. The tercentenary of La Fontaine was well observed too; and some attention was given to the centenary of Amiel. The French Academy received M. de Flers, Chevrillon, and Bédier; they lost Jean Aicard, who had not been replaced at the close of the year. Madame Aurel, as a woman, launched, not without sensation, her candidacy (letter of June 29). The Nobel Prize for Literature went to Anatole France. The Grand Prix de Littérature went to Madame de Noailles; the Grand Prix du Roman went to P. Villetard; the Grand Prix de Poésie to J. de Suberville; the Prix Goncourt to R. Maran; the Prix de la Vie Huereuse to Raymond Escholier, for the novel *Cantegril*. The poet R. de Montesquiou-Fézensac, the playwright Feydeau, and Paul Margueritte died.

FRENCH LITERATURE, ANCIENT. See PHILOLOGY, MODERN.

FRENCH SOMALI COAST OF FRENCH SOMALILAND. A French colony lying between Italian Eritrea and British Somaliland on the Gulf of Aden. Area, about 5790 square miles; population estimated in 1917 at about 208,000. The chief city is Djibouti with a population in 1917 of 13,608, of whom 294 were Europeans. It is the seat of government and the chief port. There is a considerable inland trade and a profitable trade with Abyssinia. The fisheries on the coast are of the chief importance, but salt-mining has been developed. No later figures for trade were available than those given in the preceding YEAR BOOK. The local budget for 1920 balanced at 2,887,000 francs. The country is under a governor assisted by an administrative council.

FRENCH SUDAN. A French colony of West Africa bounded on the south by the frontiers of the Ivory Coast, the Gold Coast and the Upper Volta, on the east by the Military Territory of the Niger, and the west by Mauritania and the frontier of French Guiana and on the north by Algerian territory. Area about 617,600 square miles; population, in 1920, about 2,200,975 including 975 Europeans. It was formerly known as the Upper Senegal-Niger but the name was changed by decree, Dec. 4, 1920, to French Sudan. The chief towns are Bamako, the capital (16,000); Segou (8405); Kayes (12,000); Djenné (5450); Timbuktu (4270). The chief products are peanuts, millet, maize, cotton, castor oil plant, rice, sesame, rubber, kariti, and cattle. The chief imports are foodstuffs, cottons, and metal work and the chief exports, peanuts, rubber, cattle, gum, kopak, skins, and wool. The budget for 1920 provided for 13,567,000 francs. There is a railway from Kayes to Koulikoro a distance of 344 miles. The colony is under the governor-general of French West Africa (q. v.).

FRENCH WEST AFRICA. The following colonies and territories belonging to France in western Africa, with their areas and populations in 1920: Senegal, area, 74,112 square miles; population, 1,204,113; Guinea, 95,218 square miles; population, 1,851,200; Ivory Coast, 121,976 square miles; population, 1,407,030; Dahomey, 42,460 square miles; population, 860,580; French Sudan, 617,600 square miles; population, 2,200,975; Upper Volta, 154,400 square miles; population, 3,000,100; Mauritania, 347,400 square miles; population, 240,144. The details for these separate divisions are given under the above titles respectively. There is a general budget for the whole region, which in 1920 amounted to 40,509,800 francs. The military forces employed in French West Africa in peace time have numbered about 13,500 of whom 1500 were Europeans and the police force numbered about 3000. The whole region is under a governor-general, whose headquarters are at Dakar and who is assisted by a council. Each colony is under a lieutenant-governor, subject to the governor-general. The imports and exports for four of the principal colonies, namely, Senegal, French Guinea, Ivory Coast, and Dahomey, were in 1918 and 1919 as follows: Imports (1918), 362,942,333 francs; exports, 271,187,843; imports (1919), 292,009,589; exports, 324,296,815. The vessels entered and cleared at the ports of French West Africa in 1919 numbered 3169 of 6,430,949 tons. Railway

mileage was 1370 and the telegraph mileage 12,500. Governor-general in 1921, M. Merlin. See also TOGOLAND.

PRODUCTION. The French possessions in West Africa are rich in natural products and the possibility of valuable developments became evident after the war. A programme to that end was drawn up by M. A. Sarraut, Minister of the Colonies, and M. Martial Merlin, Governor-General. Not only did it appear that the colonies might supply a vast quantity, of the raw material indispensable to French industry, but that under French direction nearly everything required for consumption in the mother country might be produced there. The agricultural population is sparse in proportion to the vast extent of the region, but sufficiently numerous in the districts suited to agriculture to admit of rapid production by the aid of agricultural machinery. In 1921 various measures for the agricultural development of these districts were under discussion including the creation of agricultural mutual credit societies, coöperatives, etc. There seemed an especially good chance of developing there the production of cotton, and thus rendering France less dependent on the American supply. Europe was deriving from the United States about 80 per cent of the cotton required by her industries and at the same time the needs of the United States were increasing and the supply available for export was diminishing in proportion. England was taking measures to assure herself of a cotton supply from her colonies. Down to the present time French West Africa had supplied but a small portion of the necessary material for the French market, that is to say, hardly more than a thousand of the 300,000 tons regularly consumed. Cotton fibre was for the most part cultivated in the Sudan and while there were resources in Senegal and the Niger, they were not as yet developed. The Sudanese cotton fields covered more than 150,000 square kilometres and it was hoped that by extending that area and by the developing of native cultivation the supply might be greatly increased. Cotton production in French West Africa was dependent upon works of irrigation which the natives were unable to carry out. Efforts to develop the industry had been going on since 1903 under the initiative of the governor-general of French West Africa, and a considerable area had been reclaimed by irrigation. The exports from 1907 to 1919 had risen as follows, in the colonies of that region: Upper Senegal and Niger, from 56 to 2180 bales; Ivory Coast, from no exports at all to 1314 bales; Dahomey, from 320 to 1065 bales; Togo, from 432 to 2000 bales; French Guinea, from no exports at all to 220 bales. (The bale contains 250 kilos.) Thus there was a total export for 1919 of about 6500 bales, a considerable increase but utterly inadequate to the needs of French industry. The French Colonial Cotton Association had made unsuccessful attempts to acclimatize American cotton but was still pursuing the experiment by

the aid of irrigation and there was some prospect of success. The governor-general of French West Africa in 1921 was studying the Egyptian system in the hope of learning methods that might be applied in the French colonies and other investigations were going on under bodies of engineers in the great valleys of the Niger and the Senegal. Among the latter was a mission under M. Bélime and a plan worked out by it was under consideration in the closing months of the year.

FRIED, ALFRED H. See **NECROLOGY**.

FRIEDENTHAL, ALBERT. German pianist, died in Batavia, January 17. He was born in Bromberg, Sept. 25, 1862. On his numerous tours of Europe, Africa, Central and South America, Australia, and the Far East he made an extensive collection of the folk-songs of various nations, which he published in several volumes. He also wrote songs and piano-pieces.

FRIEDMANN, IGNAZ. See **MUSIC, Artists, Instrumentalists**.

FRIENDS, RELIGIOUS SOCIETY OF. Four branches make up this denomination: the Society of Friends (Orthodox) with 92,379 communicants in 1921; Religious Society of Friends (Hicksite) with 17,170 communicants; the Orthodox Conservative Friends (Wilburite), with 3373 communicants; and Friends (Primitive), with 60 communicants. The largest and most active is the Society of Friends (Orthodox). It holds a Five Years' Meeting, quinquennial, composed of delegates from 12 of the 14 yearly meetings in the United States and one in Canada. The next meeting will be held in 1922 at Richmond, Ind. The foreign and domestic missionary work of the denomination is carried on by special boards. It supports nine universities and colleges, among which Haverford College at Haverford, Pa., is the best known. *The American Friend* is the official organ of the society; it is published in Richmond, Ind., where also are the headquarters.

Excellent work was performed by the American Friends' Service Committee during the war. It has continued to give aid to the afflicted peoples of Europe. In 1920 there were about 90 workers in Poland fighting the typhus and endeavoring to make the conditions more sanitary. The Friends were establishing industries in Vienna and endeavoring to find work for the people. Relief work was continued in Germany and large quantities of food furnished the undernourished children of that country.

In 1920 the denomination presented to the government of France the Chalons Maternity Hospital which it had used throughout the war; two members of the church are to be on the hospital staff permanently.

G

GABRIELS, HENRY. Roman Catholic bishop, died at Ogdensburg, N. Y. April 23. He was born in Belgium, Oct. 6, 1838; and educated in the schools there and at the University of Louvain; but came to the United States and taught theology in St. Joseph Seminary, Troy, N. Y., 1864-92. He was president of that institution after 1871. On May 5, 1892, he was appointed bishop of Ogdensburg, N. Y. He was the author of a work on rubrics and translations from the Hebrew.

GABUN. See FRENCH EQUATORIAL AFRICA.

GALBRAITH, FREDERICK W., JR. See NE-CROLOGY.

GALICIA. Formerly an Austrian province in the Austro-Hungarian monarchy lying to the south of Poland and to the west of Podolia in Russia. On Nov. 21, 1919, the Supreme Council decided to bestow eastern Galicia on Poland under mandate for a period of twenty-five years, but the term of Polish control was subsequently left indeterminate.

GALICIAN DIALECT. See PHILOLOGY, MOD-ERN.

GALLICO, PAOLO. See MUSIC, *Festivals*.

GALLSTONE DISEASE. The medical profession are in general skeptical concerning the solubility of gallstones concretions, whether spontaneously or through the use of medicines. Even if this phenomenon sometimes occurs it can hardly mean anything of importance to the patient in the long run. Naturally stones crowded together present facets and in rounded stones there is a presumption that a certain amount of solution has taken place. Other stones are of a worm-eaten appearance or suggest carious teeth. Dr. Hedinger, the pathologist of the University of Bale, Switzerland, has made a special study of this subject and makes a report in the *Schweizerische medizinische Wochenschrift*, 1921, no. 45. When the material for study is very large a few stones will be found of such shape that partial solution must have taken place. Some stones show thin rings and fragments of the same. Others less far advanced show a marked central depression which in time would become a ring, and finally break up into fragments. More convincing is the result of experiment when human stones are introduced into the gall bladder of a living dog; these stones are quite promptly dissolved. This is of course no evidence of the solubility of human stones in the human body. In the latter, evidences of solution are present in not over one per cent of all stones studied. The phenomenon is believed to occur only when the stones lie free in the gall bladder.

GAMBIA. British colony and protectorate at the mouth of the river Gambia in West Africa. Area of the colony proper, 4 square miles; population about 8000; of the protectorate 4130 square miles; population about 240,000. Capital, Bathurst on the island of St. Mary. In 1919 there were eight elementary schools aided by the government with an enrollment of 1504 pupils. The

imports in 1919 were £1,250,321; exports, £1,553,521, both including specie. The budget in 1919 was as follows: Revenue, £180,585; expenditure, £143,451. The total tonnage of vessels entered and cleared in 1919 was 441,860 of which 354,837 were British. Governor at the beginning of 1921, Captain Cecil H. Armitage.

GAMBRELL, JAMES BRUTON. Baptist clergyman, died at Dallas, Texas, June 10. He was born at Anderson, S. C., August 21, 1841; studied at the University of Mississippi; and was ordained to the Baptist ministry in 1857. He was superintendent of the Baptist mission in Texas; and president of the Texas Baptist Educational Commission. He was afterwards a professor in the Southwestern Baptist Theological Seminary. For three years he was the editor of the *Baptist Standard*.

GANZ, RUDOLF. See MUSIC, *Orchestras*.

GARBAGE AND REFUSE DISPOSAL. The uncertainties and difficulties that have prevailed in the field of garbage and refuse disposal for several years still continue. The difficulties centre largely in the high cost of capital for new plants and, as regards the operation of old plants, in the high prices for materials and labor applicable to all methods of disposal, while the prices of salable products from garbage reduction and from hog feeding plants are low. Garbage disposal continues to be on a more uncertain and unsatisfactory basis than other technical city work. Only here and there does a city class garbage disposal as a branch of engineering that demands the close attention of qualified specialists. At Boston the City Council, acting in accordance with the recommendation of a special committee composed of city officials, rejected the offer of the private company holding the contract for garbage and refuse disposal for the major part of the city to forfeit the amount of its \$100,000 bond for the satisfactory performance of its contract if it were relieved from the latter, on the ground that it was losing money. Likewise, the Council rejected the company's offer to go on with the contract if the city would pay it \$25,000 a month additional. In September, Boston received bids for the disposal of garbage and refuse for a period of ten years from July 1, 1922, the city to deliver the material to the successful bidder at the water front. The large increase in the bids for the new ten-year contract as compared with the one about to expire illustrates the difficulties confronting cities and contractors in this field. Under the old contract the city paid \$1,402,000 for ten years on a sliding scale, the price for 1921 being \$156,000 and for the final half year of the contract at the rate of \$160,000 a year. The same contractor bid a total of \$4,202,000 for the next ten years, on the basis of \$436,000 a year at the start, declining to \$402,000 for the last full year and at the rate of \$400,000 a year for the last one-half year of the term. The only bidder in the competition offered to do the work for \$3,795,-

000, at a uniform yearly rate throughout the contract. Subsequently, the old contractor reduced his total bid to \$3,914,000 for the ten years, but the new bidder adhered to his earlier bid. The special committee, the Commissioner of Public Works, and the Mayor recommended that the contract be awarded to the lowest bidder. After protracted public hearings by the City Council, it seeming likely that the recommendation would be approved, the Mayor-elect applied to the court for an injunction to prevent the award being made until after he and a partly reconstituted City Council should come into office. The court held that the award of the contract was more a matter of discretion and judgment than of law and characterized certain allegations of fraud as "the hurling of an epithet." On December 28, the contract was awarded to the low bidder. *New Bedford, Mass.*, bought the garbage reduction plant owned and operated for a number of years by a private company, thus joining in the movement for municipal ownership (q. v.) of such plants begun a number of years ago by the city of Cleveland, Ohio, and noted from time to time in various issues of this YEAR BOOK. *Providence, R. I.*, awarded a five-year contract for garbage collection and disposal, the garbage to be fed to hogs, thus continuing a method of disposal in use at Providence for many years. Bidders in 1921 were given the option of disposal by hog feeding, reduction, or incineration, but no bids were received except for disposal by feeding. The average yearly contract price of the successful bidder was \$80,000 a year, beginning at \$100,000 and diminishing by \$10,000 a year. A special investigating committee, composed of city officials of *New York City*, submitted a preliminary report in which no final conclusion was offered as to the best means for the disposal of the garbage of the city, owing in part to the fact that studies and experiments on this phase of the subject were still under way. The committee did recommend the separate collection of garbage, rubbish, ashes, and street sweepings; that as soon as possible all work of collection and disposal be done by the city without the intervention of contractors; that ashes, unmixed with any other refuse, be used to fill low land, and that where possible this should be land owned by the city; that reclamation stations be established for recovering salable material from rubbish, the unavailable substances to be burned in furnaces operating at sufficiently high temperatures to prevent nuisance; that all street sweepings be burned at these reclamation stations; and that a reduction plant for dead animals be constructed immediately. At *Newark, N. J.*, *Buffalo, N. Y.*, and *Baltimore, Md.*, all three cities having been noted in earlier YEAR BOOKS as having let contracts for garbage disposal by feeding to hogs, each city to be paid for the garbage at a price per ton, varying with the selling price of the best live hogs for killing on the Chicago market, difficulties were experienced during the year. In each case the trouble was in part due to the heavy decline in the price of hogs fattened at the feeding plants. Operations were continued throughout the year at the Newark feeding plant, but at Baltimore the contractor disposed of the hogs without notifying the city and left the city to get along as best it could, while at Buffalo the city took over the hog-feeding plant for operation by itself. The Baltimore contractor complained that during

the winter the garbage was delivered by the city in a frozen condition and that during a part of the time in the previous summer it was stale and putrid instead of being fresh as called for by the contract, the hogs refusing to eat it when frozen or when putrid. At Buffalo there was much complaint and opposition on the part of people living in the vicinity of the hog-feeding plant, which was located in outlying territory in another municipality. The local outlying health authorities brought the matter to the attention of the State Department of Health, which ordered improvements made. The local health authorities threatened legal proceedings against the contractor. As already stated, the city finally took over the plant. Its intention was to make improvements and carry on the work as a municipal enterprise. The cities of *Rochester* and *Syracuse* put in operation municipally owned reduction plants of the Cobwell type (see earlier YEAR BOOKS) that had been under construction for some time past. Each of these cities had previously taken over reduction plants built and operated by private companies. At the close of the year *Philadelphia* stood ready to complete the change from contract to direct municipal work in its entire Street Cleaning Department, this change having been contemplated by the charter amendments that went into effect early in 1920.

The city had already taken over the privately owned garbage reduction works and during the year cleaned portions of the streets. Toward the end of the year Philadelphia received bids for a large incinerating plant but owing to strong opposition as to the location of such plant on the site chosen for the purpose, the contract was not awarded and up to the end of the year no further action in the matter had been taken. This proposed incinerator was one of several that had been proposed, for location in different parts of the city in order to reduce the length of haul. It had been left undetermined whether both garbage and rubbish, or rubbish only, were to be burned in these proposed incinerators, the city having a reduction plant available for treating the garbage, as already noted. Following the abandonment of the *Baltimore* contract for garbage disposal by feeding, the city let a contract under which the contractor proposed to sell for use as fertilizer garbage to be delivered to him by the city. The authorities of Baltimore County brought an injunction suit to prevent the disposal of garbage in this way, alleging that it would create a nuisance. The city therefore disposed of the garbage for a considerable period by burial, meanwhile letting a contract for disposal for a term of years by reduction. Labor-saving machinery was utilized in burying the garbage. In the three months, September, October, and November, prior to the new garbage reduction works going into operation, the city buried 18,315 cu. yd. of garbage at a cost of \$1.225 per yard, including unloading and burial only, and about \$1.68 taking into account the cost of equipment and other factors, but including nothing for transportation. The method used was described in *Engineering News-Record*, Oct. 27, 1921. The new Baltimore contract for disposal by reduction runs for ten years. The city pays the contractor \$2.70 per ton for garbage disposal, the city guaranteeing to supply not less than 40,000 tons of garbage each year. The city delivers the

garbage by boat to the reduction plant which is located about 11 miles below the city. The Arnold-Edgerton process of garbage reduction will be used. The plant will be located in a building owned by the contractor and used by him under an earlier contract. *Savannah, Ga.*, closed down a garbage incinerating plant early in the year and began disposing of its garbage by using it with other solid wastes for filling in marsh lands. The Savannah incinerator was one of the few in operation in the United States which produced steam that was utilized for power, except for works purposes. The steam at Savannah was piped to the water-works pumping station, close by, and decreased by that amount the amount of steam which had to be raised from coal. The shift from disposal by incineration to disposal by filling was made after a change in city administration. The new administration claimed that the incinerator was run down and inefficient. It appears also that the change in the water-works system had resulted in the abandonment of the water-works pumping plant which was utilizing the stream. *New Orleans*, which had previously virtually decided to install a garbage reduction plant, determined during the year to build several incinerators instead and called for bids for one of these but no contract had been let at the close of the year. *Dallas, Texas*, let a contract for four incinerators, to be located on the site of old garbage dumps. At *Los Angeles, Calif.*, where a contract for garbage disposal by reduction under which the city was paid 51c. a ton for garbage delivered to the plant had been in force for some years, the contractor claimed that he was losing money and offered to sell the plant to the city. Instead, the City Council voted to award a contract for disposal under which the contractor was to pay the city 96c. a ton for garbage delivered to a central loading station and the contractor expected to take the garbage out of the city for disposal by feeding to hogs. The Los Angeles County authorities opposed this method of disposal at the site chosen and subsequently a second site within the county was selected. A 10-year contract for disposal by feeding to hogs in San Bernardino County was subsequently let to another contractor who agreed to pay the city 60c. a ton for garbage delivered to him. At *Seattle*, where some years ago the city closed down two or three high-temperature refuse destructors and has since been disposing of most of its garbage by what is known as the "sanitary fill" method, the city let a contract under which a company agreed to take garbage from restaurants and feed it to hogs. The restaurants claimed legal right to the garbage, but the Superior Court refused to grant an injunction to prevent the continuation of this contract. At *Montreal, Quebec*, bids for a 300-ton garbage incinerator were invited.

In *England* where for many years high-temperature destructors with heat utilization were held to be the only proper method of refuse disposal, garbage and refuse salvaging plants are becoming notable. In these, by means of sorting, screening, and pulverizing, various salable materials are recovered, as: rags, paper, bottles, tin cans, and other metals, all of which are picked out as the refuse passes over belt conveyors; also, from the residue, unburned and partly burned coal for use as fuel, and from the fine screenings a low-

grade fertilizer is produced by pulverizers. Unsalable wastes only are burned in furnaces and raise steam for works' purposes. Installations of this kind are operated by the boroughs of Bermondsey, Hampstead, and Southwark, in the administrative county of London, and at Bury, Durham, Gateshead, Oswestry, and elsewhere in England. Some details of the Marylebone plant and of a 500-ton-per-day plant under construction for Sheffield, for which the Ministry of Health approved a loan of £180,000, are given in the Engineering Supplement of the *London Times* for June, 1921. Abstract of a report by a joint refuse disposal committee of the London Metropolitan boroughs appeared in *London Engineering* for Dec. 31, 1921, with editorial comments, and in the *London Surveyor* for Jan. 6, 1922. The report shows that of the 1,317,148 long tons or about 300,000 cubic yards of refuse produced in the cities of London and Westminster and the 27 other municipalities (boroughs) in the county of London only 18.66 per cent goes to destructors while the remainder is, for the most part, dumped on land.

A comprehensive treatise on *The Collection and Disposal of Municipal Refuse* (New York), by Hering and Greeley, was published during the year.

GAYNOR, JESSIE S. American composer, died at Webster Groves, Mo., February 20. She was born in St. Louis, Feb. 17, 1863. For many years she taught in Chicago, St. Joseph, and St. Louis. Her charming piano-pieces and songs for children have become deservedly popular. She also wrote three operettas.

GEMS AND PRECIOUS STONES. The following table shows the value of precious stones produced in the United States in 1920, by States:

Montana.....	\$223,196
Nevada.....	12,920
California.....	5,504
Arizona.....	5,328
Maine.....	3,738
Oregon.....	2,475
Arkansas, Colorado, New Mexico, Utah.....	8,435
Other States ¹	3,608
	\$265,205

¹ Connecticut, Georgia, Idaho, Michigan, Minnesota, Nebraska, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, South Dakota, Texas, Virginia, and Wyoming.

The precious stones (excluding pearls) imported into the United States in 1920 were valued at \$66,100,742, the highest value ever reported except that for 1919, from which it showed a decrease of 28 per cent. Table of imports for ten years is given below. The value of the pearls produced is omitted from the total, for pearls are not a mineral but an animal product, being deposited in the shells of mollusks. They are lustrous calcareous concretions with animal membrane between successive layers, and they owe their beauty and value in part to their organic structure; but as they are among the most desired of gems, their value is given in a separate column in the table of imports.

GEMS AND PRECIOUS STONES IMPORTED AND ENTERED FOR CONSUMPTION IN THE UNITED STATES, 1910-20

Year	Glasier's	Dust and bort	Rough or uncut	Diamonds		Other stones not set	Total, excluding pearls	Pearls
				Cut but not set

GEOGRAPHICAL SOCIETY, AMERICAN. A society established in 1852 for the furtherance of geographical research. From November, 1917, to December, 1918, it was the headquarters of the body of experts known as the Inquiry, which attended the Peace Conference and served on various territorial and economic commissions. A survey of the boundary between Guatemala and Honduras was undertaken in 1919. A technical study was desired by the governments as the basis for a recommendation by the Secretary of State for a final boundary in the disputed region. The programme of the Society in 1920 consisted of a plan of intensive research in the geography of Hispanic America. This programme was advanced satisfactorily in 1921. The results will include monographs, articles, hand books, and maps; among the maps is the millionth map of Hispanic America in approximately 100 sheets. Plans were adopted in 1921 for the foundation of a School of Surveying, to train men in modern methods of geographical survey; the course is to be eighteen months in length and to be open to properly qualified students. Mr. E. L. G. Joerg of the Society's staff went on a mission to Europe for six months in 1921 to study the status of geography in European universities and geographical institutes. His report on the results of his journey was to be printed as one of the numbers in the Research Series. The Society was able to assist the United States Department of Justice during the year in the study of the Red river boundary, which is in dispute between the States of Texas and Oklahoma. The Society publishes a quarterly magazine, the *Geographical Review*. This is a scientific periodical giving the latest information in the fields of geographical research and exploration. It also contains a record section dealing with the geographical events throughout the world, and a review section covering the whole field of geographical literature. In addition there is published a *Research Series* consisting of monographs of which normally one each year is sent free of charge to each Fellow of the Society. The officers in 1921 were President, John Greenough; Vice-Presidents, James V. Ford and Philip W. Henry; Foreign Corresponding Secretary, C. Redmond Cross; Recording Secretary, Hamilton F. Kean; Treasurer, Henry Parish. Headquarters are maintained at Broadway at 156th Street. Director, Isaiah Bowman.

GEOGRAPHIC SOCIETY, NATIONAL. A national scientific organisation, with head-

quarters in Washington, D. C., founded in 1888 "for the increase and diffusion of geographic knowledge"—the former through its expeditions and the latter principally through its organ, *The National Geographic Magazine*; through the schools of the country; and through its bulletin service for the press. During the year 1921 the Society and its members contributed \$47,200 toward the purchase of 960 acres of California forests filled with sequoias—640 acres in the Martin tract and 320 in the Mitchell tract. The second expedition into the Chaco Canyon country to excavate the ruins of Pueblo Bonito spent the season in the field under the leadership of Neil M. Judd. Evidence was found indicating that the ruins are at least a thousand years old. The principal structure was a colossal apartment house, as large in floor space as the United States Capitol, and with more than 300 rooms on the first floor. It is believed to have been five stories high; portions of the fourth story walls are now standing. The gradual excavation of the place and the restoration of the cultural objects found in the ruins of the Beautiful Village promise to retrieve the unwritten record of its inhabitants and to establish their true relationship to the human history of the New World. Arrangements were made for a third expedition to continue the work at Pueblo Bonito. Photographic expeditions were sent to Dalmatia and Greece, Central and South America, Scandinavia, Spain, and Central Europe. Dr. Robert F. Griggs, leader of the Society's six expeditions to Mt. Katmai, Alaska, made his final report on the sixth and last expedition. The several Katmai expeditions resulted in the discovery of the Valley of Ten Thousand Smokes, made a National Monument by the United States Government; the ascertainment of the sequence of events in that region which culminated in the greatest volcanic eruption of modern times; and the accumulation of a vast amount of scientific data that throws new light on many phases of the problem of volcanology. The Society announced the foundation of a series of Memoirs, which will contain both accounts of the activities of the Society's expeditions of interest to the general reader, and technical papers intended for specialists in the various fields of science covered. The first number will be devoted to the Mount Katmai expeditions. The membership of the Society at the beginning of 1922 had reached a total of 700,000. The officers and editorial staff are: Gilbert Grosvenor, President and Editor; Henry White, Vice-President; John Oliver LaGorce, Vice-President and Associate Editor; O. P. Austin, Secretary; George W. Hutchi-

son, Associate Secretary; John Joy Edson, Treasurer; Frederick V. Coville, Chairman Committee on Research; Edwin P. Grosvenor, General Counsel; William J. Showalter, Assistant Editor; Ralph A. Graves, Assistant Editor; Franklin L. Fisher, Chief of Illustrations Division; J. R. Hildebrand, Chief of School Service.

GEOLOGY IN 1921. The stimulating and the depressing influences of the war were still manifest in the science of geology. On the one hand the political side of geology received great attention while on the other the depression in the mining industry had its reflection in the science of applied geology.

The interest in political geology was evidenced by numerous works pertaining to it that came out during the year. Of these three may be said to stand out in marked prominence. The first is the *World Atlas of Economic Geology*, issued by the United States Geological Survey, which is a quantitative study of the distribution of natural wealth among the various nations of the world. It will be of immense value as a reference work for economists and others though it lacks a good discussion about the effects on this distribution.

The second work, Professor Leith's *Economic Aspects of Geology* while slightly less statistical is much more philosophical in its treatment. In addition to the fact of distribution there is also a discussion as to the origin of various natural resources, then political effect, and the financial control of the mineral resources of such countries as South America. This matter was before the public eye chiefly owing to the attempts of British and American interests to obtain exclusive rights in certain regions with resulting controversies. The excellence of Britain's position as financial controller of many of the rarer metals whose use has become so important in recent years is clearly demonstrated. The general excellence of the position of the United States is also shown, but her lack of certain minor things as tin, nickel, and platinum which are so indispensable in certain of the arts, makes the reader wish that these defects could be remedied. Leith does not confine his discussion to deposits but also considers the economic geologist, his preparation, his purpose, and the ethics of his profession. This latter, the ethics of economic geologists, is a matter of great importance for the future well-being of the profession and for the esteem in which the public will hold it.

The other work is a series of short monographs by various authors on the mineral resources of the British Empire and are intended to spread information among the British public as to the extent and distribution of the Empire's resources. They are concise and well written for the most part, being accurate without being pedantic.

On the more academic side there were published a number of works, both theoretical and descriptive, of interest and importance. The post-humous work of Barrell on the *Relation of Subjacent Igneous Activity to Regional Metamorphism* embodies an important principle, namely, that the igneous invasion is a primary cause of intense metamorphism rather than the metamorphism being caused by pressure and folding alone. Hobbs on the other hand in *Earth Evolution and Its Facial Expression* shifts the emphasis from igneous activity to dynamic action and supports the thesis that igneous activity is very ephemeral

and is confined within a zone a comparatively few thousand feet below the earth's surface. His ideas which are based on volcanic phenomena seem to have been formed without sufficient consideration of batholithic intrusions and in particular of the depths at which they originate. His ideas and conclusions are most interesting and are not to be dismissed without consideration.

Grabau's *Historical Geology* was published incorporating the author's ideas of replacing overlap and change of lithologic facies and applying them to the interpretation of the geologic record. The book is profusely illustrated and has, in particular, some novel and interesting palaeogeographic maps.

Concerning geological technique Holmes published *Petrographic Methods and Calculations* which contains descriptions of the usual microscopic methods and in addition a discussion of the investigation of the constitution of detrital sediments and the application of the data obtained to geological problems such as the discrimination of molding sands from other sands without trial. This field has as yet been almost untouched.

On the descriptive side the outstanding work was Reed's *Geology of the British Empire* which places a concise account of the geology of Britain's colonies and reference to the original articles in a handy form which makes it useful to a great variety of readers.

GEORGETOWN UNIVERSITY. A Roman Catholic institution of the higher learning at Washington, D. C.; founded in 1789. In the fall session of 1921 there were 2471 students enrolled and the faculty numbered 264. The Riggs Library contained 120,000 volumes and the Hirst Library, 8000 volumes. President, J. B. Creeden, S. J., Ph.D.

GEORGE WASHINGTON UNIVERSITY. A non-sectarian co-educational institution of the higher learning at Washington, D. C.; founded in 1821. In the fall session of 1921 there were 4164 students enrolled, of whom 1945 were in Columbian College; 914 in the Law School; 502 in the Engineering College; 332 in Teacher's College; 299 in the graduate departments; 151 in the Medical College; and 21 in the School of Pharmacy. In the summer school the enrollment was 1558 of whom 868 were in arts and sciences and the rest in law. The faculty numbered 200, and 20 were added in the course of the year. The total income during the year was \$474,417. The library contained 55,000 volumes. The largest single gift of the year was the bequest of a valuable piece of real estate from the late Gen. Maxwell Van Zandt Woodhull. President pro tem., Howard Lincoln Hodgkins, Ph.D.

GEORGIA. POPULATION. According to the report of the census of 1920, there were 2,895,832 residents in the State, Jan. 1, 1920, as compared with 2,609,121 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	4,665,000	69,975,000	\$37,087,000
	1920	4,393,000	65,895,000	69,190,000
Oats.....	1921	412,000	8,652,000	5,537,000
	1920	344,000	7,224,000	7,802,000
Wheat.....	1921	138,000	1,449,000	2,536,000
	1920	124,000	1,240,000	2,976,000

Crop	Year	Acreage	Prod., bu.	Value
Tobacco.....	1921	14,000	17,896,000	1,974,000
	1920	22,000	13,200,000	4,884,000
Hay.....	1921	712,000	2,629,000	9,881,000
	1920	679,000	2,552,000	12,878,000
Peanuts.....	1921	202,000	133,320,000	3,333,000
	1920	224,000	160,832,000	8,042,000
Potatoes.....	1921	23,000	1,725,000	2,846,000
	1920	22,000	1,628,000	3,386,000
Sweet potatoes.....	1921	146,000	12,410,000	7,818,000
	1920	132,000	12,276,000	11,908,000
Cotton.....	1921	4,140,000	2,840,000	69,720,000
	1920	4,900,000	2,145,000	108,257,000
Sorg. syrup.....	1921	37,000	3,478,000	1,391,000
	1920	35,000	3,290,000	3,422,000
Sugar cane.....	1921	61,100	7,322,000	
	1920	53,100	9,697,000	

¹ Pounds. ² Tons. ³ Bales. ⁴ Gallons.

DRAINAGE. The total works completed by drainage enterprises to Dec. 31, 1919, comprised 276.8 miles of open ditches, and the additional works under construction on that date were 79.9 miles of ditches. No tile drains were included in the plans of improvement undertaken by the operating enterprises. The figures given do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. There are no pumping districts for land drainage in Georgia. The principal crop grown on the drained land in the drainage enterprises was corn; the crop of second importance was oats.

DRAINAGE ON FARMS		Amount	Per cent of total
Number of all farms in the state.....		310,732	100.0
Farms reporting land having drainage.....		15,121	4.9
Farms reporting land needing drainage.....		34,337	11.1
All land in farms.....	acres..	25,441,061	100.0
Improved land in farms.....	acres..	13,055,209	51.3
Farm land reported as provided with drainage.....	acres..	274,698	1.1
Farm land reported as needing drainage.....	acres..	1,819,611	7.2
DRAINAGE ENTERPRISES			
Approximate land area of the state.....	acres..	37,584,000	100.0
All land in operating drainage enterprises.....	acres..	65,452	0.2
Improved land.....	acres..	29,753	0.1
Timber and cut-over land.....	acres..	10,165	(1)
Other unimproved land.....	acres..	25,544	0.1
Total capital invested in and required for completion of operating enterprises.....		\$1,098,239	100.0
Capital invested in these enterprises to Dec. 31, 1919.....		\$794,585	72.4
Additional capital required to complete these enterprises.....		\$303,654	27.6

¹ Less than one-tenth of 1 per cent.

MANUFACTURES. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. A comparative summary for the State, 1914 and 1919, follows:

	Census		Per cent of increase 1914-19
	1919	1914	
Number of establishments.....	4,803	4,639	3.5
Persons engaged in manufactures.....	141,080	118,565	19.0
Proprietors and firm members.....	4,777	4,443	7.5
Salaries employees.....	12,803	9,661	32.5
Wage earners (average number).....	123,500	104,461	18.2
Primary horsepower.....	436,804	357,403	22.2
Capital.....	\$448,932,000	\$258,326,000	73.8
Services.....	127,565,000	49,960,000	155.4
Salaries.....	25,525,000	11,822,000	115.9
Wages.....	102,040,000	38,128,000	167.6
Materials.....	439,869,000	160,089,000	174.8
Value of products.....	693,556,000	253,271,000	173.8
Value added by manufacture (value of products less cost of materials).....	253,687,000	93,182,000	172.2

TRANSPORTATION. In 1921 there were 9689.77 miles of steam railway in actual operation.

EDUCATION. The total school population in 1920 was 840,861; white, 471,754; colored, 369,107; enrollment, 679,747; white, 418,246; colored, 261,501; teachers: white, 10,590; colored 4,582; average white salary, \$75.68; average colored salary, \$36.12; total expenditures, common higher schools, \$9,449,986.24.

FINANCE. Cash balance, Jan. 1, 1920, \$909,625.64; receipts for 1920, \$11,170,500.88; expenditures for 1920, \$11,055,325.37; cash balance, Jan. 1, 1921, \$1,024,801.15; bonded debt, \$5,720,202.

LEGISLATION. Among the laws passed in the legislative session of 1921 may be mentioned the following: Acts to promote the intelligent marketing of agricultural products; to prohibit all aliens or non-residents from storing or keeping dangerous explosives and to regulate the purchase, use, and sale of explosives; to create a State board of forestry; to amend the motor vehicle law and regulate speed on streets and highways; to provide for an occupation tax on sellers of gasoline; to provide for a joint committee to consider tax measures, including income tax bill; to amend school laws to provide for Bible reading.

OFFICERS. Governor, Thomas W. Hardwick; Secretary of State, G. L. McLendon; Treasurer, William J. Speer; Attorney-General, George M. Napier; Superintendent of Schools, M. L. Brittain; Adjutant-General, J. Van Holt Nash.

JUDICIARY. Supreme Court: W. H. Fish, Marcus W. Neck, Samuel C. Atkinson, H. Warner Hill, S. Price Gilbert, J. K. Hines.

GEORGIA, REPUBLIC OF. Formerly a part of the Russian empire; after 1918 an independent republic; situated in Transcaucasia between the Caspian and the Black seas; bounded on the

north by Caucasus, on the east by Azerbaijan, and on the south and southwest by Armenia and Turkey. Capital, Tiflis. It includes the following divisions: Tiflis, Kutais, Sukhum, Zakathali, Ardahan, Olti, and the southern part of the Black sea district. Area, variously estimated at from 32,769 to 35,600 square miles; population in 1915, estimated at from 3,053,345 to 3,176,156. The chief cities are: Tiflis, 346,766; Kutais, 85,151; Sukhum, 61,974; Poti, 20,731. The ultimate destination of Batum which by the treaty of May 25, 1920, had been conceded to Soviet Russia by Georgia was not determined in 1921 and was held by the Turks. Elementary instruction is free and compulsory for children between the ages of five and eleven. The university at Tiflis, founded in 1918, had 45 professors and 1500 students. No later figures in respect to production were available than those given in the preceding YEAR BOOK. See the preceding YEAR BOOK also for an account of the racial composition and general economic conditions of the country. The military system is based on both voluntary and compulsory service, the national guard being constituted on the former principle, and the regular army on the latter. The movement for independence started after the Bolshevik revolution in 1919. Georgia together with Armenia and Azerbaijan set up an independent Transcaucasian republic which refused to recognize the Bolsheviks, and proclaimed its independence, April 22, 1918. The three component parts of this new federation separated soon afterwards, and Georgia proclaimed its independence, May 26, 1918, by its national council, which had been chosen by the national assembly of Georgia. The constituent assembly ratified this act of independence, March 4, 1919, and the government was recognized *de jure* by the Allies, Jan. 27, 1921. The constituent assembly which had been elected on the basis of universal suffrage for both sexes, and direct equal secret and proportional voting was engaged in 1921 in the preparation of a constitution. During the interval executive power was in a ministry chosen from the constituent assembly, the head of the republic being the president of the ministry. The ministry was responsible to the constituent assembly which also nominated a senate with power of control over all officials of the state. The Socialist Democratic party was dominant in both the constituent assembly and in the government, being the party of the working classes and the peasantry. President of the ministry in 1921, Noah Jordania.

Conditions of great distress were reported in the closing months of the year, by the exiled leaders of the government that had been overthrown. According to these accounts the country was suffering from famine and disease, and from misgovernment. It was reported that the Russian invaders had stripped the country bare and that the government was highly oppressive, inflicting many executions and imprisonments. Similar reports also appeared in the Paris press. Among other charges against the Bolsheviks it was said that in spite of the great distress resulting from famine they had made wholesale requisitions of grain. It was also said that a large part of the population were hostile to the new government. In November the arrest of a delegation of workmen who were sent to protest against the severity

of the Soviet rule was reported. On the news that they were imprisoned in a fortress the workmen in Tiflis went on strike and the students of the universities there joined in a movement of protest, which was put down by the Bolshevik authorities after making about 2000 arrests.

GEORGIA, UNIVERSITY OF. A State institution of the higher education at Athens, Ga.; founded in 1901. There were 1230 students enrolled in 1921 and the faculty numbered 90. The library contained 62,000 volumes. President, David C. Barrow, LL.D.

GEORGIA SCHOOL OF TECHNOLOGY. A State institution of higher technical education at Atlanta, Ga.; founded in 1888. There were 1850 students enrolled for the fall session of 1921 and the faculty numbered 100. The income from State appropriations and fees was \$230,000 and the library contained 15,000 volumes. President, K. G. Matheson, LL.D.

GERHARDT, ELENA. See *Music, Artists, Vocalists.*

GERMAN COLONIES. The oversea possessions of Germany were completely conquered by the Allies before the end of the war. In Africa they consisted of the following colonies: German East Africa, German Southwest Africa, Kamerun, and Togo; in the Pacific they were: New Guinea, including all the territories held by Germany in the Western Pacific, namely, Kaiser Wilhelm's Land, the Bismarck Archipelago, the Caroline Islands, the German Solomon Islands, Marshall Islands, the Pelew Islands, Marianne or Ladrone Islands (with the exception of Guam), and the island of Nauru; also German Samoa, and in the Far East, Kiaochow. Total area, 1,140,117 square miles; total population, 13,253,000. Their distribution and status were determined by the Treaty of Versailles. For the discussion to which the subject gave rise, see the article **WAR OF THE NATIONS** in this and preceding YEAR BOOKS. According to the decision of the Supreme Council, May 7, 1919, the mandates for the German colonies in Africa were distributed between France and Great Britain, and the details were completed in the Franco-British agreement of July 10, 1919. See the titles above mentioned and also the article, **TANGANYIKA TERRITORY.** For the disposition of the Pacific colonies of Germany, see **GERMAN NEW GUINEA; GERMAN SAMOA; KIAOCHOW; and WAR OF THE NATIONS.**

GERMAN EAST AFRICA. A former possession of Germany, lying south of British East Africa and extending from Lakes Victoria Nyansa, and Tanganyika, and Nyasa to the Indian ocean. It was overrun by British and Belgians during the war, and passed under administrative control of Great Britain and Belgium under mandate of the League of Nations, the British portion being known as Tanganyika Territory (q. v.). The Belgian sphere including provinces of Ruanda and Urundi is under a royal commissioner of the Belgian government with headquarters at Kigali.

GERMAN LANGUAGE. See **PHILOLOGY, MODERN.**

GERMAN LITERATURE. The year 1921 has barely differed from those before the war in the number and character of the books published in Germany. The constantly reiterated complaint

about economic depression and the stress of poverty sounds strange to the ear, when the eye surveys the vast array of books on the shelves devoted to new publications and discovers among them not a few with elaborate illustrations and expensive bindings. The paper shortage seems certainly to have been relieved, for the quality of the material that has gone into their making is no longer inferior to that used before the fatal year 1914.

The number of new plays staged in Berlin, Leipsic, Dresden, Hamburg, Vienna, and other cities of Germany and Austria also indicates normal conditions. Though playwrights and actors may be underpaid, the crowds that fill the playhouses must certainly fill the pockets of the managers. Nor do the various foundations that offer annual prizes for new plays seem to lack funds to carry on their work of encouragement and reward.

FICTION is as usual numerically far ahead of other departments of literature. Among the names on the title pages of recent publications are some veterans of the German book world. Foremost among them is Adam Müller-Guttenbrunn, the Austrian, who has added a novel with the poet Lenau as hero to the long list of his works; the story is called *Dämoniache Jahre*. The Swiss novelist J. C. Heer has published two new books: *Joggeki*, with the subtitle *Die Geschichte einer Jugend* seems to be autobiographical and it has probably for that reason found an astonishingly large sale; forty-seven thousand copies within a few months. The other book is entitled after its hero Nick Toppeli and bids fair by its homely atmosphere to be equally well received. One of the most popular and prolific novelists of Germany, and one well known to German readers in America through his lectures in this country some ten years ago, is Rudolf Herzog. He has three new volumes to his credit: the novel *Die Buben der Frau Oplerberg* and the books of short stories entitled respectively *Der alten Sehnsucht Lied* and *Es giebt ein Glück*. Georg Herrmann, the analyst of the soul of old Berlin, whose mid-century heroine *Jettchen Gebert* is a figure in the gallery of German fiction not easily forgotten by readers of that book, has written a new novel called *Schnee*. Wilhelm Schmidtbonn, better known as a dramatist, is the author of a story which deals with dogs and is entitled *Die Flucht zu den Hülflosen*. Karl Goldmann has also written a dog story; it is called *Numa*. The brother of Gerhart Hauptmann, Carl, published a novel *Drei Frauen*, which as all of his works is psychologically interesting, but written in a very irritating style. Wilhelm Meyer-Förster, the author of *Ali Heidelberg* has written *Die liebe der Jugend*, Richard Huldshiner, who is remembered by his *Stille Stadt*, but appears rarely on the book market, has a new volume; *Beatus, aus dem Buche eines Lebens*. Jakob Schaffner, a Swiss novelist, who also resists the temptation of rapid production, has written *Kinder des Schicksals*. Emil Lucka's *Heiligenart*, Otto Soyka's *Der Selen-schmied*, Franz Nabl's *Die Galgenfrist*, Georg Wasmers *Die Gärten vor der Stadt*, Rudolf Huch's *Das unbekannte Land*, Bernd Isemann's *Klotilde*, Oskar Loercke's *Der Oger*, and Otto Flake's *Nein und Ja* recall previous works of their authors almost forgotten in the enormous output of German fiction. Norbert Jacques, a native of

Luxembourg, who chose to be rabidly Teutonic at the outbreak of the war, has chosen a neutral topic for his story of adventure *Die Frau aus Afrika*. Victor Auburtin, who before the war attracted attention by a slim volume of short sketches, delightfully French in style, has published a new book, called *Pfauenfedern*. Julius Ludassy is the author of a Viennese story: *Der Turm der Liebe*. Walter von Molo's *Das Volk wacht auf* is like most of his recent works strongly nationalistic. Zdenko Kraft's *Liebestod*, a Wagner novel, Hans Schottler's *Malthus*, called a novel of the future, and Albrecht Schaeffer's *Gewaltiger Tod*, fairy tales in twelve lunar phases, possess some features of interest. Franz Werfel, a writer of lyrics and plays of somewhat radical tendency, is the author of a novel *Der Spielhof*. There have also appeared novels and short stories by Walter Hauch, Paul Lange, Julian Karwath, Oswald Pretzmann, Werner Jansen, Wilhelm Scharrelmann, Frank Thiess, Leo Perutz, Bruno Ertler, Adolf Koelsch, and Kurt Münzer. Among the women novelists the name of Isolde Kurz is always welcomed; her new book of stories is called *Legenden*. Marie Eugénie delle Grazie, the Austrian poet, dramatist, and novelist, has published *Der Liebe und des Ruhmes Kränze*. Elisabeth Heyking, whose *Beiefe die ihn nie erreichten* had a sensational success shortly after the Boxer rebellion, will hardly add to her reputation by her new book.

DRAMA. Of the numerous new plays that saw the footlights during the past season none stand out as significant dramatic events. Gerhart Hauptmann seems long ago to have reached the zenith of his creative power. Hoffmannsthal owed his greatest success to Richard Strauss, whose musical setting of *Electra* won far greater appreciation than the original drama. Sudermann, prolific as ever and keen to utilize the feeling of the moment, goes on writing patriotic dramas, but even they do not seem to have as powerful an effect upon the people as did his early works. His patriotic series is entitled *Das deutsche Schicksal* and the three plays are *Heilige Zeit* and *Opfer*, both in four acts and *Notruf* in five. Gerhart Hauptmann's interest in Astec subjects has given us *Indipohdi*, originally published in the *Neue Deutsche Rundschau* and now available in book form. His latest play *Anna* has fallen short of his admirers' expectations. Hofmannsthal has written a three-act comedy *Der Schwierige* and has made a new German version of *Everyman*; *Jedermann*. A posthumous work of the late Richard Dehmel is *Die Götterfamilie*, labeled "cosmopolitan comedy." Another posthumous play is Frank Wedekind's *Die junge Welt*. Heinrich Lilienfein, who some years ago was very warmly acclaimed as a new star in the world of drama, has been unable to repeat his first success. His five-act play *Die Überlebenden* is a drama of contemporary Germany. The late Carl Hauptmann's interest in Russian themes, evident in much of his fiction, has culminated in a drama entitled *Der abtrünnige Zar* and labeled "legend in six scenes." Among the younger men Franz Werfel is one of the most striking personalities. Of radical tendencies, both in his philosophy as in his aesthetic principles, he is considered by not a few critics as a fair representative of the "future." His new play is entitled *Der Spiegelmann* and is attracting a

great deal of attention. Another representative of the younger generation, Carl Sternheim, cultivates a cynical attitude which unpleasantly colors most of his work. His latest work is a three-act comedy *Zeitgenossen*. The Austrian poet Anton Wildgans has begun the publication of a dramatic trilogy with a *Cain* which is to be followed by *Moses* and *Jesus*. Friedrich Seebrecht, whose name has previously appeared in the annals of the drama, is the author of a play on the old and ever fascinating theme of the Wandering Jew: *Ahasver*. Eberhard König, whose name is also remembered from past seasons, had considerable success in Nuremberg with the first performance of his poetical drama: *Wieland der Schmied*. Paul Bourfeind had two premières to his credit: *Völkerfrühling*, a play of to-day, and *Der Kaiser*, a drama with Giordano Bruno as hero, which had considerable success in Cologne. Karl Röttger is the author of a drama in three scenes *Die Heimkehr*, which he calls "legend." A comedy by Robert Walter *Die Geburt der Narren* had a successful first performance in Hamburg. The same city also acclaimed Karl Küchler's *Das Gastmahl der Liebe*, a three-act play. Carl Röseler's three-act comedy *Der pathetische Hui* is not on the level of his earlier works. Rural dramas are rare in German literature of the present; hence Elisabeth Römmling's peasant drama in four acts with an epilogue, "Der Hof," received some attention when given at the Burgtheater in Vienna. The dialect comedy in three acts *De hillige Hannes* by Hans F. Blanck, which had its initial performance in Hamburg, owed its success to the same fact. A Baltic tragedy by Otto Brüer, *Heilandstur*, is another play of distinctly local atmosphere. Finally there must be mentioned the three-act drama *Orpheus und Eurydike* by Oscar Kokoschka, the poet-painter, which was given at Frankfurt but is too blatant a product of his æsthetic idiosyncrasies to be seriously considered.

LYRIC POETRY. Arno Holz, who some years ago set out to revolutionize the poetry of his country, appears as the author of a volume called *Die Blechschmiede* with the sub-title "Pandinium, Pandæmonium, Panmysterium." Christian Morgenstern, after some years of silence has sent out two books: *Ein Kranz* and *In Phantia's Schloss*. Cesar Flaischlen's usual New Year's publication was entitled *Im Schloss der Zeit*. New volumes by Ricarda Huch, Hedda Sauer, and Agnes Miegel give evidence of their authors' undiminishing creative power. The young Austrian, Albert Ehrenstein, has also set forth a new book of poems: *Gedichte*. Other lyrical volumes are Peter Baum's collected poems, under the title *Baum, Feld und Wald*, Johann Lindner's *Gott, Erde, Mensch*, Waldemar Bonsels' *Das Feuer*, Hans Brandenburg's *Stimmen* and Victor Meyer-Eckhardt's *Der Bildner*.

ESSAYS, MEMOIRS, ETC. The physician-essayist Carl Ludwig Schleich has published a volume of reminiscences *Lebenserinnerungen* which cover the years from 1859 to 1919. Annette Kolb, a writer of French and German origin, who at the beginning of the war created a sensation by publicly declaring her inability to side with Germany, is the author of *Zarastro*, a volume of essays with the sub-title *Westliche Tage*. Anton Buchner has written a book on *Judas*, offering a "new" interpretation of the character. Rudolf Eucken's name figures on the title-page of rem-

iniscences: *Lebenserinnerungen*. One of the most interesting books of this kind is the posthumous book by Otto Braun, the son of the distinguished novelist Lily Braun. The young man fell at the front and the book which gives evidence of unusual precocity is entitled *Aus nachgelassenen Schriften eines Frühvollendeten*. Stefan Zweig, dramatist, poet, and translator of Verhaeren and Romain Rolland, has published a biography of Marcelline Desbordes. Richard Specht's book on Richard Strauss is a commendable contribution to biography and musical history. Alexander von Gleichen-Russwurm has sent forth another of his delightful books of reflections: *Narrenweisheit*. Ernst Lissauer, the author of the notorious *Hymn of Hate*, offers a warm tribute in prose and verse to Anton Bruckner, the composer, under the title *Gloria Anton Bruckners*. *Der Expressionismus* is a new book by Paul Fechtel.

LITERATURE, MUSIC, ART. Heinrich Bischoff has published a critical estimate of Lenau's poetry: *Nikolaus Lenau's Lyrik*. Paul Fechter is the author of a book on Frank Wedekind. Ella Spiess writes about the Austrian poet Jakob Julius David who died some years ago before attaining perfect development of his indisputable poetical gift. Emil Engelhardt pays tribute to Tagore, considering him as man, poet, and philosopher. Jacob Minor writes a volume of reminiscences of the Burgtheatre of Vienna under the title *Aus dem alten und dem neuen Burgtheater*. Karl Storck, long identified with the magazine, *Der Türmer*, has brought out a new revised edition of his history of music. Kurt Arnold Findeisen is the author of a volume of stories about musicians, called *Klaviergegeschichten*. Julius Bab has written a new volume of the drama called *Neue Kritik der Bühne*.*

TRANSLATIONS. The number of translations that appeared during the year is amazing. Only a few of them can be noticed here. They are Dostojewski's travel book *Reisebilder*, the poetical works of Adam Mickiewicz, E. Berthe's volume of Greek lyrics, Gorki's Recollections of Tolstoy. Schmidtbohn's translation of an old French Passion Play of the fifteenth century, and others. Oscar Wilde is continually being brought out in new translations. A rather curious volume, called *Das Herz des Feindes*, has been compiled by Karl Arne; it is an anthology of English war lyrics abounding in ludicrous mistakes. There have been translations of the recent books of Barbusse and Paul Reboux. A story by the Polish author Gabriele Zapolska has been published under the title *Die unberühmte Frau*. Otto Pick has sent forth a collection of Czech stories. Tolstoy, some new Russians, Ambrose Bierce, and Francis James have also been translated.

PRIZE CONTESTS. The Nietzsche-Archiv in Weimar has distributed three prizes of 1500 marks each among Georg Dehn, for a history of German art, Bruno Burch for a work on Immanuel Kant and Leopold Ziegler for a book called *Gestaltwandel der Götter*. The Keil foundation in Leipzig, commemorating the work of the founder of the *Gartenlaube*, has given a prize to Alfred Brust for his drama *Der ewige Mensch* and a book of plays: *Spiele*. Arno Holz has received 4000 marks for his *Blechschmiede*.

* New books on art are Max Deri's *Die neue Malerei* and Friedrich Markus Hübner's *Die neue Malerei in Holland*.

NECROLOGY. Among the writers who have died during the year are Carl Hauptmann, the gifted brother of Gerhart, who died February 4; Emil Hellbut, the art critic who died February 23; Franz Diederich, the poet, Ernst Ziel, the editor of the *Gartenlaube*, Otto Piper, author, editor and publisher of Munich, Max Kalbeck, poet and critic of Vienna, and Thaddäus Rittner, a dramatist, who had attracted no little attention during the recent seasons.

GERMAN NEW GUINEA. The name given to all the territories formerly held by Germany in the Western Pacific, including, Kaiser Wilhelm's Land, the Bismarck Archipelago, the German Solomon Islands, the Caroline Islands, the Marshall Islands, Marianne or Ladrone Islands (with the exception of Guam), the Pelew Islands, and the small island of Nauru. They were occupied by the Australians, Nov. 12, 1914. Under the Treaty the islands north of the Equator, namely, the Caroline, Marshall, Pelew, and Ladrone Islands were turned over to Japan under mandate; and those south of the Equator, the Bismarck Archipelago, the German Solomon Islands, and the former German possessions on the island of New Guinea were assigned to Australia under mandate of the League of Nations, Dec. 17, 1920. The possessions known under the title of German New Guinea were formerly administered at Rabaul, the capital, Kaiser Wilhelm's Land consists of the northern section of southeastern New Guinea with an area of about 70,000 square miles, including the adjacent islands. The population is variously estimated at from 110,000 to 530,000. (See the article **KAISER WILHELM'S LAND.**) The Bismarck Archipelago is situated between 141° and 154° E. longitude, and between the Equator and 80° S. latitude. The chief islands are: New Britain, formerly Neu Pommern; New Ireland, formerly Neu Mecklenburg; and Neu Hannover. The area of New Britain, the largest of these islands, is placed at 10,000 square miles; of New Ireland, at 4600. The population of all the islands has been estimated at 188,000. New Britain has about 50,000 inhabitants of whom in 1914, 600 were Europeans. There are a number of excellent harbors. The chief town is Rabaul, the former capital of the German possessions in the Western Pacific, and the present capital of the Bismarck Archipelago. New Ireland has about 28,000 inhabitants, and the chief town is Kawieng. The most important of the smaller groups of islands in the Archipelago is that of the Admiralty Islands. The Solomon Islands before the war were owned partly by Germany and partly by Great Britain. The German portion included the island of Bougainville, with an area of 3500 square miles and a native population of 15,000, and the smaller island of Buka. The chief harbor is Kieta on the island of Bougainville. The following table taken from the *Statesman's Year Book* of 1921 shows the principal details in the foreign trade of the former German possession of New Guinea for three years:

	1917-18	1918-19	1919-20
	£	£	£
Chief Imports:—			
Groceries.....	83,771	67,410	190,441
Hardware and machinery...	34,949	48,942	64,912
Drapery and boots.....	52,264	74,806	78,935
Tobacco.....	16,863	16,163	36,166

	1917-18	1918-19	1919-20
	£	£	£
Chief Imports:—Continued			
Wine, spirits, and beer.....	16,079	16,021	31,744
Oils and kerosene.....	16,199	14,032	23,834
Total Imports.....	258,040	271,861	506,767
Chief Exports:—

Shell.....	19,424	14,065	51,843
Birds of paradise.....		100	34,133
Cocoa.....	11,159	8,464	15,530
Total Exports.....	404,504	269,666	849,422

GERMAN PROTECTORATES. See **GERMAN COLONIES.**

GERMAN SAMOA. A former German protectorate, comprising that portion of the Samoan group which lies to the west of 171° E. longitude including the islands of Savaii and Upolu, the largest in the group; assigned under mandate of the League of Nations to Great Britain, Dec. 17, 1920, and now termed the Territory of Western Samoa. Area, estimated at from 1210 to 1260 square miles; population, 1917, 41,128 (exclusive of military) of whom 1668 were whites and 2237 coolie laborers. Of the whites the British numbered 660. It was one of the regions that suffered most severely from the influenza epidemic in 1918, the deaths being placed at about 7500. Copra is the chief production, and cocoa, sugar, rubber, and cardamons are next. Imports in 1919, £291,368; exports, £532,500. Revenue for the year ending March 31, 1920, £95,022; expenditure, £96,314. Vessels entered in 1919, 77 of 34,273 tons; cleared 81 of 35,940 tons. The islands were occupied by the New Zealand forces, August 29, 1914, and surrendered by Germany under the Treaty of Versailles, 1919. The administrator at the beginning of 1921 was Colonel R. W. Tait. The question of New Zealand's administration over the former German possessions in Samoa was under consideration at Washington at the close of the year. The treaty of 1899 dividing the Samoan Islands among Germany, the United States, and Great Britain, contained the principle of equal trade treatment for the three Powers. Under New Zealand control the legislative council established in German Samoa by the New Zealand government had passed an act providing for a higher tariff on foreign imports than on those from New Zealand. This course led to protests as inconsistent with the arrangement of 1899.

GERMAN SOUTHWEST AFRICA. A protectorate administered by the Union of South Africa under mandate of the League of Nations, Dec. 17, 1920; formerly a German protectorate; lying between Angola and Cape Province of the Union of South Africa. Area, 322,400; European population, 1913, 14,830, of whom 12,292 were German and 1799, British. After the beginning of the war 6350 Germans were deported, but recent estimates indicated that the European population in 1919 had considerably increased, owing to the influx of South Africans, and it was placed in that year at between 16,000 and 17,000. Native population, estimated at 190,000, including the Ovambos who number about 100,000. Seat of the government is Windhuk. The principal races, other than the Ovambos are: the Hereros, Bastards, Bergdarmaras, Hottentots, and Bushmen. The Ovambos inhabit the northern region known as Ovamboland. The chief stock-raising people are the Hereros. Stock-raising is the principal occupation, and cattle in

1920 were estimated at 400,000, and sheep and goats at 2,225,000. Agriculture is impracticable without irrigation except in the northwestern part. The yield of the diamond mines in 1919 was 462,181 carats, valued at £2,081,863. Copper and tin are also worked, and marble is found. The foreign trade in 1919 was as follows: Imports, £1,135,116; exports, £1,679,534.

The following is an abstract of the estimated expenditure during the year ending March 31, 1922, compared with that for the year 1920-21:

<i>Expenditure</i>	<i>1920-21</i>	<i>1921-22</i>
	£	£
Administration.....	30,940	48,556
Agriculture.....	39,550	54,193
Audit.....	1,050	2,124
Customs and excise.....	1,250	2,943
Defense.....	3,200	750
Education.....	23,980	63,198
Irrigation.....	55,500	123,677
Justice.....	39,000	57,792
Lands, deeds, and survey.....	38,660	45,049
Mines.....	4,480	4,938
Native affairs.....	7,000	16,904
Posts, telegraphs, and telephones.....	53,930	65,000
Prisons.....	23,150	25,319
Public health.....	23,634	22,880
Public works.....	68,600	118,656
Southwest Africa police.....	182,750	187,800
Total ordinary expenditure.....	596,674	839,779
Extraordinary expenditure.....	303,000	446,750
Grand total.....	899,674	1,286,529

The estimate of revenue to be collected during the year 1921-22, as compared with that for 1920-21, was:

<i>Revenue</i>	<i>1920-21</i>	<i>1921-22</i>
	£	£
Customs.....	75,000	80,000
Excise.....	4,000	4,000
Posts, telegraphs, and telephones.....	40,000	40,000
Mining royalties, profits, and leases.....	800,000	680,000
Licenses, liquor, trading, arms, game, etc.....	12,000	12,000
Stamp duties and fees.....	5,000	6,000
Estate and transfer duty.....	5,000	4,000
Native taxes.....	200	600
Land revenue.....	15,000	13,000
Sales of Crown land.....	15,000	8,000
Forest revenue.....	300	300
Rents of Government property (houses and buildings).....	2,000	7,500
Fines and forfeitures.....	7,500	3,600
Departmental receipts.....	8,000	12,000
Miscellaneous.....	36,000	20,000
Total.....	1,025,000	891,000

South African forces captured the country from the Germans in 1915. German law was enforced until 1920 when the Union of South Africa established new regulations under martial law. After that civil courts were established and the troops were withdrawn. Administrator at the beginning of 1921, Gysbert Hofmeyr.

An important step taken during the year for the development of this region was the approval by the administrator, G. R. Hofmeyr, of the project for the construction by the South African Railways and Harbors Board of a new railway to run from Windhuk, the capital, in an easterly direction to Gobabis, a distance of about 132 miles. This new line was to be of the standard South African gauge (3 ft. 6 in.), and the estimated cost was put at \$3,600,000. Gobabis is one of the important settlements in the eastern portion of the Protectorate, with numerous fresh water springs in its vicinity, so that it is the centre of one of the few districts where agriculture is possible.

GERMANY. A republic set up after the overthrow of the German empire in the revolution of the closing months of 1918; organized under the constitution adopted July 31, 1919, and promulgated August 11, 1919; formerly the German empire, a constitutional monarchy consisting of 25 federated states and an imperial territory or Reichsland; situated in central Europe.

AREA, POPULATION, ETC. The former German empire in Europe had an area of about 208,825 square miles exclusive of the German part of Lake Constance and the North Sea lagoons, with a population estimated a month before the war, June 30, 1914, at 67,812,000. The latest official figures before the war were those of the census of 1910 which are given in detail in preceding **YEAR BOOKS**. According to the census of Oct. 8, 1919, the area of the German republic, including territory subject to plebiscite and the small districts assigned to Belgium, was 183,381 square miles and the population 60,900,197. The table below taken from the *Statesman's Year Book* of 1921 gives the area and population by states and density per square mile according to the returns of that census.

The losses under the Treaty of Versailles (June 28, 1919) were as follows: (1) Alsace-Lorraine, returned to France; (2) the larger part of West Prussia, ceded to Poland; (3) a part of eastern Silesia (Galicia) ceded to Poland; (4) a part of

<i>States of the Empire</i>	<i>Area English sq. miles</i>	<i>Population, Oct. 8, 1919</i>			<i>Pop. per sq. mile 1919</i>

Upper Silesia, to Czecho-Slovakia; (5) Eupen and Malmédy, to Belgium; (6) Memel, to the Allies; (7) Danzig, to the Allies. Of these Alsace-Lorraine was estimated at 5604 square miles with a population of 1,874,014; the Polish zone, 16,744 square miles with a population of 2,961,685; the part ceded to Belgium 386 square miles with a population of 60,924; Memel, 1057 square miles with a population of 140,746; Danzig, 794 square miles with a population of 330,252. The regions to be determined by plebiscite included: (1) The Saar basin which was to be placed under the government of the League of Nations and to determine its destination after a period of 15 years; (2) Schleswig which was to decide between Denmark and Germany; (3) regions in the southern part of East Prussia, in western Prussia, and in Upper Silesia. The area of the Saar basin is placed at 750 square miles with a population of 657,870. The Schleswig plebiscite was held in March, 1920, the region having been divided into two zones for the purpose, and the southern zone decided for Germany while the northern zone decided for Denmark. (See preceding YEAR BOOK.) The plebiscite in Upper Silesia was held in 1921 and is discussed under that title as well as in the article WAR OF THE NATIONS. The area under occupation by the Allies in 1921 was about 9650 square miles with about 7,000,000 inhabitants.

The rate of increase of the German population has been heavy though for the last few years the statistics are not available. For forty years preceding the war the annual rate of increase was over 1 per cent. In 1900 it was 1.51 per cent; in 1905, 1.46 per cent; and in 1910, 1.36 per cent. The cities with over 500,000 at the census of Oct. 8, 1919, were as follows: Berlin, 1,902,509; Hamburg, 985,779; Cologne, 633,904; Munich, 630,711; Leipzig, 604,380; Dresden, 529,326; Breslau, 528,260. No later figures for education were available than those given in preceding YEAR BOOKS, with the exception of figures for universities and the technical high schools. For the summer half year 1920 the universities with a total attendance of over 4000 were as follows: Berlin, 10,278 students and 509 teachers; Munich, 6879 students and 311 teachers; Leipzig, 5583 students and 257 teachers; Bonn, 5347 students and 208 teachers; Breslau, 4936 students and 209 teachers; Göttingen, 4313 students and 169 teachers; Frankfurt, 4213 students and 155 teachers; Münster, 4093 students and 121 teachers. The technical high schools had 19,862 students and 929 teachers. Other technical high schools included those of agriculture, mining, veterinary science, architecture, art and art-industry, commerce, textile manufactures, metal industries, wood working, naval architecture, navigation, and others. Altogether there were 23 universities in the empire in addition to lyceums with faculties of only theology and philosophy.

PRODUCTION. Over 90 per cent of the soil had been estimated before the war as productive, the arable land being placed in 1913 at an acreage of 65,143,000. The chief crops in 1920 with their acreage and total yield in metric tons were as follows: Wheat, 3,453,185 acres and 2,255,055 metric tons; rye, 10,813,117 acres and 4,971,800 metric tons; barley, 2,996,155 acres and 1,799,713 metric tons; oats, 8,109,180 acres and 4,870,126 metric tons; potatoes, 6,149,680 acres and 28,248,765 metric tons; beets, 817,435

acres and 7,964,024 metric tons; hay, 13,721,665 acres and 23,656,436 metric tons. The acreage under vines in 1919 was 172,907 and the production 38,307,610 gallons. Live stock, Sept. 1, 1920, were as follows: Cattle, 16,900,000; sheep, 6,630,000; swine, 14,220,000; goats, 4,870,000. Prussia is the main source of mineral wealth and the chief mining regions are Rhenish Prussia, Westphalia, and Silesia for iron and coal, the Hartz Mountains for copper and silver; and Silesia for zinc. No more recent figures for output are available than those given in preceding YEAR BOOKS. The centres of iron manufacture are in Prussia, Bavaria, and Saxony; textiles, Saxony, Westphalia, Silesia, Württemberg, Bavaria, Baden; silk, Rhenish Prussia and Baden; best root sugar, Prussia, Brunswick, Bavaria and other states; glass, porcelain, and earthen ware, Silesia, Bavaria, Saxony, and Thuringia; clocks and wooden ware, Bavaria and Württemberg; and beer in most of the states. No recent complete figures for manufactures were available.

ECONOMIC CONDITIONS. While the masses of the people and the government suffered from the general depression and from the depreciation of the mark, the large industries appeared to be prosperous. Under the leadership of the great industrial organizer, Hugo Stinnes, a high degree of effective industrial combination was attained, and a vast amount of new capital was invested in industry. This tendency had already shown itself during the preceding year. In January, 1921, the new capital invested during 1920 was reported at fourteen billions. Foreign trade had already shown a great increase in 1920. (See below.) The government voted an indemnity of \$12,000,000,000 marks to shipping companies for war losses, and the companies in turn engaged to build at least one-third of Germany's prewar tonnage within the next ten years.

In December unemployment was reported to be less serious than at any time after the armistice, the number of men out of employment being placed at about 300,000. Several serious strikes for higher wages occurred in November, involving large bodies of men, and in general they resulted in securing an increase of wages. Great activity in the machine industry was reported, and many of the plants although working double time were unable to fill the orders on hand. There was special activity also in the hardware, textile, and silk industries. In December the adverse trade balance and the fear of tariff restriction abroad were leading the government to a policy of control over export prices and the foreign trade office was endeavoring to compel payment of German exports in foreign currency. Crop indications at the close of the year were somewhat more favorable than for the year before in respect to wheat, rye, and potatoes. Perhaps the most extraordinary feature of the German situation was the remarkable growth of the merchant marine during the latter part of the year. Early in December the tonnage of German merchant vessels was placed as high as 1,000,000 tons, an increase of about 250,000 tons since July; and the shipyards were displaying great activity under government encouragement. Nevertheless far the greater part of Germany's foreign trade was still being carried in foreign vessels—according to some authorities, about 80 per cent.

COMMERCE. The following table from the

Statesman's Year Book of 1921 shows the imports and exports during the first three years before the war:

Years	Imports £	Exports £
1911.....	500,347,250	411,219,900
1912.....	550,856,600	454,976,450
1913.....	560,335,800	509,965,000

For the first time since 1913 complete foreign trade statistics were published by the government Statistical Bureau. They are summarized as follows by the United States Bureau of Foreign and Domestic Commerce: Germany's exports for 1920 amounted to 198,096,079 double centners (1 double centner = 220.46 pounds), while imports amounted to 188,366,261 double centners. The value of these exports was placed at 69,524,476,000 German paper marks. These figures did not include reparations deliveries under the terms of the Treaty of Versailles. The itemization of Germany's foreign trade, presented in the *Monatliche Nachweise*, gave import commodities, listed by double-centner weight, but without valuation, and export commodities by double-centner weight, with valuation in paper marks, as shown in the following table:

GERMAN IMPORTS AND EXPORTS IN 1920

Articles	Imports	Exports

The above figures show a great difference from prewar figures. The largest consumer in prewar times was Great Britain which took nearly 15 per cent of the German export; next was the former Austro-Hungarian empire with 11 per cent; next Russia including Poland, with about 9 per cent; next France and the United States each with about 7½ per cent; and next the Netherlands with about 7 per cent.

After the armistice and resumption of trade great changes took place. The neutral countries' markets were, of course, easier for Germany to regain, and the 1920 statistics show that the Netherlands imports from Germany increased from 7 per cent to almost 21½ per cent of the German total. Switzerland gained the second place, with 9½ per cent, followed by the new states of the former Austro-Hungarian Empire, with 8 per cent. Denmark, which in prewar days only took 2

per cent of the German exports, reached 6 per cent in 1920. Of Germany's former enemies the United States was the only country which so far had reached prewar figures, having taken more than 7 per cent of Germany's exports in 1920. The reason for this lay in the purchasing power of the dollar as compared with the depreciated currency of other allied countries. It must also be taken into consideration that the figures covered by these percentages represented value and not volume of goods.

FINANCE. At the beginning of November the 1921 budget expenditure was placed in round numbers at 114,250,000,000 marks. The receipts so far as could be anticipated at that time would amount only to 61,200,000,000 marks thus leaving a deficit of about 53,000,000,000 marks. The extraordinary budget of 1921 was expected to show an increase of 57,000,000,000 marks as compared with the increase of 49,200,000,000 marks, so the amount to be covered by loans in the financial year 1922 would go to the high figure of 110,000,000,000. Estimates for the financial year 1922 placed receipts at 97,000,000,000 marks, ordinary expenditures at 146,000,000,000 marks, extraordinary expenditures at 36,000,000,000 marks. No way out of the difficulty, according to the government, could be found unless

the Allies relaxed their terms, for the situation, bad as it had been, had become more serious as the result of the upper Silesian decision. The Minister of Finance, Andreas Hermes, on introducing new taxation measures in parliament, at that time admitted that they involved the heaviest burden that any people had been called upon to bear; but he said they were arranged in a manner to bear in a fair proportion upon property owners and consumers. The tax on property would mainly fall on fortunes for it was proposed that the assessment of fortunes be subject to periodical revision. The increase for this source was estimated by the Ministry at from 40,000,000,000 to 42,000,000,000 marks. This heavy tax burden, however, would not meet the obligations under the Allied ultimatum.

The direct taxes on property and income were as follows: First, taxes on incomes of individuals;

second, taxes on incomes of corporations; third, special taxes on the income of capital; fourth, emergency tax on fortunes; fifth, regular tax on fortunes; sixth, inheritance and succession duty; seventh, tax on the increments of fortunes. The income tax is progressive and leaves only a small minimum free—according to the act of March 31, 1920, 1500 marks but afterwards increased. The tax ranged from 10 per cent on amounts up to 24,000 marks beyond the minimum, through a so-called surplus tax of 20 per cent on every additional hundred marks, up to 25 per cent on incomes of 30,000 marks: Then to 30 per cent for incomes of 35,000 marks and upwards; to 35 per cent for incomes of 40,000 and upward and so on to incomes up to 400,000 at which point the tax was nearly 50 per cent. The corporation tax began with 2 per cent of dividends, etc., if they did not exceed 4 per cent of the capital and rose progressively to 10 per cent if the dividends exceeded 18 per cent of the capital. The revenue from corporation incomes was estimated in the budget of 1921 at 1,050,000,000 marks. The low figure of the corporation tax as compared with that of the income tax was due to the desire to avoid double taxation. Nevertheless the tax on corporations was regarded as insufficient in 1921. At all events a far greater number of new enterprises were changed into limited liabilities associations than in former years. This form of association had great advantages under the law and offered the means of evading tax provisions. Many tax measures were pending in 1921 including plans for taxing wealth and income, for taxing the movement of capital and values such as stock exchange transactions and for taxing commodities. The government taxation schemes were attacked from various points of view. In addition to the complaints of those classes that bore the burden directly there was a large volume of criticism from political economists, experts in finance, and Socialists. They were condemned as unjust and insufficient. The situation in fact was so confused that no measures proposed would have escaped criticism. A movement developed as a result of dissatisfaction with the government measures for the seizure of real values, which was supported by elements in both the socialist groups. According to this the government should share in those values of business that were not at the mercy of the fluctuating paper currency. A proportion of the profits should be paid to the government, the percentage proposed ranging from 20 per cent to 25 per cent. The government would be in the position of a holder of a mortgage and it might administer the property itself or issue notes against it or sell a portion of it. Such a claim was naturally opposed by the capitalist and landowning classes not only as certain to involve irritating government interference but as likely to pave the way to socialization. Nevertheless, extreme measures of some kind were necessary if national bankruptcy were to be avoided and it appeared that the government programme would be best yield hardly enough to cover the deficit in the ordinary administration expenses. In December the total yield from taxation for the next fiscal year was estimated at about 95,000,000,000 marks.

FINANCE: PUBLIC DEBT. In December the public debt of Germany was given at a little over

330,000,000,000 paper marks. The funded debt was given at about 90,000,000,000 marks, on which the government paid an interest averaging $4\frac{1}{2}$ per cent. Toward the end of the year the floating debt was increased by 9,000,000,000 marks, and amounted to 242,000,000,000 marks. This consisted of non-interest-bearing treasury bills issued to banks at a discount of 4 or 5 per cent. At the beginning of December it was estimated that the deficit for the fiscal year would amount to 161,500,000,000 paper marks of which 40,500,000,000 were attributed to the railway, post and telegraph deficit, and 120,000,000,000 to the reparation payments due by April 30, 1922.

FINANCE: DEPRECIATION OF THE MARK. Many reasons were given to account for the great fall in the value of the mark in the autumn. According to the Germans the main cause was the necessity of purchasing foreign securities in order to pay the Allies the first billion. The effect was not felt at once because the government had been obliged to distribute its operations over a considerable period. The assets of the Imperial Bank had greatly diminished. Germany was now obliged to purchase additional securities in order to provide for future payments. According to the Allies, while this was an important element, it was not the chief cause. The main point was the abnormal increase of paper circulation which by the middle of October had reached the formidable figure 88,000,000,000, and which in the course of a single week had increased 2,800,000,000. Aside from these reasons there had been an unbridled speculation in the market based solely on the depreciation of the mark. This speculation was carried to greater lengths in Germany than anywhere else. Anyone who had the means in Germany appeared to be purchasing right and left American dollars, Dutch florins, and Swedish crowns. German exporters, industrialists and merchants who sold German products abroad took good care not to bring their money back, but left it abroad by way of insuring themselves against possible bankruptcy and also in order to escape heavy taxes. There was thus a great class in Germany which was profiting from the situation and was really benefiting by the failure of Germany to keep her financial engagements. In France it was hinted that the depreciation of the mark was secretly aided by high finance and that the time might come when the government would ask the Allies how they expected Germany to pay their demands when the German money was worth nothing. With the falling of the mark, the better sort of industrial securities rose in value proportionately. There was a clear distinction in Germany between so-called gold values, that is to say, sound industrial stocks, bank stocks, real estate, etc., and paper values, that is to say, the government funds. Everybody tried to obtain the former and to get rid of the latter. As to the so-called gold values, the *Frankfort Gazette* presented the following comparison in October: Assuming that the total value of sound industrial stocks was represented in January, 1920, by the figure one hundred, the value had increased Dec. 31, 1920, to 189; by January, 1921, to 195; by Sept. 2, 1921, to 238; and by September 9, to 242. It was a question whether the government was taking sufficient measures against speculation and for the regulation of foreign securities. Another element in the situation was the effect of the

present system of taxation. It was tending to accelerate the depreciation of the mark. This system, conceived and applied under the Erzberger government in 1919 and 1920, laid a formidable tax on all properties in excess of 172,000 marks. The property tax on the whole admitted the levy of from 10 to 60 per cent. In spite of this tax, which amounted to semi-confiscation, there had been an accumulation of capital and a luxurious expenditure of wealth that had never before been surpassed. As a matter of fact this tax system was more or less fictitious and had reached only taxpayers who had fixed incomes. The law-makers did not perceive, or pretended not to perceive, that the progressive depreciation of the mark was increasing proportionately the values of both real and personal property. The valuation was made June 30, 1920, but since that date the actual value of the property had about quadrupled, so the taxpayers were paying only about a quarter of what had been demanded, whereas those who had simply fixed incomes were paying in strict proportion, with the result that they were practically ruined. Whereas the tax nominally might rise to 60 per cent, it had not, as a matter of fact, owing to the depreciation of the mark, risen above 20 per cent. Moreover, there had been a very ineffective valuation of property, owing to the disorganization of administrative machinery or other causes.

In Germany the fall of the mark was frequently used as an argument against the excessive reparations demanded by the Allies. It was said that it would prevent the payment of the reparations. The payments could not be met in pounds sterling or in dollars because the price of this money would soon become prohibitive for the German treasury. It could not pay the reparations in kind because the government had not the means of paying for the merchandise that German manufacturers might furnish, since the government was overwhelmed by the additional expenses involved in the decline of the mark. The enormous increase of the floating debt had necessitated an increase in the salaries of government officers which had added 20,000,000,000 marks to the budget. The working-men employed by the government also had claimed an increase of wages and it was at that time under discussion. Moreover, an increase of pensions had been promised. In these circumstances the German newspapers asked how Germany was ever going to find the money for the reparations. On the other hand, certain classes in Germany were greatly benefited by the depreciation of the mark. A leading German newspaper, for example, pointed out that the two chief steamship companies, the Hamburg American and the North German Lloyd, had greatly profited from their participation in American enterprises and had increased the number of their ships. This rapid increase of the ocean traffic under the German flag which was observed also on other lines was due largely to the monetary situation which gave German vessels a profit while foreign vessels as a result of the rate of exchange had not reached the limit of their capacity. In the toy industry the same advantages were enjoyed even to a greater extent. On the occasion of the fair at Frankfurt, it was brought out that the toy industry belonged still for the most part to the trades in which the exporter was paid in marks and that there was much speculation in the rate

of exchange. The result was that the capitalists engaged in the toy industry had made extraordinary gains and in certain parts of Germany the industry had been obliged to add extensively to its number of workmen. A German economist wrote for a Berlin paper that during the last few months industrial undertakings had acquired a huge amount of raw materials purchased abroad and of foreign securities which would permit them to add still more to their stock in the future. The great demand for foreign securities and the fall of the mark were largely due to the laying in of these stocks of raw materials and of foreign securities by the industries. In quarters unfriendly to Germany, this was taken as a sign that the falling off of the value of the mark was in large part caused by the Germans themselves who were trying to get rid of their national currency. Another economist in a report he prepared for the League of Nations emphasized the inertia of prices, that is to say, the fact that when a currency depreciates suddenly and extensively the price of merchandise does not advance in the same proportion. Thus foreigners for the time being have a great advantage in buying the merchandise whose currency has depreciated. This could be verified by the German experience and was illustrated everywhere not only in the statistical reports but in incidents on the streets. Observing the fall of German exchange the inhabitants of the neighboring countries entered Germany with large provisions of paper marks and made extensive purchases. There were frequent articles in the press describing these purchasing tours of foreign visitors, who arriving with pocketbooks full of German bills, went home the same evening loaded with purchases. Many came from Luxemburg for this purpose, for example, and from Czecho-Slovakia, whence they passed the Saxon border and entered Dresden in great numbers. In fact over long stretches of the frontier the coming and going of travelers for this purpose was remarked and its effect on the mark was incalculable. The German customs officers on the Baden frontier were obliged to forbid the export of cloth. There was much alarm in Germany over the disappearance of the merchants' stocks of goods and in some places there was a rush of purchasers fearing that the shops would be all sold out before they had a chance to buy. The papers contained such items as the following in the *Germania*: "An army of purchasers representing especially industrial establishments and councils of exploitation including government as well as private establishments are scattered over the country and are bidding against each other for the purchase of stocks of potatoes." German manufacturers were endeavoring to exchange the products of German manual labor paid in marks for foreign securities, while on the other hand foreign buyers were eager to exchange for merchandise the German marks that they had acquired. German industry was neglecting the home market in order to enter the foreign field. At Düsseldorf the imperial commissioner of the metal industries published a warning that it was necessary to provide for the replenishing of the national market. The same situation seemed to prevail in the cotton industry. In short the fall of the mark brought enormous profits to certain classes of privileged persons especially those who took advantage of it to dispose of all the stocks in their possession

and who exported their products so rapidly that their German customers were unable to get the necessary supplies.

Toward the close of the year the mark underwent wide fluctuations as the result of the pending discussion concerning reparations. In November and December Germany's chief industrial leader and financier, Hugo Stinnes, and the well-known industrial organizer, Dr. Walter Rathenau, former minister of reconstruction, were consulting with the British member of the Reparation Commission in London with a view to new adjustments, and later M. Louis Loucheur, French minister of reconstruction, was also engaged in discussion with the Chancellor of the British Exchequer. A meeting was promised between Lloyd George and M. Briand for the purpose of reaching a definite decision in respect to the next payments. During this period the value of the paper mark rose and fell according to popular sentiment, and toward the close of the year was fluctuating around the ratio of 160 to the dollar. It had fallen as low as 300 to the dollar.

SHIPPING. At the end of 1920, after the deliveries stipulated by the Versailles Treaty, Germany had about 100,000 gross tons of ships, of more than 1000 tons each; and about 400,000 gross tons, of less than 1000 tons each; against a prewar merchant marine of 5,240,000 gross tons. During the first seven months of 1921 Germany added to its merchant marine 60 vessels, aggregating about 400,000 gross tons. These comprised 7 vessels of 12,000 tons; 9 of 8000 to 10,000 tons; 11 of 5000 to 8000 tons; and 9 for which the tonnage was not stated. These figures do not include chartered vessels in the service of German companies (such as the 400,000 tons operated by the Kosmos Line on the western coast of South America) nor the inland waterway fleet.

More than 20 of the vessels added to the fleet in 1921 were old bottoms, fitted out with submarine Diesel engines. In the autumn there were under construction in German yards 20 motor ships, aggregating 132,000 tons and 47,500 horsepower. While some shipbuilders insisted that the price of Diesel oil in Germany made the employment of the motor vessel less economical than the coal-burning or oil-burning steamer, others figured that the relative saving in weight and space in the vessel, as well as the time and labor in refueling, was sufficiently great to more than offset the higher cost of oil.

The great shipbuilding companies had doubled their capital and more than met the proportionate output in the face of 1921. While the government cut the compensation for war losses sustained by shipowners from 15,000,000,000 to 12,000,000,000 marks, it had already advanced the amount stipulated for the year, and many of the firms were asking that advances be made from the amounts stipulated for the fourth and fifth years of compensation, promising on their part to keep the yards working during those years at their own expense. It was estimated that the German shipyards had a producing capacity of 750,000 tons annually, which is 50 per cent more than before the war.

Complete statistics of the foreign traffic being carried by the German merchant marine were not available, but a steady and rapid return to prewar conditions was seen in the growing activity of the principal ports. Even in 1920, Bremen regained

half its normal shipping; and the Kiel Canal, 90 per cent. Hamburg regained the steady advance it manifested from 1900 to 1914, though not in such large proportions as before the war. Taking 25,000,000 tons as the average prewar year's activity, Hamburg's traffic in 1919 regained 12 per cent of its former proportions; 35 per cent in 1920; and 60 per cent during the first half of 1921. In June, 1921, 65 per cent of the outgoing vessels flew the German merchant marine colors.

During the first nine months of 1921, the capital invested in shipping and shipbuilding companies increased by more than 485,000,000 marks, all but 52,000,000 of which was the result of increasing the share capital of companies already in existence. The total increase of share capital since 1913 amounted to more than 150 per cent.

RAILWAYS. The total length of the German railways in 1921 was about 36,000 miles, of which 69.5 per cent had double track or multiple tracks. The loss of territories through the peace treaty naturally was responsible for a reduction of 2500 miles in the prewar mileage. Statistics for 1919 showed that the total capital invested in German railways was 21,320,000,000 marks (\$5,330,000,000 approx. par of exchange). The total revenues and expenses (in millions of dollars) for the seven years ending with 1919 are shown in the accompanying table.

The German railways, once operated by the different federal states of the former empire after April, 1920, came into the control of the republic and in 1921 were operated as one system by the state and were known as the "Reichsbahn." This system or organization, included 92.2 per cent of the mileage of the country. A conspicuous exception and the only one of the important companies to retain its old form was the Luebeck-Beuchen Railway, which operated the double track line from Hamburg to Luebeck and Beuchen and owned about 85.75 miles of line. The smaller railways were to a great extent in the hands of private companies, but the state, municipalities, and districts were also strongly interested in them.

The state railways of "Reichsbahn," were controlled by a Ministry of Transport with the former general manager of the military railways during the war in charge. The ministry was divided into the following ten sections: Administration, personnel, transport, exploitation, rates, finances, rolling stock, and maintenance, machinery and electrification, construction and inspection of other railways.

The railways in Germany no less than elsewhere in Europe suffered in 1920 and the situation naturally was aggravated by natural and imposed conditions following the war. At the time of the armistice due chiefly to captures of railway equipment from invaded countries German railway rolling stock showed increases in locomotives of 22 per cent and in freight and passenger cars of 10 per cent over numbers on hand at the beginning of 1914. The terms of the armistice forced the return of 5000 locomotives and 150,000 cars to France and Belgium, and as a result the rolling stock available in 1920 and 1921 was considerably less than that of 1914. A difference of 31 per cent was given for locomotives in 1920, and 36 per cent and 25 per cent, respectively, for passenger and freight cars. In addition to deficiency in numbers many of the locomotives and cars in use were in need of repairs, while the roadbeds of most of the

German railways had deteriorated far below standard.

The railway deficit for the year 1921 (operation and replacement) was estimated to amount to about 7,000,000,000 marks (about \$35,000,000 at the 1921 rate of exchange) as compared with 15,000,000,000 marks (about \$75,000,000) in 1920. The extraordinary large figure for the earlier year was due to an unusual expansion in the number of employees.

Rates had steadily increased in Germany from before the war. Beginning with an increase on Oct. 1, 1917, of 7 per cent. the freight rates steadily mounted, until on Nov. 1, 1921, the accumulative increase was 13.59 per cent. Passenger rates were also raised 30 per cent. Previous increases of passenger rates, 1913-20, amounted to 671 per cent for first class fares, 433 for second, 380 for third, and 405 for fourth. Even with such increases it was impossible to make expenses balance revenues, and these reduced to millions of dollars from the time when the railways were a paying proposition are shown herewith.

GERMAN RAILWAY REVENUES AND EXPENSES
IN MILLIONS OF DOLLARS

Year	Revenues	Expenses	Surplus	Deficit
1913.....	712.64	499.48	213.16	
1914.....	628.04	503.16	124.88	
1915.....	688.18	497.04	191.14	
1916.....	802.3	578.66	223.64	
1917.....	938.22	778.28	159.94	
1918.....	941.48	1,203.14		261.66
1919.....	1,602.62	2,413.34		810.72
1921 (estimated).....				3,750.00
1922 (estimated).....				2,700.00

In Germany from the prewar days the number of railway employees had increased to a marked degree. In 1913 there were 740,000 employees and in 1919 this number had been increased to 1,121,000; it was reduced to 1,091,000 in 1920. Naturally the eight-hour day adopted was in part responsible for the increase, but it was obvious that with the great reduction in traffic there were far more employees than were necessary.

As elsewhere in Europe government ownership and operation were subjects of dispute during the year and it was said that the efforts of Hugo Stinnes, the German industrial magnate, which had been directed toward securing the control of the government railways, were objected to strongly by the German railway unions. Stinnes stated he would get rid of thousands of superfluous employees if the railways were intrusted to him, as well as abolish the eight-hour day and reduce wages so the railways could be operated at a profit. The unions duly served notice on the minister of railways that they would strenuously oppose such a change, and that the Socialist party, which is in control in the Reichstag, would not sanction it.

ARMY. At the time of the armistice the total mobilized strength of the German military forces was placed at about 6,000,000 men. The terms of disarmament imposed by the Treaty will be found in the article, *War of the Nations*, in the 1919 YEAR BOOK. They required the total number of effectives to be reduced to 200,000 by April 10, 1920, and then gradually to 100,000 under the supervision of military experts appointed by the Allied powers. Universal compulsory military service was abolished and the army was to be recruited by voluntary enlistment.

After the signing of the Treaty the question of German disarmament was the subject of acute discussion especially in the French press which consistently maintained during two years that Germany was false to her engagements, either disregarding them entirely or creating under various disguises new and formidable military bodies. It appeared, however, that the strength of the Reichswehr had been reduced to the authorized limit of 100,000 by January, 1921, and that down to that time there had been surrendered 30,500 guns; 10,000 trench mortars; 63,100 machine guns, and 2,524,000 rifles. See WAR OF THE NATIONS.

NAVY. By the Treaty of Peace the German fleet was practically annihilated, but the Treaty authorized the German government to maintain a navy on a volunteer basis. Submarines were prohibited and the total personnel was not to exceed 15,000, including a maximum of 1500 officers and warrant officers. There remained at the beginning of 1920, 6 super-dreadnaughts of about 13,000 tons each but of little value for fighting purposes; 6 light cruisers; 12 destroyers; 12 torpedo boats and certain other craft to be held in reserve but not to be provided with ammunition. Of the great high sea fleet of 1921 most of the capital ships had been destroyed and the rest were to be destroyed.

GOVERNMENT. Under the constitution of August, 1919, executive power is vested in a president elected by the people for seven years, and in a ministry appointed by him but responsible to the Reichstag; legislative power in the Reichstag or parliament elected by universal, equal, direct, secret, franchise of male and female electors on the principle of proportional representation, and in an imperial council or Reichsrat consisting of representatives of the constituent states. The consent of the Reichsrat is required to all bills before their introduction in the Reichstag. It consists of 55 members distributed as follows among the states: Prussia, 22; Bavaria, 7; Saxony, 5; Baden, 3; Württemberg, 3; and for all the other states, 15. At the beginning of the year the Fehrenbach ministry appointed, June 25, 1920, was still in power. It was constituted as follows: Chancellor, Constantin Fehrenbach; Vice-Chancellor and Minister of Justice, R. Heinze; Foreign Affairs, W. Simons; Home Affairs, E. Koch; Finance, J. Wirth; Defense, O. Gessler; Economics, E. Scholz; Labor, H. Brauns; Treasury, H. von Raumer; Posts, J. Giesberts; Transport, W. Groener; Food Supplies and Agriculture, A. Hermes. The president in 1921 was Friederich Ebert elected February 11, 1919. For changes in the ministry see paragraphs on *History* below.

HISTORY

OPPOSITION TO THE ALLIES. The government protested against the severe decisions of the conferences of the Allied prime ministers at Paris, January 24-29, and at London, February 28. After the former it declared its intention to resist these demands to the utmost, and after the latter, at which Dr. Simons, Minister of Foreign Affairs, had made an unsuccessful effort to secure more favorable terms, the Reichstag passed a resolution, March 12, by a vote of 268 to 49, approving the course he had taken. The foreign minister, however, did not attribute the demands

of the Allies to imperialism or to vengeance, but merely to the distress in the Allied countries. Meanwhile the government had shown its resentment at the terms of the London conference and the military occupation of the Ruhr basin by recalling, March 8, the German ambassadors from Paris, London, and Brussels.

ACTIVITY OF THE REDS. Revolutionary agitation took place under the leadership of Communists in the industrial regions of central Germany in March. A considerable loss of life was reported. A general strike was called in the Halle region after the arrest on March 13 of some Communists who had been charged with plotting to destroy public property, and sympathetic strikes occurred in Essen and Hamburg. There were some bomb attacks on public buildings at Leipzig, Dresden, and a number of other cities. The Red flag was displayed, and property was seized at several places. The movement was checked upon President Ebert's proclamation of a state of modified siege, and by the condemnation of the movement by the general trade union league; and the police restored order in about two weeks.

NEW MINISTRY. The Fehrenbach ministry resigned, May 4, on the eve of the presentation of the ultimatum by the Allies. It had come into power, June 26, 1920, as a combination of the People's party, the Centre, and the Democrats, controlled by the great industrial and financial groups led by Hugo Stinnes. It had carried on more or less successful negotiations with the Allies under Dr. Walter Simons as Foreign Minister. The business interests would not accept the Allied ultimatum and withdrew their support. The Fehrenbach Ministry was succeeded, May 10, by a coalition ministry made up of Majority Socialists, Centrists, and Democrats under Dr. Julius Wirth of the Centre. It was constituted as follows: Chancellor and Minister of Foreign Affairs, Dr. Julius Wirth; Finance Minister and Vice-Chancellor, Gustav Bauer (Majority Socialist); Economics, Dr. Heinrich Brauns (Centrist); Justice, Herr Schiffer (Democrat); Labor, Robert Schmidt (Majority Socialist); Transportation, General Groener (Democrat); Posts and Telegraphs, Johann Giesberts (Centrist); Agriculture and Foodstuffs, Andreas Hermes (Centrist); Interior, George Gradnauer (Majority Socialist); Defense, Dr. Gessler (Democrat); Reconstruction, Herr Silberschmidt (Majority Socialist). Herr Bauer was a former Chancellor; Dr. Gessler, Herr Hermes, Herr Giesberts, and General Groener held the same portfolios in the Fehrenbach cabinet, and Dr. Brauns was Minister of Labor in that body. Upon the appointment of the new ministry, the Reichstag at once voted to accept the Allied terms by 221 to 175.

SOCIAL CONDITIONS. On the return of the troops from the war there was a great increase both in the number of marriages and in the number of divorces. Statistics from Bavaria were made public in 1920. These showed the increase of divorces from the beginning of the war down to 1920, as follows: In 1913, 1159; in 1914, 1266; in 1915, 685; in 1916, 738; in 1917, 958; in 1918, 1153; in 1919, 2207; in 1920, 3625. As to the responsibility for the divorces in 1920 it was attributed to 1484 men and 1130 women; while in 1011 cases, responsibility was placed on both parties to the marriage. While down to 1915,

inclusive, the husbands guilty of the rupture were nearly twice as numerous as the wives. The figures approached equality in 1916 and passed over to the side of the women in the three following years. The occupations in which divorces were the most frequent were the large industries, commerce, and the hotel business.

THE MURDER OF ERZBERGER. Matthias Erzberger (q. v.), former Vice-Chancellor, was shot and killed near Offenburg, Baden, while walking in the Black Forest. He was in the company of a deputy named Diez when they were fired upon by two young men. Erzberger was shot several times in the head and killed instantly and his companion was wounded. For some time past the Pan-German element had been carrying on a bitter campaign against Erzberger, accusing him of the authorship of the present German policy and of trying to get back into political life. A previous attempt had been made on his life, Jan. 26, 1920, when he was wounded after attending a session of the criminal court.

REACTIONARY MOVEMENTS. After the murder of Erzberger the government undertook measures to suppress the militarist reactionary elements in the country that were causing trouble. It forbade at once a meeting scheduled for August 28 at Potsdam, just two days after the murder, for the commemoration of the battle of Tannenberg, and the meeting was not held; but there was a riot in which the police and certain Communists and Socialists came into conflict. On August 29, at a cabinet meeting, a decree was issued prohibiting assemblies, processions, and the publication of periodicals, if the authorities believed that they tended to cause violence or to threaten the constitution; and at the same time the Chancellor issued a proclamation to the effect that the government was determined to take the most radical measures against the anti-republican movement. A little later the publication of several extreme national newspapers was suppressed by the Minister of the Interior but they were permitted to resume publication in a few days. Meetings of groups belonging to the People's party arranged at Berlin and Chemnitz for September 2, contrary to police orders, were broken up by crowds of working-men. Similar incidents took place at other points throughout the country. The President issued an order forbidding men and officers to wear uniforms while not in active military service. The government was supported in its course by the majority of Independent Socialists and by the trades unions as was shown by the sending of delegations from these groups to the Chancellor with the assurance that they would stand behind the authorities. There was a formidable demonstration at Württemberg on the occasion of Erzberger's funeral, when a large body of Berlin workmen quit work to listen to Socialist orators denouncing the reaction. The Nationalists on the other hand continued their activities wherever possible. The Nationalist party held a convention at Munich, September 1, where the government was virtually defied. Nevertheless here and there leaders reputed to be reactionary rallied to the side of the government. For example, the Prime Minister of Bavaria, Dr. von Kahr, declared that he would support the republican constitution although he was the leader of the People's party; and another leader of that party, Dr. Stresemann, made the same declaration. The

Chancellor was quoted in the press as saying that there was danger lest the country should divide into two irreconcilable portions, the Socialists and the bourgeois, and that the government must make all possible efforts to prevent this. It would range itself on the side of the working-class. A delegation from Bavaria was sent to Berlin in September for the purpose of coming to an understanding with the central government and was reported to have yielded to most of the government's demands but this act was repudiated by both the Nationalist and People's party members of the Bavarian ministry, and as a result the Bavarian Ministry under Dr. von Kahr resigned, September 12. His retirement was followed by that of his main supporter in his reactionary policy, the chief of police. A more liberal politician was chosen as prime minister on September 22, namely, Count Hugo Lerchenfeld. This was followed by an agreement between the Bavarian and Berlin governments for raising the state of siege in Bavaria. There were frequent rumors of reactionary plots on the part of the Junkers but nothing was proven. The government offered a reward for the arrest of the men who had been engaged in the monarchist movement in 1920 under Dr. Kapp. The new Bavarian premier set forth the programme of the new government in an address to the Bavarian diet, September 22. His principal task would, he said, be the maintenance of public order and he declared himself in favor of absolute fidelity to the German nation, saying that it would involve the continuance of present political relations between Bavaria and the central government.

BAVARIAN REACTION. By far the most reactionary state of Germany was Bavaria. After the short triumph of the Reds in the few months following the armistice, the Conservative and Clerical elements regained the power and completely crushed their former adversaries. Bavaria during 1921 was in a state of siege in spite of the fact that there was absolute calm among the people at large. It gave the ruling class an easy means of arresting and punishing anyone they chose. There was not at Munich, where the working-class and the Socialists are numerous, a single newspaper that represented it with the exception of a government organ which was formally addressed to their interests. All the reactionary elements in Germany whether they were aiming at the overthrow of the democratic government, the return to a monarchy, resistance to the Treaty of Versailles, a war of revenge, or other policy, turned their hopes toward Bavaria. The leader of the reactionary majority in Bavaria was General Ludendorff who was surrounded by former officers of the army. Everything was ready to hand for another attempt like that of Kapp. The large number of political murders most of which were committed by reactionaries illustrated the spirit of the country. Secret meetings and vigorous propaganda in the interest of reaction sprang up and a campaign was carried on in the German interest in the Tirol and in the German provinces of Austria, looking to eventual annexation. No public meeting or demonstration of any kind was permitted on the part of the Socialists or working-men, who were well aware that any attempt on their part would result in seizure by the police or attacks by the military. On the other hand, the parties of the

Right were free to make such demonstrations as they chose and hardly a day passed without public celebrations of a nationalist or militarist order at which Ludendorff or one of his representatives or a prince of the royal family took part. On August 11 the police forbade the celebration of the imperial holiday which corresponds to the French 14th of July. In September there were seven Socialist deputies of the Landtag still in prison on the charge of high treason. Every time the Socialist deputies entered the Chamber they were searched by bailiffs and required to empty their pockets in order to make sure that they did not carry bombs or weapons, and even their desks were regularly searched by order of the president of the Chamber. Ever since the Bolshevik uprising Bavaria had been under a judicial system known as Courts of Exception, consisting of two magistrates and three sworn members designated by the government. Their judgment was rendered in a summary manner and was without appeal. A strong feeling against foreigners was another aspect of the reactionary situation which indeed seemed to have turned back the hands of the political clock a hundred years and reminded observers of the days of the Holy Alliance. In September, as noted in the preceding paragraph, the controversy was going on in respect to the state of siege. The parties in power naturally clung to it with great obstinacy as one of the chief props of their authority. The ruling class when approached on this subject declared that the state of siege was absolutely necessary to insure order; that the working-classes were much agitated and were angry over the increasing cost of living; that they would go down to the streets on the first chance and might succeed in overpowering the police. Observers, however, declared that so far as could be seen, the working-classes were perfectly peaceable and orderly, and that it was not they who suffered the most from the increasing cost of existence. The feeling of impartial witnesses was that the fear of Bolshevism and labor troubles was merely a sort of scarecrow for the purpose of bolstering up by means of general apprehension the government of the Right. It was simply a disguise of the party that sought to overthrow the democratic régime. The ruling classes of Bavaria were supposed to be waiting for a good excuse to start a *coupe d'état*. Among the royalists the more reasonable and moderate men had already begun to try and check this movement, realizing that the hour had not come for the restoration of the monarchy in Bavaria, for her example would certainly not be followed by the rest of Germany. The movement if it should be attempted now would result in failure.

A systematic campaign had been carried on under General Ludendorff in the interests of the old militarist and monarchical elements and for relieving Germany of all guilt in respect to the war. There was a vigorous propaganda to these ends and a vast body of printed matter was in circulation for the purpose of vindicating Germany in the eyes of the world. The members of the old ruling class were doing their best to win the good opinion of foreigners. Prince Max of Baden, who had been Chancellor for the few days preceding the armistice, was active in this propaganda and a book prepared by him along with many collaborators was widely circulated. Arguments

from all points of view were produced tending to show that imperial Germany was not alone responsible for the war and should not alone be called upon to bear its consequences. General Ludendorff in an interview with a French paper presented a long series of arguments all to the same effect. Since the war he had risen to the highest point in popular esteem among these reactionary elements. He had become the chief of a vast number of militarist organisations with branches all over Germany. On August 14 in an address at Königsberg he declared that he had no doubt that the fate of the country would be decided sooner or later in a fight for the eastern border. The springing up of these militarist organisations with General Ludendorff at their head gave rise to various rumors in September and October in respect to a supposed reactionary plot like that of Kapp the year before. To be sure Ludendorff had said that a war of revenge with France was out of the question for technical military reasons, but in France this was regarded merely as an attempt to throw the French people off their guard. His main contention was that all the states of Europe must unite for the purpose of restoring prosperity and combating the Bolshevik peril. To this end the countries that had been at war must forget the past and apply themselves in harmony to the work of rehabilitating Europe. In France this was interpreted as simply meaning that in forgetting the past the German debt for reparations should be forgotten, and as to the Bolshevik peril French commentators remarked that it had been this very militarist element in Germany that had created or at least contributed to the Bolshevik peril at the beginning.

ECONOMIC POLICY. Articles by Mr. J. M. Keynes published by the London *Times* in the summer and autumn were widely circulated in Germany and the measures proposed and conditions indicated in those articles were much discussed. According to them Germany would at the most be able to expand her export of such goods as did not require for their production a considerable import of raw materials, for example, such industries as iron-working, and the production of machinery, chemical products, dyestuffs, and glassware. Little stimulus would be afforded by the exchange situation because it was only a depreciating rate that stimulated production and not simply a rate which remained like the present one at its lowest point. Little by little the present difference between the purchasing power of the paper mark in Germany and its purchasing power abroad would disappear and thus reduce the advantage that German industry possessed in the world market. As to the reparations, Mr. Keynes predicted the failure of the German government. He declared the Allies could not impose this tribute during a long period. It was implied in what he said that the Germans might do well to reduce their exports in order not to have the means of paying too much at an early date, for the time would certainly come when the Allied Powers would be unable to bring enough pressure to bear upon Germany to enforce the execution of her agreements. This idea naturally was offensive to the French who regarded it as a counsel of bad faith tending directly to encourage Germany to break her engagements. Mr. Keynes undertook to expose the delusion which ran

through a large part of the press discussion that the receipt of an indemnity injured the industries of the receiving nation. In France it was suspected that this attitude toward Germany in England was dictated by self-interest. On the other hand, Mr. Keynes continued to recommend the consolidation of inter Allied debts and also proposed that France should have priority rights over the sums due from Germany. According to the French this would improve the situation.

POLITICAL PARTIES. In September attempts were being made to bring together the different groups of the Right and according to Herr Stresemann, leader of the former National Liberals, there was a promise of success. He declared that harmony had been reestablished with the Populist party which would take part in the next cabinet. There was a plan for a coalition between the three bourgeois parties and the Majority Socialists which promised to succeed if the coming Socialist congress at Goerlitz authorized it. Herr Stresemann declared it was the only way of getting out of the present difficulty. He added that while the Populists need not sacrifice their monarchical leanings, they must take their stand on the constitution. There was a steady growth in the opposition to the Wirth government, especially for its attitude toward Bavaria. The Chancellor was accused of destroying the unity of the empire by his manner of treating that question and by the sensational revelations that he had made to the committee of Parliament. The Populist party had for one of its aims an energetic resistance to any attempt of the Socialists to separate Franconia from Bavaria. It appeared also that the Catholic party was developing a strong opposition to the Chancellor and to the faction of the Left Centre, which wished continually to give way to the demands of the revolutionists. The three great Red groups were still much in evidence and had put forth a programme containing among its features, war against Bavaria, and mobilization of the proletariat against reaction; while the Majority Socialists appeared to seek a compromise which would save their face and permit them to take part in the new ministry. At the congress at Goerlitz the Majority Socialist leader, Hermann Müller, while thundering against the Monarchists and their partisans, refrained from saying anything that would prevent the Majority Socialists from entering the government. When taunted by his opponents on this score, he declared that when his party gained the majority and were once in power it would put socialistic conceptions into practice; meanwhile Socialists were content if they could inject some doses of Socialism into the capitalist régime. His idea was that the Majority Socialists already were the masters of the country and must eventually control the government. George Bernhard who had left the Socialists and become a member of the bourgeois party declared that if the congress of Goerlitz condemned co-operation with the Populists, the empire would be fastened to the present constitution by a *bloc* of the bourgeois parties—such a *bloc* as had developed in Bavaria.

THE PEOPLE'S PARTY. In the latter part of September a convention of the People's party was held at Heidelberg and it was there decided that its members would consent to enter the government provided that they were accorded a large share in

the financial and business management of affairs. Thus there was a chance for the formation of a coalition cabinet composed of Social Democrats, Centrists, Democrats, and members of the People's party representing the large business interests of the country.

THE SOCIALISTS. At the national congress of Goerlitz, September 18-25, the Majority Socialists modified their programme. The general spirit of the programme was democracy first and social reform afterward. It was pointed out that the Social Democrats had at that time 1,221,000 members paying dues and 112 deputies in Parliament. The decision to coöperate with other parties in support of the republic meant that it would influence about 9,000,000 members including the trade unionists. This decision, however, tended to weaken the union between the Social Democrats and the Independent Socialists. The latter body had declined in strength for some time past, the moderates tending to join the Majority Socialists and the extremists inclining toward the communistic elements. The municipal election in Berlin, October 16, showed a weakening of the radical parties. The bourgeois candidates received about 842,000 votes as against 800,000 for the Socialists and Communists, and the returns indicated that they would have a majority in the board of aldermen, thus reversing the situation in that body.

The Independent Socialists made it known at the end of September that the conditions on which they would enter the central government were as follows: The establishment of financial equilibrium by taxes on property; effective measures for the defense of the republic, including suppression of all monarchist plots and the removal of officials who were openly monarchist; the introduction of reforms in the judicial system; the continuation of the social policy; the socialization of the mines; a conciliatory foreign policy and a sincere effort to meet the demands of the Allies.

FALL OF THE WIRTH GOVERNMENT. After the decision of the League of Nations in respect to Upper Silesia, the Wirth ministry was insecure. Another thing that had weakened it was the decision of the Majority Socialists at the Congress of Goerlitz to coöperate with the National Liberals of the People's party. When the Wirth ministry came into power five months before, it had against it on the one hand the financial group that controlled the People's party and the leading elements of the Nationalists, and these enemies continued to attack it for its policy of conciliation toward the Allies. The signing of the terms of the Allies for the payment of reparations solidified the opposition. Then came the Upper Silesian decision which was regarded as a national disaster and strengthened the opinion that the government was weak and submissive. Moreover, the municipal elections in Berlin showed gains for the reactionary elements. Another point was the fear that under the Wirth administration the empire was threatened with the secession of the South German states led by Bavaria. This last consideration drove the Majority Socialists to the side of the People's party. The main issue at the time of the Wirth crisis was the question whether Germany should avail itself of the opportunity to negotiate directly with the Poles. The Democrats favored this course, while the German People's party opposed it, and the Centre was undecided.

The President communicated with the various party groups on October 23. The chief difficulty was the necessity of sending an economic commission to Upper Silesia. In the note addressed by the Chancellor to the President inclosing the resignation of the ministry it was pointed out that the government had been faithful in carrying out the ultimatum of the Allies; and that it had met the heavy demands upon the people especially in respect to the payment of 1,000,000,000 gold marks on October 31; and that in spite of this the Allies had reached a decision in Upper Silesia by which not only large tracts of German territory but flourishing German towns, the greater part of the internal wealth and four-fifths of the factories would be taken from Germany, and that a large part of the population which fell to Poland was German in origin and speech. It was a loss which the German people could never forget.

THE NEW WIRTH MINISTRY. The new cabinet with Dr. Joseph Wirth, again Chancellor, was announced October 26 as follows: Chancellor and Minister of Foreign Affairs, Dr. Wirth; Vice-Chancellor and Minister of the Treasury, Gustave Adolf Bauer, Socialist; Minister of the Interior, Adolf Koester, Socialist; Minister of Defense, Herr Gessler, Democrat; Minister of Economics, Robert Schmidt, Socialist; Minister of Food and Interim Finance, Andres Hermes, Centrist; Minister of Posts and Telegraphs, Johann Gieberts, Centrist; Minister of Labor, Dr. Heinrich Brauns, Centrist; Minister of Communications, Herr Groener, Democrat; Minister of Justice, Herr Radbruch, Socialist.

The members had already served in Dr. Wirth's cabinet or in the cabinets immediately preceding with the exception of Herr Radbruch, who was an entirely new man. On meeting the new government the Reichstag voted confidence by 230 against 132, the majority consisting of Majority Socialists, Independent Socialists, Centrists, and Democrats. The People's party representing the so-called "Big Business group" headed by Hugo Stinnes, was opposed to this ministry just as it had been to the former one and it failed in like manner to prevent its election. Out of the 469 members of the Reichstag the Chancellor could count upon only 216 votes from the Centrists, Socialists, and Democrats, and 21 from the other parties. On assuming office he declared that the most urgent task of the government was the execution of the decision concerning Upper Silesia, which was a great injustice to Germany and contrary to the text of the Treaty. The situation was created by force and did not invalidate the rights of Germany to the territory.

On December 13 the Chancellor introduced measures of radical economic reform. The postal and railway rates were raised from 2000 to 3000 per cent, and it was proposed that the trade and industrial assets of the nation should serve as the security for loans.

DISARMAMENT. Reports from various quarters indicated that the disarmament of Germany was progressing at the required rate throughout the year. At the close of the year, according to the report of press representatives sent from the United States to investigate, it had been carried out to the extent of about 93 per cent in respect to machine guns and rifles and about 97 per cent in respect to artillery. As to factories known to have been engaged in the making of munitions

they were reported to have been reduced to a capacity of about 98 per cent. In December the German Chancellor, Dr. Wirth, repeated the denial which had been made on many previous occasions by German authorities of the charge on the part of France that Germany had not disarmed. He said, moreover, that all the free corps in Germany had been dissolved.

OTHER EVENTS. Various organizations of a reactionary or royalist tendency were organized throughout the year, beginning with a royalist organization, entitled, League of the Upright, which was formed at Berlin in January, and a League of Honor, formed at Bremen at about the same time. Two American detectives in pursuit of the American draft-evader, Bergdoll, were arrested in March but released soon afterwards, March 31. Attacks by the Communists occurred in Hamburg, Leipzig, and Dresden and were reported to be made at the instigation of Russian agents, but the movement was soon put down by the authorities. The most destructive explosion that had occurred in the history of German industry took place at Oppau, September 21, when the synthetic nitrate factory of the Badische Anilin company exploded, killing about 800 persons and causing damage estimated at 1,000,000,000 paper marks. Such was the force of the explosion that the town itself was virtually destroyed, the walls of buildings collapsed in the city of Worms, twelve miles away, and the shock was felt at a distance of fifty miles. The number of wounded was placed at 2000 of whom 400 were said to be seriously wounded. A French detachment stationed at the plant was annihilated. The peace treaty with the United States was ratified by the Reichstag, September 17, and by the Reichstag, December 30. In the meanwhile American consular offices in the large cities were opened (November 21). On December 16 the supreme court at Leipzig sentenced the former chief of police and two other officials, accused of complicity in the Kapp counter-revolution of March, 1920, to six or seven years' imprisonment. Elections for the Prussian parliament (Landtag) at the close of the year resulted as follows: Majority Socialists, 113 seats; Centre party, 90; People's party, 57; National party, 73; Democrats, 26; Independent Socialists, 28; Communists, 30; Economists, 4.

GERVAIS, A. A. See **NECROLOGY**.

GESTEFELD, URSALA NEWELL. Woman lecturer and writer, died at Kenosha, Wis., October 22. The "Science and Being" movement was founded by her and she wrote and lectured widely on the subject. She was born at Augusta, Maine, in 1845 and was one of the early supporters of Dr. Mary Baker Eddy. In 1897 she went to Chicago and was there the first Pastor of the Church of the New Thought and head of the College of Science and Being. She was the author of nearly twenty volumes.

GIBBON, THOMAS EDWARD. Lawyer, died, June 23. He was born at Devall Bluff, Ark., May 28, 1860; admitted to the Arkansas bar in 1883 but removed to Los Angeles, Calif., in 1888 and became organizer and attorney of several railroads. He was a member of the Arkansas house of representatives 1884-85 and after settling in California held important offices at Los Angeles, among others that of member of the harbor commission of the city, 1910-14. He was general counsel of the Los Angeles and Salt Lake rail-

way, 1901-05. He wrote *Mexico under Carranza*.

GIBBONS, JAMES. Cardinal, died March 24. He held the office of Primate of the Roman Catholic Church in the United States. He was born at Baltimore, Md., July 23, 1834, and educated in Ireland during his childhood. He returned to Maryland and began his studies for the priesthood at the age of seventeen. After his ordination in 1861 he held a pastorate at Canton (near Baltimore) and in 1868 was made Vicar Apostolic of North Carolina and soon afterwards bishop. From this work he was promoted in 1872 to the see of Richmond, Va., where he served with great success for five years. He was then appointed coadjutor in Baltimore and in the same year succeeded to the see. He presided over the third Plenary Council of Baltimore in 1884. His long and successful service resulted in his appointment as cardinal by the Pope in 1886. Among his writings may be mentioned the following: *The Faith of Our Fathers*; *Our Christian Heritage*; *The Ambassador of Christ*; and *A Retrospect of Fifty Years*.

GIBRALTAR. A narrow peninsula on the southwest coast of Spain, commanding the entrance to the Mediterranean, and comprising the rock of Gibraltar; a British colony. Area, one and seven-eighths square miles; fixed civil population estimated, Jan. 1, 1920, 16,040 (7791 males and 8249 females), for the most part descendants of Spanish and Italian settlers; alien population, 1733. Most of the inhabitants are Roman Catholics. There were in 1918 and 1919, 16 government aided elementary schools with 2603 pupils, and several private English schools. Revenue (1919), £239,397; expenditure, £136,432; total tonnage, entered, 13,737,959; cleared, 16,030,961. The trade is largely transit, including the supplying of coal to ships. Gibraltar is a naval base and one of the most important strategic points in Europe. It is a crown colony of Great Britain under a governor who is also commander-in-chief. There have been movements in Spain from time to time for the cession of Gibraltar to the Spanish government. The subject was frequently brought up in the Spanish and French press during the year.

GIBSON, JOHN MONRO. British clergyman and author, died in London, October 13. He was born at Whithorn, Scotland, April 24, 1838, and went to Canada where he studied at University College and Knox College (theological), Toronto, graduating with high honors. After teaching on the faculty of the Montreal Theological College, 1868-74, he served as minister of a Presbyterian parish at Chicago. In 1891 and 1915 he was Moderator of the Presbyterian Church of England. He wrote *The Mosaic Era* (1881); *Rock vs. Sand* (1883); *Christianity According to Christ* (1888); *Unity and Symmetry of the Bible* (1896); *From Fact to Faith* (1898); *The Glory of Life* (1900); *The Inspiration and Authority of Holy Scripture* (1908); and several other works on religion.

GIFTS AND BENEFACTION TO UNIVERSITIES AND COLLEGES. See **UNIVERSITIES AND COLLEGES**.

GILMAN, JOHN E. Veteran of the Civil War, died, February 21. He was born at Boston, Mass., Dec. 22, 1844, and educated in the public schools. During the Civil War he participated in many

battles and was honorably discharged, Oct. 28, 1863, having lost his right arm. He was afterwards in the employ of the Massachusetts government from 1901 to the time of his death as a commissioner of the Soldiers' Relief Department at Boston.

GILMORE, THOMAS MADOR. See NECROLOGY.

GIRL SCOUTS. A national organization modeled after that of the English Girl Guides and founded in the United States in 1912 by Mrs. Juliette Low, an American friend of the founder of the Boy Scouts and Girl Guides, Sir Robert Baden-Powell. The purpose of the organization is to give girls a larger life, and develop good citizenship among them through right use of their leisure time. It aims to cooperate with all bodies working to this end, is non-sectarian and open to any girl from 10 to 18 years old who wishes to join and accepts the Promise and Laws. Girl Scout Promise: "On my honor, I will try: To do my duty to God and my country; to help other people at all times; to obey the Scout Laws." Girl Scout Laws: "1, A girl scout's honor is to be trusted; 2, A girl scout is loyal; 3, A girl scout's duty is to be useful and help others; 4, A girl scout is a friend to all and a sister to every other girl scout; 5, A girl scout is courteous; 6, A girl scout is a friend to animals; 7, A girl scout obeys orders; 8, A girl scout is cheerful; 9, A girl scout is thrifty; 10, A girl scout is clean in thought, word and deed."

Girl Scouts are organized in troops of about 16 each, under the direct charge of a captain. Captains obtain their commissions from National Headquarters; they must be at least 21 years of age and of good personal character. During the school year troops hold weekly meetings for work and recreation. In the words of the handbook, Girl Scouts learn "in the happiest way how to combine patriotism, outdoor activities of every kind, skill in every branch of domestic science and high standards of community service." They go on hikes, camp out, and during the summer months many attend the regular camps maintained by the National Organization.

The annual registration fee of fifty cents for each scout and \$1.50 for each captain goes toward the support of the National Headquarters at 189 Lexington Ave., New York, which publishes a monthly magazine, *The American Girl*, and the official handbook of the Girl Scouts, *Scouting for Girls*, together with other manuals and pamphlets. For 1920 the registration in the United States included approximately 82,000 girls and 3600 captains and although figures for 1921 were not available an increase in membership was indicated.

GOLD. The Bureau of the Mint, with the co-operation of the Geological Survey, issued the following final statement of the production of gold in the United States during the calendar year 1920.

State or territory	Fine ounces	Gold	
			Value
Alaska.....	412,915	\$	8,535,700
Alabama.....	10		200
Arizona.....	240,032		4,961,900
California.....	716,477		14,810,900
Colorado.....	363,218		7,508,400
Georgia.....	34		700

State or territory	Fine ounces	Gold	
			Value
Idaho.....	22,668	\$	468,600
Illinois.....			
Massachusetts.....	10		200
Michigan.....			
Missouri.....	14		300
Montana.....	91,802		1,897,700
Nevada.....	175,451		3,626,900
New Mexico.....	21,720		449,000
North Carolina.....	54		1,100
Oregon.....	49,714		1,027,700
Pennsylvania.....			
South Carolina.....	14		300
South Dakota.....	209,842		4,337,800
Tennessee.....	285		5,900
Texas.....	5		100
Utah.....	102,975		2,128,700
Washington.....	7,160		148,000
Wyoming.....	10		200
Philippines.....	61,756		1,276,600
	2,476,166		\$51,186,900

The above figure for total value was \$9,146,500 less than in 1919. The same authorities prepared the following preliminary estimate of the production of gold in the United States during the calendar year 1921:

State or territory	Ounces	Gold	
			Value
Alaska.....	362,633	\$	7,496,300
Alabama.....	5		100
Arizona.....	156,038		3,225,600
California.....	739,214		15,280,900
Colorado.....	331,354		6,849,700
Georgia.....	39		800
Idaho.....	25,315		523,300
Illinois.....			
Maine.....	10		200
Michigan.....			
Missouri.....	10		200
Montana.....	80,835		1,671,000
Nevada.....	155,472		3,213,900
New Mexico.....	10,981		227,000
North Carolina.....	73		1,500
Oregon.....	40,079		828,500
South Dakota.....	315,981		6,531,900
Tennessee.....	251		5,200
Texas.....	68		1,400
Utah.....	89,184		1,843,600
Virginia.....	24		500
Washington.....	8,436		174,400
Wyoming.....	10		200
Philippines.....	59,467		1,229,300
	2,375,479		\$49,105,500

Compared with 1920 these estimates indicated a reduction of \$2,081,400 in value of gold production. The record gold production of the United States occurred in 1915, when \$101,035,700 gold was turned out.

The imports and exports for 1920 and 1921 are shown in the accompanying tables:

Gold	12 months ended Dec.—		
	1921, dollars	1920, dollars	Increase (+) Decrease (—) dollars
Imports.....	691,267,448	417,068,273	+ 274,199,175
Exports.....	23,680,043	332,091,208	— 298,411,165
Excess of imports.....	667,587,405	94,977,065	
Excess of exports.....

With a decline in the production of this metal in 1921 and its intimate relation with problems of currency and finance, gold mining and exchange was an important economic consideration during the year. From the various states of the British Empire was derived 67 per cent of the world's output for the year, and it is interesting to record that the labor, materials, and transportation involved in this production were paid for in a depreciated paper currency. As a result in these states gold was at a premium which varied, not only from time to time but among the states themselves with a maximum of 50 per cent in the Transvaal and a minimum of 10 per cent in Canada. Therefore it will be apparent that gold miners in these states had a distinct advantage over gold producers in the United States, which supplied 14 per cent of the year's production, and in Mexico which furnished 4 per cent, as in both these countries gold was not at a premium. Not only was this condition changing but with the tendency of exchange between the United States and Great Britain to return to the normal, as shown in the rapid rise in value of the pound sterling towards the end of the year, there was every indication that the time of adjustment was approaching.

In 1921 there continued the marked decline in gold production in the United States which was further caused by the closing down of copper mines, from which gold was derived as a by-product. Many of the ordinary gold mines were closed down when operating costs became prohibitive, and the reduction in the cost of labor and supplies that took place during the year was not sufficient to induce the operators to start up again. There was a decreased production in Alaska due to the exhaustion of old placer deposits and the failure to discover new ones of corresponding importance, while new workings for which hopes had been entertained failed to develop either on account of working conditions or for economic reasons. However, towards the end of the year, when it was believed that there would be reduced freight rates as well as lower costs for supplies and a lower scale of wages, it was thought that a resumption of mining activity

might follow, even sufficient to check the decline in the output from the United States and possibly develop a slight increase.

Canada not only maintained its rate of production but slightly increased it, the output of gold for 1921 being estimated at 875,088 fine ounces worth \$18,089,674, as compared with 765,007 ounces valued at \$15,814,089 in 1920. For the reasons already mentioned of a premium on gold the industry was able to flourish, but it was rather by extending and increasing production at existing mines than by the development of new properties. There were also indications that inevitable decreases in cost of mining might result in further developments, but on the other hand conditions in general were hardly conducive to great increases in the Canadian gold output.

In the Transvaal which in 1921 furnished about 48 per cent of the world's production, there was activity during the year due in a large measure to the substantial premium, which permitted many of the low-grade mines to operate which could not do so with profit under normal circumstances. This condition answered for the times, but with the falling of the premium there would have to be either a shutting down of at least some of these mines or a marked reduction in wages and cost of supplies. Another factor was also apparent in 1921; namely, that there were mines in the Rand where the end of the ore reserves was clearly in sight and where production inevitably would cease in a not distant future. It was true that there were new mines, but the production of these was below the losses caused by exhaustion of existing workings. Therefore the Transvaal seemed likely to be on the decline as a gold producer and the rate of this decline in some quarters it was thought would continue to be more rapid.

India apparently in 1921 maintained its rate of production, but the decrease in Australia continued and no new sources of importance were developed. Obviously in Russia the decline in production resulted from political causes and the condition of future gold output was one that was entirely dependent on the nature and conduct of a future government.

From the reports rendered from the different countries the conclusion was inevitable that the rate of gold production the world over was on the decline and that so far there had not been devised metallurgical or mining processes that would render feasible the working of ore of lower grade than was being already exploited. Yet there was unquestionably a large and growing demand for gold which would increase when the paper currencies of Europe ceased to possess value as mediums of exchange. Economists pointed to the lessons of the French Revolution and of the more recent Mexican Revolution where after the use of a paper currency there came the return to the more stable metals as a basis of exchange. Consequently it was anticipated that the search for new gold deposits and their development on an economic basis was likely to be an incident of the financial adjustment after the World War.

GOLD COAST. A British colony of Africa on the Gulf of Guinea between Togoland and the French Ivory Coast, with a coast line of 334 miles, comprising, besides the colony proper, Ashanti and a protectorate. Total area, about 80,000 square miles; population, 1911, 1,503,386, of whom the Europeans in 1915 numbered 2206.

Capital and chief town, Accra (19,585); other large towns: Cape Coast Castle (11,364); and Seccondree (7,725). The following table from the *Statesman's Year Book* of 1921 shows the revenue, expenditure, imports, and exports from 1916 to 1919, inclusive.

	1916 £	1917 £	1918 £	1919 £
Revenue.....	1,835,989	1,624,124	1,298,674	2,601,360
Expenditure....	1,465,946	1,424,279	1,309,486	1,781,170
Imports *.....	5,999,749	3,386,490	3,257,591	7,946,981
Exports *.....	5,816,527	6,364,925	4,472,925	10,814,175

* Including bullion and specie.

The chief imports in 1919 were: Cotton goods; provisions; bags and sacks; hardware; vehicles; building materials; kerosene and fuel oil; and apparel; and the chief exports were: Cocoa, gold and gold dust; kola nuts; palm kernels and palm oil; lumber; and manganese. The United Kingdom had by far the greatest share of the foreign trade, but the United States showed a marked increase over the preceding year, and ranked next in importance.

During 1920 the Gold Coast achieved the biggest trade in its history, exceeding by several million pounds sterling the trade of 1919, the record until that year. In 1920 exports and imports reached £26,000,000, or £8,500,000 more than in 1919. Imports accounted for £14,000,000, as compared with £8,000,000 in 1919, an increase of 77 per cent. This large advance in import values was in some degree accounted for by the increased cost of goods; but notwithstanding higher prices, there were, in numerous instances, larger importations as regards quantities. Imports of cotton goods approximated for £4,000,000, double the 1919 value. Wearing apparel, perfumery, tobacco, hardware, motor vehicles, and railway plant also showed considerable increases. The increased imports of high-priced nonessential articles indicated that the people possessed a considerable amount of surplus wealth for disbursement during the year. The explanation of this was to be found in a review of the export returns relating to domestic produce. The statistics showed that while over 176,000 tons of cocoa, of a value of about £8,500,000, were shipped overseas in 1919, shipments for 1920 approximated over 118,000 tons of a value totaling nearly £10,000,000. Although, therefore, the colony exported nearly 58,000 tons less, the value was £1,500,000 greater. Kola nuts and lumber also showed increases in value during the year. Owing to the influence of cocoas, the exports of palm kernels, palm oil, and rubber all fell in value. The year as a whole was one of extraordinary commercial activity and prosperity, and taking an average throughout the year sellers of produce received higher prices than they ever received before. The shipping entered and cleared in the foreign trade in 1919 had a tonnage of about 1,500,000 which was over 50 per cent in excess of the preceding year. There is a government railway 168 miles long from Seccondree to Coomassie with branches to Prestea and Inchaban; also a line from Accra to Tafo, 65 miles in length. Further lines were in process of construction. Ashanti is especially rich in forests which contain valuable woods, and commercial plants. In this region rubber and cocoa plantations have latterly been developed. The chief town of

Ashanti is Coomassie with about 24,000 inhabitants. The northern territories lying to the east and south of the French possessions and to the west of Togo were placed under British protection in 1901, and are governed by a chief commissioner whose headquarters are at Tamale. The governor of the Gold Coast at the beginning of 1920 was Brigadier-General F. G. Guggisberg.

GOLF. Upsets were plentiful on the links during the year 1921. The clashes between the players of the United States and Great Britain were the most notable golfing events of the year and added greatly to the ever-growing popularity of the game. Miss Cecil Leitch of Great Britain was the only champion of the previous year to retain her laurels, triumphing in the British, French, and Canadian title tournaments. But Miss Leitch in turn met defeat in the U. S. National Women's Championship which was won by Miss Marion Hollins.

Among the men, Jock Hutchison of Chicago stood out with his victory in the British open tournament played at St. Andrews, Scotland. James Barnes of Pelham captured the U. S. National open title, while Jesse Guilford of Woodlawn carried off the honors in the U. S. National Amateur competition. Hutchison's triumph in the British open came only after a play-off as he and Rogers Wethered made the same score in the regulation round.

Abe Mitchell and George Duncan, who rank at the top in Great Britain as professional golfers, made a long tour of the United States during 1921, and although they were unsuccessful in the open tournament made an exceptionally fine record in their many matches on foreign courses.

Walter Hagen was the victor in the U. S. Professional Golfers' Association tournament and also made an excellent showing in several other American tournaments. The Princeton University team for the second year in succession won the intercollegiate honors, J. S. Dean of Princeton taking the individual prize.

GOMEZ, JOSE MIGUEL. Cuban patriot and founder of the Cuban republic, died in New York City, June 13. After the defeat of his party in Cuba in 1920 he had come to the United States for a visit. He was born in Cuba, July 6, 1858, and educated at a Jesuit college and at the University of Havana where he graduated in 1875. At that time the Ten Years War with Spain was going on and he took part in it during its closing months. He was henceforth prominent in all the political movements on the island and fought throughout the War of Independence, in the course of which through his activity and bravery he rose to the rank of brigadier-general after the battle of Santa Teresa in which he was wounded, and he was afterwards made major-general. He fought persistently against the administration of General Weyler. After the war he was a representative to the last revolutionary assembly. Under the American intervention he was appointed governor of Las Villas in 1898 and was elected to the same office in 1901. He ran for the presidency in 1905 but failed. He was an enemy to the American control and in the revolution of 1906 was arrested but later released by the American government. In 1908 he was elected to the presidency by the Liberal-Historical party and held office from 1909 to 1913. Among the accomplishments of his administration may be mentioned the re-

organization of the army, the increase of the navy, the extension of the public school system, and important improvements of the ports, roads, bridges, etc., including railway construction. In 1920 he was again a candidate for president but was defeated by Dr. Zayas. See CUBA.

GORDON, SETH CHASE. Physician, died at Portland, Maine, June 22. He was born at Fryeburg, Maine, August 17, 1830; graduated in medicine at Bowdoin in 1855 and practiced at Portland, Maine, after 1865. He had meanwhile served as assistant-surgeon and surgeon in the Union army in the Civil War. He was surgeon of the Maine General Hospital 1874-94 and a frequent contributor to medical journals especially on gynecological subjects.

GORIZIA. The Italian name of Görs. See GÖRZ AND GRADISCA.

GORROSTIETA, L. E. See NECROLOGY.

GÖRZ AND GRADISCA. A crownland of Austria before the dissolution of the Austro-Hungarian empire at the close of 1918. For statistics see preceding YEAR BOOK. By the treaty with Austria it was acquired by Italy, and the area, according to the latest available figures, was 1138 square miles, and the population, 260,749.

GOTHIC LANGUAGE. See PHILOLOGY, MODERN.

GOUCHER COLLEGE. A non-sectarian institution for higher education for women at Baltimore, Md.; founded in 1885. The enrollment for the regular fall session of 1921 was 879. There were 75 members of the faculty. The productive funds amounted to \$1,237,008. There were 35,000 volumes in the library.

The college purchased a campus of 421 acres at Towson, Md., just six miles north of its present site, and was engaged in a campaign for \$6,000,000, of which \$5,000,000 was to be used to remove the College to its new site and \$1,000,000 was to be added to the permanent endowment funds for the purpose of increasing the salaries of the faculty. Toward the \$1,000,000 for endowment the General Education Board of New York pledged \$400,000. President, William Westley Guth, Ph.D., LL.D.

GOULD, ASHLEY MULGRAVE. Judge, died at Washington, D. C., May 20. He was born at Lower Horton, Nova Scotia, Oct. 8, 1859, graduated at Amherst College in 1881 and was admitted to the bar of Maryland in 1884. In 1898 he was a member of the Maryland house of delegates and from 1901 to 1902 United States attorney for the District of Columbia. After 1901 he was a professor in the law department of Georgetown University where he had taken his legal degree. After Dec. 8, 1902, he was associate-justice of the supreme court of the District of Columbia.

GOVERNMENT OWNERSHIP. See RAILWAYS.

GRACE, THOMAS. Roman catholic bishop, died at Sacramento, Calif., December 27. For over twenty-five years he was bishop of Sacramento. He was born at Wexford, Ireland, August 2, 1841; and educated for the priesthood at Dublin. He was ordained priest in 1867, and after that held pastorates in California and Nevada. He was rector of the cathedral at Marysville for eight years; pastor of the Sacramento Cathedral from 1881 to 1896; and was consecrated bishop of Sacramento, June 16, 1896. His attitude was tolerant and friendly to all Christian churches

and faiths. Mrs. Leland Stanford bestowed on him the Stanford mansion at Sacramento which was afterwards turned into a home for friendless children.

GRAHAM, PETER. Scottish painter, died October 19. He was born at Edinburgh in 1836, but removed to London where he became a member of the Royal Academy in 1881. His subjects are landscapes and animals, and he is best known for his studies of Highland scenery and for certain sea pictures. Among his works may be mentioned: "Highland Spate" (1866); "Our Northern Wall"; "The Fowler's Crag"; "Where Deep Seas Moan"; "A Rainy Day".

GRAHAM LAND. See FALKLAND ISLANDS.

GRAIN EXCHANGES, SUPERVISION OF. See AGRICULTURAL LEGISLATION.

GRAMMAR. See PHILOLOGY, MODERN.

GRANDIDIER, ALFRED. French scientist, Vice-dean of the Academy of Sciences, died in Paris, toward the end of September. He was born in 1836 and early applied himself to the study of the natural sciences. In 1865 he was in charge of the mission to Madagascar which he explored during a period of five years and a full description of which he published on his return to France in an elaborate work, under the title of *Physical, Natural and Political History of Madagascar*, in forty volumes. He also traveled widely in both hemispheres and published various accounts of his travels and reports on the meteorology, geography, and geology of the countries traversed.

GRANGE, E. A. A. See NECROLOGY.

GRAPHITE. The general dislocation of the world's industry and commerce caused by the war showed its effect on the production of graphite. Graphite enters in various ways into many basic industries, and the graphite industry would accordingly show a reaction to the conditions that promote or depress those industries. The history of the graphite industry in 1920 was therefore largely a reflex of the history of general business conditions, especially the conditions in the metallurgic industries. The statistics available indicated that the world's production of natural graphite in 1920 was even less than in 1919, according to the United States Geological Survey. The countries that produce chiefly crystalline or flake graphite fared generally better than those that produce chiefly amorphous graphite. Canada, Bavaria, Ceylon, and the crystalline-graphite districts of the United States showed increases in production. Madagascar, still suffering from the overproduction of 1917, was the exception. On the other hand, the output of amorphous graphite in Mexico, Austria, Czecho-Slovakia, and Italy showed marked decreases. Chosen, however, which produces both varieties, increased its output of amorphous graphite because of an increased demand from Japan, and the United States also made a larger output of that variety. The world's production of natural graphite in the years 1919 and 1920, with figures for 1913 for comparison, is shown in the accompanying table:

WORLD'S PRODUCTION OF NATURAL GRAPHITE,
1913, 1919, AND 1920, IN METRIC TONS

	1913	1919	1920
United States: ¹

GREAT BRITAIN. UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. A constitutional monarchy, comprising the British Isles. Capital, London. The term Great Britain though applicable literally only to England, Scotland, and Wales, is often used as above to include Ireland, the Isle of Man, and the Channel Islands. The status of Ireland was still indeterminate at the close of the year, and the adoption of the plans then pending indicated a change in this usage. (See IRELAND.) The United Kingdom with all its possessions and dependencies, that is to say, the dominions, colonies, protectorates, and other territories subject to the ultimate control of Parliament constitutes the British Empire.

AREA AND POPULATION. The area of England, Wales, Scotland, Ireland, the Isle of Man, and the Channel Islands is 121,633 square miles. The population at the census, April 2, 1911, was 45,516,259 of whom 22,162,390 were males and 23,353,869, females. The following table taken from the *Statesman's Year Book* of 1921 shows the distribution by divisions:

Divisions	Area in sq. miles	Males	Females	Total population on April 2, 1911
England (including Monmouthshire).....	50,874	16,421,298	17,623,992	34,045,290
Wales.....	7,466	1,024,310	1,800,892	2,025,202
Scotland.....	30,405	2,308,839	2,452,065	4,760,904
Ireland.....	32,586	2,192,048	2,198,171	4,390,219
Isle of Man.....	227	23,937	28,079	52,016
Channel Islands.....	75	46,229	50,670	96,899
Army and Navy abroad.....		145,729		145,729
Total.....	121,633	22,162,390	23,353,869	45,516,259

According to preliminary statistics of population made public in August, the population of England, Wales and Scotland, figured as of June 19, was 42,767,530. This total was the largest ever recorded in the country, and exceeded the number returned in the previous census of 1911 by 1,814,750. But this increase was numerically only about one-half of the increase during the preceding decade and proportionately far lower than in any other decade recorded. The following tables show the changes in the population by births, deaths, etc., by decades, table A, page 293, showing these variations in comparison with those of preceding intercensal periods:

In Table B, page 293, the variations are shown for individual years from 1911-20, in order that the important changes in the amount and direction of the several movements which have taken place since 1911 may be more precisely located.

The natural increase, that is, the excess of

births over deaths, continued down to 1914 at approximately the same rate, but after the latter date the continuity was broken. During the years, 1915-18, the fall in the birth-rate was greater than ever before, being from twenty to twenty-five per cent below normal. After the war ceased in 1918 large increases were recorded, but fall far short of making up for the deficiencies of war time. The deaths including the deaths of soldiers showed no such decline down to the close of the year of 1918. After 1918, however, there was a marked reduction which with the increase of births above mentioned, gave a natural increase in 1920 greater than ever before recorded.

Another feature of the census was the increasing preponderance of females over males, the figures for England being males, 16,984,987 and females 18,694,443; for Wales, males 1,098,133 and females 1,108,579. In Scotland the excess of females was over 180,000. The total excess of females in the United Kingdom was placed at about 1,906,000.

As to the cities, London remained the largest city of the world with a population of 7,476,176. The second city of the British Isles was Birmingham, with 199,438; Liverpool continued to stand third and Manchester fourth. Sheffield had 490,724; Leeds, 458,320; and Bristol, 377,061. If the population of Manchester, however, is combined with that of the adjoining town of Salford, it would stand next to London, with a population of 946,701.

The population of India was placed at 319,075,132, an increase of nearly four millions over the census of 1911; Australia, 5,426,008, an increase of a little less than one million; New Zealand, 1,218,270, not counting the Maoris, an increase of 200,000; South Africa, inclusive of natives, 1,531,635, an increase of 150,000.

For the first time since 1821, the census did not

include the population of Ireland, but assuming that the rate of decrease remained the same since 1847, the population would be 4,200,000, a decrease of 190,000 since 1911. The estimated population of the United Kingdom would thus come out at 47,000,000.

EDUCATION. In 1919 the number of elementary schools in England and Wales was 21,473, and the number of pupils enrolled, Jan. 31, 1919, was 5,917,854. The average attendance in 1918-19 was 5,108,000. In Scotland the elementary schools in 1919 numbered 3359 with 725,066 in attendance. In Ireland in 1918 the elementary schools numbered 80,002 with 488,031 in attendance. The universities suffered a great falling off during the war but rapidly recovered it afterwards. The following table from the *Statesman's Year Book* of 1921 estimates the number of members in the teaching staffs and the number of students in the universities of

TABLE A

<i>Intercensal period</i>	<i>Intercensal increase of population</i>	<i>Births registered in England and Wales</i>	<i>Deaths registered in England and Wales</i>	<i>Excess of births over deaths</i>	<i>Loss representing balance of outward over inward passenger movement</i>

* The total of the deaths shown in these two columns is taken from figures supplied by the War Departments and includes the "Missing, Presumed Dead." The number assignable to the population of England and Wales is not known, and the allocation is based on the numbers recruited in the several portions of the United Kingdom which give about 86 per cent. to England and Wales.

† Non-civilian deaths are included in this column for the years 1901-1913.

Great Britain and Ireland in 1920-21 as follows:

<i>Universities</i>	<i>Numbers of professors, &c.</i>	<i>Number of students</i>
England—		
Oxford.....	100 ^a	4,200 ^a
Cambridge.....	160	4,360 ^a
Durham.....	174	1,250
London.....	1,250 ^b	7,000 ^a

¹ Exclusive of the production of phosphate of lime (3372 tons in 1918) and of natural gas (85,000 cubic feet in 1918 and 90,000 cubic feet in 1919), the value of which is not stated.

In 1919 the total number of persons employed in the mines under the Regulation Acts was 1,212,974 of whom 958,133 were males working underground and 9647 females above ground. The mines in operation numbered 3438. The amount of coal available for home consumption exclusive of that used in operating the coal mines was placed at 162,000,000 tons. The following table from the *Statesman's Year Book* of 1921 shows the exports of coal in 1920 to foreign countries.

Countries	Weight, tons	Value £
France.....	11,691,000	42,301,000
Italy.....	2,908,000	11,759,000
Sweden.....	1,372,000	6,258,000
Gibraltar.....	1,134,000	5,570,000
Denmark.....	1,040,000	4,748,000
Egypt.....	983,000	4,505,000
Norway.....	801,000	3,907,000
Belgium.....	671,000	1,974,000
Algeria.....	511,000	2,286,000
Malta & Goso.....	421,000	1,607,000

Countries	Weight tons	Value £
Canaries.....	382,000	1,931,000
Portugal.....	301,000	1,287,000
Spain.....	290,000	1,351,000
Portuguese W. Africa.....	281,000	1,395,000
Argentina.....	274,000	1,139,000
Holland.....	239,000	924,000
Brazil.....	168,000	727,000
Uruguay.....	117,000	430,000
Russia.....	93,000	410,000

The blast furnaces in operation in 1919 numbered 280, the ore smelted amounted to 19,044,272 tons, and the pig iron produced to 7,417,401 tons.

TEXTILES. The following table from the *Statesman's Year Book* of 1921 shows the production of the respective branches of the textile industry in three-year periods from 1911 to 1919, and for the year 1920:

Annual average: Periods of three years	Weight consumed in millions of lbs.				Value of products exported (in thousands of £'s)			
	Cotton	Wool	Flax	Total	Cotton	Woolen	Linen	Total
1911-1913.....	2,074	791	237	3,102	123,167	34,194	9,403	166,767
1914-1916.....	1,854	816	225	2,895	102,548	36,545	8,909	148,002
1917-1919.....	1,623	835	121	2,579	189,000	68,800	14,100	271,900
1920.....	1,560	865	67	2,492	401,700	135,000	23,900	560,600

FISHERIES. In 1920 the fish taken in Great Britain and Ireland according to provisional figures amounted to 1,072,749 tons valued at £28,162,924. The total net tonnage of craft engaged in fishing, Jan. 1, 1919, was 335,510, and the total number of craft, 33,796.

ECONOMIC CONDITIONS. Reports of basic industries at the close of the year manifested a very low ebb of production, the lowest, in fact, for many years. The production of pig iron during 1921 amounted to 2,500,000 tons; coal, 168,000,000 tons; and steel ingots, 3,500,000 tons. During 1920 production of these items was: Pig iron, 8,007,900 tons; steel ingots, 9,056,800 tons; and coal, 229,295,000 tons. Indications during the latter part of the year, however, showed that England was rapidly assuming absolute control over her former coal markets. One of the beneficial effects of the coal-strike settlement was to be found in the increased per capita production. The week ended December 17 marked the largest weekly production and export of coal had during the entire year. The foreign demand for British coals was on the upgrade, while ocean freight rates were on the downward gradient. The ocean freight for coal to South America in December was at 13s. 6d. per ton, which was lower than the prewar level.

UNEMPLOYMENT. The serious conditions of unemployment which had marked the closing months of 1920 continued throughout 1921. It was reported that on Jan. 23, 1921, the number of unemployed had reached 1,060,000, including many ex-service men. The government made a proposal in February that the building industry should take on ex-service men for the relief of unemployment, but the proposal was indignantly rejected by the organized labor of the building industry. On July 1, the number of the unemployed was placed at 2,170,000. After that there was a decrease and on September 1 the number was estimated at 1,527,000. During the same period the partially employed fell from 1,000,000 to 400,000. But while an improvement appeared so far as numbers were concerned, the situation

was worse in respect to the funds available to the unemployed workers. The means of insurance against unemployment were becoming exhausted and on September 1, there were about 300,000 workmen who had no other assistance than the government allowance. The system of government allowances was regarded as a temporary expedient merely and it was feared that if it were extended it would tend to prolong the crisis besides laying heavy charges on the country. Before the adjournment of Parliament, Lloyd George had created a special committee of cabinet ministers under Sir Alfred Mond, Minister of Hygiene, to propose measures for the aid of the unemployed in the course of the coming winter. The government down to October seemed not to have any definite plan in view. The prime minister had held conferences with representatives of all

the groups of workmen and was reminded by them of the recommendations made at the Congress of Cardiff, which included, among other requirements, that the government should encourage a return to normal production by ordering provisions and articles that could be exported on credit, by putting into execution large public works both national and local, and by bestowing on the workmen who in spite of these measures still should remain unemployed, a sufficient means of livelihood. There was difficulty in the way of undertaking public works in that the mass of unemployed lacked the technical skill required, and the cost of transporting the workers to the places where they were needed would be extremely heavy. The Labor party refused any active co-operation with the government. According to many writers all such measures were merely transitory and the only real cure was a resumption of work in the community at large. In his address at Inverness, Lloyd George himself had made this point, saying that it was better to create work than to pay indemnities and that business could only be reestablished when the fluctuations of exchange came to an end. There was need of concentrated efforts, rigorous economy, and close co-operation on the part of the nations to stabilize exchange. A number of writers argued from this that it was necessary to relax the demands on Germany because the fall of the mark prevented the return to normal business conditions. An aspect of the situation that alarmed many observers was the attempt of the Communists to take advantage of it in order to stir up agitation of a revolutionary character. In some quarters demonstrations of the unemployed were organized by Communists. Persons terrified by the conditions in Russia saw in this the penalty for a too easy-going policy on the part of the British government toward the Soviets.

Various incidents were reported in the press showing the seriousness of unemployment throughout the country. For example, on one occasion an advertisement in the newspapers for employees in a lumber yard, where only 50 workmen were

required brought responses from 5000 and led to riots. The riotists wrecked the company's office and were with difficulty driven out. On August 31, thirty labor members of the Borough Council of London decided that they would endure imprisonment rather than obey an order requiring them to raise rates for London services under the County Council and there were several other instances of like character. There were riots in London and other cities in September and on September 22 the Parliamentary Committee of the Trades Union Congress issued a statement to the effect that the government must provide work and the charge must not be made a local burden. The problem was discussed in Parliament and in the Ministry in the hope of finding a solution, but without success. According to figures published in the first eight months of the year, the number had declined on September 16 to 1,469,700 and at this time the decline appeared to be rapidly continuing. The difficulty with the providing sums from the localities was that these localities were breaking down under the strain. This method did not distribute the burden in the right proportion. For example, in one London district on the east side where the population numbered 167,000 the recipients of relief numbered 18,000. In the autumn it was said that unless business revived it would be necessary to maintain at the public charge about 1,000,000 idle men and this would amount to £100,000,000 annually. In response to the need of providing public works the Admir-

COMMERCE. Preliminary net figures for British foreign trade during the year 1921 show an unfavorable trade balance of approximately £50,000,000, as compared with a favorable trade balance of £165,000,000 for the year 1920. Visible trade figures for the year 1921 show an unfavorable balance of approximately £176,000,000 as compared with an unfavorable balance of £379,000,000 in the same items during 1920. This shows that British invisible exports during 1921 amounted to about one-half those of 1920. The Board of Trade, in a carefully prepared statement as regards British trade in invisible items during 1920, placed their total amount at £500,000,000. It appears this half billion, derived during 1920 from shipping earnings, dividends, and interests on foreign investments, insurance, and commercial services, and other items included in the invisible trade of Great Britain, shrank to approximately £220,000,000 during 1921, leaving the above-mentioned net unfavorable balance. The invisible exports of Great Britain during 1913 may be approximated at one-third of a billion.

A marked decline was shown in every branch of British foreign trade during the month of December as compared with November. The total foreign trade of Great Britain during the year 1921 was 55 per cent in value of the total trade for the year 1920. The following table shows the status of British foreign trade during the month of December and the entire year as compared with the periods mentioned:

COMPARISON OF BRITISH FOREIGN TRADE				
Date	Imports £	Exports £	Re-exports £	Total £
December:				
1921.....	85,312,000	59,375,000	9,204,000	153,891,000

alty announced October 8 that it would sell old warships at low prices which could be broken up by firms that would undertake to begin the work as soon as the sale was completed. Various suggestions were made for relief, including plans for rationing the country. In London twenty-nine councilors were arrested for violating the regulations of local taxation but they were released in September. A large parade of the unemployed reported to include some 20,000 men passed through the streets of London in September bearing among other devices "Bread or Revolution." On November 4 there were about 1,722,800 on the registers of the employment agencies who were classed as wholly unemployed, an increase of 100,000 from the previous week. Figures for the entire year were not available, but according to the reports of the Ministry of Labor down to the end of November 6,973,000 suffered reductions amounting to about £5,563,000 a week, the trades most affected being mining, engineering, shipbuilding, textiles, iron and steel, transport, and the building trades. In December the unemployment returns indicated a decrease. There were at that time about 2,100,000 names on the unemployment registers as compared with 2,427,500 six months before.

European customers took 37 per cent of British exports in 1913. Contrary to a rather common impression, the period since the armistice has not shown a proportionate loss of continental markets to Great Britain but actually registers an increase to 44 per cent for the period from Jan. 1, 1919, to Sept. 30, 1921. As the London *Economist* goes on to show, during the last portion of this interval, from July to October, 1921, six of the principal European markets improved their position over the first months of the year. Only Italy and Spain showed a decline. Summary tables for British export trade are here reproduced from the *Economist*:

PERCENTAGE OF BRITISH TRADE TAKEN BY VARIOUS COUNTRIES IN 1913, 1920, AND 1921			
Countries	1913 P. ct.	1920 P. ct.	* 1921 P. ct.

FINANCE. The British budget for 1921-22 was introduced in the House of Commons, April 25. No new taxes were proposed, nor were there any changes in existing rates of duty apart from reduction in the taxes on sparkling wines and imported cigars. The only novel and unexpected feature of the budget was the provision for a conversion loan designed to deal with debt maturing during the next four years. Holders of this debt (amounting to about £800,000,000 in 5 per cent bonds) were offered in exchange a yield of nearly 5½ per cent

in a 3½ per cent issue irredeemable before 1961. The budget statement showed that for the past year there was a revenue of £1,425,000,000 and a realized surplus of £230,000,000. For the current year the estimate of revenue had shrunk to £1,216,000,000 while the estimated surplus of £177,000,000 was subject to so many contingencies that it seemed doubtful whether it would suffice to meet internal and external debt maturing during the year. The government, in the budget, renewed its pledge to do away with the excess-profit tax. The principal taxes, which remained unchanged were: Income tax, 6d. in the pound; supertax, from 1s. 6d. to 6d. in the pound, according to size of income; corporation tax, 1s. in the pound on profits of limited liability companies after first £500; motor bicycles, £1 10s. if not over 200 pounds weight; £3 over 200 pounds; £4 with side car; beer and spirits, duty on beer, over £5 per barrel; on spirits, 75s. 4d. per proof gallon; postage minimum rates: Letters, 2d.; newspapers, 1d.; post cards, 1d.; telegrams, minimum (12 words), 1s.

The following table shows how the expenditure was to be provided in 1921-22, compared with the expenditure in 1920-21, as estimated in April, 1920:

Expenditure	Estimate, 1920-21 £	Estimate, 1921-22 £	Increase (+) or decrease (—) in 1921-22 £
National debt services:			
Interest, etc., inside the fixed debt charge.....	24,500,000	24,500,000	
Interest, etc., outside the fixed debt charge.....	320,500,000	320,500,000	
Total national debt services.....	345,000,000	345,000,000	
Road improvement fund.....	6,650,000	8,400,000	+ 1,750,000
Payments to local taxation accounts, etc.....	10,818,000	11,115,000	+ 297,000
Land settlement.....	12,000,000	5,000,000	— 7,000,000
Other consolidated fund services.....	1,730,000	1,757,000	+ 27,000
Total consolidated fund services.....	376,198,000	371,272,000	— 4,926,000
Army (including ordnance factories).....	125,000,000	106,665,000	— 18,335,000
Navy.....	84,372,000	82,479,000	— 1,893,000
Air force.....	21,067,000	18,411,000	— 2,646,000
Civil services.....	497,318,000	379,035,000	— 118,283,000
Customs and excise, and inland revenue departments.....	10,468,000	14,701,000	+ 4,233,000
Post office services.....	49,689,000	67,165,000	+ 17,476,000
Provision for supplementary estimates.....	20,000,000		— 20,000,000
Total supply services.....	807,904,000	668,456,000	— 139,448,000
Grand total, expenditures.....	1,184,102,000	1,039,728,000	— 144,374,000
Estimated expenditure chargeable against capital.....	10,366,000	10,472,500	+ 106,500

To defray these outlays the government estimated that it would have the following sums:

Revenue	Receipts in 1920-21 £	Estimate for 1921-22 on basis of exist- ing taxation £	Increase (+) or decrease (—) in 1921-22 £
Customs.....	134,003,000	126,800,000	— 7,203,000
Excise.....	199,782,000	196,200,000	— 3,582,000
Total.....	333,785,000	323,000,000	— 10,785,000
Motor vehicle duties.....	7,073,000	9,000,000	+ 1,927,000
Estate, etc., duties.....	47,729,000	48,000,000	+ 271,000
Stamps.....	26,591,000	21,000,000	— 5,591,000
Land tax and house duty.....	2,550,000	2,500,000	— 50,000
Income tax (including super tax and mineral rights duty).....	394,166,000	410,500,000	+ 16,334,000
Excess-profits duty, etc.....	219,181,000	120,000,000	— 99,181,000
Corporation profits tax.....	650,000	30,000,000	+ 29,350,000
Total receipts from taxes.....	1,031,725,000	964,000,000	— 67,725,000
Postal service.....	36,100,000	43,000,000	+ 6,900,000
Telegraph service.....	5,200,000	5,000,000	— 200,000
Telephone service.....	8,200,000	12,000,000	+ 3,800,000
Total.....	49,500,000	60,000,000	+ 10,500,000
Crown lands.....	660,000	650,000	— 10,000

<i>Revenue</i>	<i>Receipts in 1920-21 £</i>	<i>Estimate for 1921-22 on basis of exist- ing taxation £</i>	<i>Increase (+) or decrease (-) in 1921-22 £</i>
Receipts from sundry loans, etc.:

RAILWAYS. At the beginning of 1920 the railway mileage was 23,725.

The yearly statistics of the Ministry of Transport for the year 1920 show gross receipts for Great Britain of \$1,240,000,000 (without the government compensation) as against an expenditure of \$1,224,000,000, which gives an operating ratio of 98.8 per cent. The government compensation amounted to \$213,000,000. Important increases were made in rates and fares during 1920, the increases affecting all departments of traffic. Freight rates were increased by about 50 per cent on Jan. 15, 1920, and again on Sept. 1, 1920, bringing the average up to about 112 per cent over prewar rates. Passenger fares were increased on August 6, 1920, by 16½ per cent, making an increase of 75 per cent over prewar rates. Likewise season ticket rates were advanced to 50 per cent above prewar level and for workmen's fares a mileage scale was adopted on Sept. 1, 1920, with a maximum increase of 200 per cent, or 50 cents a week, whichever was less. These advances were made during a period of high prices and wages gradually prevalent, but the coal strike of 1920 and the great trade depression of 1921 put a different face on the matter.

The total engine mileage of all railways in Great Britain in 1920 was 575,576,239 miles, or an increase of 8.03 per cent over that of the year 1919. Train mileage was 378,070,430, as against 348,911,830 in the year 1919. The average receipts per train-mile from passenger train traffic, however, fell from \$2.55 to \$2.40, but from freight train traffic they rose from \$2.48 to \$4.20.

The number of first-class passengers carried during the year 1920 was 37,675,085, or 15.62 per cent less than the previous year, but the average receipt per first-class passenger rose from 97 cents to \$1.09. There were 1,096,585,156 third-class passengers carried, or an increase of 1.21 per cent over the year 1919, and the receipt per passenger was 30 cents as against 27.4 cents for the year 1919. In second-class passengers there was an increase of 6.90 per cent over the previous year. For all ordinary passenger journeys the average receipt increased from 30.22 cents to 32.74 cents.

As regards freight the total tonnage carried was 323,971,117, or an increase of 4.21 per cent as compared with 1919. In coal, coke and patent fuel there was an increase of .65 per cent, and in other minerals an increase of 20.81 per cent. The total receipts per ton for all railways were \$1.89 as against \$1.05 in 1919.

The year 1921 in many respects may be said to have marked a turning point in regard to British railways, and also in other ways was one of unusual importance. In the first place there was of

course the complete change or entire abandonment of war methods of control, and the beginning of efforts to assimilate to the new conditions which a somewhat radical Railway Act introduced in Parliament on May 12, and becoming a law during the year after three months of debate, established. Furthermore there was a serious coal strike during the year, a marked decline in traffic due to general business conditions, and finally a situation complicated by labor and other considerations. Thus with the return to private ownership and operation the British railways were called upon to face a serious general financial condition, while at the same time future developments, it was realized, must be along lines quite out of keeping with the regular progress and evolution of the half century or more in which the British railway systems had been made effective, by a process of steady and orderly development. In 1921 there was not only the slump in traffic referred to but an increase in expenses and particularly in wages which were about 200 per cent higher than those in force before the war. The new railway bill sought to keep up the wages and reduced working hours in the face of rates that were admittedly too high, and the chief effort was by a process of consolidation which it was hoped would secure economy of management. In this work, and to comply with the provisions of the plan it was believed that many transformations would be necessary.

The new act was in large measure the result of the effects of the ministry of transport under Sir Eric Geddes. The leading and most revolutionary feature was the policy of grouping on a regional basis.

Under the new law which for this grouping does not include the underground or subway systems in and about London the British railways are divided into four main groups on a regional and non-competitive basis, the aim of the consolidation being the "reorganization and more efficient and economical working of the railway system of Great Britain." The four different groups are as follows:

1. Southern group—London and Southwestern; London, Brighton and South Coast; South Eastern; London, Chatham and Dover.
2. Western group—Great Western.
3. The Northwestern and Midland group—London & Northwestern; Midland; Lancashire & Yorkshire; North Staffordshire; Furness; Caledonian; Glasgow & South Western; and Highland.
4. The Northeastern Group—North Eastern, Great Central; Great Eastern; Great Northern; Hull & Barnsley; North British; and Great North of Scotland railways.

The act secures to the government an active

measure of control in that it gave the Railway and Canal Commission or the Minister of Transport authority to require any railway company to afford reasonable railway services, facilities, and conveniences which were proved to be necessary, unless the railway company could prove that any such undertakings would affect prejudicially the interest of the stockholders.

The Minister of Transport was to have the authority to require any or all railways to conform gradually to general standardisation of way, plant, and equipment, and to adopt plans for the coöperative use of rolling stock, shops, and other facilities; unless the railway companies affected could prove to the satisfaction of the Railway and Canal Commission that the order was such that the capital expenditure involved would prejudicially affect the stockholder's interest. Existing leases or working agreements might be continued with the approval of the Minister, and all future agreements of this nature must receive this sanction.

Regulation of rates was provided for in the act, and these were to be fixed on such a basis as to yield the aggregate net revenue for 1913, plus a sum equal to 5 per cent on capital expenditures made by the railway during government control, plus a reasonable allowance for capital expenditures on revenue-producing improvements (not to be less than £100,000 for any individual improvement) which at the beginning of 1913 had not become fully remunerative.

A Railway Rates Tribunal, consisting of three permanent members was established in which was vested authority over railway rates. Three permanent members, who are to hold office not more than seven years, are appointed by the King on the joint recommendation of the Lord Chancellor, the President of the Board of Trade, and the Minister of Transport. Diversity of interests represented is secured by the fact that the chairman must be a railroad man, one of the members a lawyer and the other a business man.

Anticipating that at times a larger rates tribunal might be required, two panels, one made up of twelve shippers appointed by the president of the Board of Trade and another, consisting of twelve members representing the railways and appointed by the Minister of Transport after consultation with the Railway Companies' Association, were provided. The Minister is given authority to select two, one from each panel to serve temporarily on the Rates Tribunal.

The Rates Tribunal was given power to prescribe in relation to the carriage of passengers and merchandise by railway—

- (a) The rates applicable to the carriage of merchandise and the conditions under which those rates shall apply;
- (b) The conditions under which exceptional rates may be charged;
- (c) The charges to be made as station and service terminals and the accommodation and services to be included in those charges;
- (d) The fares for the conveyance of passengers and their luggage and the articles and things that may be conveyed as passengers' luggage;
- (e) The conditions under which fares less than the standard fares may be charged;
- (f) The conditions (other than those relating to dangerous goods) upon which merchandise shall be carried by railway;

Furthermore the Rates Tribunal was given authority to determine any question brought before it in regard to the following:

- (a) The alteration of the classification of merchandise or of any article, or the classification of any article not at the time classified, or any question as to the class in which any article is classified.
- (b) The variation or cancellation of through rates.
- (c) The institution of new, and the continuance, modification, or cancellation of existing group rates.
- (d) The variation of any toll payable by a shipper.
- (e) The amount to be allowed for any terminal services not performed at a station, or for accommodation and services in connection with a private siding not provided or performed at that siding.
- (f) The reasonableness or otherwise of any charge made by a railway company for any services or accommodation for which no authorized charge is applicable.
- (g) The reasonableness or otherwise of any conditions as to packing of articles specially liable to damage in transit or liable to cause damage to other merchandise.
- (h) The articles and things that may be conveyed as passengers' luggage.
- (i) The constitution of local joint committees and their functions and the centres at which they are to be established.

One feature of the British Railways Act was that the Central Wages Board, which was to have jurisdiction over wage disputes, would have sixteen members, eight of whom were to represent the railways, four the National Union of Railwaymen, two the Associated Society of Locomotive Engineers and Firemen and two the Railway Clerks' Association. The National Wages Board, which has final jurisdiction, was made to include six representatives of the railway companies, two representatives of the National Union of Railwaymen, two representatives of the Associated Society of Locomotive Engineers and Firemen, two representatives of the Railway Clerks' Association and four representatives of the users of railways, with an independent chairman nominated by the Minister of Labor.

ARMY. During 1920 the army was rapidly transformed to a peace basis. The military system provides for a regular and territorial army, the troops in the former serving both at home and overseas and the latter only at home in peace time. The forces are under an army council composed of a Secretary of State for War who acts as president, and the heads of the seven departments of the War Office. The total number of regular troops, March 1, 1921, was about 341,000 of whom 201,000 were British, about 84,200, Indian and colonial troops; and 55,600, men temporarily carried in the service, after the war. The distribution of the troops at that time was as follows: Home garrison, 140,500; Mesopotamia, 77,000; Palestine, 18,000; in occupation of the Rhine and certain areas under plebiscite, 15,000; at Constantinople, 9300; the territorial army numbered about 100,000.

NAVY. The following table from the *Statesman's Year Book* of 1921 summarizes the classes of the fleet down to the beginning of 1921:

Class	Completed by end of		
	1919	1920	1921
Dreadnaughts.....	42	42	39
Pre-Dreadnaught battleships.....	21	8	—
Armored cruisers.....	34	—	—
Light cruisers.....	89	90	80
Destroyers.....	about 340		190
First class torpedo boats.....	about 96	1	?
Submarines.....	about 147		98

For later details see article **NAVAL PROGRESS.**

MINISTRY. At the beginning of 1921 the cabinet was constituted as follows:

Prime Minister and First Lord of the Treasury, Lloyd George; Lord Privy Seal and Leader of the House of Commons, Austen Chamberlain; Lord

President of the Council, A. J. Balfour; Chancellor of the Exchequer, Sir Robert S. Horne; Lord-Lieutenant of Ireland, Viscount Fitz Alan of Derwent; Chief Secretary for Ireland, Sir Hamar Greenwood; Lord Chancellor, Lord Birkenhead; Secretary of State for the Home Department, Edward Shortt; Secretary of State for Foreign Affairs, Earl Curzon of Kedleston; Secretary of State for the Colonies, Winston S. Churchill; Secretary of State for War, Sir L. Worthington-Evans; Secretary of State for India, E. S. Montagu; First Lord of the Admiralty, Lord Lee of Fareham; Secretary for Scotland, Robert Munro; President of the Board of Trade, Stanley Baldwin; Minister of Health, Sir Alfred Mond; Minister of Agriculture and Fisheries, Sir A. Griffith-Boscawen; President of the Board of Education, Herbert A. L. Fisher; Minister of Labor, T. J. Macnamara; Minister of Transport, Sir Eric Campbell Geddes; Attorney-General, Sir Gordon Hewart; Minister without Portfolio, Christopher Addison; Secretary of State for Air, F. E. Guest; Minister of Pensions, J. I. Macpherson; Chancellor of the Duchy of Lancaster, Viscount Peel; Director of Overseas Trade Department, P. Lloyd-Greame; First Commissioner of Works, Earl of Crawford and Balcarres; Solicitor-General, Sir E. M. Pollock; Postmaster-General, F. G. Kellaway; Paymaster-General, Sir J. Tudor-Walsh; Lord Advocate, T. B. Morrison; Solicitor-General for Scotland, C. D. Murray; Lord Chancellor of Ireland, Sir James H. M. Campbell; Attorney-General for Ireland, Denis S. Henry; Solicitor-General for Ireland, D. M. Wilson; Vice-President Department of Agriculture, H. T. Barrie.

HISTORY

The chief feature of internal affairs was the movement for the independence of Ireland, an account of which will be found in the article IRELAND. The principal events in foreign relations are discussed in the article on WAR OF THE NATIONS, and for the difficulties in EGYPT and INDIA, see those articles. A summary of other events follows below.

ADMINISTRATIVE CHANGES. Among the chief changes early in the year in the administrative personnel the following may be mentioned: W. L. Spencer Churchill became secretary of state for the colonies in place of Viscount Milner who resigned in February; Sir Laming Worthington-Evans became secretary of state for war in succession to Mr. Churchill; Lord Lee became chief lord of the admiralty in place of Walter Long who resigned in February; Sir Arthur Griffith-Boscawen became minister of agriculture and fisheries in succession to Lord Lee; Lord Edmund Talbot became Viceroy of Ireland under the Home Rule act in succession to Viscount French, being the first Catholic to be appointed to that office; Sir Robert S. Horne became chancellor of the exchequer in succession to Mr. Austen Chamberlain who on March 21 had been elected the Unionist leader in place of Andrew Bonar Law who had resigned March 17; Christopher Addison became minister without portfolio; F. E. Guest became secretary for air; Stanley Baldwin became president of the board of trade; Sir Alfred Mond became minister of health in succession to Christopher Addison; F. G. Kellaway became postmaster-general; the Earl of Crawford and

Balcarres became chief commissioner of works; Justin A. T. Lawrence became Lord Chief Justice in succession to Lord Reading who was appointed Viceroy of India.

The most important of these changes was the sudden resignation of Mr. Bonar Law on account of illness, March 17. This followed a series of defeats in the March elections in which the candidates of the Labor party won in four contests. In one contest, however, the government candidate defeated the Labor representative, Mr. Ramsey MacDonald. Another government defeat was that of Sir Arthur Griffith Boscawen, who, after appointment as Minister of Agriculture, was defeated for reelection, though he afterwards was elected from another constituency. The substitution of Sir Alfred Mond for Dr. Addison as Minister of Health gave rise to much discussion. Dr. Addison, during his administration, had exposed himself to criticism by his housing proposals and the new incumbent presented a programme of strict economy. The post of minister without portfolio was offered to Dr. Addison, but he forsook the government and joined the opposition after violently attacking the programme of his successor.

OPENING OF PARLIAMENT. The parliamentary session opened, February 15. The points emphasized in the King's speech were: Necessity of reducing expenditures; regret at the criminal violence in Ireland; recommendation of the passage of the unemployment insurance bill, the railway reorganization bill, the bill to safeguard essential industries, and the bills for the completion of land purchase in Ireland and the regulation of the liquor traffic. One of the first subjects at the opening session was unemployment, in regard to which the Labor members blamed the government for not making adequate provision. The government retorted with criticism of the unions, especially blaming the bricklayers' union for its refusal to admit ex-service men. In the vote that followed, the government had 262 against 84 for the Labor element, and it showed an equal strong majority when other features of its policy were brought into question, including its attitude toward German reparations and the trial of war criminals, and toward Ireland. It appeared that the government was not prepared to recommend the features of the Milner report which it promised to lay before Parliament. There was promise of a regrouping of parties owing to dissatisfaction of some members of the government party with the policy of the Coalition.

UNEMPLOYMENT INSURANCE. The severe crisis in unemployment has been described in another paragraph. Early in the session a new amendment to the Unemployment Insurance Legislation was introduced. This proposed a temporary renewal of the allowance of twenty shillings a week to unemployed ex-service men and the placing of them under the benefits of the insurance act, whose provisions were modified and extended. The extra benefits were to be payable immediately upon the passage of the bill, but the extra contributions were not to be levied until the opening of the new insurance year, July 4. The bill passed through the House of Commons, February 23-24, and was accepted by the House of Lords, no serious opposition developing in either house; and it received the royal assent March 3. In the summer the demand for government aid

of the unemployed became urgent owing to the fact that the benefits under the new insurance act were running out in many cases. Persons in need of the benefit, and unable to wait until the expiration of the period when it became due, again brought pressure for immediate relief upon the local authorities. Some of the Boards of Guardians responded, but a new issue was raised by the refusal of the Labor majority in the Borough Council of Poplar to impose the county rate on the ground that taxpayers could not pay it. The case came into the courts, which decided against the Poplar councilors, some of whom were subsequently sent to jail for contempt of court in refusing to obey the order. The government on September 8 informed the Boards of Guardians throughout the country that relief should not exceed the earnings of the lowest paid workers in the locality. Several other London districts followed the example of the Poplar Borough Council. On October 12 the Poplar councilors were released by order of the court. The difficulties occasioned by these events led to the passage of a measure known as the Local Authorities Act, which empowered the Minister of Health to appoint a receiver whenever a metropolitan borough should fail to meet the demand, and it also empowered the local authorities to issue short-term loans. In the case of a serious burden on the taxpayers, provisions were made for suspending the sinking fund payments, modifying provisions for repayment of loans, etc. For Scotland a special act was passed authorizing, for a limited period, the granting of poor relief to persons out of employment. Another measure for the relief of unemployment was the Forestry Act, permitting grants for afforestation under relaxed conditions, if unemployment needs were especially urgent.

REPEAL OF CORN PRODUCTION ACT. The legislation passed, at the close of the 1920 session, creating an elaborate administration for the control of agriculture, granting subsidies, making wage arrangements, etc., was repealed by a measure introduced for second reading, July 4. In spite of the opposition of the farming and laboring classes it was carried at the third reading in the House of Commons by a vote of 203 to 52 and was passed by the House of Lords, August 12, with certain amendments; it received the royal assent, August 19.

LICENSING ACT. In the closing days of the session a licensing measure was passed changing the restriction imposed on the sale of liquors under the Defense of the Realm Act. It permitted licensing magistrates to fix closing hours up to 11 P. M.; limited the total number of hours for sale in bars to nine; and required bars to close for two hours during the afternoon. It was carried August 17.

OTHER LEGISLATION. Other measures passed by Parliament included: An act preventing the use of captive birds in all shooting under artificial conditions; an amendment preventing the coursing of captive animals in inclosed spaces from which they could not escape; the trade facilities bill to aid public enterprises in finding capital; various measures pertaining to police pensions, public health officers, supreme court officers, etc. The autumn session of Parliament lasted from October 18 to November 10. On October 19 the Prime Minister outlined the government

programme in respect to unemployment. The chief points were as follows: Aiding public enterprises to find new capital for works that might serve to absorb unemployed men, the limitation being £25,000,000; the granting of £10,000,000 for trade relief work through the Boards of Guardians, or in the field of forestry and land drainage; an additional sum to be granted for the purpose of aiding ex-service men to emigrate; the extension of the guaranty under the Board of Trade export credit plan from 85 per cent to 100 per cent; the imposition of a levy for six months under the national insurance plan to provide additional benefits of five shillings for a wife and one shilling for each child up to a total of nine shillings. The last named proposal involved the introduction of the Unemployed Workers Dependence bill which was passed in spite of the criticism of the Labor element, and went into effect November 10.

COAL STRIKE. The decision of the government to discontinue control of the coal industry at the end of March led to a strike of coal miners. Attempts on the part of coal miners and coal operators to come to an agreement failed, March 24, the miners insisting on a standard rate throughout the country which was refused by the owners. The chief grievance of the miners against the government was its refusal of the demand that the government should aid the industry and provide funds necessary to keep the unprofitable mines at work at the current wage rate. On March 30 the Miners' Federation ordered its members to go on strike on the following day, including even the men at the pumps whose sudden withdrawal would involve the flooding of the mines. The government issued a royal proclamation, declaring a state of emergency. The strike went into effect, March 31, and on April 8 the railway men and the transport workers declared for a sympathetic strike to begin April 12. Meanwhile the Board of Trade had ordered the rationing of coal. On April 11 a conference between the parties to the dispute and the prime minister ended in failure, and the sympathetic strike was definitely fixed for April 14. On that day, however, an official of the miners implied a readiness on their part to discuss the wage question with the mine-owners and the government, provided that their other demands should be taken up later. Negotiations followed which resulted in averting the sympathetic strike. The miners, however, did not agree to a compromise proposed by their officials on April 14 although it was favored by the railway men and transport workers, and they insisted on a general strike. This had the effect of splitting up the celebrated Triple Alliance, and the orders for a sympathetic strike were withdrawn. The coal-miners' strike continued for twelve weeks, being complicated in the meanwhile by the refusal of the railway and transport men to handle imported coal. On June 28 the miners accepted the government's offer of a public grant of £10,000,000. The agreement further included a wage rate at twenty per cent above prewar wages, and a provision for the sharing of labor in the profits of the mines; the agreement to run until September, 1922, subject to termination a three months' notice.

IMPERIAL CONFERENCE. On June 20 the first imperial conference since the war was held in London, the delegates present being as follows:

For the United Kingdom, Lloyd George, Austen Chamberlain, A. J. Balfour, Winston Churchill; Canada, Arthur Meighen, Prime Minister; Australia, W. M. Hughes, Prime Minister; New Zealand, W. F. Massey, Prime Minister; South Africa, General Smuts, Prime Minister, Thomas Smartt, Minister of Agriculture, and Colonel H. Ments, Minister of Defense; India, E. S. Montagu, the Maharaja of Cutch, and Srinivasi-Sastri. On the day following the meeting the conference was urged by both General Smuts and Premier Hughes to invite Japan and the United States to a discussion of naval disarmament. The rights of dominions in foreign affairs was discussed on June 27 by Prime Minister Meighen of Canada who proposed that the governments of the dominions should be consulted on all questions of foreign policy affecting the empire as a whole; that no treaties or special alliances should be made without consulting the dominions, and that such treaties should be subject to the approval of the dominions' parliaments; that all questions between the United States and Canada should be settled in accordance with the advice of the dominion government; that the dominions should be kept constantly informed in respect to all questions of foreign policy affecting the British government. The Anglo-Japanese alliance was discussed on June 28 and June 30. The question of renewal having been raised it was urged by Mr. Balfour that the alliance should be brought into harmony with the requirements of the League of Nations. But the main point in the proceedings was the demand of the dominion Prime Ministers that they should take part in determining the foreign policies of the empire. On July 5 a committee was appointed which should consult with the home governments in respect to imperial improvements, including defense, transport, communications, etc. On August 4 it was decided that the Prime Ministers should have a share in shaping the foreign policies of the empire, and it was suggested that the coöperation of the United States should be secured.

RECONSTRUCTION. The government continued to withdraw from its control of industries. The turning over of the coal industries to private management went into effect on April 1, and the return of the railways to their owners was provided for on August 15. In the act directed to that end provision was made for the settlement of liabilities arising from the period of war control, and the adjustment of relations between the railway companies and the workmen, and the railway companies and the public. The act rested on the principle that the interest of the traveling public could not be subserved on the old basis of competition, and that government regulations were necessary to the efficient working of the railway systems. The interests of the public were protected by the establishment of a tribunal to fix rates. In respect to labor disputes, it provided that they should be referred to and settled by a central wages board with appeal to a national wages board. The term "decontrol" though applied to this arrangement was misleading since the new system provided for a more far-reaching and detailed government regulation than had ever before been known in the history of the British railroads.

NEW TARIFF MEASURE. On August 19 the new tariff law for the defense of essential in-

dustries was voted after a vigorous debate. This measure provided for a tax of 33½ per cent *ad valorem* on the goods imported from any country whose currency is depreciated to a specified degree below the English level. The government showed a desire to put the measure through and tried to cut off debate on details. Before the voting of the law a memorandum had been addressed to the prime minister, signed by leading industrials, especially representatives of iron and steel industries, pointing out the bad condition of essential industries in Great Britain. The memorandum dwelt particularly on the competition of Germany, Belgium, and France, making a special point of Belgian competition. The law, however, did not make any express mention of the countries against which the new tax should be levied. In France, it was believed that French industries would not be affected. The principle of the law was that the initiative must come from the industries themselves, that is to say a complaint must be made by them before any action would be taken. This complaint must be submitted to the examination of a committee before which representatives of the industries must offer proof that the imports from the country indicated would tend to cause unemployment in their own industries. No complaint from manufacturers of foodstuffs would be admitted. The committee charged with the examination of complaints was to be composed of three persons whose interest would not be affected by the decision. After a favorable report from the committee of examination, the Board of Trade might specifically order the application of the 33½ per cent duty to the imports in question. This ordinance would not go into effect until after twenty-one days during which the House of Commons was to have it in its power to raise objections to it.

RETRENCHMENT. As noted above, a strict policy of economic retrenchment was one of the main features of the programme recommended in the speech from the throne. There was much discontent with the government's slowness in adopting effective measures. The government, however, recognized the necessity of severe retrenchment by appointing a committee of business men to investigate the public expenditures and to make suggestions for economy. The chairmanship of the committee was bestowed upon Sir Eric Geddes. The recommendations of the committee had not been made public at the close of the year. A great improvement was indicated by the decision for a naval holiday reached at the Disarmament Conference at Washington (see WAR OF THE NATIONS). The government had previously decided, in accordance with the advice from the Admiralty, to begin work on four new super-Hoods and the contracts had been placed when the Disarmament Conference met at Washington. The orders were canceled and the building of the ships suspended. Recruiting for the Navy also was suspended.

OPPOSITION TO THE GOVERNMENT. The Labor opposition had collapsed at the beginning of the year, but a new revolt showed itself in the country and in Parliament also, under the leadership of Mr. Bottomley and Mr. Edmond Harmsworth, representatives of the "Anti-Waste" group. The programme of this group had won at the by-election in Dover, January 12, when its representative, Sir Thomas Polson, was elected. The Anti-

Waste candidates won in two elections also, in June. Moreover, there was opposition to the government from the two extremes in the Coalition, namely, the Unionists on the one hand and the Liberals on the other. On April 18 Lord Derby welcomed Lloyd George as a recruit to the Conservatives, but on June 20 Lord Salisbury made an attack upon the ministry and urged the Unionists to recover their liberty of action. The Unionists' discontent was subsequently shown by the withdrawal successively of three Unionist representatives, from the support of the government, and finally, in the autumn, the climax was reached by the so-called "Diehard" movement led by the Duke of Northumberland and Colonel John Gretton. Its main point of attack was the government policy of conciliation toward Sinn Fein. A resolution was moved by Colonel Gretton, October 31, criticising this policy. It was regarded by the government as a resolution of censure and its terms being extreme, the Independent Liberals and the Labor members joined against it. On the vote it was supported by only 43 members and the government had a majority of 439, which was the largest of the session. The Unionist element planned another attack on the ministerial programme at the National Conference of Unionists at Liverpool, November 17, but through the efforts of Mr. Austen Chamberlain and Sir Laming Worthington Evans an open assault on the government was prevented. On the other hand, the attempts of the Coalition to win over the Independent Liberals were unsuccessful. Viscount Grey attacked the Coalition Ministry in a speech at Berwick, October 7. The planks of the liberal programme were laid down at meetings of the National Liberal Federation at Newcastle in November by Mr. Asquith. They included the demand for a complete revision of the terms of the Treaty; the cancellation of the debts owed to Great Britain by her European allies; the removal of tariffs and a new programme of land and social reforms. At the conference of the Labor party on June 22 it was decided by a vote of 4,515,000 to 224,000 to reject the request of the Communist party of Great Britain for affiliation.

THE REPARATION QUESTION. The attitude of Great Britain toward the subject of German reparation and the various conferences during the year are discussed in detail in the article *WAR OF THE NATIONS*, but may be briefly summarized here for convenience. On January 9 the Allied Council at Paris fixed the German obligation at £11,300,000,000, payable in annuities during forty-two years, together with a charge of 12 per cent on the value of Germany's exports during that period. The Reparation Commission fixed the proportions of the respective Allies. Germany refused this demand and offered a total of £2,500,000,000 of which they maintained that £1,000,000,000 had already been paid in materials. Then came the ultimatum of March 3 in which Germany was informed that they must accept the Paris proposals within four days. Certain modifications of these proposals, however, were offered to the German delegates, March 7, but the latter rejected them and left London on the following day. This was at once followed by the occupation by the allied troops in the German cities of Ruhrort, Duisburg, and Düsseldorf. The bill was now drafted in Parliament providing for the collection through the allied custom houses of

50 per cent of the purchase price of goods from Germany. The system involved the payment by every British purchaser of German goods of one-half of the purchase price to the British exchequer, which would receipt for it and this receipt would be sent to the German seller by the purchaser instead of cash. Thus the German seller would have to recover, if possible, the value of this receipt from his own government. The bill was introduced, March 14, passed its third reading in the House, March 18, by a vote of 132 to 15 and became a law, March 24. Similar laws were passed by France, Belgium, Japan, and other allied states. Later, however, the acceptance of Germany was signified and on May 11 the Prime Minister announced that the German government had agreed to carry out its obligations without reserve or conditions, as had been demanded by the Reparation Commission. Germany made her first payment at the end of August. To do this the government had been obliged to secure temporary advances through foreign banks and it resorted largely to the printing of paper marks. The latter course was followed at once by a collapse of the value of the mark (see *GERMANY, Paragraphs on Finance*). The question of Germany's ability to meet the schedule of payments now became serious and was extensively discussed. In October came the agreement at Wiesbaden wherein the French and German ministers of Reconstruction, revising the earlier London agreement, admitted the priority claim of France on materials for the repair of her devastated regions. The British criticism of this was to the effect that it increased the difficulty of providing reparation for Great Britain and the other creditors of Germany. The situation was further complicated by the fall of the German government. The default of Germany in respect to the second installment seeming probable, the leading German financier, Herr Stinnes, and the well-known industrial organizer, Dr. Rathenau, went to London where they were in conference with members of the British government in the closing weeks of the year, but no solution of the difficulty had been reached at the year's close.

TRADE WITH RUSSIA. As noted in the last *YEAR BOOK*, an agreement was made with the representatives of the Soviet government for the opening of trade between the two countries at the close of 1920 and this move was regarded with high hopes. According to reports of 1921 the hopes were not fulfilled. Early in October the Chancellor of the Exchequer declared that the British plans for trade with Russia had been defeated. He explained this as in part due to the Russian famine and in part to the fact that the Russian government had shown more inclination to invest its gold in propaganda than in the purchase of goods. It was believed, however, that the agreement in respect to trade would eventually turn out well, though at present, according to the Chancellor, nothing could be gained by sending goods to Russia for they had nothing to give in exchange.

WAR PENSIONS. The cost of relief of ex-service men was exceedingly heavy. It was estimated in September that the government was paying out £111,000,000 in pensions. The casualties of the war according to figures published at that time numbered 2,250,000; and the number of men, women, and children who were receiving

pensions and allowances each week was placed at 3,335,000.

OTHER EVENTS. Mr. J. W. Lowther, Speaker of the House, who had served for fifteen years and had on several occasions prolonged his term at the special request of the government, resigned April 25 and was raised to the peerage under the title of Lord Ullswater, and was succeeded by Mr. J. H. Whitley, former Chairman of Committees, who was elected, April 27. The first woman of English birth, and the second woman to become a member of Parliament was elected to the House, September 2. The new member was Mrs. Thomas Wintringham who succeeded her husband, the latter having died suddenly in the house, August 8. She stood as an Independent Liberal and defeated both her Unionist and Labor competitors. See SHIPPING.

GREECE. A constitutional monarchy in the southeast of Europe, between the Ægean and Ionian seas, consisting of the lower end of the Balkan Peninsula, the island of Crete, the territory acquired after the Balkan wars, and indeterminate regions in Asia Minor where a state of war prevailed in 1921. The mainland is nearly cut in two by the Gulfs of Patras and Lepanto on the west and the Gulf of Ægina on the east. Besides Crete, the islands of Greece include the archipelago in the Ægean Sea and the islands of the Ionian sea. Capital, Athens.

AREA AND POPULATION. As a result of the Balkan wars the area was increased from 25,014 square miles to about 41,933 square miles; and the population from 2,643,109 on the basis of enumeration in 1917 to 4,821,300 as estimated

being the headquarters of the Allies and the centre of the supporters of Venizelos during the war; Candia, 25,185; Canea, 24,399; Cavalla, 23,378. An estimate in 1919 placed the population of Athens and the Port of Piræus at over 300,000. The majority of the inhabitants are Greek Orthodox. Education is compulsory between the ages of six and twelve, but the law is not thoroughly enforced, and illiteracy prevails. No later statistics for education were available than those given in the preceding YEAR BOOK which shows the number of primary schools, 6799 with 476,695 pupils.

PRODUCTION AND INDUSTRY. The chief interest is agriculture, but only about one-fifth of the land is cultivable. The chief cereals are: Wheat, barley, corn, oats, rye, mezzlin; but the most important crop is that of currants, of which industry Patras is the chief centre. Farm products in 1920 were as follows: Wheat, 721,173,291 lbs.; corn, 505,756,344; barley, 344,641,699; oats, 124,432,916; rye, 73,164,937. The wine production was 49,454,367 gallons or about 10 per cent less than in the previous year and olive oil was reported at 50,265,400 gallons. Other important products are: Tobacco, wine, figs, oranges, mandarines, and lemons. There is a great variety of minerals, including: Iron, lead, zinc, copper, silver, tin, nickel, manganese, aluminum, antimony, magnesite ore, cobalt, lignite, and various mineral earths.

COMMERCE. The following table taken from the *Statesman's Year Book* of 1921 shows the distribution of the foreign trade by principal countries in 1918 and 1919:

Countries	Imports from		Exports to	
	1918 Drachmas	1919 Drachmas	1918 Drachmas	1919 Drachmas
Great Britain.....	84,255,201	388,725,000	82,940,340	175,438,000
Egypt.....	61,712,763	83,820,000	34,130,170	48,205,000
United States.....	86,029,558	445,428,000	90,874,155	80,093,000
Austria-Hungary.....	351,192	2,545,000		1,193,000
Belgium.....	18,761	2,231,000		8,495,000
Bulgaria.....	356,871	3,313,000		7,393,000
France.....	82,697,319	133,586,000	62,521,982	44,950,000
Germany.....	49,115	387,000		4,327,000
Switzerland.....	4,169,374	15,762,000	30,082	6,444,000
Italy.....	79,767,838	142,021,000	17,596,200	37,982,000
Netherlands.....	564,413	20,347,000		97,178,000
Roumania.....	24,821	2,142,000		44,452,000
Russia.....	107,689	4,380,000		13,543,000
Serbia.....	1,792,075	19,536,000	2,904,548	51,564,000
Turkey.....	261,389	73,306,000	98,776	80,449,000
All other countries.....	331,748,720	165,237,000	5,768,998	14,671,000
Total.....	733,907,099	1,608,323,000	296,860,251	726,536,000

in 1914. After the late war Greece was permitted by the Allies to occupy the western part of Thrace which had been held by Bulgaria, and the greater part of the Turkish province of Aidin in Asia Minor whose chief town is Smyrna. These concessions were included in the Treaty of Sèvres with Turkey in 1920, but that treaty was not executed, and the attempt of Greece to enforce her claims in Asia Minor brought her into war with Turkey, and the result was uncertain at the close of the year. See paragraphs below on *History*, and the articles, *TURKEY* and *WAR OF THE NATIONS*. See also preceding YEAR BOOKS.

The capital, Athens, had a population in 1907 of 167,497. The largest cities of the new territories and those occupied in 1921 with their populations according to the provisional census of 1915 were as follows: Saloniki, 157,889, temporarily increased to about 250,000 in 1919 owing to its

In 1919 as appears from the above table, the United States held the first place among the countries from which imports were received, and England held the second. Exports from Greece to the United States during the first nine months of 1921 were valued at \$17,733,747 as compared with \$16,866,732 during the corresponding period of 1920; imports to Greece from the United States during the first nine months of 1921 were \$27,100,552 as compared with \$30,293,757 during the corresponding period of 1920.

FINANCE. The budget for the fiscal year 1920-21 was: Revenue, 1,169,511,196 drachmas; expenditure, 2,156,253,578 drachmas. The deficit was due to the cost of the war in Asia Minor. The external debt, Jan. 1, 1921, amounted to 3,282,986,597 drachmas. The agreements of Feb. 10, 1918, with the Allies promised advances of £14,700,000 from Great Britain; 410,000,000

francs from France; and \$48,239,267 from the United States. The control of the fund was entrusted to an inter-allied finance commission and an inter-allied military commission with headquarters at Athens. At the beginning of 1921 the amounts actually paid in by the Allies in accordance with this programme were: £7,000,000 by Great Britain; \$15,000,000 by the United States; and 30,000,000 francs by France. Figures for November, 1921, estimated the total public debt at about 5,400,000,000 drachmas, or about 770 drachmas per capita. Another estimate was about 7,000,000,000 drachmas, or about 1000 drachmas per capita. The external debt was still in excess of 3,000,000,000 drachmas. The last internal loans of the government, were those of July, 1921, one of which was for 125,000,000 drachmas, made from the National Bank of Greece; and the other for 40,000,000 francs made with a group of Greek banks. There was an increasing deficit in government expenditures over revenues that was continually adding to the public burden.

COMMUNICATIONS. The railway mileage open for traffic in 1921 was about 1507, including the following principal lines: The Hellenic; the Piræus-Athens-Peloponnesus; the Thessalian; the Attica; the Northwestern; and the lines centred at Saloniki. Down to the war with Turkey in 1912-13 there was no railway communication with the rest of Europe. But the Monastir line between Gida and a point on the Thessalian frontier was completed in 1916, providing connection with the European systems, and since then lines in western and eastern Thrace have been included. The railways are owned and controlled by the state. On Jan. 1, 1920, the Greek merchant marine consisted of 1048 sailing vessels of 108,217 tons and 228 steamships of 190,886 tons.

GOVERNMENT. The executive power is in the hands of the king who acts through a responsible ministry; and the legislative power is in the Boulé or chamber of deputies which consists of 316 members. The chamber elected, November, 1920, was distributed as follows among the political groups: Rhallis group, 25; Gounaris, 75; independents, 69; Stratos group, 62; Dragoumists, 30; Liberals (followers of Venizelos), 110. The ministry appointed, April 1, 1921, was as follows: Premier, D. Gounaris; Foreign Affairs, J. Baltazzi; Justice and War and Marine (ad interim), M. Theotoky; the Interior, M. Stais; Communications, P. Tsaldares; Education, Theodore Zaimis; Finance and Supplies, M. Protopapadakis; National Economy, Peter Mavromichalis; Public Assistance, M. Bartialis; Agriculture, M. Tertipes.

HISTORY

FOREIGN RELATIONS. The main event of the year was the war in Asia Minor, which is discussed in the article **TURKEY**. The central point in foreign policy was the persistence by Greece in her expansion in Asia Minor and in retaining such advantages as had been gained by the treaty of Sèvres. As recounted in preceding **YEAR BOOK** the return of Constantine to the throne gave great offense to France, while Great Britain acquiesced in it. French policy supported by Italy henceforth favored the Turks, and both France and Italy demanded a revision of the treaty of Sèvres. France in March entered into

a secret treaty with the Turkish Nationalists and Italy also made a secret arrangement with them. The Allies proposed a revision of the treaty of Sèvres but Greece rejected this and began a new campaign in Asia Minor for the purpose of forcing the Turks to accept the original terms of the treaty. In the war in Asia Minor, the Greeks were at first unsuccessful and the results were indecisive, but the results of later campaigns were in their favor. Meanwhile throughout the struggle the French and Italians were apparently giving aid to the Turks. Early in the year the Inter-Allied High Commission declared Constantinople and the Straits neutral. This legally closed them to the Greeks, but the ruling was reversed, June 15. Greek diplomacy appeared to have for its aim during the greater part of the year the separation of Great Britain from France and Italy in the hope of securing as much as possible of the benefits allotted to Greece in the treaty of Sèvres. On October 30 the French mission under Franklin-Bouillon negotiated a treaty at Angora which is described under **WAR OF THE NATIONS**, and at the same time Italy made an attempt to negotiate a similar one. The Greek government objected to the French treaty and the British foreign minister took the same position. See **WAR OF THE NATIONS**.

KING CONSTANTINE. The king as noted in the preceding **YEAR BOOK** was restored to the throne as the result of the November elections of 1920 and the plebiscite which was taken afterwards. On January 5 the king read his message to the parliament. On February 2 he appointed the marriage of Prince George of Greece to Princess Elizabeth of Roumania for February 27 at Bucharest, and of Princess Helen of Greece to Prince Carol of Roumania for March 9 at Athens.

NEW MINISTRY. The ministry of Rhallis fell from power in February over the questions of the responsibility of the ministry to parliament and the representation of Greece at the London Conference; and a new ministry was constituted as follows: Prime Minister, Kalogeropoulos; Agriculture, Balajzis; Justice, Theotokis; Finance, Protopapadakis; Marine, John Rhallis; Education, Theodore Zaimis; Interior and Communications, Tsaldaris. This ministry was short-lived, however, owing to party disputes in the Chamber and resigned April 8 to give place to a new ministry under Gounaris.

CRITICISM OF THE MINISTRY. At the close of the year the Gounaris ministry was attacked by its opponents. By many it was believed to be on the point of resignation. The following summary based on French reports unfriendly to the present Greek government represents the point of view of the opponents of the ministry: The policy pursued during the entire year had been dictated, according to these critics, by M. Gounaris even when he was not actually in power, for during both the ministries of Rhallis and Kalogeropoulos it was believed that he was the controlling influence. It was pointed out that none of the aims of the government had been attained and none of its promises fulfilled. The parties that had come into power after the overthrow of Venizelos had promised immediate demobilization; reduction in the cost of living; and constitutional reform. Instead of demobilization, a campaign against Turkey, involving the loss of thousands of lives, had been carried out. Instead of a reduction in

the cost of living, there had been an enormous increase in prices, and a corresponding fall in the value of the drachma. Finally constitutional reform was no nearer than it had been when the promise was made. The Greek legislative body had been turned into a Constituent Assembly which was the chief power in the state and could not be dissolved until its work was accomplished. According to the opponents of the government

purposely dragged its work along in order to continue in existence, but the nature of the questions that came up before it would at best require a long session owing to the diversity of opinion in respect to them. The government had not even kept its promise in the matter of indemnifying its partisans who had suffered under the Venizelist régime, for the condition of the treasury did not admit of the heavy expenditure which this would involve, the amount being placed at one million drachmas. The government admitted the claims of these partisans, however, and according to the accounts of its opponents, showed very little discrimination in doing so. French writers charged it with undertaking to indemnify persons engaged in spy service on behalf of Germany and persons operating against the Allied army of Saloniki. According to the French, men who ought to be imprisoned or deported were recognized by the government as victims of the Venizelist régime and were entitled to indemnity for their punishment by the military authorities of the Allies at Saloniki. The public had been deceived by M. Gounaris who had assured it that he was in the confidence of the Allies, and that if he paid a visit to their capitals, he would obtain from all that could be demanded. He made his diplomatic journey in the autumn but returned with empty hands, and Greece was left without friends in Europe. Toward the end of the year it was understood that the government was planning a complete reversal of its policy in Asia Minor. According to the newspapers the Gounaris Ministry, realizing that the Greek forces had met with a complete check, decided to withdraw the army of Anatolia.

OTHER EVENTS. On February 1 the separation between the Patriarchate of Constantinople and Synod of Athens was completed. A new government was formed under M. Gounaris, April 8, succeeding M. Kalegeropoulos. On June 17 the British foreign office and the French prime minister consulted in regard to stopping the war between Greece and Turkey, and on June 19 they sent to Greece an offer of intervention which, however, was rejected. On September 12 the Greek government informed the British authorities at Constantinople of a Moslem-Bolshevik conspiracy to assassinate the leaders of the Inter-Allied commission.

GREENE, FRANCIS VINTON. Army officer, died, May 15. He was born at Providence, R. I., June 27, 1850, and graduated at the United States Military Academy in 1870. He entered the engineering corps, June 10, 1872, and attained the rank of captain, Feb. 20, 1883. In 1872-76, he was engaged in the survey of the northern boundary as assistant astronomer and surveyor. He served in the United States legation at St. Petersburg 1877-79 and was with the Russian army 1877-78. During the Russo-Turkish war he was present at several important battles and was decorated by the emperor of Russia. He was

afterwards engaged in engineering and public works in the United States. In 1898 he was made major-general of volunteers. He resigned in 1899 and was appointed chairman of the committee on canals in New York State. From 1904 to 1915 he was the president of the Niagara-Lockport and Ontario Power company. He wrote historical works on the Revolution and Civil War and a volume on the first year of the late war which was published in 1918. His other writings include accounts of his experiences in the Russian army; a two-volume history of the Russian army and its campaigns in Turkey; *The Military Policy of the United States* (1911); *The Present Military Situation in the United States* (1915).

GREENE, HENRY ALEXANDER. Army officer, died August 19. He was born at Matteawan, N. Y., August 5, 1856, graduated at the United States Military Academy in 1879 and had risen to the rank of major by May 30, 1900. He served in Texas, Montana, Cuba, and the Philippines and held important commands after 1900 including that of the central department at Chicago, 1914, the army service schools at Fort Leavenworth, Kansas, 1914-16, on the Mexican border 1916, the 91st Infantry Division and Camp Lewis, Wash., 1917. In 1917 and 1918 he was engaged on observation duty in France and Belgium with the British, French, and American Expeditionary Forces. He was then in command of the Philippine department until his retirement from active service, Nov. 29, 1918.

GREENLAND. Next to the island continent of Australia, the largest island in the world. Area, variously estimated at from 826,000 square miles to 849,429 square miles. The greater part is uninhabited, and the settled portion which belongs to Denmark has only an area of from 34,015 square miles to 46,740 square miles; population in 1911, 13,449. The largest settlement at that time was the town of Sydproven with a population of 789; and the smallest, Skansen with 46. The exports from Greenland to Denmark in 1919 were 2,358,000 kronen; and the imports from Denmark to Greenland, 2,405,000 kronen. Trade is a monopoly of the Danish government, and is largely in seals and sealskins, fish, oil, and fox skins. The head of the administration is a director who resides at Copenhagen.

HISTORY. In 1921 there was a conflict between the Danish and Norwegian governments in regard to the limits of their respective jurisdictions.

The Danish government claimed sovereignty over all Greenland, and the Norwegian government opposed this, claiming that the extension of Danish control endangered the interests of Norway in that it might exclude the Norwegian whalers from all the Greenland coast. In 1920, 52 whalers were engaged in these waters and the catch was figured at about 60,000 crowns per whaler. The policy of Denmark, according to the press version, was that of state monopoly in the exploitation of the natural resources of Greenland. This caused anxiety to the Norwegians. On July 2 the Danish government informed Norway that by virtue of the ordinance of 1776, Greenland formed a part of the Danish colonial empire. The Norwegian government replied, November 5, to the effect that it had not recognized and could not recognize the extension of Danish sovereignty over Greenland, which would involve a corresponding extension of Denmark's

economic monopoly, to the injury of Norwegian enterprises that had hitherto operated without question in the disputed regions of Greenland. The subject had previously come up in 1919 at the time of the sale of the Antilles when the United States as well as Sweden and England had formally recognised the sovereignty of Denmark. The general opinion was that while Norway could not successfully oppose Danish occupation of Greenland it might perhaps succeed in suppressing the Danish monopoly of exploitation since that might close the country completely to all foreign enterprises. On the other hand, Denmark contended that her monopoly aimed only at supplying a moral and economic protection to the Lapps who lived under disadvantageous conditions, and that such protection was only just as against foreigners who were stronger and better equipped. At the close of the year there were indications that the subject would be referred in the future to the League of Nations. For the first time Greenland has been visited by the King of Denmark, in the summer of 1921. This journey marks an increasing activity in this arctic colony, whose interests have been so wisely safeguarded by Denmark in the past. In 1921 the Danish National Museum sent Dr. Norlund to Greenland, to continue investigations of the vestiges of the Norse settlements made prior to the discovery of America by Columbus. Norlund passed the summer in South Greenland, where his discoveries proved to be of historical importance. Near Ikigait he located a number of ancient graves, from which he obtained clothing and other articles of interest; these point to the occupancy of this section of Greenland by Norsemen from the years 885 to 1400.

GRENADA. One of the Windward Islands of the West Indies, belonging to Great Britain. Area, 133 square miles; population estimated, Dec. 31, 1919, at 74,490. The colony includes one-half of the Grenadine Islands, the other half being under the administration of St. Vincent. The capital and chief town is St. George's, with a population of 4916, mostly negroes. In 1919 there were 59 government or government-aided elementary schools with an enrollment of 9689 pupils. The chief products are spices and cocoa which are also the chief exports, but latterly sugar manufacture has developed. The exports in 1919 were £637,249; imports, £438,110. The total shipping in 1919 was 737,560 tons of which nearly all was British. Governor and commander-in-chief of the Windward Islands, including Grenada, at the beginning of 1921, Sir G. B. Haddon-Smith (government headquarters at St. George's).

GRENADINES. See GRENADA and ST. VINCENT.

GRESHAM, HERBERT. See NECROLOGY.

GREUNEBAUM, B. F. S. (COUNT GREGORY). See NECROLOGY.

GROSSCUP, PETER STENGER. Judge, died at sea, October 1. He was born at Ashland, Ohio, Feb. 15, 1852, and graduated at the Boston Law School in 1874. He practiced first at Ashland, Ohio and then at Chicago, 1882-92. In 1892 he was made United States district judge and was judge of the Circuit Court of Appeals 1889-1905. He was then made presiding judge and held that office till Oct. 23, 1911, when he resigned. Among his noteworthy official acts was the issue of an in-

junction along with Judge William A. Woods against Eugene V. Debs and other officers of the American Railway Union. He was also concerned in many other important cases including Standard Oil litigation. A local decision that drew much attention was that in respect to the closing of the World's Columbian Exposition on Sundays. Herein, his opinion dissented from the two Circuit judges but was sustained by Circuit Court of Appeals.

GROVER, G. See NECROLOGY.

GRUENBERG, LOUIS T. See MUSIC, *Orchestras, Novellies.*

GUADELOUPE. An island of the Lesser Antilles in the West Indies, belonging to France; consisting of two islands, namely, Guadeloupe proper or Basse-Terre on the west and Grande-Terre on the east, separated from each other by a narrow channel. The combined area is 722 square miles. There are also five dependencies consisting of smaller islands, whose total area is 688 square miles. Population, estimated unofficially in 1919, 213,229. Capital, Basse-Terre (8184). The chief city is Pointe-à-Pitre with a population of 22,664, which has an excellent harbor. The chief products are: Sugar, coffee, cacao, vanilla, and rum, but there is a variety of native vegetables and fruits for local consumption. Imports in 1919, 63,844,241 francs; exports, 103,628,520 francs. There is direct communication with France by two steam navigation companies and there is a wireless station at Destrellan. At the head of the government is a governor and an elected council, and the colony is represented in the French parliament by one senator and two deputies.

GUAM. An island belonging to the United States situated in the Pacific ocean between 13° 13' and 13° 39' N. latitude; 140° 77' and 144° 58' E. longitude. Area estimated at 225 square miles; population at the census of 1920, 13,275. The pupils enrolled in the schools in 1921 numbered 2369 of whom 1865 were in daily attendance. The imports during the fiscal year ending June 30, 1921, were \$427,354; and the exports, \$41,518. The leading imports were: Foodstuffs, cotton tissues, automobiles and parts of automobiles, refined sugar, cigars, and tobacco, petroleum; and iron, steel, copper, and other metals. Revenue for the fiscal year ending June 30, 1921, \$149,490.95; expenditures, \$149,940. The island of Guam is in its entirety a naval station, and the governor is head of the naval government and commandant of the naval station. Governor in 1921, Captain Ivan C. Wettengel, appointed July 7, 1920.

GUATEMALA. A republic of Central America extending from the Caribbean sea to the Pacific ocean. Capital, Guatemala City. Area, estimated at from 43,641 square miles to 48,290 square miles, varying on account of boundary disputes; population estimated, Dec. 31, 1914, at 2,003,579; unofficially, Dec. 31, 1917, 2,123,091 of whom about 61.5 per cent were Indians, the remainder being mestizos. Guatemala City had a population variously estimated at from 90,000 to 100,000 of whom five-sixths were of European origin. Earthquakes in 1917 and 1918 destroyed the city almost completely, but rapid progress had been made in rebuilding by 1921. Other towns are: Coban (30,770); Quetzaltenango (28,940); Totonicapan (28,310).

EDUCATION. Primary education is free and compulsory between the ages of six and fourteen.

In 1920 there were 55,100 pupils in attendance at the elementary schools. In 1917 the government schools numbered 1942 with an attendance of 54,745. Institutions for higher education included the University of Guatemala, opened Sept. 15, 1913, the National Central Institute, and schools of art, handicraft, and music.

PRODUCTION. Tropical and subtropical productions abound, the chief being coffee, sugar, and bananas. Coffee is raised for the most part on the mountain slopes at an altitude of 1500 to 5000 feet above sea level. In 1919 the coffee crop was estimated at 1,100,420 quintals (a quintal equals 101.4 lbs.). Sugar yielded in 1913, 42,000,000 pounds. The next important product is bananas of which on the average about 10,000,000 bunches are raised in a year. The forests are rich in mahogany and dyewoods. Gold, silver, copper, iron, and lead are worked, but have not been developed on account of the lack of means of transport. The mining of ferro-chromium has been developed latterly, especially in the department of Jalapa.

COMMERCE. In 1919 according to a British authority the imports were £2,246,164; the exports, £4,483,827. The trade of that year was distributed among the following countries in the order of their importance as follows: United States, United Kingdom, and Belize, France, Mexico, and Central America. By far the largest share is that of the United States in whose trade with Guatemala the following products have constituted the chief items: Cotton, coffee, sugar, foodstuffs, iron, steel, linen, hemp, jute, bananas, timber, paper, and leather.

FINANCE. The revenue in 1919-20 was 127,249,490 dollars; the expenditure, 101,028,476 dollars. The estimated expenditure for 1920-21 was 135,604,267 dollars.

COMMUNICATIONS. The Guatemala railway, 195 miles in length; the Guatemala Central railway, 139 miles; and shorter lines were incorporated in the International railway of Central America, in 1912. The company receives subsidies from the governments of Guatemala and Salvador. The main lines are from Guatemala City to Puerto Barrios, and from the former to San José. In 1919, vessels entered numbered 601 of 696,885 tons of which 175 of 422,929 tons were American; vessels cleared, 576 of 541,580 tons.

GOVERNMENT. The constitution dates from December, 1879, but was modified in 1885, 1887, 1889, and 1903. The executive power is vested in a president, elected for six years, and a council of state of thirteen members, partly appointed by the president and partly elected by the national assembly; legislative power is in a national assembly which consists of representatives elected for four years by universal suffrage. The president during the first part of 1921 was Don Carlos Herrera, but he was overthrown in 1921 (see following paragraph on *History*).

HISTORY. A revolt of the Indians took place late in the summer in the Department of Zacapa on the border of Honduras under two chieftains who joined forces and attacked a village. They killed the commandante and held up a train but troops were sent from the capital and put down the uprising. On December 6 a revolutionary movement overthrew the President, Carlos Herrera, who was obliged to surrender his power to

a committee of three generals pending the elections for a new congress and a new president. Ex-President Herrera, the vice-president and all the members of the cabinet were thrown into prison. This change threatened the status of Guatemala in the newly formed Central American Union, according to some accounts, since the revolutionary party was not in favor of this policy. President Herrera had been placed in power as a result of the revolution of 1920 which overthrew President Estrada Cabrera. Cabrera was confined in prison in 1920 and 1921 in spite of the efforts of the United States government on his behalf. On December 8 General Orellana, chief of staff of the army, was elected provisional president in place of Carlos Herrera, who had been deposed and the National Assembly was convened.

GUNSAULUS, FRANK WAKELEY. Clergyman and author, died March 17. He was born at Chesterville, Ohio, Jan. 1, 1856, graduated at Ohio Wesleyan University in 1875 and was ordained to the Methodist ministry in 1875. He entered the Congregationalist ministry in 1879. He held pastorates in Ohio, Massachusetts, and Baltimore and after 1887 at Chicago. After 1893 he was president of the Armour Institute of Technology and lecturer at the University of Chicago. He was widely known as a preacher, lecturer, and writer. Among his works were the following: *Metamorphosis of a Creed* (1878); *November at Eastwood* (1879); *Phidias and Other Poems* (1887); *Loose Leaves of Song* (1888); *Songs of Night and Day* (1889); *Monk and Knight* (1889); *Transfiguration of Christ* (1892); *Life of William Ewart Gladstone* (1898); *The Man of Galilee* (1899); *Paths to Power* (1905); *Paths to the City of God* (1906); *Higher Ministries of Recent English Poetry* (1907); *The Minister and the Spiritual Life* (1911).

GUNTHER, DUKE ERNST. See **NECROLOGY**.

GYMNASTICS. The National Amateur Athletic Union championships were held at Greensburg, Pa., February 26. The individual winners in the various events were: Horizontal bar, Curtis Rottman, New York Turn Verein; parallel bars, the same athlete; side horse, the same athlete; flying rings, John Kristefuk, Sokol Gymnasium, Chicago; rope climb, George Taylor, Greensburg Y. M. C. A.; Indian club swinging, Lester McCloud, New York A. C.; tumbling, Arthur W. Nugent, Newark; all-around, Rottman, New York T. V. The team honors went to the New York Turn Verein with a total of 18 points.

The United States Naval Academy won the intercollegiate title for the second year in succession, scoring 23 points; the University of Pennsylvania was second with 10 and New York University third with 9. The individual winners were: horizontal bar, Pearson, Navy; side horse, Cramer, New York University; parallel bars, Sherman, Navy; flying rings, Hales, Navy; tumbling, Woodward, Pennsylvania; swinging clubs, Gilmore, University of Pennsylvania; all-around, Pearson, Navy.

GYPSUM. In 1920, for the first time, the total quantity of gypsum produced in the United States in a single year exceeded 3,000,000 tons, according to the United States Geological Survey. After 1909, when the annual output first passed the 2,000,000-ton mark, it fluctuated, not falling below 2,000,000 tons nor going above 2,760,000 tons. The value of the product marketed also was much greater than in any previous year.

H

HABBERTON, JOHN. Author, died February 25. His reputation was acquired by an exceedingly popular story entitled *Helen's Babies*. He was born at Brooklyn, N. Y., in 1842 and educated in southern Illinois. He learned the printing trade but later was engaged in editorial work on New York periodicals. He served during the Civil War. *Helen's Babies* was published in 1876. It was a slight but amusing account of the sayings and adventures of two children and it had an extraordinary circulation being published in Europe as well as in this country. Other works of his included, *Other People's Children* (1877); *The Chaulauquans* (1891); *All He Knew* (republished in 1900); *Budge and Toddy* (1909).

HAGAR, GEORGE J. Editor, died at Newark, N. J., July 25. He was born at Newark, Sept. 12, 1847, and educated at the public schools. From 1867 to 1882 he was news editor of Frank Leslie's *Illustrated Newspaper*. From that time on he was an editor or contributor on the staffs of many encyclopedias and other reference books including the *Appleton's*, the *Columbian*, the *Johnson's*, etc., various important dictionaries including the *Standard*. In later years he was an editor of a documentary edition of President Wilson's *History of the American People* in 10 volumes and revised Appleton's *New Practical Encyclopedia* for World War events.

HAGERUP, GEORGE F. See NECROLOGY.

HAIG, AXEL HERMAN. Painter, died in 1921. He was born on an island in the Baltic sea in 1835; educated in Sweden, but went to Scotland and later to London where he worked in architecture. He made designs for churches and mural decorations in Sweden, but afterwards devoted himself chiefly to etching. He received many medals and other distinctions and published over 400 etchings, many of which are very well known.

HAINES, JOHN PETER. Philanthropist, died at Tom's River, N. J., July 26. He was at one time president of the Society for the Prevention of Cruelty to Animals. He was born in New York City, Dec. 17, 1851; educated by private tutors and pursued special courses at Columbia University. Early in his career he identified himself with the work of various humane institutions being especially active in the one above mentioned. He was the editor of *Our Animal Friends*, the official organ of the American S. P. C. A., and president of that society, 1889-1906. During his administration the society's activities were largely extended and many new laws were enacted as a result of its influence and many abuses checked. He was also a member of the American Geographical Society and the American Museum of Natural History and many other scientific and social institutions. He invented and patented the Haines electric log for indicating and registering speed of vessels.

HAITI. A republic of the West Indies occupying the western part of the Island of Haiti or Santo Domingo, the other half constituting the Dominican Republic. Capital, Port au Prince.

Area, estimated at 11,072 square miles; according to other authorities, 10,204; population based on estimates of 1909, 2,029,700. The majority of the people are negroes, speaking a dialect of French. The largest city is Port au Prince with an estimated population in 1919 of 101,272, but higher estimates are given, up to 120,000. Other cities: Cap Haïtien with an estimated population in 1919 of 18,952; Gonaïves, variously estimated at from 8000 to 30,000; Cayes, from 12,000 to 15,000; Port du Paix, from 5000 to 10,000. Education was made compulsory in 1910. In 1918 primary schools numbered 854 with 61,956 pupils. The following details were supplied by the department of public instruction in 1921: During the 1920-21 school year 15 private rural primary schools had 530 pupils and 38 private city primary schools 2951; 563 national rural primary schools, 18,187 pupils; 105 religious schools, 5857 pupils; 118 girls' primary schools, 10,481 pupils; 100 boys' schools, 8331 pupils; and 10 half-time schools, 963 pupils. In addition, there were in the 11 national primary schools in charge of friars 3260 pupils divided among 66 classes, and in 32 in charge of nuns there are 4782 pupils. There are also 29 school-teachers who are laymen and are visited by the friars as supervisors. School gardens have been instituted in Cap Haïtien, Jacmel, and Petion Ville to teach the rudiments of agriculture to the school child and interest him in profitable cultivation of the soil. In the 6 national lycées there were 650 students, and in 10 private secondary schools 2792 pupils.

PRODUCTION AND COMMERCE. Agriculture is the chief occupation and coffee is the chief product, but cocoa, cotton, and tobacco are extensively grown, and cotton has been exported in considerable quantities. Sugar, rum, and other spirits are also produced. Logwood and other valuable woods are found in the forests, and exported. The exports in 1918-19 amounted to 21,460,044 dollars; and the imports, 17,117,608 dollars. The chief exports are: Coffee, logwood and other woods, cocoa, cotton, honey, hides; and the chief imports: Cotton, sacks, iron work, machinery, flour, lard, kerosene.

FINANCE. The receipts and expenditures for 1919-20 were as follows:

Balance fiscal year 1918-19	\$ 668,626.32
Receipts	6,802,810.56
Total	7,471,436.88
Expenditures	6,348,601.48
(Including \$2,200,000 sent to the financial councilor to be converted into francs for payment of amortization, interest, and stipulated commission.)	
Balance fiscal year 1919-20	\$1,122,835.40

GOVERNMENT. The executive power is vested in a president, elected for four years by the two chambers in joint session; and the legislative power, in a chamber of deputies and a senate.

The president is assisted by a cabinet of five members. President in 1921, Sudre Dartiguenave.

HISTORY

AMERICAN OCCUPATION. The charges of atrocities against the American marines which were under discussion in the closing months of 1920 have been outlined in the preceding YEAR BOOK. On May 8 three Haitian delegates repeated the charges, and requested the American government to withdraw at once the American military force. There were further reports charging misgovernment on the part of the Americans. In the autumn a committee of the United States Senate was investigating the conditions in Haiti and taking testimony from American officials and others in respect to the alleged atrocities. Among the many witnesses was Rear-Admiral Caperton who had been in command of the marines at the beginning of the American occupation in 1915, which it will be remembered occurred on the occasion of the revolutionary movement. The Admiral testified that this revolt was in part financed by German residents at Port au Prince. He also testified that the election of the present president had been favored by the United States at the time on the ground that it would tend to insure Haiti's political integrity. Major-General George Barnett, former commander of the marines, testified on October 24 in regard to conditions in Haiti and the Dominican Republic. He said that the American marines had given Haiti the best government that it had ever had in a hundred years and that the American occupation would continue indefinitely. He gave details of his inquiry into the conduct of the marines in Haiti and he criticised former Secretary of the Navy, Mr. Daniels, for having refused to declare that the report of the Naval Committee of Investigation under Rear-Admiral Mayo did not impute any blame to him as commandant of the marines. On October 26 Major T. C. Turner of the Marine Corps, estimated that under the American occupation 2500 natives were killed in action, his report being based on an inquiry which he had made in the autumn of 1919. He declared that no evidence was found of the killing of natives held as prisoners. Of the 2500 killed during the entire period of the American occupation, 1132 were killed between Oct. 1, 1919, and Oct. 1, 1920. Major Turner declared that it was his opinion that there had been executions of the natives without trial. According to the testimony of Lieutenant-Colonel Hooker of the Marine Corps dating from January, 1919, the gendarmes had so maltreated the natives that many of them joined the bandits. It appeared from testimony heard in October, that natives had been killed in trying to escape and that natives were forcibly held in servitude for work on the roads. On the other hand Lieutenant-Colonel Alexander S. Williams, who was in command of the gendarmes from August, 1916, to July, 1919, offered an emphatic denial before the Senate Commission, against the charges against the gendarmes. He said that it was not true that the natives had been killed or treated cruelly by the gendarmes under the orders of the American Marine officers. He knew these officers and was certain that they were all animated by a high ideal of their duty and that they all showed

friendliness and sympathy for the natives. On November 7 Major-General Waller, retired, described the engagements that took place in 1915-16 between the American marines and the insurgents, saying that the latter had fired the first shots at some American patrols in violation of the understanding signed some days before with representatives of the insurgents. At that time he said that the American troops were under orders not to begin hostilities but to wait until they were attacked. He also testified that the American representatives had coöperated with the natives in the drafting of the new constitution.

On November 29 the Senate Commission arrived at Port au Prince for the purpose of making investigations on the spot. According to the chairman of the committee, Senator Medill McCormick of Illinois, the general objects of the visiting committee were to seek a political and economic basis for the future progress of Haiti, and to discover and maintain measures of preserving administrative and social order in the island. Diplomatic arrangements alone were not sufficient and it was necessary to find the means of uniting the two peoples with due regard to their safety, their rights, and their duties. The Commission returned to the United States at Christmas time, and, although its report was not published at the close of the year, it appeared from interviews with the chairman that in the opinion of the Commission it was necessary to send a high commissioner to Haiti to advance money to the government for the payment of its debts and to maintain the military occupation. Critics of the American administration at Haiti professed to see in this commission a definite step toward American acquisition of the island. They charged that intervention in Haiti, had resulted from the demand of certain financial interests in this country, that the occupation was merely a provisional measure, and that the next stage would be a definite assertion of American possession.

In general, the testimony before the Senate Commission was voluminous and contradictory. It included direct and emphatic assertions that better conditions prevailed under American occupation than ever before, and better even than in many parts of the United States. General Eli J. Cole, for example, testified to this effect and approved the course taken by the American authorities. He said martial law was necessary so long as American troops remained on the island and that native justice was venal and never accorded fair treatment to white men in the courts. On the other hand, testimony was presented to the effect that natives had been tortured and mutilated by American troops and subjected to other cruelties in order to extort from them information concerning the bandits. It was said that the natives were in the main tractable and that the higher classes were competent to manage an independent government. On the other hand, extreme cruelties were charged against the natives, cases of torture and mutilation of American soldiers were cited, and the United States government was criticised for not making the treaty effective and for not affording security for foreign capital.

HALE, ALBERT CABLE. Chemist, died at Brooklyn, N. Y., April 24. He was born at Adams, N. Y., Sept. 2, 1845, and graduated at the University of Rochester in 1869. He after-

wards studied in Germany. He was head teacher of the physical science department in the Boys' High School of Brooklyn 1883-1912, and was appointed president of the department of chemistry in the Brooklyn Institute of Arts and Sciences in 1890. He was elected president of the Physics Club of New York in 1900 and of the Chemistry Teachers' Club in 1902.

HALE, RICHARD. See MUSIC, Artists, Vocalists.

HALL, HERSCHEL S. See NECROLOGY.

HALL, LUTHER EGBERT. Former governor of Louisiana, died at New Orleans, La., November 6. He was born at Morehouse Parish, La., August 30, 1869; graduated at Washington and Lee University in 1889 and after studying law, began practicing in Louisiana in 1892. From 1898 to 1910 he held successively the positions of judge of the 6th district, judge of the court of appeals, and associate justice of the supreme court of the State. He was governor of Louisiana, 1912-16.

HALL, RANDALL COOKE. Clergyman and educator, died at Wallingford, Conn., July 27. He was born at Wallingford, Dec. 18, 1842; and graduated at Columbia in 1863 and studied at the General Theological Seminary of New York. He was ordained priest in the Protestant Episcopal Church in 1870 and from 1869 to 1899 was first instructor and then professor of Hebrew and Greek in the General Theological Seminary. After 1904 he was curate of the church of St. Mary the Virgin, in New York City.

HALSBURY, HARDINGE STANLEY GIFFARD, EARL OF. Former British cabinet minister, died in London, December 11. He was Lord High Chancellor in the ministries of Lord Salisbury and A. J. Balfour. He was born in London, Sept. 3, 1823, educated at Oxford and admitted to the bar in 1850. From 1875 to 1880 he was Solicitor General and from 1877 to 1885 Member of Parliament. His legal career began with the trial of criminal cases and throughout its long course a large number of the most important criminals were either defended or prosecuted by him. There was some scandal during his administration as Lord Chancellor owing to the large number of his relatives appointed to office. One of the chief accomplishments of his life was the codification of the laws of England in twenty-eight volumes. Lord Halsbury was regarded by many as one of the greatest lawyers of the Victorian Age. He held the Great Seal for a longer period than any other Lord Chancellor or Lord Keeper, except Lord Eldon. In politics he was a Tory and his influence was strong in the councils of his party for many years.

HALSEY, ABRAHAM WOODRUFF. Clergyman, died, April 20. He was born at Elizabeth, N. J., March 22, 1853, graduated at Princeton in 1879 and at the Princeton Theological Seminary in 1882. He was ordained to the Presbyterian ministry Oct. 10, 1882, and was for seventeen years thereafter pastor of the Spring Street Church, New York City. He was Secretary of the Board of Foreign Missions after 1899.

HAMILTON, JOHN. See NECROLOGY.

HAMILTON COLLEGE. A non-sectarian institution of the higher learning at Clinton, N. Y.; founded in 1812. There were 3248 enrolled for the fall session of 1921. There were 29 members of the faculty. The productive funds amounted to \$2,263,164 and the income for the year was

\$173,699. There were 90,484 volumes in the library. During the year Edward Franklin Hauch succeeded the late Professor Brandt in the chair of German and several other changes in the faculty occurred. An important feature of the year was the successful campaign of the alumni for an increase of the endowment, the sum aimed at being \$700,000 of which almost all had been subscribed by the summer of 1921. President, Frederick C. Ferry, LL.D.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institution for the education of negroes and American Indians at Hampton, Va.; founded in 1838. The enrollment for the autumn of 1921 was 1308 and for the summer school 540. There were 159 members of the teaching staff of whom 37 were in the summer school. The productive funds were \$3,916,719 and the income \$458,911. There were 44,617 volumes in the library. Principal, Rev. James Edgar Gregg, D.D.

HANN, JULIUS VON. Austrian meteorologist, died at Vienna, October 1. He was acknowledged to be the world's leading meteorologist. He was born near Lins in Upper Austria in 1839; educated at the University of Vienna; became professor there of physical geography in 1873; professor at Graz, 1897-1900; and after 1900 again professor at the University of Vienna in the chair of cosmic physics. He served in the Central Meteorological Bureau at Vienna, twenty-nine years and was its director for twenty-three years. His numerous publications on climatology and meteorology are of the highest character, and have never been surpassed in number and value. They include the section on astronomical geography and cosmic physics in the *Allgemeine Erdkunde* (4th ed., 1886); *Handbuch der Klimatologie* (3 vols., 1883; 3d ed., 1908-11); *Die Temperaturverhältnisse der österreichischen Alpenländer* (1887); *Lehrbuch der meteorologie* (1901; 3d ed., 1914). He was for a long time editor of the *Meteorologische Zeitschrift*.

HANNA, DAN R. See NECROLOGY.

HANNA, SEPTIMUS JAMES. Lawyer, died at Pasadena, Calif., July 24. He was born at Spring Mills, Pa., July 29, 1844, educated in the public schools and academies and during the last year of the Civil War was captain of a Pennsylvania company. After the war he was admitted to the Pennsylvania bar and practiced at Chicago 1872-79. He then removed to Leadville, Col. He was editor of the *Christian Science Journal* and the *Christian Science Sentinel* and he was first reader in the Christian Science "Mother Church" at Boston, Mass., 1894-1902. He became president of the Christian Science Board of Education at Boston.

HANNAFORD, PHEBE ANN. Universalist minister, woman suffragist, and writer, died at Rochester, N. Y., June 2. She was born on the island of Nantucket in 1829 and brought up as a Quaker. She was the first woman ordained as minister in New England (1868). Her preaching was successful and she was several times called upon to act as chaplain at the legislature of Connecticut. She took a prominent part in the Temperance movement. Her writings include, besides several biographies, *The Soldier's Daughter* (1866); *The Young Captain* (1868); *From Shore to Shore and Other Poems* (1870); *Women of the Century* (1877).

HANSON, JOSEPH MILES. Social worker, died, January 11. He was born at Darlington, Wis., March 24, 1868, and graduated at Grinnell College, Iowa, in 1893. He became superintendent of a settlement club in New York in 1894 and in 1899 general secretary of the Associated Charities at Kansas City, Mo., where he established an industrial social settlement afterwards known as the Swope Settlement. In 1908 he settled at Youngstown, Ohio, where he organized the local social welfare work. He was prominent in various other activities in connection with social work and wrote a pamphlet entitled *Universal Civilian Training* (1919).

HARA, TAKASHI. Prime Minister of Japan, assassinated at Tokyo, November 4. The murderer who was arrested soon afterwards was a young man reported to be of the Samurai class, and extracts from his diary showed that he had been for a long time planning the crime. Prime Minister Hara was born in 1854 and served as an official in the Foreign Office at home and abroad, attaining the rank of vice-minister in 1895. In 1900 he was one of the organizers along with the late Prince Ito of the Seiyu-kai party and soon afterwards was made Minister of Communications. He held that portfolio again in the Seiyu-kai ministry of 1906-08 and after that visited Europe and America, being received in Washington by President Roosevelt in September, 1908. He was again a cabinet minister in 1915 holding the portfolio of Home Affairs and in 1918 became Premier. He was strongly self-assertive as Prime Minister and practically dominated the government. In general he was opposed to the too rapid absorption of European ideas. Other features of his policy were the more complete co-operation between the military and other branches of government service and a spirit of conciliation in foreign affairs. Many attempts were made to overthrow his cabinet, the opposition attacking it for its policy towards China in the matter of the twenty-one demands and for its Siberian policy. They demanded that the Japanese troops be withdrawn. Among many of his supporters there was a desire that he should go to Washington personally and represent the cause of Japan at the Disarmament Conference and he was expected to be the real force in shaping the policy of Japan at the Conference. Latterly negotiations with China over Shantung and the policy of the Conference at Darien in which Japan had hoped to come to an agreement with the Far Eastern Republic of Chita tended to sharpen the hostility between the political parties. The assassination occurred just at the moment when the Japanese delegation was gathering for the Washington Conference. He had made frequent speeches in the Diet in respect to the work ahead of the delegates and had conferred on the subject with the American Ambassador at Tokyo. In general he expressed the view that Japan's chief aim should be the removal of race barriers and he declared that his country was willing to compromise on the Shantung question and to agree to a limitation of naval armament. By many Japanese writers Premier Hara was regarded as one of the most progressive of the prominent statesmen of Japan and he was supported by the moderate element as a champion of non-militaristic policies and of friendly relations with the United States. A previous plot to

assassinate him was brought to light in May, 1920.

HARBORS. See PORTS AND HARBORS.

HARB, SIR JOHN. British actor-manager, died, December 28. His real name was John Fairs. He was born in London, May 16, 1844, and received a grammar school education. He made his first appearance at Liverpool, Sept. 28, 1864. In the following year he appeared in London in the whole series of Robertson comedies, his leading part being Sir Peter Teazle, and immediately achieved a remarkable success. In 1875 he became the manager of the Court Theatre and in 1889-94 he was manager of the Garrick Theatre. In 1890 he appeared as Benjamin Goldfinch in Sidney Grundy's *Pair of Spectacles*. Meanwhile Pinero had made his great success and Hare had appeared in *The Profligate*. Beginning in 1895 he made tours in the United States where he was received with great enthusiasm, especially in Pinero's *The Gay Lord Quex* and in *Caste*. He was for ten years in partnership with Mr. and Mrs. Kendal down to 1888. His acting brought him many friends and admirers from among the most distinguished persons of his time. The most successful of his later parts were those of old men, and these parts were of a great variety. As an actor he showed extraordinary finish of style, and secured his effects by quiet means. As a manager he was extraordinarily successful. Other noteworthy productions were *The Notorious Mrs. Ebbsmith*; *Money*; *Diplomacy*; and *Little Mary*. His latest appearances were in revivals of *A Pair of Spectacles* in 1917.

HARKINS, MATTHEW. Bishop, died at Providence, R. I., May 25. He was born at Boston, Mass., Nov. 17, 1845, graduated at the Boston Latin School, studied at the College of Holy Cross, Worcester, Mass., and at Belgian and French institutions of theology. He was rector of parishes in Massachusetts till 1887 when he was consecrated Bishop of Providence.

HARPER, EDWARD THOMSON. Theologian, died January 4. He was born at Sabula, Sept. 28, 1857, graduated at Oberlin College in 1881 and studied in Germany. He became a professor in 1892 at the Chicago Theological Seminary, holding first, the chair of Assyriology and comparative religion and later the chair of Old Testament literature and Bible theology.

HARPER, JOHN ERASMUS. Specialist in the eye and the ear, died January 8. He was born at Cadiz, Ky., Jan. 21, 1851, studied medicine in the medical college of New York University and was professor of ophthalmology and otology at the college of medicine in the University of Illinois from 1882 to 1914, after which he became professor emeritus.

HARRIS, MERRIMAN COLBERT. Bishop, died at Tokyo, Japan, May 8. He was born at Beetsville, Ohio, July 9, 1846, graduated at Alleghany College, 1873, and served for three years in the Civil War. He was ordained to the Methodist Episcopal Church and became a missionary in Japan. From 1886 to 1904 he was superintendent of the Japanese mission of the Methodist Episcopal Church in San Francisco and while in this office he established missions in Hawaii and on the Pacific coast. In May, 1904, he was made Bishop of Japan and Korea and retired in 1916. He wrote *One Hundred Years*

of Missions; Christianity in Japan, Japanese Proverbs.

HARVARD UNIVERSITY. A non-sectarian institution of the higher learning at Cambridge, Mass.; founded in 1636. There were 6073 students enrolled for the fall session. And the enrollment for the summer schools was 2377. In the undergraduate courses of arts and sciences there were 2678 students and in the Graduate School of Arts and Sciences, 582. The principal other schools and departments with their enrollment were as follows: Engineering School, 261; Law School, 999; Medical School, 472; School of Business Administration, 466; Dental School, 205; Graduate School of Education, 153; University Extension, 2377. The total number of members of these teaching staffs was 957. The productive funds amounted to about \$47,000,000 and the income for the year from investments, tuition, fees, etc., was over \$5,000,000. The library contained 2,018,000 books and pamphlets. In the course of the summer the Rockefeller Foundation gave about \$1,600,000 to the university for the establishment of a School of Public Health. An important change in the method of instruction during the year was the extension of the general examination for graduation from the college to all candidates for the college degree except those concentrating in mathematics and the natural sciences. Hitherto only those concentrating in History, Government, and Economics had had to take this general final examination, which covers the entire field of their concentration. Another significant change was the raising of the qualifications for admission to the Harvard Dental School, by the requirement of one year of pre-dental college work. President, Abbott Lawrence Lowell, LL.D., Ph.D.

HASE, OSKAR VON. German publisher, died in Leipzig, in February. He was born in Jena, Sept. 15, 1846. He entered the firm of Breitkopf and Härtel in 1871, became manager in 1873 and partner in 1875. From 1880 till his death he was head of the famous house. He published several valuable books on the history of the book-trade.

HASELTON, SENECA. Judge, died at Burlington, Vt., July 21. He was born at Westford, Vt., Feb. 26, 1848, graduated at the University of Vermont in 1871 and was admitted to the bar in 1875. He was a member of the Vermont house of representatives in 1886, mayor of Burlington, 1891-94; minister to Venezuela, 1894-95; judge of the supreme court of Vermont, 1902-06; superior judge, 1906-08 and judge of the supreme court again in 1908-19. In politics he was a Democrat.

HAUPTMANN, CARL. See NECROLOGY.

HAVERFORD COLLEGE. An institution of the higher learning under the control of the Society of Friends at Haverford, Pa.; founded in 1833. There were 225 students enrolled for the fall session and the faculty numbered 24. The productive funds amounted to \$3,158,963 and the total income \$1,008,731. The library contained 84,550 volumes. The gifts for the year amounted to \$271,738. President, William Wistar Comford, Ph.D., LL.D.

HAWAII. A territory of the United States, formally annexed, August 12, 1898; consisting of nine inhabited islands whose names and respective areas in square miles are as follows: Hawaii, 4015; Maui, 728; Oahu, 598; Kauai, 547; Molokai,

261; Lanai, 139; Niihau, 97; Kahoolawe, 69; Midway; and besides these there are a number of small uninhabited islands. Capital, Honolulu, on the island of Oahu.

POPULATION. The following information in respect to the population and vital statistics in 1921 was supplied by the governor: From the data and information obtainable, the population of the territory was estimated to be 275,884 on June 30, 1921, an increase of 15,584. Increases were noted for all races, except the following which showed a decrease for the year: Hawaiian, Chinese, Porto Rican, Spanish, and others. Honolulu, the island of Oahu; Hilo city, Maui, and Kauai showed a growth during the year, while the island of Hawaii and the county of Kalawao showed a loss of population.

ESTIMATED POPULATION, 1921, BY NATIONALITY

American, British, German, Russian.....	37,409
Chinese.....	22,378
Filipino.....	23,971
Hawaiian.....	21,907
Japanese.....	114,879
Korean.....	5,327
Asiatic-Hawaiian.....	6,499
Caucasian-Hawaiian.....	11,348
Portuguese.....	25,257
Porto Rican.....	5,491
Spanish.....	848
Others.....	570
Total.....	275,884

Deaths during the fiscal year numbered 3789; and births, 10,156; marriages, 3268. The population of the leper settlements at Kalaupapa and Kalawao, June 30, 1921, was 481 of whom 308 were males. This was a decrease of 65 in the total number, June 30, 1920. The islands are divided into five counties of which the areas and populations are given in the following table:

AREA AND POPULATION OF COUNTIES, 1920

County	Area Sq. mils	Population		
		Total	Per sq. mile	Per cent increase since 1910
Hawaii.....	4,015	64,895	16.2	17.2
Honolulu.....	600	123,527	205.9	50.6
Kalawao.....	11	667	60.6	15.0
Kauai.....	641	29,438	45.9	22.9
Maui.....	1,182	37,385	31.6	25.6

¹ Includes islands of Maui, Kahoolawe, Lanai, and all of Molokai except Kalawao.

The census figures of the territory by races are given in the following table:

CENSUS FIGURES, POPULATION OF THE TERRITORY OF HAWAII BY RACES

Race	1920	1910	Increase since 1910
Hawaiian.....	23,723	26,041	2,318
Asiatic Hawaiian.....	6,955	3,734	3,221
Caucasian Hawaiian.....	11,072	8,772	2,300
Portuguese.....	27,002	22,301	4,701
Porto Rican.....	5,602	4,890	712
Spanish.....	2,430	1,990	440
Other Caucasian.....	19,708	14,867	4,841
Chinese.....	23,507	21,674	1,833
Japanese.....	109,274	79,675	29,299
Filipino.....	21,031	2,361	18,670
Korean.....	4,950	4,633	417
Negro.....	348	695	1,347
All others.....	310	376	166
Total.....	255,912	191,909	64,003

¹ Decrease.

The city proper of Honolulu had a population in 1920 of 83,237. The immigrants and emigrants are shown in the following table:

NUMBER OF IMMIGRANTS			
	Men	Women	Children
Chinese.....	457	73	33
Japanese.....	1,733	1,583	437
Filipinos.....	2,830	329	145
Hindus.....	1		
Koreans.....	3	8	5
Porto Ricans.....			
Portuguese.....	17	12	17
Russians.....	3		
Spanish.....			
All others.....	325	188	25
Total.....	5,369	2,193	662

NUMBER OF EMIGRANTS			
	Men	Women	Children
Chinese.....	1,289	112	148
Japanese.....	2,952	1,780	2,137
Filipinos.....	1,934	221	279
Hindus.....	2		
Koreans.....	44	13	9
Porto Ricans.....	3	5	8
Portuguese.....	67	35	134
Russians.....	19	11	19
Spanish.....	23	18	45
All others.....	353	251	55
Total.....	6,686	2,446	2,834

Excess of departures: Chinese, 986; Japanese, 3,116; Hindus, 1; Koreans, 60; Porto Ricans, 16; Portuguese, 190; Spanish, 86; Russians, 46; all others, except Filipinos, 121. Excess of arrivals: Filipinos, 870.

Of the civilian population about 44 per cent were Japanese, who with the Chinese, Filipinos, and Koreans brought the total Oriental element up to 64 per cent. The American, British, German, and Russian element made up about 14.4 per cent, including the military and naval population. It was estimated that six out of every ten children born in the territory were of Oriental parentage, and five out of every ten of Japanese parentage. The predominance of the Orientals has long been regarded as a serious question, especially that of the Japanese. They are ineligible to citizenship, which of course retards assimilation and disposes the Oriental settler to regard his residence as merely temporary. This influx of Orientals is not to be attributed to a definite movement of invasion, but is explained mainly by the need of the territory for industrial workers and the prevalence there of a spirit of great equality and tolerance among the races. The Japanese predominance has continued in spite of stoppage of immigration since 1908. This is explained not only by the large number of Japanese already in the country at that date, but by the high birth rate and low death rate. During the fiscal year, 1920-21, the Japanese births made up about half of the total. The birth rate of the Japanese was 42.74, while that of the white groups, namely, American, British, German, and Russian, was 15.88, being lower than that of any other group. But it is to be noted that while the Japanese are not eligible to citizenship, children born in the country of Japanese parents become citizens. It was estimated that by 1930 these Japanese citizens would come to about 28 per cent of the electorate, and by 1940 to about

47 per cent, attaining the majority in the course of the next ten years.

EDUCATION. Education is compulsory from the ages of six to fifteen, inclusive. In school attendance the territory stands higher than most of the States of the United States, having an average of over 92 per cent. The public school system of late years has been rapidly expanded, the number of pupils having almost quadrupled in twenty years. Increase in fact as been so rapid as to make the housing problem the most serious of the external difficulties. The public schools in 1921 numbered 174, and the private schools, 59. At the end of the fiscal year the number of pupils enrolled in the public schools was 41,151, an increase of 2856 over the preceding year. There were 7573 in the private schools or 167 more than the year before. There were 1362 teachers in the public schools of whom 1207 were females; and 402 in the private schools of whom 315 were females. There were two industrial schools, one for boys and one for girls, the former having an attendance of 159, July 1, 1920, and the latter of 137. The following information concerning recent legislation in respect to the foreign language schools was supplied in the governor's report. Provision for the regulation of "foreign-language schools" in the Territory, by which is meant any school conducted in any language other than English or Hawaiian, was made by act 30, of the legislature in special session, November, 1920. The department of public instruction is placed in charge of the administration of the law. Briefly, the act provides that no person shall conduct a foreign-language school in Hawaii without first obtaining a permit from the department of public instruction, and each teacher in such a school must similarly hold a permit from the department. Permits shall not be issued until the department is satisfied that the applicant is possessed of the ideals of democracy, knowledge of American history and institutions, and knows how to read, write, and speak the English language. Provision is made that the portion of the law relating to a knowledge of the English language shall be liberally construed during the first two years after the act became effective, July 1, 1921. Such schools are not to be conducted in the mornings before the public schools open, nor during the hours the public schools are in session. The first examinations under the new law were held at Honolulu, July 5-9, 1921. These examinations were attended by 492 teachers, all of whom were granted permits. There are approximately 200 foreign-language schools, 500 teachers, and 23,000 pupils in the Territory.

The most important question of the schools pertained to this matter of racial composition. According to the school survey completed in 1920 by the government, only two or three per cent of the children entering school at six or seven years of age could speak the English language. The majority used a local jargon, made up of native, Japanese, Chinese, Portuguese, and English words. The Orientals in the public and private schools on June 30, 1919, made up 54.5 per cent; the Latin races, including Portuguese, Spanish, and Porto Ricans, 18.5 per cent, and the Americans, British, Russians, Germans, and other Europeans, 5.5 per cent. The following table shows the racial elements in round numbers in the schools in 1921:

Hawaiian.....	3,400
Part-Hawaiian.....	4,500
Anglo-Saxon.....	1,200
Spanish.....	160
Portuguese.....	5,200
Porto Rican.....	1,100
Chinese.....	3,800
Japanese.....	20,000
Korean.....	700
Filipino.....	1,200
Others.....	500

Owing to the great numbers of Orientals and other foreigners, a question much discussed of late has been the danger that the American element would be completely denationalized, and there has been a movement in the larger cities and towns for separate schools for the whites. Experiments for the solution of this problem were being made, but nothing permanent had been accomplished in 1921. The diversity of languages has made necessary a special effort in the teaching of languages, and in 1921 there were as noted above about 200 foreign-language schools, most of the schools being Japanese. The Japanese foreign-language schools have been much criticised as tending to impose Japanese culture rather than American and have latterly been placed under territorial regulations which restrict attendance of pupils to one hour a day after school hours, etc. Education in Hawaii is of especial importance as it is the chief means of solving the difficult problems arising from racial diversity.

The University of Hawaii was established in 1919, and its work was divided between two colleges, the College of Applied Sciences and the College of Arts and Science. A marine laboratory was completed at Waikiki and in use during 1921.

tons and the pineapple yield at 5,500,000 cases. In 1920 and 1921 the country was suffering from a shortage of labor and in the latter year there were serious strikes among agricultural laborers. The labor shortage was explained in part by the return of many of the laborers to their native lands after the high wages of the preceding years and the absorption of them in other interests than agriculture. The condition was so serious that a committee was appointed by the governor to go to Washington and request legislation that would bring relief. This resulted in the passage of a measure which provided that in an emergency the Secretary of Labor might provide for the admission to the Territory of Hawaii a limited number of alien laborers under such conditions as he might prescribe. The total area in the 47 forest reserves in the territory in 1921 was 817,109 acres, of which 557,339 were owned by the government. A considerable advance was made in 1921 in the protection of these reserves and in reforestation. The homestead problem which has been much discussed in recent years led to the passage of the Hawaiian Homes Commission act which was signed by the President July 9. This constituted a commission of five members consisting of the governor and four citizens whom he should appoint. The policy aimed at preserving certain of the remaining public lands for the use of the natives and provided for a revolving fund for loans for the benefit of home-seekers.

MANUFACTURES. The United States Bureau of the Census issued in 1921 the results of the census of manufactures in Hawaii for 1919. The accompanying table gives a summary with corresponding figures from the census of 1909 for purposes of comparison:

	Manufacturing industries		Per cent of increased 1909-19
	1919	1909	
Number of establishments.....	496	500	— 0.8
Persons engaged.....	11,744	7,572	55.1
Proprietors and firm members.....	700	1,074	— 34.8
Salaried employees.....	1,075	594	81.0
Wage earners (average number).....	9,969	5,904	68.9
Primary horsepower.....	64,295	41,930	53.3
Capital.....	\$48,841,000	\$23,875,000	1034.6
Salaries and wages.....	8,666,000	2,795,000	210.1
Salaries.....	2,029,000	686,000	195.8
Wages.....	6,637,000	2,109,000	214.7
Paid for contract work.....	35,000	188,000	— 81.4
Rent and taxes.....	10,863,000	1,236,000	762.7
Cost of materials.....	81,144,000	25,629,000	216.6
Value of products.....	133,096,000	47,404,000	180.8
Value added by manufacture ¹	51,952,000	21,775,000	138.6

¹ A minus sign (—) denotes decrease.

² Includes 272 members of coöperative associations not reported in 1919.

³ Value of products less cost of materials.

The University of Hawaii grew out of the former College of Hawaii and was based on that establishment. Students' registration in 1921 nearly doubled that of the previous year, being 432 as against 242.

AGRICULTURE. The basic interest of the country is agriculture on which its commercial life depends. The production of raw sugar and the canning of pineapples are the chief industries. The sugar yield for 1921 was estimated at 583,894

Manufacturing is largely centralized in the cities of Hilo and Honolulu. In 1919 Honolulu produced 32.8 per cent of the total value of products, and employed 54.7 per cent of the average number of wage earners; the corresponding percentages in 1899 were 14 per cent and 25.4 per cent, respectively. The prosperity of Hawaii depends largely on the production of sugar. Rice ranked second in value of products in 1909. Its loss in position was due to the growth in the value

of pineapples canned, which increased 1094 per cent during the decade, while the increase in rice was 142.8 per cent. As the Hawaiian Islands have practically no mineral resources, all mineral fuel must be procured elsewhere, principally from the United States. In the sugar-mill industry a large amount of fuel is required and has been largely supplied by the refuse from sugar cane.

OCCUPATIONS. According to the returns of the Fourteenth Census, taken as of Jan. 1, 1920, there were 111,882 persons 10 years of age and over in Hawaii engaged in gainful occupations, constituting 43.7 per cent of the total population of the territory (255,912) and 59.8 per cent of the population 10 years of age and over (187,167). At the census of 1910, the 101,194 gainful workers constituted 52.7 per cent of the total population of the territory and 68 per cent of the population 10 years of age and over.

Of the gainful workers of Hawaii in 1920, 97,619, or 87.3 per cent, were males and 14,263, or 12.7 per cent, were females. The male gainful workers constituted 84 per cent of all males 10 years of age and over in 1920, as against 88.8 per cent in 1910, while the female gainful workers constituted 20.1 per cent of all females 10 years of age and over in 1920, as against 23.7 per cent in 1910.

Of the gainful workers of Hawaii in 1920, 56,244, or 50.3 per cent, were engaged in agri-

1920 was due, principally, to the great increase in the number of Filipino workers. Of the 18,037 workers in the "all other" group in 1920, 15,048 were Filipinos, 2712 were Koreans, 180 were Negroes, and 97 belonged to other races.

The 111,882 gainful workers of Hawaii in 1920 were distributed by age periods as follows: 10 to 13 years, 269, or two-tenths of 1 per cent; 14 to 15 years, 1333, or 1.2 per cent; 16 to 17 years, 3508, or 3.1 per cent; 18 to 19 years, 5631, or 5 per cent; 20 to 24 years, 16,880, or 15.1 per cent; 25 to 44 years, 54,682, or 48.9 per cent; 45 to 64 years, 27,231, or 24.3 per cent; 65 years and over, 2270, or 2 per cent; and age unknown, 78, or one-tenth of 1 per cent.

Of married persons 15 years of age and over in Hawaii in 1920, 60.9 per cent were gainfully occupied. The percentages gainfully occupied for married males and females 15 years of age and over were 97 and 18.8, respectively.
